FEDERAL REGISTER

Vol. 78 Friday,
No. 139 July 19, 2013

Pages 43061–43752

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpo@custhelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 77 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, September 17, 2013
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 950

[SATS No: WY–043–FOR; Docket ID: OSM–2012–0020; S1D1SSS08011000SXDO66 A0067F134S180110; S2D2SSS0801100 0SX066A00033F13XS501520]

Wyoming Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Final rule.

SUMMARY: The Office of Surface Mining Reclamation and Enforcement (OSM), is removing previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified in the Code of Federal Regulations (CFR). The disapprovals and required program amendments are no longer necessary because Wyoming subsequently submitted and obtained OSM approval of revised regulations under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act).

DATES: Effective July 19, 2013.

FOR FURTHER INFORMATION CONTACT: Jeffrey Fleischman, Chief, Denver Field Division, Telephone: 307–261–6550, Internet address: *jfleischman@OSMRE.gov.*

SUPPLEMENTARY INFORMATION:

I. Discussion of Final Rule

At its own initiative (SATS number: WY–043–FOR, Administrative Record Docket ID No. OSM–2012–0020), OSM is removing certain Wyoming program disapprovals and required program amendments codified at 30 CFR 950.12 and 950.16 that have been previously addressed by the State and approved by OSM. A description of the disapprovals and required amendments being removed, including the citation and date of the original **Federal Register** document that resulted in their removal, are listed below in the order that they appear in 30 CFR 950.12 and 950.16.

A. Previously Addressed State Program Provisions That Were Not Approved

1. 30 CFR 950.12(a)(1)

The regulations at 30 CFR 950.12(a)(1) disapproved the phrases ''run-of-the-mine'' and ''to separate the coal from its impurities'' within the definition of ''coal preparation plant'' at Chapter I, section 2(m) of Wyoming's Coal Rules and Regulations. Wyoming subsequently deleted these phrases from its definition, and OSM approved their removal in a July 25, 1990, **Federal Register** (55 FR 30221, 30223).

2. 30 CFR 950.12(a)(3)

The regulations at 30 CFR 950.12(a)(3) disapproved the deletion of the requirement at Chapter II, section 3(a)(vi)(H)(II)(3) of Wyoming's Coal Rules and Regulations to collect baseline surface water data on acidity. Wyoming subsequently reinstated the requirement regarding surface water information at Chapter II, section 2(a)(vi)(L)(IV), and OSM approved it in a November 6, 2002, **Federal Register** (67 FR 67540–67541).

3. 30 CFR 950.12(a)(4)

The regulations at 30 CFR 950.12(a)(4) disapproved the deletion of the locational data requirements for monitoring stations at Chapter II, section 3(a)(vi)(M) of Wyoming's Coal Rules and Regulations. Wyoming subsequently explained that the requirements were present in its current rules at Chapter II, section 2(a)(vi)(J)(VIII), and OSM approved it in a November 6, 2002, **Federal Register** (67 FR 67540, 67543).

4. 30 CFR 950.12(a)(6)

The regulations at 30 CFR 950.12(a)(6) disapproved the replacement of the word ''is'' with the phrase ''the vegetative cover and total ground cover are'' in Chapter IV, section 2(d)(vi) of Wyoming's Coal Rules and Regulations. Wyoming subsequently deleted the reference to ''total ground cover'' and added the term ''absolute total'' to the phrase ''vegetative cover'' in Chapter IV, section 2(d)(ii)(B)(I), which is revised text from Chapter IV, section 2(d)(x) in the currently approved rules. OSM approved the deletion in a June 14, 2011, **Federal Register** (67 FR 34816, 34831).

5. 30 CFR 950.12(a)(7)

The regulations at 30 CFR 950.12(a)(7) disapproved the addition of the phrase ''or an alternative success standard approved by the Administrator'' to Chapter IV, section 2(d)(vi) of Wyoming's Coal Rules and Regulations. Wyoming subsequently deleted language in proposed Chapter IV, section 2(d)(i)(G) and 2(d)(ii)(B)(I), which is revised text from Chapter IV, section 2(d)(x) in the currently approved rules, that allows the use of unspecified alternative success standards when approved by the Administrator. OSM approved the deletion in a June 14, 2011, **Federal Register** (67 FR 34816, 34831).

6. 30 CFR 950.12(a)(10)

The regulations at 30 CFR 950.12(a)(10) disapproved all revisions to Chapter IV, section 3(a)(ix) of Wyoming's Coal Rules and Regulations concerning cut-and-fill terraces. Wyoming subsequently eliminated these revisions from its rules, and OSM approved their removal in a July 25, 1990, **Federal Register** (55 FR 30221, 30224).

7. 30 CFR 950.12(a)(11)

The regulations at 30 CFR 950.12(a)(11) disapproved the addition of section 1(a)(ii)(C), section 2(c), and section 3 to Chapter IX of Wyoming's Coal Rules and Regulations which would have provided a general variance from the approximate original contour requirements. Wyoming subsequently deleted the general variance provisions from its rules, and OSM approved their removal in a July 25, 1990, **Federal Register** (55 FR 30221–30222).

8. 30 CFR 950.12(b)

The regulations at 30 CFR 950.12(b) disapproved the addition of section 1(b)(iii) to Chapter XII of Wyoming's Coal Rules and Regulations which would have allowed personal property other than allowed by 30 CFR 800.5 (cash accounts, negotiable bonds, certificates of deposit, and letters of credit) to be posted as collateral bond. Wyoming subsequently revised its rules

in Chapter XII governing self-bonding to allow the use of personal property as collateral for securing self bonds. The revised rules addressed OSM's previously expressed concerns, and OSM approved them in a July 25, 1990, **Federal Register** (55 FR 30221, 30226–30227).

B. Previously Approved Required Program Amendments

1. 30 CFR 950.16(d)

The regulations at 30 CFR 950.16(d) required Wyoming to submit by September 24, 1990, a revision to its permanent program rules at Chapter IV, section 3(i) or otherwise propose to amend its program to require quarterly ground water monitoring for surface and underground coal mining operations. Wyoming subsequently amended its program as required, and OSM approved the changes in a November 6, 2002, **Federal Register** document (67 FR 67540, 67542).

2. 30 CFR 950.16(e)

The regulations at 30 CFR 950.16(e) required Wyoming to submit by September 24, 1990, a revision to its permanent program rules at Chapter IV, section 3(u) or otherwise propose to amend its program to give the State the authority to require additional preventive, remedial, or monitoring measures to assure that material damage to the hydrologic balance outside the permit area is prevented for both surface and underground coal mining operations. Wyoming subsequently amended its program as required, and OSM approved the changes in a November 6, 2002, **Federal Register** (67 FR 67540–67541).

3. 30 CFR 950.16(h)

The regulations at 30 CFR 950.16(h) required Wyoming to submit by June 30, 1987, revisions of the Land Quality Division (LQD) rules at Chapter II section 3(a)(vi)(J)(II) or otherwise propose to amend its program to provide that the groundwater quality description in a permit application must include pH. Wyoming subsequently amended its program as required at Chapter II section 2(a)(vi)(M)(III)(4), and OSM approved the changes in a November 6, 2002, **Federal Register** document (67 FR 67540–67541).

4. 30 CFR 950.16(i)

The regulations at 30 CFR 950.16(i) required Wyoming to submit by June 30, 1987, revisions to the LQD rules at Chapter II section 3(b)(ix)(D) or otherwise propose to amend its program to specify the minimum groundwater quality parameters that must be monitored. Wyoming subsequently submitted an amendment clarifying that the required minimum groundwater quality parameters were present in its current rules at Chapter IV, section 2(i), and OSM approved the changes in a November 6, 2002, **Federal Register** document (67 FR 67540, 67542).

Based on the information presented above, we are removing previously disposed-of state program disapprovals for Wyoming that remain codified at 30 CFR 950.12(a)(1), (3), (4), (6), (7), (10), (11), and (b) in this final rule. Additionally, we are removing previously disposed-of required program amendments for Wyoming at 30 CFR Part 950.16(d), (e), (h), and (i). Removal of these state program disapprovals and required program amendments does not alter the terms of our previous decisions or Wyoming's existing regulatory requirements.

II. Procedural Determinations

Administrative Procedure Act

We are publishing this final rule without prior public notice or opportunity for public comment. The Administrative Procedure Act (APA), 5 U.S.C. 553, provides an exception to notice and comment requirements when an agency finds that there is good cause for dispensing with notice and comment procedures on the basis that they are impracticable, unnecessary, or contrary to the public interest. We have determined that, under 5 U.S.C. 553(b)(3)(B), good cause exists for dispensing with the notice of proposed rulemaking and public comment procedures for this rule.

Specifically, we have determined that notice and comment is unnecessary for this rule because it is nonsubstantive. As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements.

For the same reasons, we find that good cause exists under 5 U.S.C. 553(d)(3) to have the regulation become effective on a date that is less than 30 days after the date of publication in the **Federal Register**.

Executive Order 12866

This rule is not a significant rule and is not subject to review by the Office of Management and Budget under Executive Order 12866. As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements. For these reasons, we find that:

(1) This rule will not have an effect of $100 million or more on the economy. It will not adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities.

(2) This rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency for the reasons stated above.

(3) This rule does not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients.

(4) This rule does not raise novel legal or policy issues for the reasons stated above.

Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements.

Small Business Regulatory Enforcement Fairness Act

As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements. Therefore, this rule is not considered a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act, and it will not—

(1) Have an annual effect on the economy of $100 million.

(2) Cause a major increase in costs or prices for consumers, individual industries, Federal, state, or local government agencies, or geographic regions because the rule does not impose new requirements on the coal mining industry or consumers.

(3) Have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S. based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on state, local, or tribal governments or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on state, local, or tribal governments or the private sector. As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

Federal Paperwork Reduction Act

This rule does not contain collections of information that require approval by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

National Environmental Policy Act

This rule does not require an environmental assessment or environmental impact statement because section 702(d) of SMCRA, 30 U.S.C. 1292(d), provides that agency actions pertaining to approval of state regulatory programs do not constitute major Federal actions within the meaning of section 102(2)(C) of the National Environmental Policy Act, 42 U.S.C. 4332(2)(C).

Executive Order 12988 on Civil Justice Reform

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Executive Order 13211—Regulations That Significantly Affect the Supply, Distribution, or Use of Energy

Executive Order 13211 requires agencies to prepare a statement of energy effects for a rule that is (1) considered significant under Executive Order 12866, and (2) likely to have a significant adverse effect on the supply, distribution, or use of energy. This rule is not considered significant under Executive Order 12866, nor would it have a significant adverse effect on the supply, distribution, or use of energy. Therefore, a statement of energy effects is not required.

Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

In accordance with Executive Order 13175, we have evaluated the potential effects of this rule on federally recognized Indian tribes and have determined that the removal of previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16 would not have substantial direct effects on the relationship between the Federal Government and Indian Tribes or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

Executive Order 12630—Takings

Under the criteria in Executive Order 12630, this rule does not have significant takings implications; therefore, a takings implication assessment is not required. As discussed above, this rule removes provisions concerning previously disposed-of state program disapprovals and required program amendments for Wyoming that remain codified at 30 CFR 950.12 and 950.16, respectively. This rule neither imposes new regulatory requirements nor removes any existing regulatory requirements.

Executive Order 13132—Federalism

This rule does not have federalism implications. For the reasons previously stated, it will not have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.''

Data Quality Act

In developing this rule, we did not conduct or use a study, experiment, or survey requiring peer review under the Data Quality Act (Pub. L. 106–554).

List of Subjects in 30 CFR Part 950

Intergovernmental relations, Surface mining, Underground mining.

Dated: June 10, 2013.

Allen D. Klein,

Director, Western Region.

For the reasons set out in the preamble, 30 CFR part 950 is amended as set forth below:

PART 950—WYOMING

■ 1. The authority citation for part 950 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

■ 2. Revised § 950.12 to read as follows:

§ 950.12 State program provisions and amendments not approved.

The following provisions of the Rules and Regulations of the Land Quality Division of the Wyoming Department of Environmental Quality are not approved:

(a) [Reserved]

(b) [Reserved]

§ 950.16 [Amended]

■ 3. In § 950.16, remove and reserve paragraphs (d), (e), (h), and (i) and remove reserved paragraphs (v) through (ll).

[FR Doc. 2013–17366 Filed 7–18–13; 8:45 am]

BILLING CODE 4310–05–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[USCG–2013–0542]

Drawbridge Operation Regulations; Arthur Kill, NY

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Commander, First Coast Guard District, has issued a temporary deviation from the regulations governing the operation of the Arthur Kill AK Railroad Bridge across Arthur Kill, mile 11.6, between Staten Island, New York and Elizabeth, New Jersey. Under this temporary deviation the bridge may remain in the closed position for four days to facilitate scheduled maintenance. This deviation is necessary to facilitate tie and miter rail replacement on the lift span.

DATES: This deviation is effective from July 19, 2013 through July 31, 2013, and has been enforced with actual notice since July 17, 2013.

ADDRESSES: The docket for this deviation, [USCG–2013–0542] is available at *http://www.regulations.gov.*

Type the docket number in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this deviation. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call Joe Arca, Project Officer, First Coast Guard District, at (212) 668–7165, *joe.m.arca@uscg.mil.* If you have questions on viewing the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION: The AK Railroad Bridge, across Arthur Kill, mile 11.6, between Staten Island, New York and Elizabeth, New Jersey has a vertical clearance in the closed position of 31 feet at MHW and 35 feet at MLW. The existing drawbridge operation regulations are listed at 33 CFR § 117.702.

The waterway supports both commercial and recreational navigation of various vessel sizes.

The operator of the bridge, Conrail, requested a temporary deviation to facilitate scheduled maintenance, tie and miter rail replacement at the bridge.

The bridge must remain in the closed position to perform this maintenance.

Under this temporary deviation the draw may remain in the closed position as follows:

On July 17, 2013 from 6:30 a.m. to 10:40 a.m. and from 12:50 p.m. to 4:40 p.m.

On July 18, 2013 from 7:30 a.m. to 11:35 a.m. and from 2:40 p.m. to 5:44 p.m.

On July 30, 2013 from 6:30 a.m. to 10:43 and from 12:43 p.m. to 4:35 p.m.

On July 31, 2013 from 7:30 a.m. to 11:35 a.m. and from 1:40 p.m. to 5 p.m.

There are no alternate routes for vessel traffic. The bridge can be opened in an emergency.

In accordance with 33 CFR 117.35(e), the bridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: July 8, 2013.

Gary Kassof,

Bridge Program Manager, First Coast Guard District.

[Docket No. USCG–2013–0485]

RIN 1625–AA00

Safety Zone; Maritime Heritage Festival Fireworks, St. Helens, OR

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a safety zone in St. Helens, OR. This safety zone is necessary to help ensure the safety of the maritime public during a planned fireworks display and will do so by prohibiting unauthorized persons and vessels from entering the safety zone unless authorized by the Sector Columbia River Captain of the Port or his designated representatives.

DATES: This rule is effective on July 27, 2013, from 9:45 p.m. until 10 p.m.

ADDRESSES: Documents mentioned in this preamble are part of docket [USCG–2013–0485]. To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type the docket number in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email ENS Ian McPhillips, Waterways Management Division, Marine Safety Unit Portland, U.S. Coast Guard; telephone (503) 240–9319, email *msupdxwwm@uscg.mil.* If you have questions on viewing or submitting material to the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because to do so would be impracticable considering the event will take place before the notice can be published or comments taken. Coast Guard Marine Safety Unit Portland did not receive the necessary information for this event until it was too late to issue an NPRM. Approximately 1,000 people are anticipating this event to commence as scheduled, and the event organizers are unable to reschedule the events in order to allow comment.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register** because it is impracticable and contrary to the public interest. There is insufficient time remaining to undertake a 30 day delayed effective date for this rule.

B. Basis and Purpose

Fireworks displays create hazardous conditions for the maritime public due to loud noises, falling debris, and explosions, combined with the heavy vessel traffic congregating near the displays. The safety zone will help ensure the safety of the maritime public by prohibiting persons and vessels from risks associated with fireworks displays. As part of the Maritime Heritage Festival Fireworks in St. Helens, OR, the festival will feature a fireworks display. The Coast Guard expects approximately 1,000 people to attend this event. Because of the aforementioned concerns, the Coast Guard is establishing a safety zone in the vicinity of the launch site.

C. Discussion of the Final Rule

The rule establishes a safety zone in the Sector Columbia River Captain of the Port Zone.

The safety zone will be established on the Columbia River, St. Helens, OR. The safety zone will extend 500 yards in all directions from Sand Island marine Park. This event will take place on Saturday July 27, 2013 from 9:45 p.m. to 10 p.m.

D. Regulatory Analyses

We developed this rule after considering numerous statutes and

executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders. The Coast Guard has made this determination based on the fact that the safety zone created by this rule will not significantly affect the maritime public because vessels may still coordinate their transit in the vicinity of the safety zone with the Coast Guard.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This rule may affect the following entities, some of which may be small entities: the owners and operators of vessels intending to operate in the area covered by the safety zone on Saturday July 27, 2013, from 9:45 p.m. to 10 p.m.

The safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: (i) The safety zone is limited in size; (ii) the official on-scene patrol may authorize access to the safety zone; (iii) the safety zone will affect a limited geographical location for a limited time; and (iv) the Coast Guard will make notifications via maritime advisories so mariners can adjust their plans accordingly.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a ''significant energy action'' under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the creation of a safety zone around a fireworks display. This rule is categorically excluded from further review under paragraph 34(g) of Figure

2–1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR Part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Public Law 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T13–253 to read as follows:

§ 165.T13–253 Maritime Heritage Festival, St. Helens, Oregon.

(a) *Safety Zone.* The following areas are designated safety zone:

(1) *Location.* All waters of the Columbia River at St. Helens, OR encompassing a 500 yard radius in all directions from the discharge site.

(2) *Enforcement period.* This safety zone is in effect from Saturday July 27, 2013, from 9:45 p.m. to 10 p.m.

(b) *Regulations.* In accordance with the general regulations in 33 CFR part 165, subpart C, no person may enter or remain in the safety zone created in this section or bring, cause to be brought, or allow to remain in the safety zone created in this section any vehicle, vessel, or object unless authorized by the Captain of the Port or his designated representative. The Captain of the Port may be assisted by other Federal, State, or local agencies with the enforcement of the safety zone.

Dated: July 2, 2013.

B.C. Jones,

Captain, U.S. Coast Guard, Captain of the Port, Sector Columbia River.

[Docket No. 0808041047–3587–03]

RIN 0648–AW62

Magnuson-Stevens Act Provisions; National Standard 2—Scientific Information

AGENCY: National Marine Fisheries Service (NMFS); National Oceanic and Atmospheric Administration (NOAA); Commerce.

ACTION: Final rule.

SUMMARY: This final action amends the guidelines for National Standard 2 (NS2) of the Magnuson-Stevens Fishery Conservation and Management Act (MSA) regarding scientific information. Consistent with the President's memo on Scientific Integrity (March 9, 2009) and NOAA Administrative Order 202–735D, the revised NS2 guidelines are intended to ensure the highest level of integrity and strengthen public confidence in the quality, validity and reliability of scientific information disseminated by the National Marine Fisheries Service (NMFS) in support of fishery management actions. This action provides guidance on what constitutes best scientific information available (BSIA) for the effective conservation and management of fisheries managed under Federal fishery management plans (FMPs), and adds new language to the NS2 guidelines regarding the advisory role of the Scientific and Statistical Committees (SSCs) of the Regional Fishery Management Councils (Councils) and the relationship of SSCs to the peer review process. The revised NS2 guidelines also clarify the content and purpose of the Stock Assessment and Fishery Evaluation (SAFE) Report and related documents. This action makes modest adjustments to current operating practices; it is intended to ensure that scientific information, including its collection and analysis, has been validated through peer review, as appropriate, is transparent to the public, and is used appropriately by SSCs, Councils, and NMFS in the conservation and management of marine fisheries.

DATES: Effective July 19, 2013.

ADDRESSES: Copies of supporting documents prepared for this final rule, such as the proposed rule and public comments that were received, can be found at the Federal e-Rulemaking portal: *http://www.regulations.gov* by searching for RIN 0648–AW62.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Overview of Revisions to the NS2 Guidelines

Section 301(a)(2) of the MSA specifies that fishery conservation and management measures shall be based upon the best scientific information available. 16 U.S.C. 1851(a)(2). Section 301(b) of the MSA states that: ''the Secretary (of Commerce) shall establish advisory guidelines (which shall not have the force and effect of law), based on national standards, to assist in the development of fishery management plans.'' *Id.* 16 U.S.C. 1851(b). The existing national standard guidelines appear at 50 CFR 600.305 through 600.355. In the Magnuson-Stevens Fishery Conservation and Management Reauthorization Act of 2007, Congress added provisions to improve the use of science in decision-making, including a stronger role for Councils' SSCs in the review of scientific information and providing fishing level recommendations to their Councils, and authorizing the Secretary and Councils to establish a peer review process for scientific information used to advise Councils about conservation and management of fisheries. These revised NS2 guidelines address the above changes in the MSA. The guidelines include guidance on what constitutes BSIA for fishery conservation and management measures, provide standards for scientific peer review, clarify the role of the SSC in the review of scientific information for its Council, expand and clarify the contents of SAFE reports, and emphasize the importance

of the availability and transparency of SAFE reports used in Council decision making.

We published an advanced notice of proposed rulemaking (ANPR) in the **Federal Register** on September 18, 2008 (73 FR 54132), announcing the agency's intent to revise the NS2 guidelines, and received public comments from 24 organizations providing recommendations. The proposed guideline revisions published in the **Federal Register** on December 11, 2009 (74 FR 65724), and were open for public comment for three months, through March 11, 2010. We received comments from 25 organizations and 118 identical email submissions. In general, the public comments were supportive of the need to revise the NS2 guidelines and provided informative recommendations and some editorial clarifications. We address changes made in the final NS2 guidelines in the next section (Section II), and summarize comments received on the proposed guidelines and respond to those comments in Section IV. Response to Comments.

II. Synopsis of Changes Made in the Final Action

This final action does not include substantive changes from the proposed guideline revisions. In response to public comments, changes were made to clarify the guidelines and emphasize the importance of public transparency in peer review of scientific information, as recommended by public comments. Language was added to clarify the following: Scientific information includes both established and emerging science; peer reviewers should not make formal fishing level recommendations, because this is the purview of the SSC; no individual can be appointed to a review panel if that individual has a conflict of interest that is relevant to the functions to be performed; peer reviews that require a greater degree of independence should use rotation of reviewers, recognizing that repeated service by the same reviewer may be unavoidable when there is a limited availability of expertise; SAFE reports should contain an explanation of information gaps and highlight needs for future scientific work; and for stocks managed cooperatively by Federal and State governments, the scientific information used for FMP development should include harvest information from both state and Federal waters. See Section V of this preamble for a detailed description of the changes made to the text of the proposed action.

III. Overview of the Major Aspects of the Final Action

A. Best Scientific Information Available (BSIA)

In 2004, the National Research Council (NRC) of the National Academies examined the application of the BSIA standard in the development of fishery conservation and management measures. The NRC recommended approaches to more uniformly apply the BSIA standards for fishery management actions. The NRC recommendations are available in the NRC (2004) publication entitled ''Improving the Use of the 'Best Scientific Information Available' Standard in Fisheries Management'' (2004, *http://books.nap.edu/openbook.php*).

The revised NS2 guidelines adopt, to the extent possible, the 2004 NRC recommendations regarding the production and use of scientific information for fishery management actions. The public comments provided a nearly unanimous recommendation that the NS2 guidelines should be revised to incorporate the NRC recommendations, and that an overly prescriptive definition of BSIA should be avoided due to the dynamic nature of science. Therefore, as recommended by the NRC, the NS2 guideline revisions are based on the following widely accepted criteria for evaluating BSIA: Relevance, inclusiveness, objectivity, transparency, timeliness, verification, validation, and peer review of fishery management information as appropriate. The revised NS2 guidelines do not prescribe a static definition of BSIA because science is a dynamic process involving continuous improvements.

The availability and quality of scientific information to inform fisheries management varies. Ecosystems and human societies are complex, interacting, dynamic systems that are impacted by multiple factors, including those within the scope of fisheries management. Some fisheries are well studied and have much information from long-term annual research surveys and comprehensive biological, social, and economic fisheries data collection programs. Other fisheries do not have the same breadth of information available. In light of this variability, the NS2 guideline revisions elevate the importance of evaluating the uncertainty and associated risk of the scientific information to inform fishery management decisions. The revised guidelines also provide that mandatory management decisions should not be delayed due to limitations in the scientific information or the promise of future data collection or analysis.

The NS2 guidelines provide guidance that is fundamental for the reliability and integrity of scientific information to be used by the Secretary and Councils to effectively manage and conserve our nation's living marine resources.

B. Peer Review Processes

Pursuant to its authority under the Information Quality Act (44 U.S.C. 3516), the Office of Management and Budget (OMB) issued a Final Information Quality Bulletin for Peer Review (70 FR 2664, January 14, 2005) that establishes minimum peer review requirements for ''influential scientific information'' disseminated by Federal agencies. Section 302(g)(1)(E) of the MSA provides that: ''The Secretary and each Council may establish a peer review process for that Council for scientific information used to advise the Council about the conservation and management of the fishery.'' 16 U.S.C. 1852(g)(1)(E). If the Secretary and a Council establish such a process, it will be deemed to satisfy the requirements of the Information Quality Act, including the OMB Peer Review Bulletin guidelines. The revised NS2 guidelines provide guidance and widely-accepted national quality standards that should be followed to establish a peer review process per MSA section 302(g)(1)(E). They also provide flexibility to maintain existing peer review processes established by the Secretary and Councils, and clarify the role of the Councils' SSCs in the scientific review process.

MSA section 302(g)(1)(E) peer review processes must be carefully designed to maximize the likelihood of an outcome that is objective, and provide useful information relative to the intended scope of work. The revised NS2 guidelines adopt many of the OMB peer review standards, including balance in expertise, knowledge, and bias; lack of conflicts of interest; independence from the work being reviewed; and transparency of the peer review process. A peer review may take many forms, including individual letter or written review or panel reviews. Duplication of previously conducted peer review should be avoided. The amount of time and resources spent on any particular review and the degree of independence may depend on the novelty, controversy, and complexity of the scientific information being reviewed. Peer reviewers who are federal employees must comply with all applicable federal ethics requirements (available at: *http://www.oge.gov/*). Potential reviewers who are not Federal employees must be screened for conflicts of interest in accordance with

the procedures set forth in the NOAA Policy on Conflicts of Interest for Peer Review subject to OMB's Peer Review Bulletin (available at: *http://www.cio.noaa.gov/service_programs/NOAA_PRB_COI_Policy_110606.html*). The nature and scope of each peer review should be developed and defined prior to the selection of reviewers, to ensure that reviewers with the appropriate expertise and skills are selected.

Peer review processes established by the Secretary and a Council for that Council should not be duplicative and should focus on reviewing information that has not already undergone rigorous peer review. When the Secretary and a Council develop a peer review process per MSA section 302(g)(1)(E), the revised NS2 guidelines provide that they must publish a notice and brief description of the process in the **Federal Register**, make a complete, detailed description of the process publicly available on the Council's Web site, and update it as necessary.

The revised NS2 guidelines are not intended to replace or result in the duplication of effective peer review processes that have already been established by NMFS and the Councils, such as the Stock Assessment Workshop/Stock Assessment Review Committee (SAW/SARC), Southeast Data Assessment Review (SEDAR), Stock Assessment Review (STAR), and Western Pacific Stock Assessment Review (WPSAR). Section 302(g)(1)(E) of the MSA provides that the peer review process established by the Secretary and a Council may include existing committees or panels. The aforementioned existing peer review processes (SAW/SARC, SEDAR, STAR and WPSAR) may qualify as MSA section 302(g)(1)(E) review processes, if the determination is made by the Secretary in conjunction with the relevant Councils. If such a determination is made, the Secretary will announce the decision in the **Federal Register**.

The impact of this action on current Council peer review practices should be minimal because the peer review standards are consistent with OMB's policy and presently incorporated in the existing peer review processes established by the Secretary and Councils. However, it may be necessary to refine those existing review processes in accordance with these revised NS2 guidelines.

C. The Role of the SSC in the Review of Scientific Information

The NS2 guidelines address several roles of the SSC and/or SSC members: The SSC as scientific advisor to its Council; the SSC as a peer review panel; and SSC members' participation on other peer review panels. With regard to the advisory role, the NS2 guidelines provide that the SSCs are the scientific advisory bodies to the Councils.

Section 302(g)(1)(A) of the MSA mandates that: ''Each Council shall establish, maintain, and appoint the members of a scientific and statistical committee to assist it in the development, collection, evaluation, and peer review of such statistical, biological, economic, social, and other scientific information as is relevant to such Council's development and amendment of any fishery management plan.'' 16 U.S.C. 1852(g)(1)(A). As stated in MSA section 302(g)(1)(B), each SSC: ''Shall provide its Council ongoing scientific advice for fishery management decisions, including recommendations for acceptable biological catch, preventing overfishing, maximum sustainable yield, and achieving rebuilding targets, and reports on stock status and health, bycatch, habitat status, social and economic impacts of management measures, and sustainability of fishing practices.'' *Id.* 16 U.S.C. 1852(g)(1)(B).

Paragraph (c)(6) of the final action, which is substantively unchanged from the proposed action, clarifies that the SSC, and not a peer review process, provides recommendations to a Council for developing annual catch limits (ACLs). MSA section 302(h)(6) states that: ''Each Council shall . . . develop annual catch limits for each of its managed fisheries that may not exceed the fishing level recommendations of its scientific and statistical committee or the peer review process established under subsection (g).'' 16 U.S.C. 1852(h)(6). A possible interpretation of this section is that a Council could not exceed the fishing level recommendation of either the SSC or optional peer review process established under MSA section 302(g)(1)(E); if both provided recommendations, the lower of the two levels would be the limit. However, section 302(g)(1)(B) requires that each SSC: ''Shall provide its Council ongoing scientific advice for fishery management decisions, including recommendations for acceptable biological catch, preventing overfishing, maximum sustainable yield and achieving rebuilding targets . . .'' The SSC's acceptable biological catch (ABC) recommendation is the fishing level recommendation that is most relevant for developing an ACL.

As explained in the proposed action, NMFS believes that, when read in conjunction with MSA section 302(g)(1)(A)–(B), MSA section 302(h)(6) does not mean that a peer review process displaces the SSC's role in providing fishing level recommendations and other advice to its Council. A better reading of the two subsections is that they allow for development of fishing level recommendations either through the SSC or a peer review process, but ultimately, it is the SSC that provides final scientific advice to its Council. The purpose of a peer review process is to ensure the quality and credibility of scientific information, rather than directly providing scientific advice to a Council.

As reflected in § 600.315(b)(1)(ii) of the revised NS2 guidelines, a peer review process per MSA section 302(g)(1)(E) should be conducted early in the scientific evaluation process, in order to provide the SSC with a reasonable opportunity to review the peer review report and make recommendations to the Council. Section 600.315(c)(5) states that the SSC may provide a recommendation to its Council that is inconsistent with the findings of a peer review, in whole or in part, but in such cases the SSC should prepare a report outlining the areas of disagreement and the rationale and information supporting the SSC's determination. The revised NS2 guidelines also state that the SSC evaluation of peer review findings should be complementary to the overall scientific review process for the purpose of providing advice to its Council, and the SSC should not repeat a previously conducted technical peer review.

The revised NS2 guidelines state that an SSC member may participate in a peer review established pursuant to MSA section 302(g)(1)(E) when beneficial due to the expertise and regional knowledge of the SSC member, or when such participation would assist the SSC as a whole in its advisory role to the Council. If the SSC as a body or individual members of an SSC participate in a peer review established pursuant to MSA section 302(g)(1)(E), the SSC member(s) must meet the peer reviewer selection criteria as described in paragraph (b)(2) of the guidelines. For an SSC member or the SSC as a body to participate in a peer review, the guidelines require screening the SSC member(s) for conflicts of interest pursuant to NOAA's Policy on Conflicts of Interest for Peer Reviews Subject to OMB's Peer Review Bulletin. That policy prevents review of one's own work. Furthermore, the NS2 guidelines provide that the review and evaluation of scientific information by the Councils' SSCs should be transparent,

and should include the recording of minority viewpoints.

Some public comments focused on the evaluation and recommendations of the SSCs on the scientific information for catch-level specifications and pertinent measures of uncertainty. These issues were addressed in the MSA National Standard 1 (NS1) guidelines (74 FR 3178, January 16, 2009), and may be further refined in a subsequent update of the NS1 guidelines. (See 77 FR 26238, May 3, 2012.)

D. Stock Assessment and Fishery Evaluation (SAFE) Reports

The Secretary of Commerce (Secretary) has the responsibility for preparation and review of SAFE reports. The current NS2 guidelines state that the SAFE report is a document or set of documents that provides the Secretary and Councils with a summary of scientific information. The existing guidelines also contain specifications on the contents of SAFE reports. The revised NS2 guidelines provide further clarification on the purpose and content of the SAFE report. Specifically, they provide guidance on the scientific information that should be included in the SAFE report to enable the SSC to fulfill its role in providing its Council with ongoing scientific advice for fishery management decisions.

Some comments suggested that a SAFE report should be a single report; however the revised NS2 guidelines maintain the language from the previous NS2 guidelines that describes the SAFE report as a document or set of documents. This is necessary to provide the Secretary flexibility in the preparation of the SAFE report and accommodates differing regional practices with regard to the SAFE report. The revised NS2 guidelines clarify that the SAFE report should include essential fish habitat (EFH) information, in accordance with the EFH provisions contained in § 600.815(a)(10), as a stand-alone chapter or clearly noted section.

The revised NS2 guidelines contain provisions intended to facilitate the use of information in the SAFE reports and its availability to the Councils, NMFS, and public. For example, the NS2 guideline revisions specify, as recommended by public comments, that SAFE reports or similar documents must be made available by the Council or NMFS on a Web site accessible to the public, and that they include a summary of the information they contain and an index or table of contents of each component that comprises the SAFE report.

E. Fishery Management Plan (FMP) Development

This final action maintains the current NS2 guidelines language on FMP development, with only minor changes to the organization of the text.

IV. Responses to Comments

NMFS received comments from constituents, regional fishery management councils and the general public on the proposed guideline revisions, and most of the commenters were supportive of the standards proposed for using the best scientific information available and having robust peer review processes. Commenters provided useful recommendations that were carefully considered during development of the final NS2 guidelines.

BSIA Criteria

Comment 1: One commenter stated that the proposed guidelines were lengthy, detailed, and prescriptive regarding what constitutes BSIA and how BSIA should be used. The commenter stated that this prescriptiveness may lead Councils and SSCs to conform to inappropriate or overly restrictive approaches, or open the door to legal challenge based on procedural technicalities.

Response: NMFS disagrees. The revised NS2 guidelines are advisory guidelines that do not have the force and effect of law. In the revised guidelines, NMFS adopted the NRC (2004) recommendations on what constitutes BSIA for improving fisheries management. Most commenters supported the inclusion of language outlining appropriate criteria of relevance, inclusiveness, objectivity, transparency and openness, timeliness, verification and validation, and peer review for evaluating BSIA. Furthermore, the guidelines are consistent with the Information Quality Act and the OMB Peer Review Bulletin requirements for improving the integrity of scientific information. This action is not overly prescriptive and provides sufficient flexibility to adopt new scientific protocols for data collection and analysis; as stated in paragraph (a)(5): ''Science is a dynamic process, and new scientific findings constantly advance the state of knowledge.''

Comment 2: One commenter suggested including additional clarification regarding the difference between ''established'' and ''emergent'' science as described by the American Fisheries Society and the Estuarine Research Federation (AFS/ERF). Other comments requested clarification of the language in paragraph (a)(4): ''Scientific information includes, but is not limited to, factual input . . .''

Response: NMFS has added language in paragraph (a)(4) that clarifies the difference between ''established'' and ''emergent'' science. The AFS/ERF committee was established to consider what determines the best available science for natural resource policies and management, and its 2006 report (Fisheries 31(9):460–465) distinguished ''established'' science as scientific knowledge derived and verified through the scientific process that tends to be agreed upon without controversy. ''Emergent'' science was defined as relatively new knowledge that is still evolving and being verified, therefore, potentially controversial because it is open to debate. Therefore, paragraph (a)(4) was revised to emphasize that: ''Emergent science should be considered more thoroughly, and scientists should be attentive to effective communication of emerging science.''

Comment 3: Some commenters recommended changing the phrase ''best scientific information available'' to other phrases such as ''best data available,'' ''best scientific data possible'' or ''best scientific information possible,'' suggesting that the modifiers ''best'' and ''available'' might result in a precedence for referring to scientific guesses and poorly done science or disputes over scientific information used in management.

Response: NMFS disagrees because the phrase ''best scientific information available'' is taken directly from NS2 in the MSA. See 16 U.S.C. 301(a)(2).

Comment 4: One commenter suggested modifying paragraph (a)(1) as follows: ''Successful fishery management depends, in part, on the thorough analysis of this information, and the extent to which the information is applied for: (i) Evaluating the impact that conservation and management measures will have on living marine resources, essential fish habitat (EFH), marine ecosystems, fisheries participants, fishing communities, and the nation; (ii) Identifying areas where additional management measures are needed; and (iii) Evaluating the consequences of not taking management actions when and where necessary.''

Response: NMFS agrees to add the language as recommended in (i) and (ii) which conveys important considerations for the success of fishery management. However, the suggested language for (iii) is not accepted because section 302(h) of the MSA requires Councils to prepare an FMP or amendments thereto for each fishery under its authority in need of

conservation and management. Therefore, not taking management action when and where necessary is not an option.

Comment 5: Commenters requested that the revised NS2 guidelines add environmental conditions (e.g., weather modeling) to the types of scientific data considered in marine conservation and management, and should specify that historical information shall include the use of weather (e.g., wind, air temperature, water temperature, and wave height data) and economic conditions (e.g., fuel prices) as all of these have tremendous effect on the fishery participation and effort estimates.

Response: NMFS agrees that environmental information is potentially useful for fisheries management. Ecological information mentioned in paragraph (a)(1) includes interactions of species with their environment, including the physical environment. The guidelines avoid being too prescriptive by not providing an exhaustive list of potential types of scientific information. The term ''environmental'' was inserted into the following sentence to be more inclusive: ''Fishery conservation and management require high quality and timely biological, ecological, environmental, economic, and sociological scientific information to effectively conserve and manage living marine resources.'' 50 CFR 600.315(a)(1).

Comment 6: Two commenters noted that there is no consideration of how the BSIA principles enshrined in the MSA should be applied to NMFS in pursuit of its responsibilities under the Endangered Species Act (ESA) or the Marine Mammal Protection Act (MMPA), and the NS2 guidelines should also specify that criteria for BSIA and peer review standards should be applicable to these other statutes.

Response: The National Standards and associated guidelines are specific to fishery management measures developed and promulgated under the MSA. The ESA and MMPA are separate laws with their own implementing regulations and science policies. Changes to those regulations and policies are beyond the scope of this action.

Comment 7: Some commenters suggested that the NS2 guidelines should provide more guidance for NMFS and Councils' SSCs to address the lack of scientific information, resolve critical data gaps, and specify that investments in time, effort, and funding are required to turn data poor fisheries into data rich fisheries. One commenter recommended that the NS2 guidelines include the statement: ''For fisheries that are data poor and require management, every effort should be made to collect data that will increase the certainty of needed management actions.'' Another commenter suggested that paragraph (a)(3) should state: ''In information-limited situations where simpler tools and assessment methods are warranted, scientific advice should be accompanied by recommendations for prioritizing data-needs in the short and long-term to move the fishery into a higher data category and improve assessment methods.'' One commenter also suggested adding, ''identification of future research areas and funding priorities'' to the end of the list of research-plan elements in paragraph (a)(5).

Response: NMFS did not add the suggested language because the revised guidelines adequately address the importance of the evaluation of uncertainty, identification of data gaps, and assessment of risks associated with limited information when developing fishery management actions. NMFS also believes that funding and priorities for resolving data gaps are best addressed by the peer review and research prioritization processes of the Secretary and Councils.

Comment 8: Some commenters expressed concern about the evaluation of uncertainty and data gaps in scientific information and the effect on SSC and Council decision-making. The commenters reported that their experience thus far indicates that a lack of information merely results in reduced quotas and fishing effort so as not to trigger the annual catch limit (ACL) or accountability measures (AM) thresholds pursuant to MSA requirements. Some recommended that the NS2 guidelines should provide guidance on how uncertainty should be addressed beyond the guidance that is provided in the proposed rule. One commenter recommended a more cautious interpretation of findings where uncertainty is high in order to ensure conservation of data-poor species and provide an incentive to collect the necessary information. Some commenters suggested adding language stating that sources of uncertainty must be considered and accounted for to the maximum extent possible.

Response: The revised NS2 guidelines have sufficient, but not overly prescriptive, language on the importance of addressing uncertainty in scientific information. For example, paragraph (a)(2), states: ''Scientific information that is used to inform decision making should include an evaluation of its uncertainty and identify gaps in the information.'' Further guidance for addressing uncertainty is covered in the NS1 guidelines. 50 CFR 600.310(f)(4) and (6).

Comment 9: One commenter suggested that the statement in paragraph (a)(2): ''Limitations in scientific information may not be used as a justification for delaying fishery management actions,'' presupposes that in the absence of information, management actions should be taken even if there may be compelling reasons for not taking action until more information is known. The commenter recommended that in such circumstances, the NS2 guidelines need to allow for evaluation of a no action alternative in the absence of scientific information and should assess the consequences of action versus no action.

Response: NMFS struck the sentence at issue in paragraph (a)(2) because the concept of not delaying management actions due to limitations in scientific information is adequately addressed in paragraph (a)(6)(v). In response to the comment, the NS1 guidelines identify the need for a precautionary management response in the face of uncertainty, and the lack of data generally suggests the need for more precaution, but not inaction.

Comment 10: One commenter recommended that the NS2 guidelines establish a conservative precautionary default for each FMP in case of delays or problems with scientific information. Specifically, the more dated the scientific information used to support fishery management actions, the more caution should be used in setting the acceptable biological catch (ABC) level when there is uncertainty. NMFS should require the SSCs and Councils to be more conservative in their management decisions and to err on the side of precaution to reduce the risk of overfishing. If a Council delays management action, NMFS must step in and implement this precautionary default.

Response: It is beyond the scope of the NS2 guidelines to address the level of precaution needed to manage fisheries resources. The NS1 guidelines address the need for precaution, including a requirement that scientific uncertainty be taken into account when the SSC makes recommendations to its Council regarding acceptable biological catch (ABC) levels. The role of the NS2 guidelines is to assure that uncertainty is calculated as accurately as possible so that it can be taken into account consistent with the NS1 guidelines.

Comment 11: One commenter recommended an increased focus on economic impacts on coastal

communities in all fishery management decisions, and greater transparency as to how the various factors, including economic considerations, are weighted.

Response: National Standard 8 requires consideration of impacts on fishing communities when developing fishery conservation and management measures. The NS2 guidelines emphasize the importance of high quality and timely social and economic information for evaluating the impact that conservation and management measures will have on fishing communities, as well as living marine resources, essential fish habitat, marine ecosystems, fisheries participants and the nation.

Comment 12: One commenter, noting the increasing complexity of fisheries models, both for stock assessment and for social and economic analyses, recommended adding language in paragraph (a)(4) to reflect that system complexity will inevitably lead to more complex decision making models, especially in ecosystem based management, where stock assessments, social impacts and environmental systems are integrated into a single model or series of inter-connected models.

Response: Although efforts to take into account the full complexity of ecosystems and fisheries may lead to complex models, NMFS disagrees that this would inevitably lead to complex decisions. A range of model complexities, commensurate with data availability and management questions, is anticipated by NMFS to meet the needs of the Councils.

Comment 13: One commenter recommended directing fishery managers to use scientific information at the ecosystem level.

Response: Paragraph (a)(6)(i) of the revised NS2 guidelines directs that an important criteria for evaluating BSIA is its relevance to the current questions or issues under consideration. Thus, the guidelines provide that if it is appropriate for ecosystem level scientific information to be considered or included in a particular analysis, managers should consider such information. Further guidelines are not necessary.

Comment 14: One suggestion was provided to change the term ''data-poor'' to ''information-limited'' because even data-rich fisheries can be information-limited and require the use of proxies if certain crucial data are missing or highly uncertain.

Response: NMFS agrees and added the term ''information-limited'' to paragraph (a)(3) of the revised NS2 guidelines.

Comment 15: One commenter requested clarifying the use of ''surveys or sampling programs'' to determine if this includes only underwater sampling and fishing catch collections, or whether ''survey'' also includes non-scientific telephone and dockside questionnaires. The commenter recommended discontinuing the use of phone surveys and instead using information from fishing license applications and species endorsements.

Response: NMFS uses a range of surveys and sampling programs, including phone surveys, to collect scientific data from commercial and recreational fisheries. NMFS surveys that directly gather information from the public or business entities, including phone surveys administered by the NMFS Marine Recreational Information Program, have been reviewed and meet the rigorous OMB standards for survey methodologies employed by the Federal government. See OMB Guidance on Agency Survey and Statistical Information Collections (January 20, 2006).

Comment 16: One commenter questioned using peer review as a criteria for evaluating what constitutes BSIA, stating that external peer review, outside the normal SSC process, should not be a separate and mandatory criteria for determining BSIA, particularly because the use of peer review is discretionary in MSA section 302(g)(1)(E). The commenter recommended that external peer review should be an optional tool, best used in circumstances of significant controversy regarding scientific information. Another commenter recommended changing: ''. . . peer review, as appropriate; and communication of findings'' in paragraph (a)(5) to: ''shall include peer review; and subsequent communication of findings.''

Response: Paragraph (a)(6) of the revised NS2 guidelines does not mandate peer review in all cases, but simply lists peer review as one of many criteria for evaluating BSIA, to be used as appropriate. We believe the guidelines should be flexible, therefore paragraph (a)(5) calls for peer review ''as appropriate'' as an element of a sound research plan. The revised NS2 guidelines state that the Secretary and Council have discretion to establish a peer review process as provided in section 302(g)(1)(E) of the MSA and that: ''peer review should be used when appropriate.''

Comment 17: Paragraph (a)(6) of the proposed guidelines stated that: ''Principles for evaluating best scientific information must be based on relevance, inclusiveness, objectivity, transparency and openness, timeliness, verification and validation, and peer review, as appropriate.'' One commenter suggested changing ''must'' to ''should.'' Another recommended eliminating ''as appropriate'' and requested that the SSC should consider peer reviewed scientific information above non-peer reviewed scientific information.

Response: NMFS changed the quoted sentence in the revised guidelines to: ''Criteria to consider when evaluating best scientific information available are relevance, inclusiveness, objectivity, transparency and openness, timeliness, verification and validation, and peer review, as appropriate.'' The criteria for evaluating BSIA were adopted from the recommendations of the NRC (2004) on the application of BSIA principles in the development of fishery conservation and management measures. In response to the comments above, the change in paragraph (a)(6) was made to emphasize that these are criteria or factors to be considered when evaluating BSIA, not mandatory elements that must be met in all cases.

Comment 18: One commenter objected to the use of a management strategy based on a proxy derived from another geographic area and different species to judge the responses of industry participants or business decisions, and recommended use of socio-economic data from the affected management area. Another commenter requested clarification on how the proxy, related species, and other geographical information could be used in modeling in data poor situations as specified in paragraph (a)(6)(i).

Response: The NS1 guidelines address the use of a proxy or indicator species for specifying maximum sustainable yield (MSY) in data-limited situations. See 50 CFR 600.310(e)(1)(iii) and (iv). Although the use of proxies is acknowledged as a useful tool in data limited situations, NMFS has revised in paragraph (a)(6)(i) the phrase ''powerful tool'' to ''may be a useful tool'' in the final NS2 guidelines to ensure proxies are not used unnecessarily.

Comment 19: Commenters supported consideration of relevant local and traditional knowledge (LTK) when evaluating scientific information to support fishery management actions, particularly in data limited situations and for fisheries in regions comprised of diverse indigenous communities with extensive traditional and local ecological knowledge. Commenters recommended specifying that collection of LTK must be consistent with appropriate scientific methods, undergo scientific review, and peer review, which may include indigenous

fishermen and hunters as well as researchers from other relevant disciplines to evaluate the sources and methods of recording LTK. They additionally suggested adding standards and procedures for incorporating LTK into the scientific process to increase Councils' confidence in its use.

Response: NMFS agrees that using LTK in support of fishery management actions is important, and recognizes that there are various ways that LTK can be utilized in the fishery management process, including experiential LTK knowledge from both indigenous and non-indigenous sources. NMFS encourages the development of scientific approaches to collection and evaluation of LTK, but does not believe the NS2 guidelines should prescribe appropriate collection and evaluation of LTK.

Comment 20: With respect to the language in paragraph (a)(6)(ii)(C): ''To the extent possible, an effort should be made to reconcile scientific information with local and traditional knowledge,'' commenters recommended removing ''reconcile'' because it implies that scientific information must be made consistent with LTK, or vice versa, if there is a discrepancy. The use of ''reconcile'' could be misconstrued to mean that scientific information needs to be reconciled to conform to LTK information. LTK should not be required to be validated by another form of science for it to be incorporated or factored into a decision.

Response: NMFS agrees and will remove ''reconcile'' to ensure that LTK information is acknowledged and evaluated along with other scientific information. NMFS agrees that reconciliation of LTK and other information should not be necessary for Councils to consider both types of information. Where the two types of information directly conflict and both have been validated through their respective review processes (SSC and LTK review subcommittee), the Councils should adopt an approach that takes account of the uncertainty inherent in this conflict.

Comment 21: One commenter requested that paragraph (a)(6)(iii) identify what constitutes ''non-scientific considerations'' and clearly define ''standards for objectivity'' for scientific information. The commenter suggested that the final NS2 guidelines should describe the process for establishing, documenting, and evaluating compliance with the standard of objectivity.

Response: NMFS agrees that the proposed rule language should be clarified and has revised paragraph (a)(6)(iii) to read: ''Objectivity. Scientific information should be accurate, with a known degree of precision, without addressable bias, and presented in an accurate, clear, complete, and balanced manner. Scientific processes should be free of undue nonscientific influences and considerations.'' Non-scientific considerations include activities that negate the attributes of scientific standards, such as verification, validation, and approval by scientific review, as indicated in the BSIA section of the guidelines.

Comment 22: Most commenters supported the importance of transparency as specified in the proposed guidelines, while some expressed concern that more public transparency was needed during the scientific peer review and fishery management meetings. One commenter stated the entire review process should be transparent and recommended paragraph (a)(6)(iv)(B) specify all rationale for excluding data from analysis must be clearly explained.

Response: The NS2 guidelines emphasize that vetting of scientific information should be open and public. Moreover, the guidelines are consistent with MSA section 302(i)(2)(A) which provides broad public and shareholder access to the Councils' fishery conservation and management process. See 16 U.S.C. 1852(i)(2)(A). No change was made regarding paragraph (a)(6)(iv)(B) because it already states that: ''Scientific information products . . . should explain any decisions to exclude data from analysis.''

Comment 23: Two commenters expressed concern that paragraph (a)(6)(iv) suggests that a researcher must allow general public comments on all phases of research design, collection, and analysis. Without technical expertise, the public could not provide constructive comments from an analytical perspective, and the requirement to allow public comment during each stage of the scientific process would be cumbersome and result in delay, inhibit the scientific process, or politicize the research itself. Another commenter recommended requiring public comment on reports of uncertainty, statistical error, data limitations, and decisions to exclude data from analyses.

Response: To address the concern, in paragraph (a)(6)(iv) NMFS struck the text: ''the public should have access to each stage in the development of scientific information,'' and revised the paragraph to read: ''Public comment should be solicited at appropriate times during the review of scientific information.'' The goal of these revised guidelines is to provide flexibility while emphasizing the importance of both public access to the scientific information used to support fishery management actions and public comment. Transparency of scientific data and analytical methods is a precondition for reproduction by others of the analyses of scientific information as noted in the verification section.

Comment 24: One comment suggested adding after paragraph (a)(6)(iv)(B) a new paragraph as follows: ''(C) The reports of the SSC shall contain an analysis of the certainty of the findings and shall clearly state a confidence factor in the validity of the information and analysis in the form of a percentage of the reliability of the information provided.''

Response: NMFS does not agree with prescribing that the SSC report uncertainty in a particular way. There are many ways to characterize uncertainty, and there is no way to predetermine a particular level of uncertainty. Transparency regarding uncertainty is adequately addressed in paragraph (a)(2) of the revised guidelines that states: ''Scientific information that is used to inform decision making should include an evaluation of its uncertainty and identify gaps in the information.''

Comment 25: One commenter requested that the Councils be required to provide adequate time in their decision-making process to have scientific information analyzed and subjected to appropriate review before it is used to inform fishery management decisions, and that NMFS and the Councils establish benchmark stock assessment peer reviews sufficiently far in advance of SSC review and recommendations to its Council. Another commenter suggested changing ''must be brought forward'' to ''may be brought forward'' in paragraph (a)(6)(v)(B) on timeliness.

Response: The timing of a Council's decision-making process is not within the scope of the NS2 guidelines. However, NMFS agrees with the second commenter and has changed the language in paragraph (a)(6)(v) to ''may be considered for use.''

Comment 26: One commenter recommended that paragraph (a)(6)(vi) regarding verification and validation be moved to the Peer Review portion of the guidelines in paragraph (b) because unrealistic demands for validation and verification could be misused to delay action under the guise of requiring more research to validate uncertain information. The commenter believes the methodological considerations with using verification and validation to

evaluate BSIA are better addressed as subordinate points in the peer review section.

Response: NMFS retains the verification and validation section in the BSIA portion of the guidelines because these are important requirements of science that should be undertaken regardless of whether the science is peer reviewed. Verification is used to document scientific data collection and analytical procedures and NMFS routinely publishes sampling procedures for all of its major survey programs. Validation is the requirement to test scientific methodology and is also routinely done independently of peer review. The peer review section focuses on standards for conducting a peer review, such as the form of the review or criteria for selection of reviewers. The terms of reference for a specific peer review can require reviewers to determine if the science has been validated and verified. Paragraph (a)(6)(v) explicitly addresses delay concerns by stating that: ''Management decisions should not be delayed due to limitations in the scientific information or the promise of future data collection or analysis.''

Comment 27: One commenter suggested editing paragraph (a)(6)(vi)(B) to state: ''. . . the accuracy and precision of the estimates are adequate.''

Response: NMFS revised paragraph (a)(6)(vi)(B) to include both ''accuracy and precision'' as important in estimates, and further clarified the importance of accuracy by adding: ''Models should be tested using simulated data from a population with known properties to evaluate how well the models estimate those characteristics and to correct for known bias to achieve accuracy.''

Comment 28: Paragraph (a)(6)(viii) of the proposed guidelines states: ''To the extent practicable, the scientific information that supports substantial fishery management alternatives considered by a Council should be peer reviewed.'' Some commenters noted that peer review addresses scientific issues. This language implies that the peer review could apply to policy matters, including fishery management decisions, thereby undermining the role of the Councils as primary policy making bodies. One commenter stated that the NS1 guidelines distinguish between the scientific process (determination of overfishing levels (OFL) and ABC) and the management process (determination of ACL, annual catch target, and management measures), and that both processes are interdependent and closely linked. Although the scientific peer review process is well established, commenters expressed concern that the management process does not currently undergo a similar review process. Another commenter recommended that the NS2 guidelines advise the use of management strategy evaluation (MSE) or alternative technology, to support the peer review of management alternatives. MSE, which involves evaluating the tradeoffs and performance of different management alternatives, is a type of management tool for evaluating management alternatives that produce feedback into the stock assessment process.

Response: To clarify that peer review pertains to scientific information, NMFS has revised paragraph (a)(6)(vii) to read: ''The scientific information that supports conservation and management measures considered by the Secretary or a Council should be peer reviewed, as appropriate.'' In regard to comments suggesting that management alternatives must be reviewed, the choice between management alternatives is a policy decision and is outside the scope of the NS2 guidelines. The intent is not to peer review the Council's management decisions, but rather to ensure, as required by NS2, that conservation and management measures are based on BSIA. To that end, paragraph (a)(6)(vi)(B) provides: ''The concept of validation using simulation testing should be used, to the extent possible, to evaluate how well a management strategy meets management objectives.''

Peer Review Standards

Comment 29: Many comments supported the inclusion of the current OMB peer review requirements in the NS2 guidance, as appropriate, and the establishment of peer review processes pursuant to MSA section 302(g)(1)(E). Some commenters requested changing the heading of paragraph (b) to ''Optional Peer Review'' so that the standards apply only to optional peer reviews. Some commenters requested further guidance on when an independent peer review should occur and expressed concern with an ''optional'' peer review because this could indicate that the Councils, SSCs and agency are disinterested in utilizing this process. Other comments requested more prescriptive language including how or when peer review should be conducted, and by whom, especially when there is significant controversy regarding the scientific information on which fishery management decisions will be based. One commenter emphasized that the NS2 guidelines should require that each Council, working with the Secretary, determine whether an optional external peer review process is warranted, whereas others opposed the implication that an external peer review may be necessary, stating: ''The Council has sole discretion to establish a supplemental peer review.''

Response: NMFS does not agree that the peer review section should be titled ''optional peer review.'' MSA section 302(g)(1)(E) and the revised NS2 guidelines adequately convey that this is an optional, not mandatory peer review process. The language in section 302(g)(1)(E) clearly states that: ''The Secretary and each Council *may* establish a peer review process for that Council. . .'' 16 U.S.C.1852(g)(1)(E) (emphasis added). Thus the Secretary and each Council have the discretion, working together, to establish a peer review process. Under the revised guidelines, the Secretary and Councils have the necessary flexibility to continue to use and improve their existing peer review processes. See response to Comment 36 for factors to consider when determining whether to conduct a peer review, and if so, the appropriate level of review.

Comment 30: Commenters asked for clarification on the SSC's role as an advisory body to the Council and the SSC's participation in a peer review process established pursuant to MSA section 302(g)(1)(E). Some commenters requested that paragraph (b) of the revised guidelines clarify that the SSC is the primary and final peer reviewer for scientific information. One commenter stated that MSA section 302(g)(1)(E) was specifically crafted to allow SSCs to function as the primary peer review panel and that the SSC peer review satisfies the Information Quality Act requirements. Another commenter opposed the use of external peer reviewers, and stated that MSA section 302(g)(1)(E) allows Councils to use their own SSC as an optional peer review process at the discretion of the Council. One commenter stated the guidance in paragraph (b) should be for use only when a Council decides to use an external peer review, and that additional peer reviews beyond the SSC would further lengthen the Council process and should be avoided. Contrary to this, other commenters stated the SSC should not participate in peer reviews, but rather all peer reviews should be independent and external to the SSC process.

Response: MSA section 302(g)(1)(E) gives the Secretary and Councils the discretion to establish a peer review as appropriate, and does not preclude Councils from using their SSCs for peer review. Paragraph (b) of the revised NS2

guidelines: ''provides guidance and standards that should be followed in order to establish a peer review process per [MSA] section 302(g)(1)(E).'' NMFS does not agree that MSA section 302(g)(1)(E) states that SSC peer review alone satisfies IQA requirements, but rather, that a peer review process established by the Secretary and a Council is deemed to satisfy IQA requirements. NMFS believes that further revision to the guidelines is unnecessary because they are consistent with the MSA and clearly provide that the SSC, as a body or its members, may participate in peer review. The guidelines are clear that this discretionary peer review process is not meant to supplant the role of the SSC.

Comment 31: A commenter requested that the agency clarify whether the Secretary has the authority to veto a decision by a Council to establish a peer review process pursuant to MSA section 302(g)(1)(E), or whether the Council may proceed as it deems appropriate subject to ultimate Secretarial review of the consistency of the FMP with the MSA. The commenter recommended the latter view as the appropriate policy.

Response: NMFS disagrees with the suggested interpretation of MSA section 302(g)(1)(E) because that section clearly states that: ''the Secretary and each Council may establish a peer review process for that Council. . .'' The establishment of a peer review process is a joint Secretary-Council activity. NMFS disagrees with the suggestion that the Council may proceed as it deems appropriate, subject to ultimate Secretarial review. It is important to note that joint Secretary-Council establishment of a peer review process does not supplant the Secretarial authority to review consistency of Council fishery management plans, amendments or other actions with the MSA and other applicable law.

Comment 32: Commenters requested further clarification on the text in paragraphs (b)(1), and (c)(4) regarding duplicating or repeating peer reviews. One commenter expressed concern that the paragraphs could potentially restrict the SSC re-evaluation of peer-review reports. Commenters stated that the guidelines should have flexibility to allow for additional analysis within any review process that is complementary and not duplicative.

Response: As discussed in response to comment 30, *supra,* paragraph (b) of the revised guidelines explicitly states that: ''A peer review process is not a substitute for an SSC and should work in conjunction with the SSC.'' Paragraph (c)(4) of the guidelines provides that the SSC evaluation of peer review findings should be complementary to the overall scientific review process for the purpose of providing advice to its Council, and the SSC should not repeat a previously conducted technical peer review because of disagreement with peer review findings. NMFS believes that these provisions allow for sufficient flexibility and therefore, no changes were made to paragraphs (b)(1), or (c)(4).

Comment 33: Commenters supported paragraph (b)(4) that specifies: ''The Secretary will announce the establishment of a peer review process under [MSA] section 302(g)(1)(E) in the **Federal Register** along with a brief description of the process'' while other commenters were concerned that the proposed guidelines do not acknowledge the existing stock assessment review processes (SAW/SARC, SEDAR, STAR and WPSAR) as being consistent with the MSA section 302(g)(1)(E) review process. Two commenters recommended that the Secretary clearly identify which existing Council committees or panels meet the NS2 guideline standards, in order to avoid confusion, prevent duplication and improve the ability of NMFS and the Councils to determine the appropriate type of peer review required for particular information.

Response: The revised guidelines are consistent with the language in MSA section 302(g)(1)(E) that a peer review process established by the Secretary and a Council may include existing committees or panels. However, as with all other processes, in order to be recognized formally as MSA 302(g)(1)(E) processes, the same process as described in (b)(4) of the revised guidelines must be followed, culminating in an announcement of the formal designation in the **Federal Register**. NMFS disagrees that such determinations are made only by the Secretary, thus the guidelines provide for a role for both the Secretary and the relevant Council in making MSA section 302(g)(1)(E) determinations.

Comment 34: One commenter criticized the language in paragraph (b)(1)(iii) of the revised guidelines arguing that policy considerations are in the purview of the Secretary and the Councils. Some commenters suggested that the decisions on all fishery management plans should be peer reviewed. Another commenter requested clarification on ''scientific'' and ''policy'' reviews and suggested distinguishing scientific uncertainty as a matter for scientific peer review and risk tolerance as a matter for policy peer review.

Response: NMFS agrees that clarification would be helpful and has revised paragraph (b)(1)(iii) to read: ''The scope of work may not request reviewers to provide advice on policy or regulatory issues (e.g., amount of precaution used in decision-making) which are within the purview of the Secretary and the Councils, or to make formal fishing level recommendations, which are within the purview of the SSC.''

Comment 35: Some commenters suggested that the scope of peer reviews should include all stages of the scientific process. One commenter suggested that the guidelines should require all data and science used by NMFS or the Councils be subjected to peer review before being used to inform management decisions.

Response: NMFS agrees that the scope of peer review should include all stages of the scientific process and has clarified in paragraph (b)(1)(iii) that the scope of peer reviews includes ''evaluation of the various stages of the science.'' NMFS disagrees that all data and science should be peer reviewed because such a requirement would be impractical, not required in all cases, and would cause significant delays in the fishery management process.

Comment 36: Some commenters requested more specificity regarding what types of scientific information must be peer reviewed. One commenter recommended that paragraph (b)(1)(i) be revised not simply to provide the Secretary and Council with discretion to determine appropriate peer review processes, but to require them to identify major products they receive and to establish criteria for determining the appropriate peer review for each. An SSC peer review or other independent form of review should occur when significant revisions are made to a benchmark assessment. Another commenter stated that all benchmark assessments should be subject to a formal external review, and the reviewers must be independent from the science to be reviewed, such as reviewers drawn from the Center for Independent Experts (CIE) or another comparable outside organization.

Response: NMFS believes the revised NS2 guidelines provide sufficient guidance as to the necessity of and appropriate scope of peer review in paragraph (a)(6)(vii). This guidance is adopted from and consistent with the OMB peer review requirements. For peer reviews requiring a greater degree of independence, such as benchmark assessments, the Secretary and Councils routinely use independent reviewers,

including reviewers who are selected through the CIE process.

Comment 37: Commenters supported peer reviews being conducted early in the process of producing scientific information. Some commenters suggested further guidance on the timing of peer review. Another commenter suggested that NMFS and the Councils must provide compelling justification for foregoing established peer review processes.

Response: NMFS understands the importance of and need for conducting timely peer review to ensure that peer review findings are available to an SSC and its Council. NMFS has revised paragraph (b)(1)(ii) of the guidelines to read: ''The peer review should, to the extent practicable, be conducted early in the process of producing scientific information or a work product so peer review reports are available for the SSC to consider in its evaluation of scientific information for its Council and the Secretary.''

Comment 38: Two commenters recommended that peer review should be a tool used to review the SSC's advice, while other commenters stated that the peer review process should be used to inform the Council's SSC.

Response: NMFS disagrees that peer review should be used to review the SSC's advice because, as explained in paragraph (a)(6)(vii) of the guidelines: ''Peer review is a process used to ensure that the quality and credibility of scientific information and scientific methods meet the standards of the scientific and technical community.'' Paragraph (c)(4) correctly states: ''peer review of scientific information used to advise the Council, including a peer review process established by the Secretary and the Council under [MSA] section 302(g)(1)(E), should be conducted early in the scientific evaluation process in order to provide the SSC with reasonable opportunity to consider the peer review report and make recommendations to the Council as required under [MSA] section 302(g)(1)(B).''

Comment 39: Paragraph (a)(6)(v)(B) of the proposed guidelines stated that: ''Management decisions should not be delayed due to data limitations or the promise of future data collection and analysis.'' One commenter suggested revising the text to make clear that peer reviews cannot be used to justify delay of management decisions either, especially if a stock is overfished or subject to overfishing.

Response: NMFS agrees that this is the intent of the text (which was moved to paragraph (a)(6)(v) of the revised guidelines) and revised it to clarify: ''Mandatory management actions should not be delayed due to limitations *i*n the scientific information or the promise of future data collection or analysis.'' NMFS also added new text in paragraph (b)(1)(ii) regarding timing of peer reviews. (See response to Comment 37 for explanation.)

Comment 40: A commenter suggested inserting additional text in paragraph (b)(1)(iii) providing that the scope of peer reviews should include findings and recommendations on missing information, future research, data collection, and improvements in methodologies and should also specify the type of expertise and balance of perspective for a review panel.

Response: Paragraph (b)(2)(i) states: ''Peer reviewers must be selected based on scientific expertise and experience relevant to the disciplines of subject matter to be reviewed. The group of reviewers that constitute the peer review should reflect a balance in perspectives, to the extent practicable, and should have sufficiently broad and diverse expertise to represent the range of relevant scientific and technical perspectives to complete the objectives of the peer review.'' Therefore, NMFS believes that the guidelines sufficiently address expertise and balance of perspective for peer review. NMFS has revised paragraph (b)(1)(iii) to clarify that the scope of work should allow reviewers to make recommendations regarding ''missing information, future research, data collection, and improvements in methodologies.''

Comment 41: One commenter suggested revising paragraph (b)(2) to state that peer reviewer selection should be guided by the scope of work which, according to paragraph (b)(1)(iii), should be determined before selecting reviewers.

Response: NMFS believes the final rule has sufficient language to address the commenter's concern. Section (b)(1)(iii) specifies: ''The scope of work or charge (sometimes called the terms of reference) of any peer review should be determined in advance of the selection of reviewers'' and paragraph (b)(2)(i) states: ''Peer reviewers must be selected based on scientific expertise and experience relevant to the disciplines of subject matter to be reviewed, including a balance in perspectives'' to ensure the peer reviewer selection is guided by the scope of work.

Comment 42: One commenter recommended that the ''group of reviewers'' that constitute the peer review have sufficiently broad and diverse expertise, and should also be representative of all sectors of the resource that are to be effected (e.g., commercial interests, charter operators, party/head boat operators, and recreational interests).

Response: NMFS disagrees that scientific peer review must include representatives of all sectors with an interest in the resource. Input from such sectors occurs through the Council advisory panels, not through scientific peer review. The revised guidelines are clear on the peer reviewer qualification requirements of scientific expertise and experience relevant to the disciplines of subject matter to be reviewed, including a balance in perspectives.

Comment 43: One commenter suggested that paragraph (b)(2)(i) on expertise and balance, when read with paragraph (a)(6)(iii) on objectivity, appears to establish a process requiring public hearings and testimony before a group with ''a balance in perspectives'' that is formed in order to review ''substantial fishery management alternatives.''

Response: Peer reviews may require a balance in expertise and perspectives to review science that encompasses various disciplines, but seeking that balance should not involve consideration of non-scientific issues. NMFS provided clarification to show this is not the intent by revising paragraph (a)(6)(vii) to read: ''the scientific information that supports conservation and management measures considered by the Secretary or a Council should be peer reviewed'' to differentiate between reviewing science products and management actions.

Comment 44: One commenter expressed concern with the NS2 guidelines requiring a ''balance of viewpoints'' because a single individual would never meet this standard. The commenter recommended that the guidelines be revised to ensure a balance in the quality, number of perspectives, and number of reviewers.

Response: The language in paragraph (b)(2)(i) is not in reference to a single peer reviewer as the commenter suggested, but rather, the peer review body as a whole. NMFS revised the paragraph to clarify this point, as indicated in the response to Comment 40.

Comment 45: One commenter criticized the present peer review system claiming that NMFS controls all aspects of the process and stated that there should be outside or independent review of science used in support of fishery management actions, including data collection and analysis. The commenter stated that peer reviewers are ''handpicked'' by NMFS in the SEDAR peer review process. Another commenter recommended that members

of the peer review should not include members of the SEDAR, SSC, Advisory Panel, and the Council, thus eliminating potential sources for conflicts of interest.

Response: The final NS2 guidelines provide sufficient guidance to ensure that reviewers meet peer review standards consistent with the OMB's Peer Review Bulletin and the National Academies Policy on Committee Composition and Balance and Conflicts of Interest by specifying in paragraph (b)(2) that: ''The selection of participants in a peer review should be based on expertise, independence, and a balance of viewpoints, and be free of conflicts of interest.'' Paragraph (c)(1) of the guidelines provides that: ''SSCs may conduct peer reviews or evaluate peer reviews to provide clear scientific advice to the Council'' consistent with MSA section 302(g)(1)(A). See 16 U.S.C. 1852(g)(1)(A). In regard to the comment on SEDAR reviews, the SEDAR reviews include external peer reviewers who are independently selected by a third party, the Center for Independent Experts, to meet rigorous peer review standards.

Comment 46: Comments were generally supportive of the requirement that peer reviewers must not have conflicts of interest and included suggestions for revising paragraph (b)(2)(ii). One commenter suggested that the phrases ''real or perceived conflict of interest'' and ''any financial or other interest'' may create ambiguity and the opportunity for inappropriate manipulation of the selection process. Another commenter recommended that the definition of conflicts of interest be further expanded to include advocacy conflict of interest or conflict of interest of a recipient of any consulting agreement, grant, or contract with NMFS. Another recommendation was to revise the text to be more specific about the conditions under which a conflict of interest is unavoidable such as when there is only one qualified reviewer available.

Response: In response to comments, NMFS revised paragraph (b)(2)(ii) to delete ''real or perceived,'' but retained ''any financial or other interest.'' NMFS also revised the text to specify: ''For reviews requiring highly specialized expertise, the limited availability of qualified reviewers might result in an exception when a conflict of interest is unavoidable; in this situation, the conflict must be promptly and publicly disclosed.'' Consulting arrangements, grants and contracts are included as potential conflicts of interest in paragraph (b)(2)(ii)(B). Advocacy activities are adequately addressed in the NOAA Conflict of Interest policy, which is incorporated by reference into the NS2 guidelines in paragraph (b)(2)(ii).

Comment 47: One commenter stated that the selection of peer reviewers should be based on expertise and qualifications exclusively. Thus, paragraph (b)(2)(iii) should be revised to eliminate ''should rotate'' and the presumption that past service on a peer review panel is a basis for exclusion from future service.

Response: The guidelines are clear on the importance of expertise and qualifications in the selection of peer reviewers, and the intent of the language on rotation of peer reviewers across the available pool of reviewers is to avoid a situation where a peer reviewer repeatedly reviews his or her scientific contributions from a previous review. Therefore, NMFS disagrees with the request to remove the language regarding rotating reviewers.

Comment 48: Commenters generally agreed that the names of reviewers must be made publicly available. However one commenter suggested the language in paragraph (b)(3), ''Names and organizational affiliations of reviewers should be publicly available prior to review'' should be revised because of a concern for interference in the selection of independent reviewers. Another commenter requested that the guidelines specify that the peer reviewer selection process be publicly transparent, including the rejection of a potential reviewer based on conflicts of interest.

Response: NMFS agrees that the peer review process should be as transparent as possible, including the public disclosure of the names and affiliations of the reviewers. However, NMFS agrees to remove the text ''prior to review'' to allow the option to withhold names of peer reviewers prior to review, when necessary. NMFS notes this practice is consistent with the OMB Peer Review Bulletin. NMFS disagrees with the suggestion of requiring public transparency of rejected potential reviewers because this is not required by the OMB peer review guidelines. Additionally, conflict of interest disclosure information for potential reviewers contains sensitive financial information that must be held in confidence.

Comment 49: Most commenters supported the requirement for transparency in the peer review process, but one commenter expressed concern that it is impractical for public participation in all peer reviews. For example, the public could not attend a peer review conducted as an external desk review where a report is sent by email to the reviewer. Another commenter suggested that the guidelines appear to preclude any individual review, such as a desk review, because the guidelines imply that a review panel meeting is the only acceptable peer review process.

Response: Paragraph (b)(1)(i) specifies: ''The Secretary and Council have discretion to determine the appropriate peer review process for a specific information product. A peer review can take many forms, including individual letter or written reviews, and panel reviews.'' Therefore, a review panel meeting is not the only acceptable peer review process under the revised NS2 guidelines. To ensure transparency of all types of peer reviews, NMFS revised paragraph (b)(3) to read: ''A transparent process is one that ensures background documents and reports from peer review are publicly available . . . and allows the public full and open access to peer review panel meetings.''

Comment 50: Some commenters requested that the guidelines specify that background documents be made publicly available 30 days prior to a peer review.

Response: NMFS believes that inclusion of a specified number of days would be overly prescriptive because there are various forms of peer review, some of which may require a more expedited timeline. We believe that the guidelines adequately emphasize the importance of timeliness and transparency in peer review.

Comment 51: One commenter suggested that the 14 day advanced notice of a peer review meeting specified in the action should be extended to provide a minimum of a 21 day notice period.

Response: In order to extend the advance notice, NMFS revised the language in paragraph (b)(3) to read as: ''public notice of the peer review panel meetings should be announced in the **Federal Register** with a minimum of 14 days, and with an aim of 21 days, before the review to allow public comments during meetings.''

Role of SSC in the Review of Scientific Information

Comment 52: NMFS received many comments regarding whether or not the SSC should participate in peer review. Some commenters argued that the peer review standards in the revised NS2 guidelines are unnecessary and inconsistent with the role of the SSC to function as the primary and final peer review for scientific information brought before the Council. One commenter requested that the NS2 guidelines be amended to specify that

the SSC functions as the primary peer review panel in all cases unless the Council decides otherwise, and that the SSC should not need to meet the conflict of interest standards in paragraph (b)(2) when conducting peer review. Contrary to this view, other commenters insisted that all peer reviews be independent and external of the SSC, and that SSC members should not participate in peer review. Many commenters expressed support for paragraph (c) on the advisory role of the SSC and participation of the SSC in peer review, and supported clarifying that the peer-review process complements, but does not replace, the role of the SSC to provide ongoing scientific advice to its Council for management decisions.

Response: A primary reason for revising the NS2 guidelines was to clarify the distinction between the advisory role of the SSC to its Council as specified in MSA section 302(g)(1)(B), 16 U.S.C. 1852(g)(1)(B), and the ability of the SSC to assist in peer review, as specified in MSA section 302(g)(1)(A), *id.* § 1852(g)(1)(A). NMFS carefully considered public comments received in response to the ANPR and proposed rule requesting clarification on the distinction between these provisions. The revised guidelines specify that peer review is separate from the SSC's subsequent activity to evaluate scientific information for the purpose of providing advice, such as fishing level recommendation, to its Council. The revisions are also consistent with MSA section 302(g)(1)(E) providing the Secretary and Councils with the discretion to establish a peer review process. NMFS disagrees with comments that the SSC may not assist in peer review, as we believe that view is contrary to the plain language of MSA section 302(g)(1)(A). The revised NS2 guidelines encourage SSC members to participate in a peer review when such participation is beneficial due to the expertise and institutional memory of that SSC member, or beneficial to the Council's advisory body by allowing that SSC member to make a more informed evaluation of scientific information for its Council. The revised guidelines also state that participation of an SSC member in a peer review should not impair the ability of that member to fulfill his or her responsibilities to the SSC. NMFS disagrees with the recommendation that SSC members be completely exempt from paragraph (b)(2) addressing peer reviewer selection, but revised paragraph (c)(3) so that the paragraph (b)(2) requirements only apply when the SSC as a body or individual SSC members participate in a peer review process established under MSA section 302(g)(1)(E). The revision allows for less formal SSC review of information that is not novel, controversial or influential, such as a routine update of a stock assessment. Peer reviewers, including SSC members, participating in a peer review process established pursuant to MSA section 302(g)(1)(E) must meet the applicable OMB peer review standards as adopted in the revised NS2 guidelines. The revised NS2 guidelines are consistent with MSA section 302(g)(1)(D) which specifies that each SSC member shall be treated as an affected individual for the purposes of paragraphs (2), (3)(B), (4), and (5)(A) of MSA section 302(j). Further details on the conflicts of interest disclosure of SSC members as affected individuals are provided at 50 CFR 600.235. Regarding the comment that the SSC is the final arbiter in the peer review process, we agree that the SSC review is the final step in the overall scientific review process and the SSC should certify that its scientific recommendations for its Council are based on the BSIA. The revised NS2 guidelines do not restrict or impinge on the SSC's responsibilities to its Council.

Comment 53: Some commenters suggested that the SSC's role is advisory and should not invade the province of the Council decision making ability. They stated that the Council shall take into consideration the recommendations of the SSC, any public comment, and peer review findings in decision making.

Response: We agree that the role of the SSC is advisory and the revised NS2 guidelines in no way preclude any Council's consideration of public comments or other information when making decisions. However, the NS2 guidelines encourage all scientific information considered by the Council, including peer reviews, be brought to the Council through its SSC. We also note that pursuant to section 302(h)(6) of the MSA, a Council may not exceed fishing level recommendations of its SSC when establishing ACLs. See the NS1 guidelines (50 CFR 600.310) for further explanation.

Comment 54: Commenters suggested paragraph (b)(2)(iii) could be misinterpreted to indicate that federal and state fishery agency scientists could not serve as SSC members to review data or scientific materials prepared by their respective agencies. One commenter suggested amending the guidelines to prevent SSC members who are state or NMFS employees with unique scientific qualifications from being disqualified on conflict of interest grounds. A commenter also asked for clarification on whether SSC members, including state or territorial officials, who advance an agenda at odds with Council decisions, should be screened for conflicts of interest.

Response: The guidelines provide that peer reviewers, including the SSC or SSC members who participate in peer review, must satisfy the peer review standards, and federal employees conducting peer review must comply with all applicable federal ethics requirements. The NS2 guidelines are clear regarding SSC participation in peer review and do not impose a blanket prohibition on employees from state or federal agencies, including NMFS, from participating in peer review. For clarity, we agree to remove, ''reviewers should not be employed by the Council or entity that produced or utilizes the product for management decisions'' in paragraph (b)(2)(iii). This also resolves the ambiguity of the word ''entity,'' which was too vague. Additional details on the conflict of interest disclosure requirements for SSC members are provided at 50 CFR 600.235.

Comment 55: One commenter requested clarification of paragraph (c) by inserting ''evaluation'' in the title and first sentence to read: ''Scientific evaluation and advice to Council'' and: ''Each scientific and statistical committee shall provide its Council ongoing scientific evaluation and advice for fishery management decisions.''

Response: Paragraph (c) quotes MSA section 302(g)(1)(B) verbatim, therefore NMFS did not revise that language in the final guidelines. Moreover, NMFS believes that the SSC's role in evaluating scientific information is adequately addressed in paragraph (c)(1) which states: ''Debate and evaluation of scientific information is the role of the SSC.''

Comment 56: One commenter requested that the NS2 guidelines include guidance on the SSC process itself, because there is no oversight of the SSC and the SSC process is neither free of bias and conflict, nor amenable to alternative points of view. Other commenters requested the addition of language to address a perception of philosophical bias or advocacy by some SSC members.

Response: NMFS believes that the revised guidelines provide clear guidance on the peer review standards and the SSC's role as scientific advisors to its Council. Pursuant to MSA section 302(f)(6), Councils are required to make available to the public a Statement of Organization, Practices and Procedures (SOPP) in accordance with uniform standards prescribed by the Secretary of

Commerce. (See 16 U.S.C. 1852(f)(6).) The purpose of the SOPP is to inform the public how the Council (including the SSC and advisory panels) operates. (See 50 CFR 600.115.) The Council SOPP provides the best practices and operating procedures for the Council's SSC. Regarding alleged bias and conflict in the SSC process, MSA section 302(g)(1)(D) requires disclosure of SSC members' financial interests, and details on SSC member conflict of interest disclosure are provided at 50 CFR 600.235. Regarding openness of SSCs to alternative points of view, the SSC is comprised of experts from academic, non-governmental, and Federal and state government entities who provide expertise over a range of disciplines needed for informed fishery management decisions.

Comment 57: One commenter requested striking the statement: ''the SSC must have a peer review of all of its recommendations'' in the proposed guidelines.

Response: This statement does not exist in the proposed guidelines, nor do the guidelines require the SSC recommendations to be peer reviewed. Paragraph (c)(1) states that: ''SSC scientific advice and recommendations to its Council are based on scientific information that the SSC determines to meet the guidelines for best scientific information available as described in paragraph (a) of this section.''

Comment 58: One commenter suggested replacing ''information'' with ''data'' in the paragraph (c)(1) statement: ''Such scientific advice should attempt to resolve conflicting scientific information, so that the Council will not need to engage in debate on technical merits.''

Response: NMFS did not make the suggested change because the scientific information considered by the SSC is not always strictly data. For example, the SSC often evaluates scientific data, methods, results, and conclusions.

Comment 59: NMFS received several comments on the importance of transparency of the SSC when providing evaluation and advice to its Council; however, some expressed concern that meetings of the SSC were not publicly transparent. One commenter suggested that the NS2 guidelines should bar SSC meetings that are not public, including closed conference call meetings, and stated that some SSCs do not even meet concurrently with Council meetings, thereby preventing input from constituents. Another commenter suggested adding ''must'' to paragraph (c)(3) to read: ''When the SSC as a body is conducting peer review, it should strive for consensus and must meet the transparency guidelines for best scientific information available and peer reviews as described in paragraphs (a)(6)(iv) and (b)(3) of this section,'' because it is essential that the SSC, in the capacity of a peer reviewer, be transparent.

Response: The NS2 guidelines clearly state that review of scientific information by the SSC should be transparent and paragraph (c)(3) has been revised as requested. MSA section 302(i)(2) mandates that SSC meetings be open to the public and that timely notice be published in the **Federal Register**. SSC evaluations, findings, and recommendations are documented for Council meetings, which are also open to the public.

Comment 60: One commenter indicated that the SSC (or other Council advisory bodies), when conducting peer review, does not have to meet the high standards of the OMB peer review criteria. It was suggested that, in some instances, decisions on the use of updated stock assessment information have been made by the Councils and their SSCs without prior review by the established stock assessment review processes.

Response: NMFS agrees that the majority of work conducted by the SSC and other advisory bodies are not peer review processes, but rather advisory responsibilities, and the Council's SOPP provides guidance on best practices and operating procedures for the Council's SSC and other advisory bodies. Details on SSC member conflict of interest disclosure are provided at 50 CFR 600.235. Peer reviewers, including SSC members that participate in peer review, are required to satisfy the OMB peer review standards, where applicable. The NS2 guidelines also specify: ''For peer review of some work products or scientific information, a greater degree of independence may be necessary to assure credibility of the peer review process.'' For example, an assessment update may not require the same degree of independence in the peer review process as would a benchmark assessment. NMFS notes that all stock assessment information undergoes some degree of peer review prior to the SSC evaluation for its Council.

Comment 61: A commenter recommended including a requirement for Council approval before any SSC member could be selected for an outside peer review, to mitigate the potential for any real or perceived conflicts of interest for SSC recommendations to its Council.

Response: We do not believe that the recommended revision is necessary. The NS2 guidelines clearly state: ''Participation of an SSC member in a peer review should not impair the ability of that SSC member to accomplish the advisory responsibilities to the Council.''

Comment 62: One commenter suggested revising subsection (c)(2) to reflect that, to the extent possible, service on peer review panels should rotate between qualifying SSC members to strive for independence, balance and an absence of potential bias on review panels.

Response: NMFS believes that this recommendation is already adequately addressed in paragraph (b)(2)(iii) of the guidelines, which recommends rotating peer review responsibilities across an available pool of qualified reviewers.

Comment 63: Paragraph (b)(2) states: ''The selection of participants in peer review must be based on expertise, independence, and a balance of viewpoints . . .'' One commenter recommended removing the implication that the SSC is not itself ''balanced'' with respect to scientific perspectives. The commenter noted that the SSC includes scientists employed by the states, the Federal government, international commissions, and universities, and questioned whether the SSC members, for example government members, are to be considered as having some ''perspective'' that needs to be balanced with other perspectives and, therefore, whether additional SSC members must be appointed.

Response: NMFS believes that this is a misinterpretation of the guidelines because the guidelines do not provide any requirements on the selection of SSC as an advisory body to its Council and do not imply that the SSC body is not itself balanced. Paragraph (b)(2) adopts the criteria from the OMB Peer Review Bulletin requiring that the selection of peer reviewers, including SSC members that participate in peer review, be based on expertise, independence, balance of viewpoints, and be free of conflicts of interest.

Comment 64: Commenters requested removing the phrase ''conducts or'' from the statement in paragraph (c)(3): ''If an SSC as a body, or individual members of an SSC, conducts or participates in a peer review, those SSC members must meet the peer reviewer selection criteria.''

Response: NMFS revised the statement to read: ''If an SSC as a body conducts a peer review established under [MSA] section 302(g)(1)(E) or individual members of an SSC participate in such a peer review, the SSC members must meet the peer reviewer selection criteria as described

in paragraph (b)(2) of this section.'' See the response to Comment 52 for additional detail.

Comment 65: One commenter recommended that NMFS and the Councils establish terms of reference requiring SSC members to serve as chairs or facilitators in peer review, a role in which they may serve without having to meet strict qualifying criteria for peer reviewers.

Response: NMFS agrees that it may be beneficial to the Council to have an SSC member serve as a chair during a peer review. The revised NS2 guidelines allow for this and NMFS does not believe additional language is necessary because the Secretary and each Council have the discretion to establish the peer review process, including who should serve as the chair of the review. Paragraph (c)(2) clearly states: ''An SSC member may participate in peer review when such participation is beneficial to the peer review due to the expertise and institutional memory of that member, or beneficial to the Council's advisory body by allowing that member to make a more informed evaluation of the scientific information.''

Comment 66: One commenter requested that paragraph (c)(3) clearly distinguish regular peer review activities of the SSC from official peer reviews which require SSC members participating in the review to meet the peer reviewer standards in paragraph (b)(2).

Response: NMFS agrees and clarified in paragraph (c)(3) that SSC members must meet the peer reviewer selection criteria contained in paragraph (b)(2) when they participate in a peer review established pursuant to MSA section 302(g)(1)(E). See the responses to Comments 52 and 60 for additional detail.

Comment 67: Several commenters expressed support for paragraph (c)(5), which requires that SSC disagreements with peer review findings be documented in a report and made available to their Council and the public. Some commenters requested stronger language to prevent the SSC from freely rejecting the results of any peer review. Other commenters suggested that the scientific advice of the SSC should attempt to resolve conflicting scientific information, and the analysis of conflicts should be reported so that the Council will not be forced to engage in debate on technical merits. The SSC should reconcile the differences between its findings and that of the peer review. One commenter requested an additional 45–60 day period for public review of the peer review report and SSC findings when an SSC reports disagreements with the findings and conclusions of a peer review. Another commenter supports the idea that the SSC should report its decisions that are inconsistent with a peer review finding, but expressed concern that paragraph (c)(5) implies that a peer review panel is an independent policy and review body with standing equal to that of the SSC or Council.

Response: Paragraph (c)(1) provides appropriate guidance that the SSC's scientific advice should attempt to resolve conflicting scientific information. Further, paragraph (c)(5) provides that when the SSC disagrees with peer review results, a report must be prepared outlining the areas of disagreement, and the rationale and information used by the SSC for making its determination. Paragraph (c)(5) does not state or imply that a peer review panel has equal standing to that of the SSC and Council; rather, the intent is to ensure transparency in the SSC evaluation of scientific information that is inconsistent with the findings or conclusions of a peer review. NMFS disagrees with the request to require an additional 45–60 day period for public review when the SSC reports disagreements with the findings and conclusions of a peer review because it would significantly delay final Council action on fishery management measures.

Comment 68: One commenter requested that the NS2 guidelines require any additional assessment work requested by the SSC be subject to peer review. The commenter explained that SSCs in some regions have extended stock assessments by requiring additional model runs, which are then incorporated into scientific advice to the Council without further peer review.

Response: NMFS does not agree that the NS2 guidelines should in all cases require peer review of additional work requested by the SSC. When the SSC requests additional work, it should be for the purpose of clarification in the context of a main body of work that has already been reviewed. The need for peer review of additional work will depend upon the novelty, complexity, and potential for controversy. The peer review system can involve existing committees, so it may be acceptable for the SSC to act as reviewers for the added work if any review is needed. It is important that this additional work be documented in the SAFE report or elsewhere so that it becomes part of the public record for fishery management actions.

Comment 69: One commenter expressed concern with language in paragraph (c)(4) that states that the SSC should, ''not repeat the previously conducted and detailed technical peer review,'' on the basis this implies that SSC input is not warranted if a peer review is conducted. The commenter recommended adding, ''but this provision is not intended to thwart or constrain the scope or depth of SSC comments.''

Response: Paragraph (c)(4) is not intended to constrain the advisory role of the SSC to its Council, but seeks to ensure that a technical peer review is not repeated. A primary role and necessary function of the SSC is to evaluate and provide recommendations on scientific information for its Council, including recommendations on whether the scientific information is adequate or requires further work if deemed inadequate.

Comment 70: Some commenters requested clarification of the roles of the SSC and Council regarding establishment of ABCs and ACLs. One commenter stated that the NS2 guidelines should include a definitive statement that SSCs provide science-based ABCs and Councils set ACLs. Some commenters requested revising the language in paragraph (c)(6) to: ''Annual catch limits (ACLs) may exceed the SSC's recommendations for fishing levels.'' Other commenters stated that, once the SSC has set the ABC, the options of the Councils are extremely limited. The NS2 guidelines should clarify that the Councils must have the power and ability to determine the proper limits and regulations based on the recommendations of the SSCs.

Response: The NS1 guidelines provide detailed guidance on compliance with the ACL requirements and clarify the relationship between ACLs, ABC, maximum sustainable yield (MSY), optimum yield (OY) and other applicable reference points. (See generally 50 CFR 600.310.) Those issues are not addressed in the NS2 guidelines. NMFS will not make the suggested revisions to the language in paragraph (c)(6) because doing so would be inconsistent with MSA section 302(h)(6) which states that: ''Each Council shall . . . develop annual catch limits for each of its managed fisheries that may not exceed the fishing level recommendations of its scientific and statistical committee or the peer review process established under subsection (g).''

SAFE Report

Comment 71: One commenter requested that the guidelines specify that the SAFE report be a single document, or alternatively provide that the SAFE documents be available in one

place on a Council or NMFS Web site with an index and links to pertinent documents. Most commenters agreed with the SAFE report being a ''document or set of documents'' and with the new language in paragraph (d)(5)(ii) that the SAFE report: ''must be made available by the Council or NMFS on a readily accessible Web site.'' Two commenters recommended retaining the current NS2 guidelines language: ''Each SAFE report must be scientifically based, and cite data sources and interpretations'' and recommended that the Secretary ensure disclosure of the source of any information included in the SAFE report.

Response: While NMFS understands that a single document has certain advantages of convenience to the users, NMFS decided that it is more beneficial to provide the Councils and the Secretary the discretion to choose whether to compile the SAFE report as a single document or set of documents. In response to comments on the proposed guidelines, NMFS has added language in paragraph (d) stating that: ''Each SAFE report must be scientifically based, with appropriate citations of data sources and information.'' NMFS adds further clarification in paragraph (d)(5)(i): ''Sources of information in the SAFE report should be referenced unless the information is proprietary.''

Comment 72: One commenter requested adding ''and the Secretary'' to the first sentence of paragraph (d) to indicate that the SAFE report is for both the Secretary and Council. Some commenters suggested that the NS2 guidelines should explicitly delegate to NMFS or the Councils the accountability for preparing the SAFE report with support from others as needed.

Response: Paragraph (d) was revised to state that the SAFE report: ''provides the Secretary and Councils with a summary of scientific information . . .'' The NS2 guidelines explicitly designate responsibility in paragraph (d)(1): ''The Secretary has the responsibility to ensure that SAFE reports are prepared and updated or supplemented as necessary . . .'' while also providing that: ''The Secretary or Councils may utilize any combination of personnel from Council, State, Federal, university, or other sources to acquire and analyze data and product the SAFE report.'' The intent is to allow flexibility between the Secretary and Councils in utilizing their resources to compile the SAFE report.

Comment 73: One commenter objected to the language in paragraph (d) because it appears to give NMFS the responsibility to prepare the SAFE report, making NMFS the final arbiter of what constitutes BSIA for the Councils. It also appears to require that the SAFE report be peer reviewed before it can be considered by a Council, which usurps the SSC's role of providing scientific advice to the Council. Another commenter requested that each SAFE report, particularly new information, be peer reviewed and that all sources used to compile the SAFE reports should be free of conflicts of interest.

Response: As reflected in paragraph (d), the Secretary of Commerce ultimately has the responsibility under the MSA to determine whether a proposed management action is based on BSIA, because all fishery management actions must be determined to be consistent with all of the MSA national standards, including NS2, as well as other applicable law. While it is expected that the advice provided by SSCs will be based on BSIA, that information, as well as how it is applied, is still subject to Secretarial review and approval before it can be implemented. There is no language in paragraph (d) that implies that the Secretary's responsibility in regard to the SAFE report undermines the role of the SSC. Peer review of scientific information, including information contained in SAFE reports, and conflict of interest concerns are sufficiently addressed in the peer review section of these revised guidelines. The guidelines are clear that the SAFE report is a compilation of the BSIA products, some of which may have been peer reviewed, to be used by the Secretary, Councils, and the public in developing and reviewing fishery management actions. The SAFE report is an important and useful summary of scientific information for evaluation and recommendations by the SSC for its Council.

Comment 74: One commenter recommended that the NS2 guidelines specify a standard format for SAFE reports, similar to a format of the North Pacific groundfish SAFE reports where individual stock assessments are summarized in an executive summary including relevant information, such as biological reference points and stock status, as well as recommendations for OFLs and ABCs, and the concerns addressed in these recommendations.

Response: NMFS considered requiring a common format for SAFE reports, but recognized that there are significant differences in how the eight Councils and the Secretary conduct their business, including their management schedules, the committees and technical groups involved, how and when they receive scientific information, and the format in which that information is received. In consideration of those differences and the need to make the SAFE report preparation efficient, NMFS believes that allowing flexibility in the format of the SAFE documents is preferable to requiring a single uniform format.

Comment 75: One commenter requested that the SAFE report include information on safety at sea, as specified in the National Standard 10 guidelines.

Response: Paragraph (d)(2) of the revised NS2 guidelines states that SAFE reports provide ''information on bycatch and safety for each fishery.''

Comment 76: Commenters indicated that some regions have not routinely prepared SAFE reports, and requested the SAFE report be updated regularly, on at least an annual basis to ensure consistency with any and all management decisions.

Response: NMFS believes paragraph (d)(1) is sufficiently clear that: ''The SAFE report and any comments or reports from the SSC must be available to the Secretary and Council for making management decisions for each FMP'' and also states: ''The Secretary has the responsibility to ensure that SAFE reports are prepared and updated or supplemented as necessary whenever new information is available to inform management decisions. . .'' NMFS disagrees with the recommendation that the SAFE report be updated on at least an annual basis because, in some cases, Council processes may allow for multiyear harvest specifications. NMFS believes allowing the SAFE reports to be prepared periodically is appropriate and consistent with the decision-making schedule to allow for efficiencies and differences in the processes used by different Councils for different fisheries.

Comment 77: One commenter recommended that the text in paragraph (d)(2), ''. . . assessing the relative success of existing state and Federal fishery management programs'' be revised to ''. . . assessing the relative success of existing relevant state and Federal fishery management plans.''

Response: NMFS agrees to insert the word ''relevant.'' The word ''programs'' was not changed to ''plans'' as recommended because not all states have FMPs.

Comment 78: One commenter requested inserting in paragraph (d)(3): ''To the extent possible . . .'' at the start of ''each SAFE report should contain the following'' because items to be included in a SAFE report cannot always be calculated for all stocks (*e.g.,* minimum stock size threshold cannot be calculated for data-poor stocks with incomplete catch records).

Response: NMFS agrees with the commenter's concern and revised paragraph (d)(3) as: ''Each SAFE report should contain the following scientific information when it exists.'' NMFS also added to paragraph (d)(2): ''The SAFE report should contain an explanation of information gaps and highlight needs for future scientific work.''

Comment 79: One commenter requested that the NS2 guidelines require that uncertainty be specified in the SAFE report because the ABC will be set based, in part, on scientific uncertainty. The commenter also requested the guidelines require that the SAFE report include management uncertainty information and relevant recommendations for the Council's consideration in establishing ACLs.

Response: NMFS agrees with the suggestion to include consideration of scientific uncertainty in the SAFE report, and revises the language in paragraph (d)(3)(i)(B) to read ''(B) Information on OFL and ABC, preventing overfishing, and achieving rebuilding targets. Documentation of the data collection, estimation methods, and consideration of uncertainty in formulating catch specification recommendations should be included (§ 600.310(f)(2)).'' The SSC takes into account scientific uncertainty in setting ABC control rules, and the SSC report to the Council should document how the SSC did so.

Comment 80: One commenter requested that the NS2 guidelines require the SAFE report to include definitions for ''overfishing'' and ''overfished'' from the NMFS 1998 National Standard 1 Guidelines. Another commenter stated that SAFE reports should include the SSC recommendations for ABC, and must contain the maximum fishing mortality threshold (MFMT), the minimum stock size threshold (MSST), overfishing and overfished status, and rebuilding plans if applicable. Another commenter suggested that the SAFE report contain assessment team recommendations for OFLs and ABCs, including any concerns that went into their recommendations and this information should then be evaluated by the SSC for their Council's catch specification process. Another commenter expressed concern with the requirement that the SAFE report include recommendations and reports of the SSC regarding overfishing levels and ABCs because the SAFE report is published before the SSC evaluation. The SAFE report is reviewed by the SSC as it provides its advice to the Council, and its recommendations occur after the publication of the SAFE report. Therefore, the SSC should publish a report of its deliberations and make it publicly available on the Council's Web site as part of the official record supporting the Council's recommendations to the Secretary.

Response: NMFS disagrees with the suggestion to require definitions for ''overfishing'' and ''overfished'' in the SAFE report because those terms are already defined in the NS1 guidelines. We believe the information on which to base catch specifications and status determinations should be available to the Councils at the time of their decision making process, and therefore, language is added to paragraph (d)(3)(i) that the SAFE report should contain: ''Information on which to base catch specifications and status determinations, including the most recent stock assessment documents and associated peer review reports, and recommendations and reports from the Council's SSC.'' Regarding the comment on the requirement that the SAFE report include SSC reports on overfishing levels and ABCs, NMFS believes this concern is adequately addressed in the NS2 guidelines because the SAFE report can be a document or set of documents, including the report of the SSC findings and recommendations, that are publicly available. The final recommendations and actions of the SSC may be included in an amendment to the SAFE report.

Comment 81: Two commenters expressed concern with the text in paragraph (d)(3): ''Each SAFE report should contain . . . (i)(B) Any management measures necessary to rebuild an overfished stock or stock complex . . .'' The SAFE report should report progress towards stock rebuilding, but rebuilding plans, including analysis of management alternatives, should be developed through the Council's FMP process with input from advisors and the public.

Response: The revised NS2 guidelines specify that the SAFE report should contain the scientific information needed in support of management measures or rebuilding plan, and the intent was not to include the actual management measures or the full analyses of the alternatives. MSA section 303 requires FMPs and FMP amendments to contain conservation and management measures for fisheries. To clarify this, NMFS has deleted ''along with information to determine'' from paragraph (d)(3)(i)(A), so it now reads: ''A description of the SDC (*e.g.,* maximum fishing mortality rate threshold and minimum stock size threshold for each stock or stock complex in the fishery).'' NMFS also revised paragraph (d)(3)(i)(B) to read: ''The best scientific information available to determine whether overfishing is occurring with respect to any stock or stock complex, whether any stock or stock complex is overfished. . .'' Paragraph (d)(3)(i)(C) was revised to read: ''The best scientific information available in support of management measures necessary to rebuild an overfished stock or stock complex (if any) in the fishery to a level consistent with producing the MSY in that fishery.'' These changes make clear that the purpose of the SAFE report is to provide the Councils and Secretary with the necessary BSIA to understand the status of the fishery and support their efforts in evaluating management measures and alternatives.

Comment 82: One commenter urged that paragraph (d)(3)(iii) incorporate the Standardized Bycatch Reporting Methodology (SBRM) required by MSA section 303(a)(11), 16 U.S.C. 1853(a)(11), into the SAFE report. The SAFE report also should include information on catch and bycatch, a description of pertinent data collection and estimation methods, and ''quantitative estimates'' of total mortality.

Response: Paragraph (d)(3)(ii) of the revised NS2 guidelines states that the SAFE report should include: ''Information on sources of fishing mortality (both landed and discarded), including commercial and recreational catch and bycatch in other fisheries and a description of data collection and estimation methods used to quantify total catch mortality, as required by the National Standard 1 Guidelines.'' The NS2 guidelines do not preclude including discard and total mortality estimates into the SAFE report when available. NMFS believes it is inappropriate to require SAFE reports to contain SBRM, as MSA section 303(a)(11) requires that SBRM be established in an FMP.

Comment 83: Two commenters expressed concern that paragraph (d)(3)(v) could be misinterpreted as requiring the relevant evaluations of EFH information to be in the SAFE report. EFH information should be evaluated through Plan Teams, SSC and Council meetings. The frequency of review and revision of EFH components of FMPs is already provided for in 50 CFR 600.815(a)(10), therefore it would be confusing to require additional EFH review as part of the SAFE report. Another commenter indicated that this confusion can be resolved with minor clarification that EFH information may be included by reference and contained in a stand-alone separate document, not just physically merged into the SAFE report.

Response: The NS2 guidelines ensure that a summary of BSIA is available in the SAFE report, including any relevant EFH information. The intent is not to require an additional evaluation of EFH. Therefore, NMFS has deleted ''review and evaluations'' and ''stand-alone chapter'' from paragraph (d)(3)(iv) so it now reads: ''Information on EFH to be included in accordance with the EFH provisions (§ 600.815(a)(10)).''

Comment 84: One commenter requested language requiring more thorough assessments of marine ecosystems in SAFE reports. Two commenters supported the inclusion of: ''Pertinent economic, social, community, and ecological information'' in paragraph (d)(3)(vi) and one suggested additional language that explicitly includes ecosystem considerations, such as forage fish impacts and other criteria to determine optimum yield.

Response: NMFS believes that the NS2 guidelines include sufficient language on the scientific information to be included in the SAFE report, including marine ecosystem information. The SAFE report is a summary of existing information, not only on stock status, but on many ecosystem components as well. The language is intended to be broad enough to include all the important considerations in ecological information, including forage fish impacts where relevant.

FMPs

Comment 85: One commenter requested insertion of the language: ''BSIA is needed for regulatory amendments in conjunction with a framework FMP, and not just FMPs.''

Response: The proposed edit is not necessary because the MSA national standards apply to all Council actions, not just FMPs.

Comment 86: One commenter requested adding: ''If information indicates that drastic changes have occurred in the fishery that require revision of the management objectives or measures, then the FMP process must begin again.''

Response: This is beyond the scope of the guidelines and is unnecessary. Councils have the statutory responsibility for preparing FMPs and amendments to such plans and revising them as appropriate according to sections 302(h) and other provisions of the MSA.

Comment 87: One commenter asserted that the preparation and implementation of an FMP should be delayed until the best scientific data possible concerning a fishery is complete.

Response: NMFS disagrees and provides in paragraph (e)(2): ''The fact that scientific information concerning a fishery is incomplete does not prevent the preparation and implementation of an FMP.'' This is consistent with the NS2 requirement that fishery conservation and management measures be based on the BSIA.

Comment 88: One commenter stated the NS2 guidelines should apply equally to Highly Migratory Species (HMS) managed by NMFS and Council-managed species. The commenter also requested that the guidelines address how scientific advice for HMS is provided to NMFS.

Response: The NS2 guidelines apply to scientific information used by the Councils and NMFS. Scientific information used by NMFS to manage Atlantic HMS undergoes a rigorous and transparent peer review process. No additional HMS-specific provisions are needed in the guidelines.

Comment 89: One commenter suggested that clarification is needed in paragraph (e)(3): ''Information about harvest within state waters, as well as in the EEZ, may be collected if it is needed for proper implementation of the FMP and cannot be obtained otherwise.'' The commenter recommended that the NS2 guidelines specify FMP information requirements that may be imposed on fisherman and processors.

Response: Information to be collected from fishermen and processors must be identified in FMPs per MSA section 303(a)(5). Thus NMFS has not revised the NS2 guidelines to require specification of this information. However, NMFS has added a new sentence in paragraph (e)(3) that clarifies: ''Scientific information collections for stocks managed cooperatively by Federal and State governments should be coordinated with the appropriate state jurisdictions, to the extent practicable, to ensure harvest information is available for the management of stocks that utilize habitats in state and federal managed waters.''

Comment 90: Four commenters requested that the words ''should'' or ''must'' be replaced with the word ''shall'' through many sections to strengthen the requirements of NS2. Conversely, two commenters noted that MSA section 301(b) provides that the National Standards guidelines are advisory in nature and do not have the force and effect of law, and therefore recommended that NMFS strike all use of the words ''must'' and ''shall'' in the NS2 guidelines.

Response: In the NS2 guidelines, ''shall'' is used only when quoting statutory language directly. ''Must'' is used instead of ''shall'' to denote an obligation to act and is primarily used when referring to requirements of the MSA, the logical extension thereof, or other applicable law. ''Should'' is used to indicate that an action or consideration is strongly recommended to fulfill the Secretary's interpretation of the MSA, and is a factor reviewers will look for in evaluating a SOPP or FMP. ''May'' is used in a permissive sense. NMFS notes that the above word usage in the National Standards guidelines is explained at 50 CFR 600.305(c).

V. Changes From Proposed Action (74 FR 65724, Dec. 11, 2009)

Paragraph (a)(1) was revised to clarify that ''environmental'' scientific information is also important for fishery conservation and management. This introductory paragraph was revised to clarify that successful fishery management not only depends on evaluation of ''potential'' impact that conservation and management measures will have on living marine resources, but also depends on ''(ii) Identifying areas where additional management measures are needed.''

Paragraph (a)(2) was revised by striking the last sentence because similar language is provided in paragraph (a)(6)(v).

Paragraph (a)(3) was revised to expand the term ''data-poor fisheries'' to ''Information-limited fisheries, commonly referred to as 'data-poor' fisheries.''

Paragraph (a)(4) was revised by adding: ''Scientific information includes established and emergent scientific information. Established science is scientific knowledge derived and verified through a standard scientific process that tends to be agreed upon often without controversy. Emergent science is relatively new knowledge that is still evolving and being verified, therefore, may potentially be uncertain and controversial. Emergent science should be considered more thoroughly, and scientists should be attentive to effective communication of emerging science.'' Editorial clarification was also included in the revised language: ''Scientific information includes data compiled directly from surveys or sampling programs, and models that are mathematical representations of reality constructed with primary data.''

Paragraph (a)(5) provides a description of science as a dynamic process, and the word ''ideally'' was added to the statement that: ''Best scientific information is, therefore, not

static and ideally entails developing and following a research plan with the following elements'' because the ability to achieve all the listed elements is not always possible.

Paragraph (a)(6) was revised to replace ''Principles'' with ''Criteria to consider'' to read as: ''Criteria to consider when evaluating best scientific information are . . .''

Paragraph (a)(6)(i) was revised to clarify that analysis of related stocks or species for inferring the likely traits of stocks ''may be a useful tool'' rather than the previously stated ''is a powerful tool.''

Paragraph (a)(6)(ii)(B) was revised to clarify ''Alternative points of view'' as ''Alternative scientific points of view.''

Paragraph (a)(6)(ii)(C) was revised to remove ''reconcile'' and the ambiguity associated with the previous statement: ''effort should be made to reconcile scientific information with local and traditional knowledge.'' The language now reads: ''Relevant local and traditional knowledge (e.g., fishermen's empirical knowledge about the behavior and distribution of fish stocks) should be obtained, where appropriate, and considered when evaluating the BSIA.''

Paragraph (a)(6)(iii) was revised by striking the first sentence of the paragraph and revising the second sentence from: ''The objectivity standards should ensure that information is accurate, reliable, and unbiased, and that information products are presented in an accurate, clear, complete, and balanced manner'' to read: ''Scientific information should be accurate, with a known degree of precision, without addressable bias, and presented in an accurate, clear, complete and balanced manner.'' We also included the statement: ''Scientific processes should be free of undue nonscientific influences and considerations'' as recommended by the NRC (2004).

In paragraph (a)(6)(iv), the statement: ''Subject to the Magnuson-Stevens Act confidentiality requirements, the public should have access to each stage in the development of scientific information, from data collection, to analytical modeling, to decision making'' was removed because it is impracticable to solicit public comment during all the stages of development of the science, such as data sampling operations and analytical work. Further revision was made to clarify public comment should be solicited during the ''review'' of scientific information rather than during the ''development'' of science.

Paragraph (a)(6)(v) on timeliness was revised by moving paragraph (a)(6)(v)(B) to the beginning of paragraph (a)(6)(v), and then relabeling paragraph (C) as (B). The last sentence from (B) was moved to be the first sentence in (a)(6)(v), and this phrase: ''Management decisions should not be delayed due to data limitations . . .'' was revised to: ''Mandatory management actions should not be delayed due to limitations in scientific information . . .''

In paragraph (a)(6)(v), the statement: ''Sufficient time should be allotted to analyze recently acquired data to ensure its reliability and that it has been audited'' was modified for clarification to: ''Sufficient time should be allotted to audit and analyze recently acquired information to ensure its reliability.'' Further clarification is provided by revising: ''Data collection methods are expected to be subjected to appropriate review before used to inform management decisions'' to: ''Data collection methods are expected to be subjected to appropriate review before providing data used to inform management decisions.'' The text of proposed paragraph (a)(6)(v)(B) was revised by changing: ''Timeliness may also mean that in some cases results of important studies or monitoring programs must be brought forward'' to: ''In some cases, due to time constraints, results of important studies or monitoring programs may be considered for use before they are fully completed.''

Paragraph (a)(6)(v)(A) was revised by changing: ''For those data that require being updated'' to: ''For information that needs to be updated. . .'' The words ''In particular,'' were removed. The words ''such timing concerns'' were added to language that now reads: ''subject to regulatory constraints, and such timing concerns should be explicitly considered. . .'' Further clarification was added with: ''Data collection is a continuous process, therefore analysis of scientific information should specify a clear time point beyond which new information would not be considered in that analysis and would be reserved for use in subsequent analytical updates.''

Paragraph (a)(6)(v)(C) was merged with paragraph (B), and revised for clarity by changing ''species' life history characteristics might not change'' to ''some species' life history characteristics might not change.'' Another revision changed: ''Other time-series data (e.g., abundance, catch statistics, market and trade trends) provide context for changes in fish populations, fishery participation, and effort used, and therefore provide valuable information to inform current management decisions'' to read: ''Other historical data (e.g., abundance, environmental, catch statistics, market and trade trends) provide time-series information on changes in fish populations, fishery participation, and fishing effort that may inform current management decisions.''

Paragraph (a)(6)(vi)(B) was revised to clarify the list of validation measures by changing: ''the precision of the estimates is adequate, model estimates are unbiased, and the estimates are robust to model assumptions'' to: ''the accuracy and precision of the estimates is adequate, and the estimates are robust to model assumptions.'' The phrase ''and to correct for known bias to achieve accuracy'' was added to the statement: ''models should be tested using simulated data from a population with known properties to evaluate how well the models estimate those characteristics.''

In paragraph (a)(6)(vii) a new sentence was added for additional clarity: ''Routine updates based on previously reviewed methods require less review than novel methods or data.'' We also provided clarification by revising: ''substantial fishery management alternatives considered by a Council'' to: ''The scientific information that supports conservation and management measures considered by the Secretary or a Council should be peer reviewed, as appropriate.''

Paragraphs (a)(6)(vii) and (viii) were combined into a single paragraph. A new sentence was added to the end of the paragraph: ''Other applicable guidance on peer review can be found in the Office of Management and Budget Final Information Quality Bulletin for Peer Review.''

Paragraph (b)(1) was revised by removing ''for each Council'' from the phrase: ''The process established by the Secretary and Council for each Council . . .''

The first sentence of paragraph (b)(1)(ii) was revised by moving ''to the extent practicable'' from the end of the sentence to read: ''The peer review should, to the extent practicable, be conducted early . . .'' and adding: ''so peer review reports are available for the SSC to consider in its evaluation of scientific information for its Council and the Secretary'' to the end of the sentence.

Paragraph (b)(1)(iii) was revised by changing: ''The scope of work contains the objective of the specific advice being sought'' to: ''The scope of work contains the objectives of the peer review, evaluation of the various stages of the science, and specific recommendations for improvement of the science.'' The language: ''as well as to make recommendations regarding areas of missing information, future research,

data collection, and improvements in methodologies'' was added to the third sentence of the paragraph. Further clarification was made by revising: ''The scope of work may not request reviewers to provide advice on scientific policy (e.g., amount of uncertainty that is acceptable or amount of precaution used in an analysis)'' to: ''The scope of work may not request reviewers to provide advice on policy or regulatory issues (e.g., amount of precaution used in decision-making) which are within the purview of the Secretary and the Councils, or to make formal fishing level recommendations which are within the purview of the SSC.''

Paragraph (b)(2) on peer review selection was revised by changing a ''must'' to a ''should.''

Paragraph (b)(2)(i) was revised by deleting ''including a balance in perspectives'' from the first sentence and adding ''should reflect a balance in perspectives, to the extent possible'' to the second sentence.

Paragraph (b)(2)(ii) was revised by deleting the second sentence and replacing it with the last sentence of this section which was revised to: ''Potential reviewers who are not federal employees must be screened for conflicts of interest in accordance with the NOAA Policy on Conflicts of Interest for Peer Review Subject to OMB's Peer Review Bulletin or other applicable rules or guidelines. ''Under the NOAA policy'' was added to the beginning of the third sentence and: ''Peer reviewers must not have any real or perceived conflicts of interest'' was changed to: ''peer reviewers must not have any conflicts of interest . . .''

Paragraph (b)(2)(ii)(C) was merged with paragraph (b)(2)(ii)(B). The language: ''Except for those situations in which a conflict of interest is unavoidable, and the conflict is promptly and publicly disclosed'' was revised to: ''For reviews requiring highly specialized expertise, the limited availability of qualified reviewers might result in an exception when a conflict of interest is unavoidable; in this situation, the conflict must be promptly and publicly disclosed.'' The last sentence of the paragraph was modified and moved to paragraph (b)(2)(ii) as noted above.

Paragraph (b)(2)(iii) addressing independence in peer review was clarified by revising: ''Peer reviewers must not have participated in the development of the work product or scientific information under review'' to: ''Peer reviewers must not have contributed or participated in the development of the work product or scientific information under review.'' The language: ''For peer review of some work products or scientific information, a greater degree of independence may be necessary to assure credibility of the peer review process'' was revised for clarity to: ''For peer review of products of higher novelty or controversy, a greater degree of independence is necessary to ensure credibility of the peer review process.'' The language: ''Peer review responsibilities should rotate across the available pool of qualified reviewers or among the members on a standing peer review panel, recognizing that, in some cases, repeated service by the same reviewer may be needed because expertise'' was revised for clarity to: ''Peer reviewer responsibilities should rotate across the available pool of qualified reviewers or among the members on a standing peer review panel to prevent a peer reviewer from repeatedly reviewing that same scientific information, recognizing that, in some cases, repeated service by the same reviewer may be needed because of limited availability of specialized expertise.''

Paragraph (b)(3) on transparency in peer review was revised from: ''A transparent process is one that allows the public full and open access to peer review panel meetings, background documents, and reports, subject to Magnuson-Stevens Act confidentiality requirements'' to: ''A transparent process is one that ensures that background documents and reports from peer review are publicly available, subject to Magnuson-Stevens Act confidentiality requirements, and allows the public full and open access to peer review panel meetings.'' The text: ''also be publicly transparent in accordance with the Council's requirements for notifying the public meetings. The date, time, location, and terms of reference (scope and objectives)'' was replaced with: ''be conducted in accordance with meeting procedures at § 600.135.'' The time period for public notice of a peer review panel meeting was revised by changing the language to: ''Consistent with that section, public notice of peer review panel meetings should be announced in the **Federal Register** with a minimum of 14 days and with an aim of 21 days before the review. . .'' The words ''prior to review'' were removed from the statement: ''Names and organizational affiliations of reviewers also should be publicly available.''

Paragraph (c)(1) on SSC advice to its Council was revised from: ''SSC scientific advice and recommendations to the Councils based on review and evaluation of scientific information must meet the guidelines of best scientific information available'' to: ''SSC scientific advice and recommendations to its Council are based on scientific information that the SSC determines to meet the guidelines for best scientific information available.'' In the sentence: ''SSCs may conduct peer reviews, participate in peer reviews, or evaluate peer reviews to . . .'', the words ''participate in peer reviews'' were struck because participation in peer review by SSC members is addressed in the paragraph (c)(2). The language: ''. . . so that the Council will not be forced to engage in debate on technical merits. Debate and evaluation of scientific information should be part of the role of the SSC'' was changed to: ''. . . so that the Council will not need to engage in debate on technical merits. Debate and evaluation of scientific information is the role of the SSC.''

The last sentence of paragraph (c)(2) was changed from: ''Participation of an SSC member in a peer review should not impair the ability of that SSC member to accomplish the advisory responsibilities to the Council'' to: ''Participation of an SSC member in a peer review should not impair the ability of that member to fulfill his or her responsibilities to the SSC.''

The first sentence of paragraph (c)(3) was revised from: ''If an SSC as a body, or individual members of an SSC, conducts or participates in a peer review, those SSC members must meet the peer reviewer selection criteria as described in paragraph (b)(2) of this section'' to: ''If an SSC as a body conducts a peer review established under Magnuson-Stevens Act section 302(g)(1)(E) or individual members of an SSC participate in such a peer review, the SSC members must meet the peer reviewer selection criteria as described in paragraph (b)(2) of this section.'' The second sentence was changed from: ''These guidelines require separate consideration from those of § 600.235 . . .'' to: ''In addition, the financial disclosure requirements under § 600.235 . . . . apply.'' When the SSC body is conducting peer review, the word ''must'' was added to ''meet the transparency guidelines.''

In paragraph (c)(4), the statement ''SSCs must maintain their role as advisors to the Council about scientific information that comes from an external peer review process'' was changed by removing ''external'' because this statement applies to all peer review rather than only external peer review. The phrase ''be linked to'' in the first sentence was changed to ''consider'' and the word ''review'' was changed to ''consider'' in the last sentence of the paragraph for clarification.

In the first sentence of paragraph (c)(5), the phrase: ''If the evaluation of scientific information by the SSC is inconsistent with'' was changed to: ''If an SSC disagrees with'' and the word ''should'' was changed to ''must'' to strengthen the need for the SSC to prepare a report outlining disagreement with peer review findings, and NMFS added: ''This report must be made publicly available'' to the end of the paragraph.

Paragraph (c)(6) was revised by specifying that ACLs are ''developed by a Council.'' The term ''SSC recommendation'' was clarified to ''SSC fishing level recommendations.'' ''Per the National Standard 1 Guidelines,'' was added to the beginning of the second sentence. Further clarification was provided by adding: ''The SSC is expected to take scientific uncertainty into account when making its ABC recommendation (§ 600.310(f)(4)). The ABC recommendation may be based upon input and recommendations from the peer review process.''

Paragraph (d) was revised to clarify that the SAFE report provides scientific information for ''the Secretary and the Councils'' rather than to only the Councils. The language: ''Each SAFE report must be scientifically based with appropriate citations of data sources and information'' was also added to this paragraph.

Paragraph (d)(1) was revised for clarification to state that the SAFE report is prepared and updated or supplemented as necessary whenever new information is available: ''to inform management decisions such as status determination criteria (SDC), overfishing level (OFL), optimum yield, or ABC values.'' It previously read: ''that requires a revision to the status determination criteria (SDC), or is likely to affect the overfishing level (OFL), optimum yield, or ABC values.'' Clarification was also made that the SAFE report must be available to ''the Secretary and Council'' rather than to only the Council.

Paragraph (d)(2) was revised by adding: ''The SAFE report should contain an explanation of information gaps and highlight needs for future scientific work. Information on bycatch and safety for each fishery should also be summarized.'' The word ''relevant'' was also added to ''state and Federal fishery management programs'' for further clarification.

The introductory paragraph (d)(3) for the SAFE report information was revised for clarification by adding ''scientific information when it exists'' to ''Each SAFE report should contain the following.''

The subsections within paragraph (d)(3) were reordered and renumbered for clarification purposes.

The language in paragraph (d)(3)(i) was moved to paragraph (d)(3)(i)(A), and revised to clarify by removing ''along with information to determine.''

The language from paragraph (d)(3)(i)(A) was moved to paragraph (d)(3)(i)(B) and revised to clarify by adding: ''The best scientific information available to determine.''

Paragraph (d)(3)(i)(B) was renumbered as paragraph (d)(3)(i)(C) and revised to clarify by adding: ''The best scientific information in support of'' and removing the word ''any.''

In paragraph (d)(3)(ii), the language: ''Information on which to base catch specifications and status determinations, including the most recent stock assessment documents and associated peer review reports, and recommendations and reports from the Council's SSC'' was moved to paragraph (d)(3)(i) as an introductory sentence to paragraph (d). The remaining language: ''on OFL and ABC, preventing overfishing, and achieving rebuilding targets'' and: ''Documentation of the data collection, estimation methods, and consideration of uncertainty in formulating catch specification recommendations should be included'' was moved to paragraph (d)(3)(i)(B). The word ''Information'' was added before the phrase ''on OFL and ABC, preventing overfishing.''

Paragraph (d)(3)(iii) was renumbered as paragraph (d)(3)(ii).

Paragraph (d)(3)(iv) was renumbered as paragraph (d)(3)(iii).

Paragraph (d)(3)(v) was renumbered as paragraph (d)(3)(iv), and revised by changing: ''Review and evaluation of EFH information in accordance with the EFH provisions (§ 600.815(a)(10))'' to: ''Information on EFH to be included in accordance with the EFH provisions (§ 600.815(a)(10)). The language ''as a standalone chapter in a clearly noted section'' was removed because the EFH report tends to be a lengthy document that is included in the SAFE report that is comprised of a set of documents.

Paragraph (d)(3)(vi) was renumbered as paragraph (d)(3)(v), and revised to clarify by changing ''success of management measures'' to ''success and impacts of management measures.''

A new paragraph (d)(4) was added. It states: ''Transparency in the fishery management process is enhanced by complementing the SAFE report with the documentation of previous management actions taken by the Council and Secretary including a summary of the previous ACLs, ACTs, and accountability measures (AMs), and assessment of management uncertainty.''

Paragraph (d)(4) was renumbered as paragraph (d)(5).

Paragraph (d)(4)(i) was renumbered as paragraph (d)(5)(i), and revised by adding: ''Sources of information in the SAFE report should be referenced, unless the information is proprietary.''

Paragraph (d)(4)(ii) was renumbered as paragraph (d)(5)(ii).

Paragraph (e)(3) was revised for clarification by adding: ''Scientific information collections for stocks managed cooperatively by Federal and State governments should be coordinated with the appropriate state jurisdictions, to the extent practicable, to ensure harvest information is available for the management of stocks that utilize habitats in state and federal managed waters.''

VII. Classification

The NMFS Assistant Administrator has determined that this action is consistent with the provisions of the MSA and other applicable law.

This action has been determined to be not significant for purposes of Executive Order 12866.

The Chief Council for Regulation of the Department of Commerce certified to the Chief Council for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the

proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

List of Subjects in 50 CFR Part 600

Fisheries, Fishing, Recordkeeping and reporting requirements.

Dated: July 16, 2013.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, performing the functions and duties of the Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons stated in the preamble, 50 CFR part 600 is to be amended as follows:

PART 600—MAGNUSON-STEVENS ACT PROVISIONS

■ 1. The authority citation for part 600 continues to read as follows:

Authority: 5 U.S.C. 561 and 16 U.S.C. 1801 *et seq.*

■ 2. Section 600.315 is revised to read as follows:

§ 600.315 National Standard 2—Scientific Information.

(a) *Standard 2.* Conservation and management measures shall be based upon the best scientific information available.

(1) Fishery conservation and management require high quality and timely biological, ecological, environmental, economic, and sociological scientific information to effectively conserve and manage living marine resources. Successful fishery management depends, in part, on the thorough analysis of this information, and the extent to which the information is applied for:

(i) Evaluating the potential impact that conservation and management measures will have on living marine resources, essential fish habitat (EFH), marine ecosystems, fisheries participants, fishing communities, and the nation; and

(ii) Identifying areas where additional management measures are needed.

(2) Scientific information that is used to inform decision making should include an evaluation of its uncertainty and identify gaps in the information. Management decisions should recognize the biological (e.g., overfishing), ecological, sociological, and economic (e.g., loss of fishery benefits) risks associated with the sources of uncertainty and gaps in the scientific information.

(3) Information-limited fisheries, commonly referred to as ''data-poor'' fisheries, may require use of simpler assessment methods and greater use of proxies for quantities that cannot be directly estimated, as compared to data-rich fisheries.

(4) Scientific information includes, but is not limited to, factual input, data, models, analyses, technical information, or scientific assessments. Scientific information includes data compiled directly from surveys or sampling programs, and models that are mathematical representations of reality constructed with primary data. The complexity of the model should not be the defining characteristic of its value; the data requirements and assumptions associated with a model should be commensurate with the resolution and accuracy of the available primary data. Scientific information includes established and emergent scientific information. Established science is scientific knowledge derived and verified through a standard scientific process that tends to be agreed upon often without controversy. Emergent science is relatively new knowledge that is still evolving and being verified, therefore, may potentially be uncertain and controversial. Emergent science should be considered more thoroughly, and scientists should be attentive to effective communication of emerging science.

(5) Science is a dynamic process, and new scientific findings constantly advance the state of knowledge. Best scientific information is, therefore, not static and ideally entails developing and following a research plan with the following elements: Clear statement of objectives; conceptual model that provides the framework for interpreting results, making predictions, or testing hypotheses; study design with an explicit and standardized method of collecting data; documentation of methods, results, and conclusions; peer review, as appropriate; and communication of findings.

(6) Criteria to consider when evaluating best scientific information are relevance, inclusiveness, objectivity, transparency and openness, timeliness, verification and validation, and peer review, as appropriate.

(i) *Relevance.* Scientific information should be pertinent to the current questions or issues under consideration and should be representative of the fishery being managed. In addition to the information collected directly about the fishery being managed, relevant information may be available about the same species in other areas, or about related species. For example, use of proxies may be necessary in data-poor situations. Analysis of related stocks or species may be a useful tool for inferring the likely traits of stocks for which stock-specific data are unavailable or are not sufficient to produce reliable estimates. Also, if management measures similar to those being considered have been introduced in other regions and resulted in particular behavioral responses from participants or business decisions from industry, such social and economic information may be relevant.

(ii) *Inclusiveness.* Three aspects of inclusiveness should be considered when developing and evaluating best scientific information:

(A) The relevant range of scientific disciplines should be consulted to encompass the scope of potential impacts of the management decision.

(B) Alternative scientific points of view should be acknowledged and addressed openly when there is a diversity of scientific thought.

(C) Relevant local and traditional knowledge (*e.g.,* fishermen's empirical knowledge about the behavior and distribution of fish stocks) should be obtained, where appropriate, and considered when evaluating the BSIA.

(iii) *Objectivity.* Scientific information should be accurate, with a known degree of precision, without addressable bias, and presented in an accurate, clear, complete, and balanced manner. Scientific processes should be free of undue nonscientific influences and considerations.

(iv) *Transparency and openness.* (A) The Magnuson-Stevens Act provides broad public and stakeholder access to the fishery conservation and management process, including access to the scientific information upon which the process and management measures are based. Public comment should be solicited at appropriate times during the review of scientific information. Communication with the public should be structured to foster understanding of the scientific process.

(B) Scientific information products should describe data collection methods, report sources of uncertainty or statistical error, and acknowledge other data limitations. Such products should explain any decisions to exclude data from analysis. Scientific products should identify major assumptions and uncertainties of analytical models. Finally, such products should openly acknowledge gaps in scientific information.

(v) *Timeliness.* Mandatory management actions should not be delayed due to limitations in the scientific information or the promise of future data collection or analysis. In some cases, due to time constraints,

results of important studies or monitoring programs may be considered for use before they are fully complete. Uncertainties and risks that arise from an incomplete study should be acknowledged, but interim results may be better than no results to help inform a management decision. Sufficient time should be allotted to audit and analyze recently acquired information to ensure its reliability. Data collection methods are expected to be subjected to appropriate review before providing data used to inform management decisions.

(A) For information that needs to be updated on a regular basis, the temporal gap between information collection and management implementation should be as short as possible, subject to regulatory constraints, and such timing concerns should be explicitly considered when developing conservation and management measures. Late submission of scientific information to the Council process should be avoided if the information has circumvented the review process. Data collection is a continuous process, therefore analysis of scientific information should specify a clear time point beyond which new information would not be considered in that analysis and would be reserved for use in subsequent analytical updates.

(B) Historical information should be evaluated for its relevance to inform the current situation. For example, some species' life history characteristics might not change over time. Other historical data (e.g., abundance, environmental, catch statistics, market and trade trends) provide time-series information on changes in fish populations, fishery participation, and fishing effort that may inform current management decisions.

(vi) *Verification and validation.* Methods used to produce scientific information should be verified and validated to the extent possible.

(A) *Verification* means that the data and procedures used to produce the scientific information are documented in sufficient detail to allow reproduction of the analysis by others with an acceptable degree of precision. External reviewers of scientific information require this level of documentation to conduct a thorough review.

(B) *Validation* refers to the testing of analytical methods to ensure that they perform as intended. Validation should include whether the analytical method has been programmed correctly in the computer software, the accuracy and precision of the estimates is adequate, and the estimates are robust to model assumptions. Models should be tested using simulated data from a population with known properties to evaluate how well the models estimate those characteristics and to correct for known bias to achieve accuracy. The concept of validation using simulation testing should be used, to the extent possible, to evaluate how well a management strategy meets management objectives.

(vii) *Peer review.* Peer review is a process used to ensure that the quality and credibility of scientific information and scientific methods meet the standards of the scientific and technical community. Peer review helps ensure objectivity, reliability, and integrity of scientific information. The peer review process is an organized method that uses peer scientists with appropriate and relevant expertise to evaluate scientific information. The scientific information that supports conservation and management measures considered by the Secretary or a Council should be peer reviewed, as appropriate. Factors to consider when determining whether to conduct a peer review and if so, the appropriate level of review, include the novelty and complexity of the scientific information to be reviewed, the level of previous review and the importance of the information to be reviewed to the decision making process. Routine updates based on previously reviewed methods require less review than novel methods or data. If formal peer review is not practicable due to time or resource constraints, the development and analysis of scientific information used in or in support of fishery management actions should be as transparent as possible, in accordance with paragraph (a)(6)(iv) of this section. Other applicable guidance on peer review can be found in the Office of Management and Budget Final Information Quality Bulletin for Peer Review.

(b) *Peer review process.* The Secretary and each Council may establish a peer review process for that Council for scientific information used to advise about the conservation and management of the fishery. 16 U.S.C. 1852(g)(1)(E). A peer review process is not a substitute for an SSC and should work in conjunction with the SSC (see § 600.310(b)(2)(v)(C)). This section provides guidance and standards that should be followed in order to establish a peer review process per Magnuson-Stevens Act section 302(g)(1)(E).

(1) The objective or scope of the peer review, the nature of the scientific information to be reviewed, and timing of the review should be considered when selecting the type of peer review to be used. The process established by the Secretary and Council should focus on providing review for information that has not yet undergone rigorous peer review, but that must be peer reviewed in order to provide reliable, high quality scientific advice for fishery conservation and management. Duplication of previously conducted peer review should be avoided.

(i) *Form of process.* The peer review process may include or consist of existing Council committees or panels if they meet the standards identified herein. The Secretary and Council have discretion to determine the appropriate peer review process for a specific information product. A peer review can take many forms, including individual letter or written reviews and panel reviews.

(ii) *Timing.* The peer review should, to the extent practicable, be conducted early in the process of producing scientific information or a work product, so peer review reports are available for the SSC to consider in its evaluation of scientific information for its Council and the Secretary. The timing will depend in part on the scope of the review. For instance, the peer review of a new or novel method or model should be conducted before there is an investment of time and resources in implementing the model and interpreting the results. The results of this type of peer review may contribute to improvements in the model or assessment.

(iii) *Scope of work.* The scope of work or charge (sometimes called the terms of reference) of any peer review should be determined in advance of the selection of reviewers. The scope of work contains the objectives of the peer review, evaluation of the various stages of the science, and specific recommendations for improvement of the science. The scope of work should be carefully designed, with specific technical questions to guide the peer review process; it should ask peer reviewers to ensure that scientific uncertainties are clearly identified and characterized, it should allow peer reviewers the opportunity to offer a broad evaluation of the overall scientific or technical product under review, as well as to make recommendations regarding areas of missing information, future research, data collection, and improvements in methodologies, and it must not change during the course of the peer review. The scope of work may not request reviewers to provide advice on policy or regulatory issues (e.g., amount of precaution used in decision-making) which are within the purview of the Secretary and the Councils, or to make formal fishing level

recommendations which are within the purview of the SSC.

(2) *Peer reviewer selection.* The selection of participants in a peer review should be based on expertise, independence, and a balance of viewpoints, and be free of conflicts of interest.

(i) *Expertise and balance.* Peer reviewers must be selected based on scientific expertise and experience relevant to the disciplines of subject matter to be reviewed. The group of reviewers that constitute the peer review should reflect a balance in perspectives, to the extent practicable, and should have sufficiently broad and diverse expertise to represent the range of relevant scientific and technical perspectives to complete the objectives of the peer review.

(ii) *Conflict of interest.* Peer reviewers who are federal employees must comply with all applicable federal ethics requirements. Potential reviewers who are not federal employees must be screened for conflicts of interest in accordance with the NOAA Policy on Conflicts of Interest for Peer Review Subject to OMB's Peer Review Bulletin or other applicable rules or guidelines.

(A) Under the NOAA policy, peer reviewers must not have any conflicts of interest with the scientific information, subject matter, or work product under review, or any aspect of the statement of work for the peer review. For purposes of this section, a conflict of interest is any financial or other interest which conflicts with the service of the individual on a review panel because it: could significantly impair the reviewer's objectivity, or could create an unfair competitive advantage for a person or organization.

(B) No individual can be appointed to a review panel if that individual has a conflict of interest that is relevant to the functions to be performed. For reviews requiring highly specialized expertise, the limited availability of qualified reviewers might result in an exception when a conflict of interest is unavoidable; in this situation, the conflict must be promptly and publicly disclosed. Conflicts of interest include, but are not limited to, the personal financial interests and investments, employer affiliations, and consulting arrangements, grants, or contracts of the individual and of others with whom the individual has substantial common financial interests, if these interests are relevant to the functions to be performed.

(iii) *Independence.* Peer reviewers must not have contributed or participated in the development of the work product or scientific information under review. For peer review of products of higher novelty or controversy, a greater degree of independence is necessary to ensure credibility of the peer review process. Peer reviewer responsibilities should rotate across the available pool of qualified reviewers or among the members on a standing peer review panel to prevent a peer reviewer from repeatedly reviewing the same scientific information, recognizing that, in some cases, repeated service by the same reviewer may be needed because of limited availability of specialized expertise.

(3) *Transparency.* A transparent process is one that ensures that background documents and reports from peer review are publicly available, subject to Magnuson-Stevens Act confidentiality requirements, and allows the public full and open access to peer review panel meetings. The evaluation and review of scientific information by the Councils, SSCs or advisory panels must be conducted in accordance with meeting procedures at § 600.135. Consistent with that section, public notice of peer review panel meetings should be announced in the **Federal Register** with a minimum of 14 days and with an aim of 21 days before the review to allow public comments during meetings. Background documents should be available for public review in a timely manner prior to meetings. Peer review reports describing the scope and objectives of the review, findings in accordance with each objective, and conclusions should be publicly available. Names and organizational affiliations of reviewers also should be publicly available.

(4) *Publication of the peer review process.* The Secretary will announce the establishment of a peer review process under Magnuson-Stevens Act section 302(g)(1)(E) in the **Federal Register** along with a brief description of the process. In addition, detailed information on such processes will be made publicly available on the Council's Web site, and updated as necessary.

(c) *SSC scientific evaluation and advice to the Council.* Each scientific and statistical committee shall provide its Council ongoing scientific advice for fishery management decisions, including recommendations for acceptable biological catch, preventing overfishing, maximum sustainable yield, achieving rebuilding targets, and reports on stock status and health, bycatch, habitat status, social and economic impacts of management measures, and sustainability of fishing practices. 16 U.S.C. 1852(g)(1)(B).

(1) SSC scientific advice and recommendations to its Council are based on scientific information that the SSC determines to meet the guidelines for best scientific information available as described in paragraph (a) of this section. SSCs may conduct peer reviews or evaluate peer reviews to provide clear scientific advice to the Council. Such scientific advice should attempt to resolve conflicting scientific information, so that the Council will not need to engage in debate on technical merits. Debate and evaluation of scientific information is the role of the SSC.

(2) An SSC member may participate in a peer review when such participation is beneficial to the peer review due to the expertise and institutional memory of that member, or beneficial to the Council's advisory body by allowing that member to make a more informed evaluation of the scientific information. Participation of an SSC member in a peer review should not impair the ability of that member to fulfill his or her responsibilities to the SSC.

(3) If an SSC as a body conducts a peer review established under Magnuson-Stevens Act section 302(g)(1)(E) or individual members of an SSC participate in such a peer review, the SSC members must meet the peer reviewer selection criteria as described in paragraph (b)(2) of this section. In addition, the financial disclosure requirements under § 600.235, Financial Disclosure for Councils and Council committees, apply. When the SSC as a body is conducting a peer review, it should strive for consensus and must meet the transparency guidelines under paragraphs (a)(6)(iv) and (b)(3) of this section. If consensus cannot be reached, minority viewpoints should be recorded.

(4) The SSC's evaluation of a peer review conducted by a body other than the SSC should consider the extent and quality of peer review that has already taken place. For Councils with extensive and detailed peer review processes (e.g., a process established pursuant to Magnuson-Stevens Act section 302(g)(1)(E)), the evaluation by the SSC of the peer reviewed information should not repeat the previously conducted and detailed technical peer review. However, SSCs must maintain their role as advisors to the Council about scientific information that comes from a peer review process. Therefore, the peer review of scientific information used to advise the Council, including a peer review process established by the Secretary and the Council under Magnuson-Stevens Act section

302(g)(1)(E), should be conducted early in the scientific evaluation process in order to provide the SSC with reasonable opportunity to consider the peer review report and make recommendations to the Council as required under Magnuson-Stevens Act section 302(g)(1)(B).

(5) If an SSC disagrees with the findings or conclusions of a peer review, in whole or in part, the SSC must prepare a report outlining the areas of disagreement, and the rationale and information used by the SSC for making its determination. This report must be made publicly available.

(6) Annual catch limits (ACLs) developed by a Council may not exceed its SSC's fishing level recommendations. 16 U.S.C. 1852(h)(6). Per the National Standard 1 Guidelines, the SSC fishing level recommendation that is most relevant to ACLs is acceptable biological catch (ABC), as both ACL and ABC are levels of annual catch (see § 600.310(b)(2)(v)(D)). The SSC is expected to take scientific uncertainty into account when making its ABC recommendation (§ 600.310(f)(4)). The ABC recommendation may be based upon input and recommendations from the peer review process. Any such peer review related to such recommendations should be conducted early in the process as described in paragraph (c)(4) of this section. The SSC should resolve differences between its recommendations and any relevant peer review recommendations per paragraph (c)(5) of this section.

(d) *SAFE Report.* The term SAFE (Stock Assessment and Fishery Evaluation) report, as used in this section, refers to a public document or a set of related public documents, that provides the Secretary and the Councils with a summary of scientific information concerning the most recent biological condition of stocks, stock complexes, and marine ecosystems in the fishery management unit (FMU), essential fish habitat (EFH), and the social and economic condition of the recreational and commercial fishing interests, fishing communities, and the fish processing industries. Each SAFE report must be scientifically based with appropriate citations of data sources and information. Each SAFE report summarizes, on a periodic basis, the best scientific information available concerning the past, present, and possible future condition of the stocks, EFH, marine ecosystems, and fisheries being managed under Federal regulation.

(1) The Secretary has the responsibility to ensure that SAFE reports are prepared and updated or supplemented as necessary whenever new information is available to inform management decisions such as status determination criteria (SDC), overfishing level (OFL), optimum yield, or ABC values (§ 600.310(c)). The SAFE report and any comments or reports from the SSC must be available to the Secretary and Council for making management decisions for each FMP to ensure that the best scientific information available is being used. The Secretary or Councils may utilize any combination of personnel from Council, State, Federal, university, or other sources to acquire and analyze data and produce the SAFE report.

(2) The SAFE report provides information to the Councils and the Secretary for determining annual catch limits (§ 600.310(f)(5)) for each stock in the fishery; documenting significant trends or changes in the resource, marine ecosystems, and fishery over time; implementing required EFH provisions (§ 600.815(a)(10)); and assessing the relative success of existing relevant state and Federal fishery management programs. The SAFE report should contain an explanation of information gaps and highlight needs for future scientific work. Information on bycatch and safety for each fishery should also be summarized. In addition, the SAFE report may be used to update or expand previous environmental and regulatory impact documents and ecosystem descriptions.

(3) Each SAFE report should contain the following scientific information when it exists:

(i) Information on which to base catch specifications and status determinations, including the most recent stock assessment documents and associated peer review reports, and recommendations and reports from the Council's SSC.

(A) A description of the SDC (e.g., maximum fishing mortality rate threshold and minimum stock size threshold for each stock or stock complex in the fishery) (§ 600.310(e)(2)).

(B) Information on OFL and ABC, preventing overfishing, and achieving rebuilding targets. Documentation of the data collection, estimation methods, and consideration of uncertainty in formulating catch specification recommendations should be included (§ 600.310(f)(2)). The best scientific information available to determine whether overfishing is occurring with respect to any stock or stock complex, whether any stock or stock complex is overfished, whether the rate or level of fishing mortality applied to any stock or stock complex is approaching the maximum fishing mortality threshold, and whether the size of any stock or stock complex is approaching the minimum stock size threshold; and

(C) The best scientific information available in support of management measures necessary to rebuild an overfished stock or stock complex (if any) in the fishery to a level consistent with producing the MSY in that fishery.

(ii) Information on sources of fishing mortality (both landed and discarded), including commercial and recreational catch and bycatch in other fisheries and a description of data collection and estimation methods used to quantify total catch mortality, as required by the National Standard 1 Guidelines (§ 600.310(i)).

(iii) Information on bycatch of non-target species for each fishery.

(iv) Information on EFH to be included in accordance with the EFH provisions (§ 600.815(a)(10)) .

(v) Pertinent economic, social, community, and ecological information for assessing the success and impacts of management measures or the achievement of objectives of each FMP.

(4) Transparency in the fishery management process is enhanced by complementing the SAFE report with the documentation of previous management actions taken by the Council or Secretary including a summary of the previous ACLs, ACTs, and accountability measures (AMs), and assessment of management uncertainty.

(5) To facilitate the use of the information in the SAFE report, and its availability to the Council, NMFS, and the public:

(i) The SAFE report should contain, or be supplemented by, a summary of the information and an index or table of contents to the components of the report. Sources of information in the SAFE report should be referenced, unless the information is proprietary.

(ii) The SAFE report or compilation of documents that comprise the SAFE report and index must be made available by the Council or NMFS on a readily accessible Web site.

(e) *FMP development.*—(1) FMPs must take into account the best scientific information available at the time of preparation. Between the initial drafting of an FMP and its submission for final review, new information often becomes available. This new information should be incorporated into the final FMP where practicable; but it is unnecessary to start the FMP process over again, unless the information indicates that drastic changes have occurred in the fishery that might require revision of the management objectives or measures.

(2) The fact that scientific information concerning a fishery is incomplete does not prevent the preparation and implementation of an FMP (see related §§ 600.320(d)(2) and 600.340(b)).

(3) An FMP must specify whatever information fishermen and processors will be required or requested to submit to the Secretary. Information about harvest within state waters, as well as in the EEZ, may be collected if it is needed for proper implementation of the FMP and cannot be obtained otherwise. Scientific information collections for stocks managed cooperatively by Federal and State governments should be coordinated with the appropriate state jurisdictions, to the extent practicable, to ensure harvest information is available for the management of stocks that utilize habitats in state and federal managed waters. The FMP should explain the practical utility of the information specified in monitoring the fishery, in facilitating inseason management decisions, and in judging the performance of the management regime; it should also consider the effort, cost, or social impact of obtaining it.

(4) An FMP should identify scientific information needed from other sources to improve understanding and management of the resource, marine ecosystem, the fishery, and fishing communities.

(5) The information submitted by various data suppliers should be comparable and compatible, to the maximum extent possible.

(6) FMPs should be amended on a timely basis, as new information indicates the necessity for change in objectives or management measures consistent with the conditions described in paragraph (d) of this section (SAFE reports). Paragraphs (e)(1) through (5) of this section apply equally to FMPs and FMP amendments.

[FR Doc. 2013–17422 Filed 7–18–13; 8:45 am]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 78, No. 139
Friday, July 19, 2013

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 193

[Docket No.: FAA–2013–0375]

Technical Operations Safety Action Program (T–SAP) and Air Traffic Safety Action Program (ATSAP)

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of Proposed Order Designating Safety Information as Protected from Disclosure.

SUMMARY: The FAA is proposing that safety information provided to it under the T–SAP, established in Notice JO 7210.807 which will be incorporated in FAA Order JO 7200.20, *Voluntary Safety Reporting Programs,* and ATSAP, covered by FAA Order JO 7200.20, be designated by an FAA Order as protected from public disclosure in accordance with the provisions of 14 CFR part 193, *Protection of Voluntarily Submitted Information*. The designation is intended to encourage persons to voluntarily provide information to the FAA under the T–SAP and ATSAP, so the FAA can learn about and address aviation safety hazards of which it was unaware or more fully understand and implement corrective measures for events or safety issues known by it through other means. Under 49 U.S.C. 40123, *Protection of Voluntarily Submitted Information,* the FAA is required to protect information from disclosure to the public, including disclosure under the Freedom of Information Act (5 U.S.C. 552) or other laws, following the issuance of such Order.

DATES: Comments must be received on or before August 19, 2013.

ADDRESSES: You may send comments identified by docket number FAA–2013–0375 using any of the following methods: via mail to U.S. Department of Transportation, Docket Operations, M–30, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington DC 20590–0339; telephone (202) 366–9826. You must identify the FAA Docket No. FAA–2013–3075 at the beginning of your comments. You may also submit comments through this Web site at *http://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Lisbeth Mack—Group Manager, ATO Safety Programs, Federal Aviation Administration, 490 L'Enfant Plaza, Suite 7200, Washington DC 20024 or via email at *lisbeth.mack@faa.gov* or phone at 202–385–4757.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify docket number FAA 2013–0375 and be submitted in triplicate to the Docket Management System (see **ADDRESSES** section for address and phone number). Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: ''Comments to FAA Docket No. FAA–2013–0375''. The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified closing date for comments will be considered before taking action on the proposed Order. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of This Proposed Designation

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An electronic copy of this document may be downloaded through the Internet at *http://www.regulations.gov*. Recently published rule-making documents can also be accessed through the FAA's Web site at *http://www.faa.gov/airports_airtraffic/air_traffic/publications*.

1. Background

Under Title 49 of the United States Code (49 U.S.C.), section 40123, certain voluntarily provided safety and security information is protected from disclosure in order to encourage persons to provide the information. The FAA must first issue an Order that specifies why the agency finds that the information should be protected in accordance with 49 U.S.C. 40123. The FAA's rules for implementing that section are in 14 CFR part 193. If the Administrator issues an Order designating information as protected under 49 U.S.C. 40123, that information will not be disclosed under the Freedom of Information Act (Title 5 of the United States Code (5 U.S.C.), section 552) or other laws, except as provided in 49 U.S.C. 40123, 14 CFR part 193, and the Order designating the information as protected. This Order is issued under part 193, section 193.11, which sets out the notice procedure for designating information as protected.

2. Applicability

This proposed designation is applicable to any FAA office that receives information covered under this designation from T–SAP, established in Notice JO 7210.807, and which will be incorporated in FAA Order JO 7200.20, *Voluntary Safety Reporting Programs,* or the ATSAP described in FAA Order JO 7200.20. The proposed designation would also apply to any other government agency that receives such information from the FAA. For any other government agency to receive T–SAP or ATSAP information covered under the proposed designation from the FAA, each such agency must first

stipulate, in writing, that it will abide by the provisions of part 193 and the Order designating T–SAP and ATSAP as protected from public disclosure under 14 CFR part 193.

3. Overview

a. *Qualified Participants.* Technical Operations employees who are covered under the collective bargaining agreement (CBA) between PASS and the FAA effective December 14, 2012, or its successor, and other employees identified in Notice JO 7210.807, which will be incorporated in Order JO 7200.20, are eligible to complete a T–SAP report for events that occur while acting in that capacity. Air Traffic employees who are covered under the CBA between NATCA and the FAA effective October 1, 2009 or its successor, Staff Support Specialists covered under the CBA between NATCA and FAA effective August 1, 2010 or its successor, Flight Services personnel covered under the CBA between NATCA and the FAA effective June 5, 2011, or its successor, employees covered under the CBA between NAGE Local R3–10 and the FAA dated May 24, 2007 or its successor, and others identified in FAA Order JO 7200.20 are eligible to file an ATSAP report for events that occur while acting in that capacity.

b. *Voluntarily-provided Information Protected from Disclosure Under the Proposed Designation.* Except for T–SAP or ATSAP reports that involve possible criminal conduct, substance abuse, controlled substances, alcohol, or intentional falsification, the following information would be protected from disclosure:

(1) The content of any report concerning an aviation safety or security matter that is submitted by a qualified participant under the T–SAP or ATSAP, that is accepted into either program, including the T–SAP or ATSAP report, and the name of the submitter of the report. Notwithstanding the foregoing, mandatory information about occurrences that are required to be reported under FAA Orders, Notices or guidance is not protected under this designation, unless the same information has also been submitted or reported under other procedures prescribed by the Agency. The exclusion is necessary to assure that the information protected under this designation has been voluntarily submitted. It also permits changes to FAA Orders, Notices and guidance without requiring a change to this designation.

(2) Any evidence gathered by the Event Review Committee during its investigation of a safety- or security-related event reported under T–SAP or ATSAP, including the T–SAP or ATSAP investigative file.

c. *Ways to Participate.* Individuals who are qualified participants register for, and submit a report into, the electronic reporting system.

d. *Duration of Voluntary Safety Reporting Programs.* These programs continue as long as provided for by Order, Notice, policy or a collective bargaining agreement.

4. Findings

The FAA designates information received from a T–SAP or ATSAP submission as protected under 49 U.S.C. 40123 and 14 CFR 193.7, based on the following findings:

a. *Summary of why the FAA finds that the information will be provided voluntarily.* The FAA finds that the information will be provided voluntarily. This finding is supported by the significant increase in reports of safety-related matters since the implementation of T–SAP and ATSAP. No covered individual is required to participate in the T–SAP, ATSAP, or other voluntary safety reporting program.

b. *Description of the type of information that may be voluntarily provided under the program and a summary of why the FAA finds that the information is safety-related.*

(1) The following types of reports are ordinarily submitted under the T–SAP or ATSAP:

i. *Noncompliance reports.* Noncompliance reports identify specific instances of a failure to follow FAA directives.

ii. *Aviation safety concern reports.* Aviation safety concerns that do not involve specific noncompliance with FAA directives. These may include, but are not limited to, potential safety events or perceived problems with policies, procedures, and equipment.

(2) Technical Operations personnel support the delivery and efficiency of flight services through maintenance of the National Airspace System facilities, systems and equipment. Reports submitted by these employees under T–SAP ordinarily involve matters or observations occurring during the performance of their job responsibilities, and therefore the information submitted is inherently safety related. Air Traffic personnel provide and support the provision of air traffic services at FAA facilities throughout the NAS. Reports submitted by these employees under ATSAP ordinarily involve occurrences or problems identified or experienced during the performance of their job responsibilities which directly affect safety.

c. *Summary of why the FAA finds that the disclosure of the information would inhibit persons from voluntarily providing that type of information.* The FAA finds that disclosure of the information would inhibit the voluntary provision of that type of information. Individuals are unwilling to voluntarily provide detailed information about safety events and concerns, including those that might involve their own failures to follow Agency directives and policies, if such information could be released publicly. If information is publicly disclosed, there is a strong likelihood that the information could be misused for purposes other than to address and resolve the reported safety concern. Unless the FAA can provide assurance that safety-related reports will be withheld from public disclosure, personnel will not participate in the programs.

d. *Summary of why the receipt of that type of information aids in fulfilling the FAA's safety responsibilities.* The FAA finds that receipt of information in T–SAP or ATSAP reports aids in fulfilling the FAA's safety responsibilities. Because of its capacity to provide early identification of needed safety improvements, this information offers significant potential for addressing hazards that could lead to incidents or accidents. In particular, one of the benefits of T–SAP and ATSAP is that they encourage the submission of narrative descriptions of occurrences that provide more detailed information than is otherwise available. The T–SAP and ATSAP produce safety-related data that is not available from any other source. Receipt of this previously unavailable information has provided the FAA with an improved basis for modifying procedures, policies, and regulations to improve safety and efficiency.

e. *Consistencies and inconsistencies with FAA safety responsibilities.* The FAA finds that withholding T–SAP and ATSAP information from public release is consistent with the FAA's safety responsibilities, because it encourages individuals to provide important safety information that it otherwise might not receive.

(1) Withholding T–SAP and ATSAP information from disclosure, as described in this designation, is consistent with the FAA's safety responsibilities. Without the Agency's ability to assure that the detailed information reported under these programs, which often explains why the event occurred or describes underlying problems, will not be disclosed, the

information will not be provided to the FAA. Individuals are concerned that public release of the information could result in potential misuses of the information that could affect them negatively. If the FAA does not receive the information, the FAA and the public will be deprived of the opportunity to make the safety improvements that receipt of the information otherwise enables. Corrective action under T–SAP and ATSAP can be accomplished without disclosure of protected information. For example, for acceptance under each program, the reporting individual must comply with ERC recommendations for corrective action, such as additional training. If the individual fails to complete corrective action in a manner satisfactory to all members of the ERC, the event may be referred to an appropriate office within the FAA for any additional investigation, reexamination, and/or action, as appropriate.

(2) The FAA may release T–SAP and ATSAP information submitted to the agency, as specified in Part 193 and this proposed Order. For example, to explain the need for changes in FAA policies, procedures, and regulations, the FAA may disclose de-identified, summarized information that has been derived from T–SAP and ATSAP reports or extracted from the protected information listed under paragraph 4b. The FAA may disclose de-identified, summarized T–SAP and ATSAP information that identifies a systemic problem in the National Airspace System, when a party needs to be advised of the problem in order to take corrective action. Under the current version of FAA Order JO 7200.20, reported events and possible violations may be subject to investigation, reexamination, and/or action. Although the report itself and the content of the report are not used as evidence, the FAA may use the knowledge of the event or possible violation to generate an investigation, and, in that regard, the information is not protected from disclosure. To withhold information from such limited release would be inconsistent with the FAA's safety responsibilities. In addition, reports that appear to involve possible criminal activity, substance abuse, controlled substances, alcohol, or intentional falsification will be referred to an appropriate FAA office for further handling. The FAA may use such reports for enforcement purposes, and will refer such reports to law enforcement agencies, if appropriate. To withhold information in these circumstances would be inconsistent with the agency's safety responsibilities because it could prevent, or at least diminish, the FAA's ability to effectively address egregious misconduct.

f. *Summary of how the FAA will distinguish information protected under part 193 from information the FAA receives from other sources.*

(1) All T–SAP and ATSAP reports are clearly labeled as such. Each individual must submit their own report.

5. Designation

The FAA designates the information described in paragraph 4b to be protected from disclosure in accordance with 49 U.S.C. 40123 and 14 CFR part 193.

Issued in Washington, DC, on July 10, 2013.

Michael P. Huerta,

Administrator, Federal Aviation Administration.

21 CFR Part 74

[Docket No. FDA–1998–C–0381] (Formerly Docket No. 98C–0676)

Sensient Technologies Corporation; Withdrawal of Color Additive Petition

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of withdrawal.

SUMMARY: The Food and Drug Administration (FDA) is announcing the withdrawal, without prejudice to a future filing, of a color additive petition (CAP 8C0261) proposing that the color additive regulations be amended to provide for the safe use of External D&C Violet No. 2 in coloring externally applied drug products.

FOR FURTHER INFORMATION CONTACT: Ellen Anderson, Center for Food Safety and Applied Nutrition (HFS–265), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740–3835, 240–402–1309.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of August 24, 1998 (63 FR 45073), FDA announced that a color additive petition (CAP 8C0261) had been filed by Warner-Jenkinson Co., Inc. (now part of Sensient Cosmetic Technologies, a unit of Sensient Technologies Corporation), 107 Wade Ave., South Plainfield, NJ 07080. The petition proposed to amend the color additive regulations in 21 CFR part 74 *Listing of Color Additives Subject to Certification* to provide for the safe use of External D&C Violet No. 2 in coloring externally applied drug products. Sensient Technologies Corporation has now withdrawn the petition without prejudice to a future filing (21 CFR 71.6(c)(2)).

Dated: July 16, 2013.

[Docket Nos. FDA–2013–F–0700 and FDA–2013–P–0472]

Richard C. Theuer; Filing of Food Additive Petition and Citizen Petition

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of petition.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing that Richard C. Theuer, Ph.D., has filed a petition proposing that the food additive regulations be amended to prohibit the use of carrageenan and salts of carrageenan in infant formula. In addition, the petitioner has submitted a citizen petition, under FDA regulations, requesting that we amend the generally recognized as safe (GRAS) regulations to prohibit the use of Chondrus extract (carrageenin) in infant formula.

FOR FURTHER INFORMATION CONTACT: Molly A. Harry, Center for Food Safety and Applied Nutrition (HFS–265), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740–3835, 240–402–1075.

SUPPLEMENTARY INFORMATION: Under section 409(b)(5) of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 348(b)(5)), we are giving notice that Richard C. Theuer, Ph.D., 7904 Sutterton Ct., Raleigh, NC 27615, has filed a food additive petition (FAP 3A4798; Docket No. FDA–2013–F–0700). The petition proposes to amend the food additive regulations in 21 CFR 172.620 and 172.626 to prohibit the use of carrageenan and salts of carrageenan in infant formula. In addition, Dr. Theuer has submitted a citizen petition, under 21 CFR 10.30, requesting that 21

CFR 182.7255 of the GRAS regulations be amended to prohibit the use of Chondrus extract (carrageenin) in infant formula (Docket No. FDA–2013–P–0472). (Carrageenin is an alternate name for carrageenan.)

Although the petitioner has submitted both a food additive petition and a citizen petition, for reasons of administrative efficiency, we may address all aspects of the petitions under the procedures established in section 409 of the FD&C Act and regulations issued under that section.

We have determined under 21 CFR 25.32(m) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Dated: July 16, 2013.

BILLING CODE 4160–01–P

LIBRARY OF CONGRESS

Copyright Royalty Board

37 CFR Part 384

[Docket No. 2012–1 CRB Business Establishments II]

Determination of Rates and Terms for Business Establishment Services

AGENCY: Copyright Royalty Board, Library of Congress.

ACTION: Proposed rule.

SUMMARY: The Copyright Royalty Judges are publishing for comment proposed regulations that set the rates and terms for the making of an ephemeral recording of a sound recording by a business establishment service for the period January 1, 2014, through December 31, 2018.

DATES: Comments and objections are due no later than August 19, 2013.

ADDRESSES: Comments and objections may be sent electronically to *crb@loc.gov.* In the alternative, send an original, five copies, and an electronic copy on a CD either by mail or hand delivery. Please do not use multiple means for transmission. Comments and objections may not be delivered by an overnight delivery service other than the U.S. Postal Service Express Mail. If by mail (including overnight delivery), comments and objections must be addressed to: Copyright Royalty Board, P.O. Box 70977, Washington, DC 20024–0977. If hand delivered by a private party, comments and objections must be brought between 8:30 a.m. and 5 p.m. to the Copyright Office Public Information Office, Library of Congress, James Madison Memorial Building, Room LM–401, 101 Independence Avenue SE., Washington, DC 20559–6000. If delivered by a commercial courier, comments and objections must be delivered between 8:30 a.m. and 4 p.m. to the Congressional Courier Acceptance Site located at 2nd and D Street NE., Washington, DC, and the envelope must be addressed to Copyright Royalty Board, Library of Congress, James Madison Memorial Building, LM–403, 101 Independence Avenue SE., Washington, DC 20559–6000.

FOR FURTHER INFORMATION CONTACT: LaKeshia Keys, Program Specialist, by telephone at (202) 707–7658 or email at *crb@loc.gov.*

SUPPLEMENTARY INFORMATION: In 1995, Congress enacted the Digital Performance in Sound Recordings Act, Public Law 104–39, which created an exclusive right for copyright owners of sound recordings, subject to certain limitations, to perform publicly sound recordings by means of certain digital audio transmissions. Among the limitations on the performance right was the creation of a statutory license for nonexempt, noninteractive digital subscription transmissions. 17 U.S.C. 114(d).

The scope of the section 114 statutory license was expanded in 1998 upon the passage of the Digital Millennium Copyright Act of 1998 (DMCA), Public Law 105–34, in order to allow for the public performance of a sound recording when made in accordance with the terms and rates of the statutory license, 17 U.S.C. 114(d), by a preexisting satellite digital audio radio service or as part of an eligible nonsubscription transmission. In addition to expanding the section 114 license, the DMCA also created a statutory license for the making of an ''ephemeral recording'' of a sound recording by certain transmitting organizations. 17 U.S.C. 112(e). This license allows entities that transmit performance of sound recordings to business establishments, pursuant to the limitations set forth in section 114(d)(1)(C)(iv), to make an ephemeral recording of a sound recording for a later transmission. *Id.* The license also provides a means by which a transmitting entity with a statutory license under section 114(f) can make more than one phonorecord permitted under the exemption set forth in section 112(a). 17 U.S.C. 112(e).

Chapter 8 of the Copyright Act requires the Copyright Royalty Judges (Judges) to conduct proceedings every five years to determine the rates and terms for ''the activities described in section 112(e)(1) relating to the limitation on exclusive rights specified by section 114(d)(1)(C)(iv).'' [1] 17 U.S.C. 801(b)(1), 804(b)(2). In accordance with section 804(b)(2), the Judges commenced a proceeding to set rates and terms for the making of ephemeral sound recordings by a business establishment service on January 5, 2007, 72 FR 584, and published in the **Federal Register** on March 27, 2008, final regulations setting those rates and terms. 73 FR 16199. Therefore, the next proceeding was to be commenced in January 2012. 17 U.S.C. 804(b)(2).

Accordingly, the Judges published a notice commencing the current proceeding and requesting interested parties to submit their petitions to participate. 77 FR 133 (Jan. 3, 2012). Petitions to Participate were received from: Pandora Media, Inc.; Music Choice; DMX, Inc.; Muzak LLC; Music Reports, Inc.; Clear Channel Broadcasting, Inc.; SoundExchange, Inc.; and Sirius XM Radio, Inc. The Judges set the timetable for the three-month negotiation period, *see* 17 U.S.C. 803(b)(3), and directed the participants to submit their written direct statements no later than November 16, 2012. Subsequently, the Judges granted the participants' request to extend the deadline to November 29, 2012, in order to allow the participants to finalize a settlement agreement. *See Order Granting Joint Motion for Extension of Time for Filing Written Direct Statements,* Docket No. 2012–1 CRB Business Establishments II (Nov. 14, 2012). On November 29, 2012, the Judges received a Motion to Adopt Settlement stating that all participants had reached a settlement obviating the need for a hearing.

Section 801(b)(7)(A) of the Copyright Act authorizes the Judges to adopt rates and terms negotiated by ''some or all of the participants in a proceeding at any time during the proceeding'' provided they are submitted to the Judges for approval. This section provides in part that the Judges must provide to both non-participants and participants to the rate proceeding who ''would be bound

[1] Prior to the enactment of the Copyright Royalty and Distribution Reform Act of 2004, which established the Copyright Royalty Judges, rates and terms for the statutory license under section 112(e) were set under the Copyright Arbitration Royalty Panel system, which was administered by the Librarian of Congress.

by the terms, rates, or other determination set by any agreement . . . an opportunity to comment on the agreement.'' 17 U.S.C. 801(b)(7)(A)(i). Participants to the proceeding may also ''object to [the agreement's] adoption as a basis for statutory terms and rates.'' *Id.* The Judges ''may decline to adopt the agreement as a basis for statutory terms and rates for participants that are not parties to the agreement,'' only ''if any participant [to the proceeding] objects to the agreement and the [Judges] conclude, based on the record before them if one exists, that the agreement does not provide a reasonable basis for setting statutory terms or rates.'' 17 U.S.C. 801(b)(7)(A)(ii).

Rates and terms adopted pursuant to section 801(b)(7)(A) are binding on all copyright owners of sound recordings and business establishment services making an ephemeral recording of a sound recording for the period January 1, 2014, through December 31, 2018.

As noted above, the public may comment and object to any or all of the proposed regulations contained in this notice. Such comments and objections must be submitted no later than August 19, 2013.

List of Subjects in 37 CFR Part 384

Copyright, Digital audio transmissions, Ephemeral recordings, Performance right, Sound recordings.

Proposed Regulations

For the reasons set forth in the preamble, the Copyright Royalty Judges propose to amend part 384 of chapter III of title 37 of the Code of Federal Regulations to read as follows:

PART 384—RATES AND TERMS FOR THE MAKING OF EPHEMERAL RECORDINGS BY BUSINESS ESTABLISHMENT SERVICES

■ 1. The authority citation for part 384 continues to read as follows:

Authority: 17 U.S.C. 112(e), 801(b)(1).

§ 384.1 [Amended]

■ 2. Section 384.1 is amended as follows:

■ a. In paragraph (a), by removing ''§ 384.2(a)'' and adding ''§ 384.2'' in its place, and by removing ''2009–1013'' and adding ''January 1, 2014, through December 31, 2018'' in its place;

■ b. In paragraph (b), by removing ''licenses set forth in 17 U.S.C. 112'' and adding ''license set forth in 17 U.S.C. 112(e)'' in its place; and

■ c. In paragraph (c), by removing ''services'' and adding ''Licensees'' in its place.

■ 3. Section 384.2 is amended by revising the definition for ''*Copyright Owner''* to read as follows:

§ 384.2 Definitions.

* * * * *

Copyright Owners are sound recording copyright owners who are entitled to royalty payments made under this part pursuant to the statutory license under 17 U.S.C. 112(e).

* * * * *

§ 384.3 [Amended]

■ 4. Section 384.3 is amended as follows:

■ a. In paragraph (a), by removing ''service pursuant to the limitation on exclusive rights specified by 17 U.S.C. 114(d)(1)(C)(iv)'' and adding ''Business Establishment Service'' in its place and removing ''10%'' and adding ''12.5%'' in its place; and

■ b. In paragraph (b), by removing ''$10,000 for each calendar year'' and adding ''$10,000 for each calendar year of the License Period'' in its place.

■ 5. Section 384.4 is amended as follows:

■ a. By revising the paragraph heading for paragraph (a);

■ b. In paragraph (b)(2)(i), by removing ''condition precedent in paragraph (b)(2) of this section'' and adding ''condition precedent in this paragraph (b)(2)'' in its place, and by removing ''authorized such Collective'' and adding ''authorized the Collective'' in its place;

■ c. By revising paragraphs (c) through (e);

■ d. By revising introductory text of paragraph (f);

■ e. In paragraph (f)(2), by removing ''facsimile number'' and adding ''facsimile number (if any)'' in its place, and by removing ''individual or individuals'' and adding ''person'' in its place;

■ f. In paragraph (f)(3), by removing ''handwritten'';

■ g. In paragraph (f)(3)(i), by removing ''a corporation'' and adding ''corporation'' in its place;

■ h. In paragraph (f)(6), by removing ''a corporation'' and adding ''corporation'' in its place;

■ i. In paragraph (f)(8), by removing ''if the Licensee is a corporation or partnership,'';

■ j. By revising paragraphs (g) and (h); and

■ k. By removing paragraph (i).

The revisions read as follows:

§ 384.4 Terms for making payment of royalty fees and statements of account.

(a) *Payment to the Collective.* * * * * * * * * *

(c) *Monthly payments.* A Licensee shall make any payments due under § 384.3(a) on a monthly basis on or before the 45th day after the end of each month for that month. All monthly payments shall be rounded to the nearest cent.

(d) *Minimum payments.* A Licensee shall make any minimum payment due under § 384.3(b) by January 31 of the applicable calendar year, except that payment by a Licensee that has not previously made Ephemeral Recordings pursuant to the license under 17 U.S.C. 112(e) shall be due by the 45th day after the end of the month in which the Licensee commences to do so.

(e) *Late payments.* A Licensee shall pay a late fee of 1.0% per month, or the highest lawful rate, whichever is lower, if either or both a required payment or statement of account for a required payment is received by the Collective after the due date. Late fees shall accrue from the due date until both the payment and statement of account are received by the Collective.

(f) *Statements of account.* For any part of the License Period during which a Licensee operates a Business Establishment Service, at the time when a minimum payment is due under paragraph (d) of this section, and by 45 days after the end of each month during the period, the Licensee shall deliver to the Collective a statement of account containing the information set forth in this paragraph (f) on a form prepared, and made available to Licensees, by the Collective. In the case of a minimum payment, or if a payment is owed for such month, the statement of account shall accompany the payment. A statement of account shall contain only the following information:

* * * * *

(g) *Distribution of royalties.* (1) The Collective shall promptly distribute royalties received from Licensees directly to Copyright Owners, or their designated agents, that are entitled to such royalties. The Collective shall only be responsible for making distributions to those Copyright Owners or their designated agents who provide the Collective with such information as is necessary to identify the correct recipient. The Collective shall distribute royalties on a basis that values all Ephemeral Recordings by a Licensee equally based upon the information provided under the reports of use requirements for Licensees contained in § 370.4 of this chapter.

(2) If the Collective is unable to locate a Copyright Owner entitled to a distribution of royalties under paragraph (g)(1) of this section within 3 years from the date of payment by a Licensee, such royalties shall be handled in accordance with § 384.8.

(h) *Retention of records.* Books and records of a Licensee and of the Collective relating to payments of and distributions of royalties shall be kept for a period of not less than the prior 3 calendar years.

§ 384.5 [Amended]

■ 6. Section 384.5 is amended as follows:

■ a. In paragraph (a), by removing ''part'' and adding ''section'' in its place, and by removing ''account, any information'' and adding ''account and any information'' in its place;

■ b. In paragraph (b), by removing ''The Collective shall have'' and adding ''The party claiming the benefit of this provision shall have'' in its place;

■ c. In paragraph (c), by removing ''activities directly related thereto'' and adding ''activities related directly thereto'' in its place;

■ d. In paragraph (d)(1), by removing ''work, require access to the records'' and adding ''work require access to Confidential Information'' in its place;

■ e. In paragraph (d)(2), by removing ''Collective committees'' and adding ''the Collective committees'' in its place, and by removing ''confidential information'' and adding ''Confidential Information'' in its place each place it appears;

■ f. In paragraph (d)(3), by removing ''respect to the verification of a Licensee's royalty payments'' and adding ''respect to verification of a Licensee's statement of account'' in its place;

■ g. In paragraph (d)(4), by removing ''Copyright owners whose works'' and adding ''Copyright Owners, including their designated agents, whose works'' in its place, by removing '', or agents thereof'', and by removing ''confidential information'' and adding ''Confidential Information'' in its place; and

■ h. In paragraph (e), by removing ''to safeguard all Confidential Information'' and adding ''to safeguard against unauthorized access to or dissemination of any Confidential Information'' in its place, and by removing ''belonging to such Collective'' and adding ''belonging to the Collective'' in its place.

■ 7. Section 384.6 is amended by revising paragraph (d) to read as follows:

§ 384.6 Verification of royalty payments.

* * * * *

(d) *Acquisition and retention of report.* The Licensee shall use commercially reasonable efforts to obtain or to provide access to any relevant books and records maintained by third parties for the purpose of the audit. The Collective shall retain the report of the verification for a period of not less than 3 years.

* * * * *

■ 8. Section 384.7 is amended as follows:

■ a. In paragraph (a), by removing ''Provided'' and adding ''provided'' in its place; and

■ b. By revising paragraph (d).

The revision reads as follows:

§ 384.7 Verification of royalty distributions.

* * * * *

(d) *Acquisition and retention of record.* The Collective shall use commercially reasonable efforts to obtain or to provide access to any relevant books and records maintained by third parties for the purpose of the audit. The Copyright Owner requesting the verification procedure shall retain the report of the verification for a period of not less than 3 years.

* * * * *

■ 9. Section 384.8 is revised to read as follows:

§ 384.8 Unclaimed funds.

If the Collective is unable to identify or locate a Copyright Owner who is entitled to receive a royalty distribution under this part, the Collective shall retain the required payment in a segregated trust account for a period of 3 years from the date of distribution. No claim to such distribution shall be valid after the expiration of the 3-year period. After expiration of this period, the Collective may apply the unclaimed funds to offset any costs deductible under 17 U.S.C. 114(g)(3). The foregoing shall apply notwithstanding the common law or statutes of any State.

Dated: July 12, 2013.

Suzanne M. Barnett,

Chief Copyright Royalty Judge.

BILLING CODE 1410–72–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 81

[EPA–R01–OAR–2013–0020; FRL–9834–7]

Approval and Promulgation of Air Quality Implementation Plans; Connecticut; Redesignation of Connecticut Portion of the New York-New Jersey-Connecticut Nonattainment Area to Attainment of the 1997 Annual and 2006 24-Hour Standards for Fine Particulate Matter

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve the State of Connecticut's June 22, 2012 request to redesignate the Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT fine particle ($PM_{2.5}$) area (i.e., New Haven and Fairfield Counties; herein called the ''Southwestern CT Area'' or ''the Area'') from nonattainment to attainment for the 1997 annual National Ambient Air Quality Standards (NAAQS or standard), as well as for the 2006 24-hour $PM_{2.5}$ NAAQS. As part of these proposed approvals, EPA proposes to approve (1) a State Implementation Plan (SIP) revision containing a 10-year maintenance plan for the Area; (2) a 2007 base-year emissions inventory for the Area; and (3) new motor vehicle emissions budgets (MVEBs) for the years 2017 and 2025 that are contained in the 10-year $PM_{2.5}$ maintenance plan for the Area.

In addition, in the course of proposing to approve Connecticut's request to redesignate the Southwestern CT Area, EPA addresses a number of additional issues, including the effects of two decisions of the United States Court of Appeals for the District of Columbia (D.C. Circuit Court): (1) The Court's August 21, 2012 decision to vacate and remand to EPA the Cross-State Air Pollution Control Rule (CSAPR), and (2) the Court's January 4, 2013 decision to remand to EPA two final rules implementing the 1997 $PM_{2.5}$ standard.

This action is being taken in accordance with the Clean Air Act (CAA).

DATES: Written comments must be received on or before August 19, 2013.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R01–OAR–2013–0020 by one of the following methods:

1. *www.regulations.gov:* Follow the on-line instructions for submitting comments.

2. *Email: arnold.anne@epa.gov*

3. *Fax:* (617) 918–0047.

4. *Mail:* ''Docket Identification Number EPA–R01–OAR–2013–0020,'' Anne Arnold, U.S. Environmental Protection Agency, EPA New England Regional Office, 5 Post Office Square, Suite 100 (mail code: OEP05–2), Boston, MA 02109–3912.

5. *Hand Delivery or Courier.* Deliver your comments to: Anne Arnold, Manager, Air Quality Planning Unit, Office of Ecosystem Protection, U.S. Environmental Protection Agency, EPA New England Regional Office, 5 Post Office Square, Suite 100, Boston, MA 02109–3912. Such deliveries are only

accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding legal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R01–OAR–2013–0020. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through *www.regulations.gov* or email, information that you consider to be CBI or otherwise protected. The *www.regulations.gov* Web site is an ''anonymous access'' systems, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

Docket: All documents in the electronic docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at Air Quality Planning Unit, Office of Ecosystem Protection, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: Alison C. Simcox, Air Quality Planning Unit, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, (Mail code OEP05–2), Boston, MA 02109—3912, telephone number (617) 918–1684, fax number (617) 918–0684, email *simcox.alison@epa.gov.*

In addition to the publicly available docket materials available for inspection electronically in the Federal Docket Management System at *www.regulations.gov,* and the hard copy available at the Regional Office, which are identified in the **ADDRESSES** section of this **Federal Register**, copies of the state submittal are also available for public inspection during normal business hours, by appointment at the State Air Agency: Bureau of Air Management, Department of Energy and Environmental Protection, State Office Building, 79 Elm Street, Hartford, CT 06106–1630.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

Table of Contents

I. What should I consider as I prepare my comments for EPA?

When submitting comments, remember to:

1. Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date, and page number).

2. Follow directions—EPA may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.

3. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

4. Describe any assumptions and provide any technical information and/or data that you used.

5. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

6. Provide specific examples to illustrate your concerns, and suggest alternatives.

7. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

8. Make sure to submit your comments by the comment period deadline identified.

II. What is the background for the proposal?

A. General Background

On June 22, 2012, the Connecticut Department of Energy and Environmental Protection (CT DEEP)

submitted a request to EPA to redesignate the Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT fine particle ($PM_{2.5}$) area (the Southwestern CT Area comprising New Haven and Fairfield Counties) to attainment for the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS, and for EPA approval of the state implementation plan (SIP) revision containing an emissions inventory and a maintenance plan for the area.

Fine particulate pollution is emitted directly from a source (primary $PM_{2.5}$) or is formed secondarily through chemical reactions in the atmosphere involving precursor pollutants (nitrogen oxides (NO_X), sulfur dioxides (SO_2), volatile organic compounds (VOC), and ammonia (NH_3)) emitted from a variety of sources. For example, sulfates are formed from SO_2 emissions from power plants and industrial facilities. Nitrates are formed from combustion emissions of NO_X from power plants, mobile sources, and other combustion sources.

The CAA establishes a process for air-quality management through the NAAQS. The first air quality standards for $PM_{2.5}$ were promulgated on July 18, 1997 (62 FR 38652). EPA promulgated an annual standard at a level of 15 micrograms per cubic meter ($\mu g/m^3$) of ambient air, based on a three-year average of the annual mean $PM_{2.5}$ concentrations at each monitoring site. In the same rulemaking, EPA promulgated a 24-hour $PM_{2.5}$ standard of 65 $\mu g/m^3$, based on a three-year average of the annual 98th percentile of 24-hour concentrations at each monitoring site.

On January 5, 2005 (70 FR 944), EPA designated the New York-N. New Jersey-Long Island, NY-NJ-CT area (also referred to as the New York Metropolitan Area), which includes the Southwestern CT Area, as nonattainment for the 1997 $PM_{2.5}$ NAAQS. See 70 FR 944 for a listing of all counties included in the tri-state nonattainment area.

On October 17, 2006 (71 FR 61144), EPA issued the 2006 $PM_{2.5}$ NAAQS. The 2006 NAAQS retained the annual $PM_{2.5}$ standard at 15 $\mu g/m^3$, but revised the 24-hour standard to 35 $\mu g/m^3$, based on a three-year average of the annual 98th percentile of the 24-hour $PM_{2.5}$ concentrations. However, petitioners challenged EPA's decision to retain the annual standard (but did not challenge the 2006 24-hour $PM_{2.5}$ standard). On February 24, 2009, the U.S. Court of Appeals for the D.C. Circuit remanded the annual $PM_{2.5}$ standard to the Agency for reconsideration. *See American Farm Bureau Federation and National Pork Producers Council, et al.* v. *EPA,* 559 F.3d 512 (D.C. Cir. 2009).

On November 13, 2009 (74 FR 58688), EPA published designations for the 24-hour standard established in 2006, designating the same New York Metropolitan Area (including the Southwestern CT Area) as nonattainment for this standard. In the November 2009 action, EPA clarified the designations for the NAAQS promulgated in 1997, stating that the New York Metropolitan Area remained designated nonattainment for the 1997 annual $PM_{2.5}$ NAAQS, but was designated attainment for the 1997 24-hour NAAQS. Therefore, today's action does not address attainment of the 1997 24-hour $PM_{2.5}$ NAAQS.

Today's action also does not address attainment of the remanded 2006 annual standard. However, given that the 1997 and 2006 annual standards are essentially identical, attainment of the 1997 annual standard would also indicate attainment of the remanded 2006 annual standard. Therefore, today's action addresses attainment of the 1997 annual standard and the 2006 24-hour standard.

On November 15, 2010, EPA determined that the entire New York Metropolitan Area had attained the 1997 annual $PM_{2.5}$ standard (75 FR 69589). This determination of attainment was based upon complete, quality-assured and certified ambient air-quality data for the 2007–2009 monitoring period. Subsequently, on December 31, 2012, EPA determined that the entire New York Metropolitan Area had also attained the 2006 24-hour $PM_{2.5}$ standard (77 FR 76867). This determination of attainment was based upon complete, quality-assured and certified ambient air-quality data for the 2007–2009, 2008–2010, and 2009–2011 monitoring periods. In addition, $PM_{2.5}$ monitoring data for 2012 indicate continued attainment of both standards. These determinations of attainment suspended the requirements for Connecticut to submit an attainment demonstration, associated reasonably available control measures, reasonable further progress (RFP), contingency measures, and other planning SIPs related to attainment of the 1997 annual or 2006 24-hour $PM_{2.5}$ NAAQS for as long as the Southwestern CT Area continues to attain these standards.

The CT DEEP redesignation request includes a maintenance plan designed to ensure continued compliance with both the 1997 annual and 2006 24-hour $PM_{2.5}$ standards through the year 2025. On December 14, 2012, EPA issued a new annual standard of 12 $\mu g/m^3$. Today's action does not address the 2012 standard.

B. Effect of the August 21, 2012 D.C. Circuit Decision Regarding EPA's CSAPR

On May 12, 2005, EPA published the Clean Air Interstate Rule (CAIR), which requires significant reductions in emissions of SO_2 and NO_X from electric generating units (EGUs) to limit the interstate transport of these pollutants and the ozone and fine particulate matter they form in the atmosphere. *See* 76 FR 70093. The D.C. Circuit Court initially vacated CAIR, *North Carolina* v. *EPA,* 531 F.3d 896 (D.C. Cir. 2008), but ultimately remanded that rule to EPA without vacatur to preserve the environmental benefits provided by CAIR, *North Carolina* v. *EPA,* 550 F.3d 1176, 1178 (D.C. Cir. 2008).

The Cross State Air Pollution Rule (CSAPR) included regulatory changes to sunset (i.e., discontinue) CAIR and the CAIR Federal Implementation Plans (FIPs) for control periods in 2012 and beyond. *See* 76 FR 48322. On December 30, 2011, the D.C. Circuit issued an order addressing the status of CSAPR and CAIR in response to motions filed by numerous parties seeking a stay of CSAPR pending judicial review. In that order, the Court stayed CSAPR pending resolution of the petitions for review of that rule in *EME Homer City Generation, L.P.* v. *EPA* (No. 11–1302 and consolidated cases). The Court also indicated that EPA was expected to continue to administer CAIR in the interim until judicial review of CSAPR was completed.

On August 21, 2012, the D.C. Circuit issued *EME Homer City Generation, L.P.* v. *EPA,* 696 F.3d 7 (D.C. Cir. 2012), which vacated and remanded CSAPR and ordered EPA to continue administering CAIR ''pending . . . development of a valid replacement.'' *EME Homer City* at 38. The D.C. Circuit denied all petitions for rehearing on January 24, 2013. On March 29, 2013, the U.S. Solicitor General petitioned the Supreme Court to review the D.C. Circuit Court's decision on CSAPR. On June 24, 2013, the Supreme Court granted the petition to review the decision. The Supreme Court's decision to review the case does not alter the current status of CAIR or CSAPR.

Connecticut's submittal and EPA modeling demonstrate that attainment of the 1997 annual and 2006 24-hour $PM_{2.5}$ standards will be maintained with or without the implementation of CAIR or CSAPR. To the extent that attainment is due to emission reductions associated with CAIR, EPA is here determining that those reductions are sufficiently

permanent and enforceable for purposes of CAA sections 107(d)(3)(E)(iii) and 175A.

As directed by the D.C. Circuit, CAIR remains in place and enforceable until EPA promulgates a valid replacement rule to substitute for CAIR. Connecticut's SIP revision lists CAIR as a control measure (Regulations of Connecticut State Agencies (RCSA) section 22a–174–22c) that was adopted by the State in September 2007 with an effective date of May 1, 2009. CAIR was, thus, in place and achieving emission reductions when the New York Metropolitan Area began monitoring attainment of the 1997 annual $PM_{2.5}$ standard during the 2007–2009 period, and of the 2006 24-hour $PM_{2.5}$ standards during the same period. The quality-assured, certified monitoring data continues to show the area in attainment with the 1997 and 2006 $PM_{2.5}$ standards through 2012.

In addition, modeling conducted by EPA during the CSAPR rulemaking process also demonstrates that the Southwestern CT Area will have $PM_{2.5}$ levels below the 1997 annual and 2006 24-hour $PM_{2.5}$ standards in both 2012 and 2014 without taking into account emissions reductions from CAIR or CSAPR. See ''Air Quality Modeling Final Rule Technical Support Document'', App. B, B–18, B–19. This modeling is available in the docket for this proposed redesignation action.

In sum, neither the current status of CAIR nor the current status of CSAPR affects any of the criteria for proposed approval of this redesignation request for the Southwestern CT Area.

C. Effect of the January 4, 2013 D.C. Circuit Decision Regarding $PM_{2.5}$ Implementation Under Subpart 4

1. Background

As discussed above, on January 4, 2013, in *Natural Resources Defense Council* v. *EPA,* the D.C. Circuit remanded to EPA the ''Final Clean Air Fine Particle Implementation Rule'' (72 FR 20586, April 25, 2007) and the ''Implementation of the New Source Review (NSR) Program for Particulate Matter Less than 2.5 Micrometers ($PM_{2.5}$)'' final rule (73 FR 28321, May 16, 2008) (collectively, ''1997 $PM_{2.5}$ Implementation Rule''). 706 F.3d 428 (D.C. Cir. 2013). The Court found that EPA erred in implementing the 1997 $PM_{2.5}$ NAAQS pursuant to the general implementation provisions of subpart 1 of Part D of Title I of the CAA, rather than the particulate-matter-specific provisions of subpart 4 of Part D of Title I. Although the Court's ruling did not directly address the 2006 $PM_{2.5}$ standard, EPA is taking into account the Court's position on subpart 4 and the 1997 $PM_{2.5}$ standard in evaluating redesignations for the 2006 standard.

2. Proposal on This Issue

EPA is proposing to determine that the Court's January 4, 2013 decision does not prevent EPA from redesignating the Southwestern CT Area to attainment. Even in light of the Court's decision, redesignation for this area is appropriate under the CAA and EPA's longstanding interpretations of the CAA's provisions regarding redesignation. EPA first explains its longstanding interpretation that requirements that are imposed, or that become due, after a complete redesignation request is submitted for an area that is attaining the standard, are not applicable for purposes of evaluating a redesignation request. Second, EPA then shows that, even if EPA applies the subpart 4 requirements to Connecticut's redesignation request and disregards the provisions of its 1997 $PM_{2.5}$ implementation rule recently remanded by the Court, the state's request for redesignation of this area still qualifies for approval. EPA's discussion takes into account the effect of the Court's ruling on the area's maintenance plan, which EPA views as approvable when subpart 4 requirements are considered.

a. Applicable Requirements for Purposes of Evaluating the Redesignation Request

With respect to the 1997 $PM_{2.5}$ Implementation Rule, the Court's January 4, 2013 ruling rejected EPA's reasons for implementing the $PM_{2.5}$ NAAQS solely in accordance with the provisions of subpart 1, and remanded that matter to EPA, so that it could address implementation of the 1997 $PM_{2.5}$ NAAQS under subpart 4 of Part D of the CAA, in addition to subpart 1. For the purposes of evaluating Connecticut's redesignation request for the Southwestern CT Area, to the extent that implementation under subpart 4 would impose additional requirements for areas designated nonattainment, EPA believes that those requirements are not ''applicable'' for the purposes of CAA section 107(d)(3)(E), and, thus, EPA is not required to consider subpart 4 requirements with respect to this redesignation request. Under its longstanding interpretation of the CAA, EPA has interpreted section 107(d)(3)(E) to mean, as a threshold matter, that the part D provisions which are ''applicable'' and which must be approved in order for EPA to redesignate an area include only those which came due prior to a state's submittal of a complete redesignation request. *See* ''Procedures for Processing Requests to Redesignate Areas to Attainment,'' Memorandum from John Calcagni, Director, Air Quality Management Division, September 4, 1992 (Calcagni memorandum). *See also* ''State Implementation Plan (SIP) Requirements for Areas Submitting Requests for Redesignation to Attainment of the Ozone and Carbon Monoxide (CO) National Ambient Air Quality Standards (NAAQS) on or after November 15, 1992,'' Memorandum from Michael Shapiro, Acting Assistant Administrator, Air and Radiation, September 17, 1993 (Shapiro memorandum); Final Redesignation of Detroit-Ann Arbor, (60 FR 12459, 12465–66, March 7, 1995); Final Redesignation of St. Louis, Missouri, (68 FR 25418, 25424–27, May 12, 2003); *Sierra Club* v. *EPA,* 375 F.3d 537, 541 (7th Cir. 2004) (upholding EPA's redesignation rulemaking applying this interpretation and expressly rejecting Sierra Club's view that the meaning of ''applicable'' under the statute is ''whatever should have been in the plan at the time of attainment rather than whatever actually was in the plan and already implemented or due at the time of attainment'').[1] In this case, at the time that Connecticut submitted its redesignation request, requirements under subpart 4 were not due.

EPA's view that, for purposes of evaluating the Southwestern CT Area redesignation, the subpart 4 requirements were not due at the time the State submitted the redesignation request is in keeping with the EPA's interpretation of subpart 2 requirements for subpart 1 ozone areas redesignated subsequent to the D.C. Circuit's decision in *South Coast Air Quality Mgmt. Dist.* v. *EPA,* 472 F.3d 882 (D.C. Cir. 2006). In *South Coast,* the Court found that EPA was not permitted to implement the 1997 8-hour ozone standard solely under subpart 1, and held that EPA was required under the statute to implement the standard under the ozone-specific requirements of subpart 2 as well. Subsequent to the *South Coast* decision, in evaluating and acting upon redesignation requests for the 1997 8-hour ozone standard that were submitted to EPA for areas under subpart 1, EPA applied its longstanding interpretation of the CAA that ''applicable requirements,'' for purposes

[1] Applicable requirements of the CAA that come due subsequent to the area's submittal of a complete redesignation request remain applicable until a redesignation is approved, but are not required as a prerequisite to redesignation. Section 175A(c) of the CAA.

of evaluating a redesignation, are those that had been due at the time the redesignation request was submitted. *See, e.g.,* Proposed Redesignation of Manitowoc County and Door County Nonattainment Areas (75 FR 22047, 22050, April 27, 2010). In those actions, EPA therefore did not consider subpart 2 requirements to be ''applicable'' for the purposes of evaluating whether the area should be redesignated under section 107(d)(3)(E).

EPA's interpretation derives from the provisions of CAA Section 107(d)(3). Section 107(d)(3)(E)(v) states that, for an area to be redesignated, a state must meet ''all requirements 'applicable' to the area under section 110 and part D.'' Section 107(d)(3)(E)(ii) provides that the EPA must have fully approved the ''applicable'' SIP for the area seeking redesignation. These two sections read together support EPA's interpretation of ''applicable'' as only those requirements that came due prior to submission of a complete redesignation request. First, holding states to an ongoing obligation to adopt new CAA requirements that arose after the state submitted its redesignation request, in order to be redesignated, would make it problematic or impossible for EPA to act on redesignation requests in accordance with the 18-month deadline Congress set for EPA action in section 107(d)(3)(D). If ''applicable requirements'' were interpreted to be a continuing flow of requirements with no reasonable limitation, states, after submitting a redesignation request, would be forced continuously to make additional SIP submissions that in turn would require EPA to undertake further notice-and-comment rulemaking actions to act on those submissions. This would create a regime of unceasing rulemaking that would delay action on the redesignation request beyond the 18-month timeframe provided by the Act for this purpose.

Second, a fundamental premise for redesignating a nonattainment area to attainment is that the area has attained the relevant NAAQS due to emission reductions from existing controls. Thus, an area for which a redesignation request has been submitted would have already attained the NAAQS as a result of satisfying statutory requirements that came due prior to the submission of the request. Absent a showing that unadopted and unimplemented requirements are necessary for future maintenance, it is reasonable to view the requirements applicable for purposes of evaluating the redesignation request as including only those SIP requirements that have already come due. These are the requirements that led to attainment of the NAAQS. To require, for redesignation approval, that a state also satisfy additional SIP requirements coming due after the state submits its complete redesignation request, and while EPA is reviewing it, would compel the state to do more than is necessary to attain the NAAQS, without a showing that the additional requirements are necessary for maintenance.

In the context of this redesignation, the timing and nature of the Court's January 4, 2013 decision in *NRDC* v. *EPA* compound the consequences of imposing requirements that come due after the redesignation request is submitted. The State submitted its redesignation request on June 22, 2012, but the Court did not issue its decision remanding EPA's 1997 $PM_{2.5}$ implementation rule concerning the applicability of the provisions of subpart 4 until January 2013.

To require the State's fully-completed and pending redesignation request for the 2006 $PM_{2.5}$ standard to comply now with requirements of subpart 4 that the Court announced only in its January, 2013 decision on the 1997 $PM_{2.5}$ implementation rule, would be to give retroactive effect to such requirements when the State had no notice that it was required to meet them. The D.C. Circuit recognized the inequity of this type of retroactive impact in *Sierra Club* v. *Whitman,* 285 F.3d 63 (D.C. Cir. 2002),[2] where it upheld the District Court's ruling refusing to make retroactive EPA's determination that the St. Louis area did not meet its attainment deadline. In that case, petitioners urged the Court to make EPA's nonattainment determination effective as of the date that the statute required, rather than the later date on which EPA actually made the determination. The Court rejected this view, stating that applying it ''would likely impose large costs on States, which would face fines and suits for not implementing air pollution prevention plans . . . even though they were not on notice at the time.'' *Id.* at 68. Similarly, it would be unreasonable to penalize the State of Connecticut by rejecting its redesignation request for an area that is already attaining the 1997 and 2006 $PM_{2.5}$ standards and that met all applicable requirements known to be in effect at the time of the request. For EPA now to reject the redesignation request solely because the state did not expressly address subpart 4 requirements of which it had no notice, would inflict the same unfairness condemned by the Court in *Sierra Club* v. *Whitman.*

b. Subpart 4 Requirements and Connecticut's Redesignation Request

Even if EPA were to take the view that the Court's January 4, 2013 decision requires that, in the context of a pending redesignation for the 1997 and 2006 $PM_{2.5}$ standards, subpart 4 requirements were due and in effect at the time the State submitted its redesignation request, EPA proposes to determine that the Southwestern CT Area still qualifies for redesignation to attainment. As explained below, EPA believes that the redesignation request for the Southwestern CT Area, though not expressed in terms of subpart 4 requirements, substantively meets the requirements of that subpart for purposes of redesignating the area to attainment.

With respect to evaluating the relevant substantive requirements of subpart 4 for purposes of redesignating the Southwestern CT Area, EPA notes that subpart 4 incorporates components of subpart 1 of part D, which contains general air quality planning requirements for areas designated as nonattainment. *See* Section 172(c). Subpart 4 itself contains specific planning and scheduling requirements for PM_{10}[3] nonattainment areas, and under the Court's January 4, 2013 decision in *NRDC* v. *EPA,* these same statutory requirements also apply for $PM_{2.5}$ nonattainment areas. EPA has longstanding general guidance that interprets the 1990 amendments to the CAA, making recommendations to states for meeting the statutory requirements for SIPs for nonattainment areas. *See* ''State Implementation Plans; General Preamble for the Implementation of Title I of the Clear Air Act Amendments of 1990,'' 57 FR 13498 (April 16, 1992) (the ''General Preamble''). In the General Preamble, EPA discussed the relationship of subpart 1 and subpart 4 SIP requirements, and pointed out that subpart 1 requirements were to an extent ''subsumed by, or integrally related to, the more specific PM–10 requirements.'' 57 FR 13538 (April 16, 1992). The subpart 1 requirements include, among other things, provisions for attainment demonstrations, reasonably available control measures (RACM), reasonable further progress

[2] *Sierra Club* v. *Whitman* was discussed and distinguished in a recent D.C. Circuit decision that addressed retroactivity in a quite different context, where, unlike the situation here, EPA sought to give its regulations retroactive effect. *National Petrochemical and Refiners Ass'n* v. *EPA.* 630 F.3d 145, 163 (D.C. Cir. 2010), rehearing denied 643 F.3d 958 (D.C. Cir. 2011), cert denied 132 S. Ct. 571 (2011).

[3] PM_{10} refers to particulates nominally 10 micrometers in diameter or smaller.

(RFP), emissions inventories, and contingency measures.

For the purposes of this redesignation, in order to identify any additional requirements which would apply under subpart 4, we are considering the Southwestern CT Area to be a ''moderate'' $PM_{2.5}$ nonattainment area. Under section 188 of the CAA, all areas designated nonattainment areas under subpart 4 would initially be classified by operation of law as ''moderate'' nonattainment areas, and would remain moderate nonattainment areas unless and until EPA reclassifies the area as a ''serious'' nonattainment area. Accordingly, EPA believes that it is appropriate to limit the evaluation of the potential impact of subpart 4 requirements to those that would be applicable to moderate nonattainment areas. Sections 189(a) and (c) of subpart 4 apply to moderate nonattainment areas and include the following: (1) An approved permit program for construction of new and modified major stationary sources (section 189(a)(1)(A)); (2) an attainment demonstration (section 189(a)(1)(B)); (3) provisions for RACM (section 189(a)(1)(C)); and (4) quantitative milestones demonstrating RFP toward attainment by the applicable attainment date (section 189(c)).

The permit requirements of subpart 4, as contained in section 189(a)(1)(A), refer to and apply the subpart 1 permit provisions requirements of sections 172 and 173 to PM_{10}, without adding to them. Consequently, EPA believes that section 189(a)(1)(A) does not itself impose for redesignation purposes any additional requirements for moderate areas beyond those contained in subpart 1.[4] In any event, in the context of redesignation, EPA has long relied on the interpretation that a fully approved nonattainment new source review program is not considered an applicable requirement for redesignation, provided the area can maintain the standard with a prevention of significant deterioration (PSD) program after redesignation. A detailed rationale for this view is described in a memorandum from Mary Nichols, Assistant Administrator for Air and Radiation, dated October 14, 1994, entitled, ''Part D New Source Review Requirements for Areas Requesting Redesignation to Attainment.'' *See also* rulemakings for Detroit, Michigan (60 FR 12467–12468, March 7, 1995); Cleveland-Akron-Lorain, Ohio (61 FR 20458, 20469–20470, May 7, 1996); Louisville, Kentucky (66 FR 53665, October 23, 2001); and Grand Rapids, Michigan (61 FR 31834–31837, June 21, 1996).

With respect to the specific attainment planning requirements under subpart 4,[5] when EPA evaluates a redesignation request under either subpart 1 and/or 4, any area that is attaining the $PM_{2.5}$ standard is viewed as having satisfied the attainment planning requirements for these subparts. For redesignations, EPA has for many years interpreted attainment-linked requirements as not applicable for areas attaining the standard. In the General Preamble, EPA stated that:

> The requirements for RFP will not apply in evaluating a request for redesignation to attainment since, at a minimum, the air quality data for the area must show that the area has already attained. Showing that the State will make RFP towards attainment will, therefore, have no meaning at that point.

''General Preamble for the Interpretation of Title I of the Clean Air Act Amendments of 1990''; (57 FR 13498, 13564, April 16, 1992).

The General Preamble also explained that

> [t]he section 172(c)(9) requirements are directed at ensuring RFP and attainment by the applicable date. These requirements no longer apply when an area has attained the standard and is eligible for redesignation. Furthermore, section 175A for maintenance plans * * * provides specific requirements for contingency measures that effectively supersede the requirements of section 172(c)(9) for these areas.

Id.

EPA similarly stated in its 1992 Calcagni memorandum that, ''The requirements for reasonable further progress and other measures needed for attainment will not apply for redesignations because they only have meaning for areas not attaining the standard.''

It is evident that even if we were to consider the Court's January 4, 2013 decision in *NRDC* v. *EPA* to mean that attainment-related requirements specific to subpart 4 should be imposed retroactively [6] and, thus, are now past due, those requirements do not apply to an area that is attaining the 1997 and 2006 $PM_{2.5}$ standards, for the purpose of evaluating a pending request to redesignate the area to attainment. EPA has consistently enunciated this interpretation of applicable requirements under section 107(d)(3)(E) since the General Preamble was published more than twenty years ago. Courts have recognized the scope of EPA's authority to interpret ''applicable requirements'' in the redesignation context. *See Sierra Club* v. *EPA,* 375 F.3d 537 (7th Cir. 2004).

Moreover, even outside the context of redesignations, EPA has viewed the obligations to submit attainment-related SIP planning requirements of subpart 4 as inapplicable for areas that EPA determines are attaining the standard. EPA's prior ''Clean Data Policy'' rulemakings for the PM_{10} NAAQS, also governed by the requirements of subpart 4, explain EPA's reasoning. They describe the effects of a determination of attainment on the attainment-related SIP planning requirements of subpart 4. *See* ''Determination of Attainment for Coso Junction Nonattainment Area,'' (75 FR 27944, May 19, 2010). *See also* Coso Junction proposed PM_{10} redesignation, (75 FR 36023, 36027, June 24, 2010); Proposed and Final Determinations of Attainment for San Joaquin Nonattainment Area (71 FR 40952, 40954–55, July 19, 2006; and 71 FR 63641, 63643–47 October 30, 2006). In short, EPA in this context has also long concluded that to require states to meet superfluous SIP planning requirements is not necessary and not required by the CAA, so long as those areas continue to attain the relevant NAAQS.

Elsewhere in this notice, EPA proposes to determine that the Southwestern CT Area has attained the 1997 and 2006 $PM_{2.5}$ standards. Under its longstanding interpretation, EPA is proposing to determine here that the area meets the attainment-related plan requirements of subparts 1 and 4.

Thus, EPA is proposing to conclude that the requirements to submit an attainment demonstration under 189(a)(1)(B), a RACM determination under section 172(c)(1) and section 189(a)(1)(c), a RFP demonstration under 189(c)(1), and contingency measure requirements under section 172(c)(9) are satisfied for purposes of evaluating the redesignation request.

c. Subpart 4 and Control of $PM_{2.5}$ Precursors

The D.C. Circuit in *NRDC* v. *EPA* remanded to EPA the two rules at issue in the case with instructions to EPA to re-promulgate them consistent with the requirements of subpart 4. EPA in this section addresses the Court's opinion with respect to $PM_{2.5}$ precursors. While past implementation of subpart 4 for PM_{10} has allowed for control of PM_{10} precursors such as NO_X from major stationary, mobile, and area sources in order to attain the standard as

[4] The potential effect of section 189(e) on section 189(a)(1)(A) for purposes of evaluating this redesignation is discussed below.

[5] I.e., attainment demonstration, RFP, RACM, milestone requirements, and contingency measures.

[6] As EPA has explained above, we do not believe that the Court's January 4, 2013 decision should be interpreted so as to impose these requirements on the states retroactively. *Sierra Club* v. *Whitman, supra.*

expeditiously as practicable, CAA section 189(e) specifically provides that control requirements for major stationary sources of direct PM_{10} shall also apply to PM_{10} precursors from those sources, except where EPA determines that major stationary sources of such precursors ''do not contribute significantly to PM_{10} levels which exceed the standard in the area.''

EPA's 1997 $PM_{2.5}$ implementation rule, remanded by the D.C. Circuit, contained rebuttable presumptions concerning certain $PM_{2.5}$ precursors applicable to attainment plans and control measures related to those plans. Specifically, in 40 CFR 51.1002, EPA provided, among other things, that a state was ''not required to address VOC [and ammonia] as . . . $PM_{2.5}$ attainment plan precursor[s] and to evaluate sources of VOC [and ammonia] emissions in the State for control measures.'' EPA intended these to be rebuttable presumptions. EPA established these presumptions at the time because of uncertainties regarding the emission inventories for these pollutants and the effectiveness of specific control measures in various regions of the country in reducing $PM_{2.5}$ concentrations. EPA also left open the possibility for such regulation of VOC and ammonia in specific areas where that was necessary.

The Court in its January 4, 2013 decision made reference to both section 189(e) and 40 CFR 51.1002, and stated that, ''In light of our disposition, we need not address the petitioners' challenge to the presumptions in [40 CFR 51.1002] that volatile organic compounds and ammonia are not $PM_{2.5}$ precursors, as subpart 4 expressly governs precursor presumptions.'' *NRDC* v. *EPA,* at 27, n.10.

Elsewhere in the Court's opinion, however, the Court observed:

> Ammonia is a precursor to fine particulate matter, making it a precursor to both $PM_{2.5}$ and PM_{10}. For a PM_{10} nonattainment area governed by subpart 4, a precursor is presumptively regulated. See 42 U.S.C. § 7513a(e) [section 189(e)].

Id. at 21, n.7. For a number of reasons, EPA believes that its proposed redesignation of the Southwestern CT Area is consistent with the Court's decision on this aspect of subpart 4. First, while the Court, citing section 189(e), stated that ''for a PM_{10} area governed by subpart 4, a precursor is 'presumptively regulated,' '' the Court expressly declined to decide the specific challenge to EPA's 1997 $PM_{2.5}$ implementation rule provisions regarding ammonia and VOC as precursors. The Court had no occasion to reach whether and how it was substantively necessary to regulate any specific precursor in a particular $PM_{2.5}$ nonattainment area, and did not address what might be necessary for purposes of acting upon a redesignation request.

However, even if EPA takes the view that the requirements of subpart 4 were deemed applicable at the time the state submitted the redesignation request, and disregards the implementation rule's rebuttable presumptions regarding ammonia and VOC as $PM_{2.5}$ precursors (and any similar provisions reflected in the guidance for the 2006 $PM_{2.5}$ standard), the regulatory consequence would be to consider the need for regulation of all precursors from any sources in the area to demonstrate attainment and to apply the section 189(e) provisions to major stationary sources of precursors. In the case of the Southwestern CT Area, EPA believes that doing so is consistent with proposing redesignation of the area for the 1997 and 2006 $PM_{2.5}$ standards. The Southwestern CT Area has attained the standard without any specific additional controls of VOC and ammonia emissions from any sources in the area.

Precursors in subpart 4 are specifically regulated under the provisions of section 189(e), which requires, with important exceptions, control requirements for major stationary sources of PM_{10} precursors.[7] Under subpart 1 and EPA's prior implementation rule, all major stationary sources of $PM_{2.5}$ precursors were subject to regulation, with the exception of ammonia and VOC. Thus, we must address here whether additional controls of ammonia and VOC from major stationary sources are required under section 189(e) of subpart 4 in order to redesignate the area for the 1997 $PM_{2.5}$ standard. As explained below, we do not believe that any additional controls of ammonia and VOC are required in the context of this redesignation.

In the General Preamble, EPA discusses its approach to implementing section 189(e). *See* 57 FR 13538–13542. With regard to precursor regulation under section 189(e), the General Preamble explicitly stated that control of VOCs under other Act requirements may suffice to relieve a state from the need to adopt precursor controls under section 189(e). 57 FR 13542. In this proposal, EPA proposes to determine that the SIP has met the provisions of section 189(e) with respect to ammonia and VOCs as precursors. This proposed determination is based on our findings that (1) the Southwestern CT Area contains no major stationary sources of ammonia, and (2) existing major stationary sources of VOC are adequately controlled under other provisions of the CAA regulating the ozone NAAQS.[8] In the alternative, EPA proposes to determine that, under the express exception provisions of section 189(e), and in the context of the redesignation of the area, which is attaining the 1997 and 2006 $PM_{2.5}$ standards, at present ammonia and VOC precursors from major stationary sources do not contribute significantly to levels exceeding the 1997 and 2006 $PM_{2.5}$ standards in the Southwestern CT Area.

EPA notes that its 1997 $PM_{2.5}$ implementation rule provisions in 40 CFR 51.1002 were not directed at evaluation of $PM_{2.5}$ precursors in the context of redesignation, but at SIP plans and control measures required to bring a nonattainment area into attainment of the 1997 $PM_{2.5}$ NAAQS. By contrast, redesignation to attainment primarily requires the area to have already attained due to permanent and enforceable emission reductions, and to demonstrate that controls in place can continue to maintain the standard. Thus, even if we regard the Court's January 4, 2013 decision as calling for ''presumptive regulation'' of ammonia and VOC for $PM_{2.5}$ under the attainment planning provisions of subpart 4, those provisions in and of themselves do not require additional controls of these precursors for an area that already qualifies for redesignation. Nor does EPA believe that requiring Connecticut to address precursors differently than they have already would result in a substantively different outcome.

Although, as EPA has emphasized, its consideration here of precursor requirements under subpart 4 is in the context of a redesignation to attainment, EPA's existing interpretation of subpart 4 requirements with respect to precursors in attainment plans for PM_{10} contemplates that states may develop attainment plans that regulate only those precursors that are necessary for purposes of attainment in the area in question, i.e., states may determine that only certain precursors need be regulated for attainment and control

[7] Under either subpart 1 or subpart 4, for purposes of demonstrating attainment as expeditiously as practicable, a state is required to evaluate all economically and technologically feasible control measures for direct PM emissions and precursor emissions, and adopt those measures that are deemed reasonably available.

[8] The Southwestern CT area has reduced VOC emissions through the implementation of various control programs including VOC Reasonably Available Control Technology regulations and various on-road and non-road motor vehicle control programs.

purposes.[9] Courts have upheld this approach to the requirements of subpart 4 for PM_{10}.[10] EPA believes that application of this approach to $PM_{2.5}$ precursors under subpart 4 is reasonable. Because the Southwestern CT Area has already attained the 1997 and 2006 $PM_{2.5}$ NAAQS with its current approach to regulation of $PM_{2.5}$ precursors, EPA believes that it is reasonable to conclude in the context of this redesignation that there is no need to revisit the attainment control strategy with respect to the treatment of precursors. Even if the Court's decision is construed to impose an obligation, in evaluating this redesignation request, to consider additional precursors under subpart 4, it would not affect EPA's approval here of Connecticut's request for redesignation of the Southwestern CT Area. In the context of a redesignation, the area has shown that it has attained the standard. Moreover, the state has shown and EPA is proposing to determine that attainment in this area is due to permanent and enforceable emissions reductions on all precursors necessary to provide for continued attainment. It follows logically that no further control of additional precursors is necessary. Accordingly, EPA does not view the January 4, 2013 decision of the Court as precluding redesignation of the Southwestern CT Area to attainment for the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS at this time.

In sum, even if Connecticut were required to address precursors for the Southwestern CT Area under subpart 4 rather than under subpart 1, as interpreted in EPA's remanded $PM_{2.5}$ implementation rule, EPA would still conclude that the area had met all applicable requirements for purposes of redesignation in accordance with section 107(d)(3)(E)(ii) and (v).

d. Maintenance Plan and Evaluation of Precursors

With regard to the redesignation of Southwestern CT Area, in evaluating the effect of the Court's remand of EPA's implementation rule, which included presumptions against consideration of VOC and ammonia as $PM_{2.5}$ precursors, EPA in this proposal is also considering the impact of the decision on the maintenance plan required under sections 175A and 107(d)(3)(E)(iv). To begin with, EPA notes that the area has attained the 1997 annual and 2006 24-hour $PM_{2.5}$ standards and that the state has shown that attainment of those standards is due to permanent and enforceable emission reductions.

EPA proposes to determine that the State's maintenance plan shows continued maintenance of the standards by tracking the levels of the precursors whose control brought about attainment of the 1997 and 2006 $PM_{2.5}$ standards in the Southwestern CT Area. EPA, therefore, believes that the only additional consideration related to the maintenance plan requirements that results from the Court's January 4, 2013 decision is that of assessing the potential role of VOC and ammonia in demonstrating continued maintenance in this area. As explained below, based upon documentation provided by the State and supporting information, EPA believes that the maintenance plan for the Southwestern CT Area need not include any additional emission reductions of VOC or ammonia in order to provide for continued maintenance of the 1997 and 2006 $PM_{2.5}$ standards.

III. What are the criteria for redesignation to attainment?

The CAA sets forth the requirements for redesignating a nonattainment area to attainment. Specifically, section 107(d)(3)(E) of the CAA allows for redesignation provided that: (1) EPA determines that the area has attained the applicable NAAQS; (2) EPA has fully approved the applicable state implementation plan for the area under CAA section 110(k); (3) air-quality improvements are due to permanent and enforceable emission reductions; and (4) EPA has fully approved a maintenance plan for the area meeting the requirements of CAA section 175A; and (5) the state containing such area has met all requirements applicable to the area under CAA section 110 and part D.

EPA has provided guidance on redesignation in the General Preamble for the Implementation of Title I of the CAA Amendments of 1990 (April 16, 1992, 57 FR 13498) (supplemented on April 28, 1992, 57 FR 18070) and has provided further guidance on processing redesignation requests in the following documents:

1. ''Procedures for Processing Requests to Redesignate Areas to Attainment,'' Memorandum from John Calcagni, Director, Air Quality Management Division, September 4, 1992 (hereafter referred to as the ''Calcagni Memorandum'');

2. ''State Implementation Plan (SIP) Actions Submitted in Response to Clean Air Act (CAA) Deadlines,'' Memorandum from John Calcagni, Director, Air Quality Management Division, October 28, 1992; and

3. ''Part D New Source Review (Part D NSR) Requirements for Areas Requesting Redesignation to Attainment,'' Memorandum from Mary D. Nichols, Assistant Administrator for Air and Radiation, October 14, 1994.

IV. What is EPA's analysis of the State's request?

EPA is proposing to determine that the Southwestern CT Area has met all applicable redesignation criteria under CAA section 107(d)(3)(E). The basis for EPA's proposed approval of the redesignation request is discussed below.

A. Has the Southwestern CT Area attained the 1997 $PM_{2.5}$ NAAQS?

On November 15, 2010 (75 FR 69589), EPA determined that the New York Metropolitan Area, which includes the Southwestern CT Area, attained the 1997 annual $PM_{2.5}$ NAAQS. EPA determines that an area has attained the 1997 annual $PM_{2.5}$ NAAQS based on three complete, consecutive calendar years of quality-assured air quality data. To attain the annual standard, the three-year average of the annual mean $PM_{2.5}$ concentrations for designated monitoring sites in an area must not exceed 15.0 $\mu g/m^3$. The data must be collected and quality-assured in accordance with 40 CFR part 58, and recorded in EPA's Air Quality System (AQS). The monitors generally should have remained at the same location for the duration of the monitoring period required for demonstrating attainment.

Specifically, on November 15, 2010 (75 FR 69589), EPA determined that the New York Metropolitan Area attained the 1997 annual $PM_{2.5}$ NAAQS based on complete, quality-assured monitoring data for 2007–2009, and that it had attained this standard as of April 5, 2010, its applicable attainment date. Further discussion of pertinent air quality issues underlying this determination was provided in the notice of proposed rulemaking for EPA's determination of attainment for this Area, published on August 2, 2010 (75 FR 45076).

In addition, as discussed below with respect to the maintenance plan, the CT DEEP has committed to continue to operate an EPA-approved monitoring network in the area as necessary to demonstrate maintenance of the NAAQS. Connecticut remains obligated to continue to ensure the quality of monitoring data in accordance with 40 CFR part 58, and to enter all data into the AQS in accordance with Federal

[9] *See, e.g.,* ''Approval and Promulgation of Implementation Plans for California—San Joaquin Valley PM–10 Nonattainment Area; Serious Area Plan for Nonattainment of the 24-Hour and Annual PM–10 Standards,'' 69 FR 30006 (May 26, 2004) (approving a PM_{10} attainment plan that impose controls on direct PM_{10} and NO_X emissions and did not impose controls on SO_2, VOC, or ammonia emissions).

[10] *See, e.g., Assoc. of Irritated Residents* v. *EPA et al.,* 423 F.3d 989 (9th Cir. 2005).

guidelines. In summary, the area has attained the 1997 annual $PM_{2.5}$ NAAQS.

B. Has the Southwestern CT Area attained the 2006 $PM_{2.5}$ NAAQS?

On December 31, 2012 (77 FR 76867), EPA determined that the New York Metropolitan Area, which includes the Southwestern CT Area, attained the 2006 24-hour $PM_{2.5}$ NAAQS. EPA determines that an area has attained the 2006 24-hour $PM_{2.5}$ NAAQS based on three complete, consecutive calendar years of quality-assured air quality data. The 24-hour standard is met when the 98th percentile 24-hour concentration, as determined in accordance with 40 CFR part 50, Appendix N, is less than or equal to 35.0 μg/m^3. The data must be collected and quality-assured in accordance with 40 CFR part 58, and recorded in EPA's AQS. The monitors generally should have remained at the same location for the duration of the monitoring period required for demonstrating attainment.

Specifically, on December 31, 2012 (77 FR 76867), EPA determined that the New York Metropolitan Area attained the 2006 24-hour $PM_{2.5}$ NAAQS based on complete, quality-assured monitoring data for 2007–2009, 2008–2010, and 2009–2011, and that it had attained this standard ahead of December 14, 2014, its applicable attainment date. Further discussion of pertinent air quality issues underlying this determination was provided in the notice of proposed rulemaking for EPA's determination of attainment for this Area, published on August 30, 2012 (77 FR 52626).

In addition, as discussed below with respect to the maintenance plan, the CT DEEP has committed to continue to operate an EPA-approved monitoring network in the area as necessary to demonstrate maintenance of the NAAQS. Connecticut remains obligated to continue to ensure the quality of monitoring data in accordance with 40 CFR part 58, and to enter all data into the AQS in accordance with Federal guidelines. In summary, the area has attained the 2006 24-hour $PM_{2.5}$ NAAQS.

C. Has the State of Connecticut met all applicable requirements of Section 110 and Part D and does the Southwestern CT Area have a fully approved SIP under Section 110(k) of the CAA for purposes of redesignation to attainment?

EPA is proposing to determine that the Southwestern CT Area has met all SIP requirements applicable for purposes of this redesignation under section 110 of the CAA (General SIP Requirements) and that, upon final approval of the 2007 base-year emissions inventory, as discussed below in this proposed rulemaking, it will have met all applicable SIP requirements under part D of Title I of the CAA, in accordance with CAA section 107(d)(3)(E)(v). In addition, EPA is proposing to find that all applicable requirements of the Connecticut SIP for purposes of redesignation have been approved in accordance with CAA section 107(d)(3)(E)(ii). In making these proposed determinations, EPA ascertained which SIP requirements are applicable for purposes of redesignation of this Area, and concluded that the applicable portions of the SIP meeting these requirements are fully approved under section 110(k) of the CAA.

1. Section 110 and General SIP Requirements

Section 110(a)(2) of Title I of the CAA delineates the general requirements for a SIP, which include enforceable emissions limitations and other control measures, means, or techniques, provisions for the establishment and operation of appropriate devices necessary to collect data on ambient air quality, and programs to enforce the limitations. The general SIP elements and requirements set forth in CAA section 110(a)(2) include, but are not limited to the following:

- Submittal of a SIP that has been adopted by the state after reasonable public notice and hearing;
- Provisions for establishment and operation of appropriate procedures needed to monitor ambient air quality;
- Implementation of a source permit program; provisions for the implementation of Part C requirements (Prevention of Significant Deterioration (PSD));
- Provisions for the implementation of Part D requirements for New Source Review (NSR) permit programs;
- Provisions for air pollution modeling; and
- Provisions for public and local agency participation in planning and emission control rule development.

Section 110(a)(2)(D) of the CAA requires that SIPs contain certain measures to prevent sources in a state from significantly contributing to air quality problems in another state. To implement this provision, EPA has required certain states to establish programs to address the interstate transport of air pollutants in accordance with the NO_X SIP Call, October 27, 1998 (63 FR 57356), amendments to the NO_X SIP Call, May 14, 1999 (64 FR 26298) and March 2, 2000 (65 FR 11222), and CAIR, May 12, 2005 (70 FR 25162). However, the CAA section 110(a)(2)(D) requirements for a state are not linked with a particular nonattainment area's designation and classification in that state. EPA believes that the requirements linked with a particular nonattainment area's designation and classifications are the relevant measures to evaluate in reviewing a redesignation request. The transport SIP submittal requirements, where applicable, continue to apply to a state regardless of the designation of any one particular area in the state. Thus, EPA does not believe that these requirements are applicable requirements for purposes of redesignation.

Further, we conclude the other section 110 elements described above that are not connected with nonattainment plan submissions and not linked with an area's attainment status are also not applicable requirements for purposes of redesignation. A state remains subject to these requirements after an area is redesignated to attainment. We conclude that only the section 110 and part D requirements that are linked with a particular area's designation are the relevant measures which we may consider in evaluating a redesignation request. This approach is consistent with EPA's existing policy on applicability of conformity and oxygenated fuels requirements for redesignation purposes, as well as with section 184 ozone transport requirements. *See* Reading, Pennsylvania, proposed and final rulemakings (61 FR 53174, October 10, 1996), (62 FR 24826, May 7, 1997); Cleveland-Akron-Lorain, Ohio final rulemaking (61 FR 20458, May 7, 1996); and Tampa, Florida final rulemaking (60 FR 62748, December 7, 1995). *See also* the discussion on this issue in the Cincinnati, Ohio redesignation (65 FR at 37890, June 19, 2000) and in the Pittsburgh, Pennsylvania redesignation (66 FR at 53099, October 19, 2001).

We have reviewed Connecticut's SIP and have concluded that it meets the general SIP requirements under section 110 of the CAA, to the extent they are applicable for purposes of redesignation. EPA has previously approved provisions of the Connecticut SIP addressing section 110 requirements (including provisions addressing particulate matter). On September 4, 2008 and September 18, 2009, Connecticut made submittals for the 1997 annual and 2006 24-hour $PM_{2.5}$ standards, respectively, addressing ''infrastructure SIP'' elements required by section 110(a)(2) of the CAA. EPA approved or conditionally approved all elements of Connecticut's submittals on October 16, 2012, at 77 FR 63228. The

requirements of section 110(a)(2), however, are statewide requirements that are not linked to the $PM_{2.5}$ nonattainment status of the Southwestern CT Area. Therefore, EPA believes that these SIP elements are not applicable requirements for purposes of review of the State's $PM_{2.5}$ redesignation request.

EPA also has previously approved $PM_{2.5}$ and $PM_{2.5}$ precursor control measures that are permanent and enforceable controls that will remain in place following redesignation (see Table 1).

TABLE 1—LIST OF CONNECTICUT CONTROL MEASURES FOR $PM_{2.5}$ AND $PM_{2.5}$ PRECURSORS

Name of control measure	Type of measure	Approval citation
Tier 2 Vehicle Standards and Gasoline Sulfur Standards	federal rule	Promulgated at 40 CFR part 86.
Heavy-Duty Diesel and Gasoline Highway Vehicle Standards.	federal rule	Promulgated at 40 CFR part 86.
Motorcycle Exhaust Standards	federal rule	Promulgated at 40 CFR part 86.
Large Non-road Diesel Engine Standards	federal rule	Promulgated at 40 CFR part 89.
Non-road Spark-Ignition Engines and Recreational Engine Standards.	federal rule	Promulgated at 40 CFR part 90.
NO_X SIP Call	federal rule	63 FR 57356 (10/27/1998).
CAIR	federal rule	70 FR 25162 (5/12/2005).
Control of Sulfur Compound Emissions 19–508–19	SIP-approved state regulation.	46 FR 56612 (11/18/1981).
Control of SO_2 emissions from power plants and other large stationary sources 22a–174–19a.	SIP-approved state regulation.	Approval signed 4/26/2013, not yet published. See CT Regional Haze SIP docket (EPA–R01–OAR–2009–0919).
Control of NO_X Emissions 22a–174–22	SIP-approved state regulation.	62 FR 52016 (10/06/1997).
Post-2002 NO_X Budget Program 22a–174–22b	SIP-approved state regulation.	65 FR 81743 (12/27/2000); superseded by CAIR (22a–174–22c).
CAIR NO_X Ozone Season Trading Program 22a–174–22c.	SIP-approved state regulation.	73 FR 4105 (01/24/2008).
Control of Particulate Emissions 19–508–18	SIP-approved state regulation.	47 FR 41958 (09/23/1982).
Emission Standards and On-Board Diagnostic II Test Requirements for Periodic Motor Vehicle Inspection and Maintenance 22a–174–27.	SIP-approved state regulation.	73 FR 74019 (12/05/2008).
Low Emission Vehicles 22a–174–36b	SIP-approved state regulation.	64 FR 44411 (08/16/1999).
Municipal Waste Combustors 22a–174–38	SIP-approved state regulation.	66 FR 63311 (12/06/2001).
Permit to Construct and Operate Stationary Sources 22a–174–3a.	SIP-approved state regulation.	76 FR 26933 (05/10/2011).

2. Part D SIP Requirements

EPA has determined that, upon approval of the base-year emissions inventories discussed below, the Connecticut SIP will meet the applicable SIP requirements for the Southwestern CT Area applicable for purposes of redesignation under part D of the CAA. Subpart 1 of part D, found in sections 172–176 of the CAA, sets forth the basic nonattainment requirements applicable to all nonattainment areas.

Subpart 1 Section 172 Requirements

On November 15, 2010 (75 FR 69589) and December 31, 2012 (77 FR 76867), EPA made determinations that the New York Metropolitan Area, including the Southwestern CT Area, is attaining the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS, respectively. These determinations of attainment were based on quality-assured and certified air-quality data for the 2007–2009 monitoring period (1997 NAAQS) and for the 2007–2009, 2008–2010, and 2009–2011 monitoring periods (2006 NAAQS) showing that the Southwestern CT Area had attained the applicable NAAQS. Monitoring data for 2012 are also consistent with continued attainment of the standards. Under EPA's Clean Data Policy and pursuant to 40 CFR 51.1004(c), upon determination by EPA that an area designated nonattainment of the $PM_{2.5}$ NAAQS has attained the standard, the requirement for such an area to submit an attainment demonstration and associated reasonably achievable control technology (RACT)/RACM, RFP, contingency measures, and other planning SIPs related to the attainment of the $PM_{2.5}$ NAAQS are suspended until EPA determines that the area has again violated the $PM_{2.5}$ NAAQS, at which time such plans are required to be submitted.[11] As a result of the determinations of attainment for the Southwestern CT Area, the only remaining requirement under CAA section 172 to be considered is the emissions inventory required under CAA section 172(c)(3).

In this rulemaking action, EPA is proposing to approve Connecticut's 2007 base-year emissions inventory in accordance with section 172(c)(3) of the CAA. Final approval of the 2007 base-year emissions inventory will satisfy the emissions inventory requirement under section 172(c)(3) of the CAA.

The General Preamble for Implementation of Title I also discusses the evaluation of these requirements in the context of EPA's consideration of a redesignation request. The General Preamble sets forth EPA's view of applicable requirements for purposes of evaluating redesignation requests when an area is attaining the standard. *See*

[11] Nevertheless, CT DEEP did submit a SIP on November 18, 2008, which included an attainment demonstration for the 1997 annual $PM_{2.5}$ standard for the Southwestern CT Area. In its June 22, 2012 redesignation request, CT DEEP states that it will withdraw the attainment demonstration SIP, effective one day after EPA signs the final rule approving Connecticut's redesignation request and maintenance plans.

General Preamble for Implementation of Title I (57 FR 13498, April 16, 1992).

Because attainment of the 1997 annual and 2006 24-hour $PM_{2.5}$ standards has been reached for the Southwestern CT Area, no additional measures are needed to provide for attainment, and CAA section 172(c)(1) requirements for an attainment demonstration and RACT/RACM are no longer considered to be applicable for purposes of redesignation as long as the area continues to attain the standards until redesignation. *See* 40 CFR 51.1004(c). The RFP requirement under CAA section 172(c)(2) and contingency measures requirement under CAA section 172(c)(9) are similarly not relevant for purposes of redesignation.

Section 172(c)(3) of the CAA requires submission and approval of a comprehensive, accurate and current inventory of actual emissions. The maintenance plan submitted by CT DEEP includes a 2007 base-year emissions inventory that meets this requirement. The 2007 base-year emissions inventory for the Southwestern CT Area, compiled jointly by CT DEEP and the Mid-Atlantic Regional Air Management Association (MARAMA), contains $PM_{2.5}$ (including condensables), and $PM_{2.5}$ precursors, SO_2 and NO_X. MARAMA emissions inventories also include the $PM_{2.5}$ precursors ammonia (NH_3) and volatile organic compounds (VOC). *See* Appendix C of Connecticut's June 22, 2012 redesignation request. The emissions inventories cover the general source categories of EGU point sources, non-EGU point sources (i.e., individual industrial, commercial, and institutional facilities), area sources (i.e., aggregated small, non-permitted sources such as small industrial/commercial facilities, residential heating furnaces, and road dust re-entrainment), on-road mobile sources (i.e., cars, trucks, buses, and other vehicles on public roadways), and nonroad mobile sources (e.g., marine vessels, airplanes, railroad locomotives, forklifts, lawn and garden equipment, portable generators (non-road MAR). However, there is one exception to the source category coverage mentioned above. MARAMA's VOC and NH_3 emission estimates did not include estimates for the on-road mobile sector, and so the emission values in Table 4 below represent values taken from EPA's regulatory impact analysis for the PM NAAQS.

A summary of the inventory development process is given below under ''EPA's analysis of the Southwestern CT Area maintenance plan.'' Connecticut provided detailed descriptions of the derivation of emission estimates in Appendices A–I of their June 22, 2012 submittal.

Tables 2 and 3 show the 2007 base-year emissions for $PM_{2.5}$ and $PM_{2.5}$ precursors, SO_2 and NO_X, which are the principal $PM_{2.5}$ precursors in the Southwestern CT Area. Table 4 shows the other $PM_{2.5}$ precursors, ammonia and VOC, for the entire state of Connecticut. VOC emission levels in Connecticut, including the Southwestern CT Area, have historically been well-controlled under SIP requirements related to ozone and other pollutants. Total ammonia emissions throughout the state are very low, estimated for 2007 to be 5,765 tons per year. This amount of statewide ammonia emissions is small compared to the total amounts of SO_2 and NO_X, and even direct $PM_{2.5}$ emissions from sources within just the two-county Southwestern CT Area. Moreover, available information shows that no precursor, including VOC and ammonia, is expected to increase over the maintenance period so as to interfere with or undermine the State's maintenance demonstration, as further discussed below under ''EPA's analysis of the Southwestern CT Area maintenance plan.'' The proposed approval of the 2007 base-year emissions inventory in this rulemaking action will, when finalized, meet the requirements of CAA section 172(c)(3).

TABLE 2—NEW HAVEN COUNTY, CT: $PM_{2.5}$, SO_2 AND NO_X EMISSIONS (TPY) FOR BASE-YEAR 2007 BY SOURCE SECTOR

Sector	SO_2	NO_X	$PM_{2.5}$
Point (EGU)	822.7	639.6	88.1
Point (Non-EGU)	55.6	822.7	40.4
Area	3,707.7	2,936.1	1,900.3
Marine Vessels, Airplanes, RR Locomotives (MAR)	727.4	3,945.9	168.5
Nonroad (NMIM)	174.1	3,688.1	279.1
Onroad (MOVES)	91.8	11,502.7	389.6
Total	5,579.2	23,535.1	2,866.0

Note: Primary $PM_{2.5}$ includes filterables and condensables.

TABLE 3—FAIRFIELD COUNTY, CT: $PM_{2.5}$, SO_2 AND NO_X EMISSIONS (TPY) FOR BASE-YEAR 2007 BY SOURCE SECTOR

Sector	SO_2	NO_X	$PM_{2.5}$
Point (EGU)	3,311.2	2,268.5	283.5
Point (Non-EGU)	154.8	1,875.4	44.7
Area	3,917.3	3,088.8	1,991.5
Marine Vessels, Airplanes, RR Locomotives (MAR)	353.4	3,034.2	119.9
Nonroad (NMIM)	215.8	4,648.1	403.0
Onroad (MOVES)	84.3	11,888.9	404.4
Total	8,036.7	26,804.0	3,247.0

TABLE 4—CONNECTICUT: AMMONIA AND VOC EMISSIONS (TPY) FOR BASE-YEAR 2007 BY SOURCE SECTOR.

Sector	VOC	Ammonia (NH_3)
Point (EGU)	143	0
Point (nonEGU)	1,447	0
Area	57,253	4,421
Non-road mobile	20,721	16
Commercial Marine Vessels	161	3
Airports	509	0
Railroad Locomotives	73	1
On-road mobile	28,967	1,324
Total	109,274	5,765

Section 172(c)(4) of the CAA requires the identification and quantification of allowable emissions for major new and modified stationary sources in an area, and CAA section 172(c)(5) requires new source permits for the construction and operation of new and modified major stationary sources anywhere in the nonattainment area. EPA has determined that, since the PSD requirements will apply after redesignation, areas being redesignated need not comply with the requirement that a nonattainment NSR program be approved prior to redesignation, provided that the area demonstrates maintenance of the NAAQS without part D NSR. A more detailed rationale for this view is described in a memorandum from Mary Nichols, Assistant Administrator for Air and Radiation, dated October 14, 1994 entitled, ''Part D New Source Review Requirements for Areas Requesting Redesignation to Attainment.'' Nevertheless, Connecticut currently has an approved NSR program, established in RCSA section 22a–174–2a with amendments in 22a–174–3a. *See* 68 FR 9009 (February 27, 2003) and 76 FR 26933 (May 10, 2011). However, Connecticut's PSD program for the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS will become effective in Southwestern CT Area (i.e., New Haven and Fairfield Counties) upon redesignation to attainment.

Section 172(c)(6) of the CAA requires the SIP to contain control measures necessary to provide for attainment of the NAAQS. Because attainment has been reached for the Southwestern CT Area, no additional measures are needed to provide for attainment.

Section 172(c)(7) of the CAA requires the SIP to meet the applicable provisions of CAA section 110(a)(2). As noted previously, we believe the Connecticut SIP meets the requirements of CAA section 110(a)(2) that are applicable for purposes of redesignation.

Subpart 1, Section 176 Conformity Requirements

Section 176(c) of the CAA requires states to establish criteria and procedures to ensure that federally-supported or funded activities, including highway projects, conform to the air quality planning goals in the applicable SIPs. The requirement to determine conformity applies to transportation plans, programs, and projects developed, funded or approved under title 23 of the U.S. Code and the Federal Transit Act (transportation conformity) as well as to all other federally-supported or funded projects (general conformity). State conformity revisions must be consistent with federal conformity regulations relating to consultation, enforcement and enforceability, which EPA promulgated pursuant to CAA requirements.

EPA interprets the conformity SIP requirements as not applying for purposes of evaluating the redesignation request under section 107(d) for two reasons. First, the requirement to submit SIP revisions to comply with the conformity provisions of the CAA continues to apply to areas after redesignation to attainment, since such areas would be subject to a section 175A maintenance plan. Second, EPA's federal conformity rules require the performance of conformity analyses in the absence of federally-approved state rules. Therefore, because areas are subject to the conformity requirements regardless of whether they are redesignated to attainment and, because they must implement conformity under federal rules if state rules are not yet approved, it is reasonable to view these requirements as not applying for purposes of evaluating a redesignation request. See *Wall* v. *EPA,* 265 F.3d 426 (6th Cir. 2001), upholding this interpretation. *See* also 60 FR 62748, 62749–62750 (December 7, 1995) (Tampa, Florida).

Connecticut's June 22, 2012 redesignation request included new fine particle motor vehicle emissions budgets (MVEBs) as part of their maintenance plan. The SIP establishes annual direct $PM_{2.5}$ and annual NO_X transportation conformity budgets for 2017 and 2025 to ensure that future emissions from on-road mobile sources provide for continuing attainment of the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS. Connecticut submitted on-road MVEBs for the Southwestern CT Area of 575.8 tpy direct $PM_{2.5}$ and 12,791.8 tpy NO_X for 2017, and 516 tpy direct $PM_{2.5}$ and 9,728.1 tpy NO_X for 2025.

EPA New England sent a letter to CT DEEP on January 8, 2013, stating that the 2017 and 2025 MOVES2010 MVEBs in the June 22, 2012 SIP submittal are adequate for transportation conformity purposes. On February 5, 2013, (78 FR 8122) EPA notified the public through a **Federal Register** notice of adequacy that EPA has found that the 2017 and 2025 MVEBs adequate for transportation conformity purposes. These MVEBs became effective on February 20, 2013. For the Southwestern CT Area, Connecticut must use the MVEBs in any future conformity determination on or after the effective date of the notice of adequacy. MVEBs are discussed further in section V.

3. Does the Southwestern CT Area have a fully approved applicable SIP under Section 110(k) of the CAA?

Upon final approval of the 2007 base-year emissions inventory, EPA will have fully approved the Connecticut portion of the New York–N. New Jersey–Long Island, NY–NJ–CT Area under section 110(k) of the CAA for all requirements applicable for purposes of redesignation to attainment for the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS. As noted above, in this rulemaking action, EPA is proposing to approve the Southwestern CT Area's 2007 base-year emissions inventory (submitted as part of its maintenance plan) as meeting the requirement of section 172(c)(3) of the CAA for the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS. Therefore, upon final approval of the 2007 base-year emissions inventory, Connecticut will have satisfied all applicable requirements under part D of Title I of the CAA for the Southwestern CT Area.

D. Are the air quality improvements in the Southwestern CT Area due to permanent and enforceable reductions in emissions?

EPA proposes to find that the state has demonstrated that the observed air quality improvement in the Southwestern CT Area is due to permanent and enforceable reductions in emissions resulting from implementation of the SIP, federal measures, and other state-adopted measures, listed in Table 1 above. As shown in the state's submittal and supported by EPA rulemaking (see 75 FR 69589, November 15, 2010 and 77 FR 76867, December 31, 2012), the Area came into attainment with the 1997 annual $PM_{2.5}$ standard based on $PM_{2.5}$ data for 2007–2009, and into attainment with the 2006 24-hour standard based on $PM_{2.5}$ data for the 2007–2009, 2008–2010, and 2009–2011 monitoring periods. The Area has remained in

attainment and the air quality has improved in the area. Attainment is the direct result of permanent and enforceable emission reductions and not favorable meteorology or economic downturn.

Connecticut's redesignation request documents substantial emission reductions in $PM_{2.5}$ and $PM_{2.5}$ precursors both in upwind states and within Connecticut. For example, the state's request notes that due to federal programs including EPA's acid rain program, Ozone Transport Commission's NO_X budget program, and EPA's NO_X SIP Call, emissions from EGUs from states impacting Connecticut declined by 66 percent for NO_X and by 48 percent for SO_2 between 2002 and 2009.

1. Federal Measures Implemented

Reductions in $PM_{2.5}$ and $PM_{2.5}$ precursor emissions (e.g., NO_X and SO_2) have occurred statewide and in upwind states as a result of federal measures with additional emission reductions expected to occur in the future. The maintenance plan for the Southwestern CT Area lists post-2002 federal measures (as well as state measures) that have reduced $PM_{2.5}$ and $PM_{2.5}$ precursor emissions from stationary and mobile sources. These measures include the following:

(a) Tier 2 Emission Standards for Vehicles and Gasoline Sulfur Standards

These emission control requirements, which were published on February 10, 2000 (65 FR 6698), result in lower NO_X, and SO_2 emissions from new cars and light duty trucks, including sport utility vehicles. The Federal rules were phased in between 2004 and 2009. EPA has estimated that, after phasing in the new requirements, new vehicles emit less NO_X in the following percentages: Passenger cars (light duty vehicles)—77 percent; light duty trucks, minivans, and sports utility vehicles—86 percent; and larger sports utility vehicles, vans, and heavier trucks—69–95 percent. EPA expects fleet-wide average emissions to decline by similar percentages as new vehicles replace older vehicles. The Tier 2 standards also reduced the sulfur content of gasoline to 30 parts per million (ppm) beginning in January 2006, which reflects up to a 90 percent reduction in sulfur content.

(b) Heavy-Duty Diesel Rule and Gasoline Highway Vehicle Standards

EPA published the heavy-duty diesel rule on January 18, 2001 (66 FR 5002). This rule, designed to reduce NO_X and VOC emissions from heavy-duty diesel and from gasoline highway vehicles, took effect in 2004 and 2005, respectively. A second phase, which took effect in 2007, reduced $PM_{2.5}$ emissions from heavy-duty highway engines and further reduced the highway diesel fuel sulfur content to 15 ppm. The program is estimated to achieve a 90-percent reduction in direct $PM_{2.5}$ emissions and a 95-percent reduction in NO_X emissions for these new engines using low-sulfur diesel fuel when compared to engines using higher sulfur diesel. The reduction in fuel sulfur content also yielded an immediate reduction in particulate sulfate emissions from all diesel vehicles.

(c) Motorcycle Exhaust Standards

In 2004, EPA published a final rule to implement improved exhaust emission standards on new highway motorcycles (69 FR 2398). These standards apply to model-year 1978 and newer gasoline-fuels motorcycles, and to later model-year motorcycles that use other fuel types (1990 model year for methanol; 1997 model year for natural gas or liquefied petroleum gas). For 2006 and later model-year new motorcycles, the standards apply regardless of fuel. Starting with the 2006 model year, EPA re-defined Class I to include motorcycles with engines smaller than 50 cubic centimeters. In addition, motorcycles with the largest engines are subject to more stringent NO_X and hydrocarbon standards beginning with the 2010 model year.

(d) Non-Road Diesel Rule

In June 2004, EPA published a new rule for large nonroad diesel engines, such as those used in construction, agriculture, and mining, to be phased in from 2008 to 2014 (69 FR 38958). The rule also reduced the sulfur content in nonroad diesel fuel by over 99 percent. Prior to 2006, nonroad diesel fuel averaged approximately 3,400 ppm sulfur. This rule limited nonroad diesel sulfur content to 500 ppm by 2006, with a further reduction to 15 ppm by 2010. Because of the timing of the new requirements, most reductions will occur during the maintenance period for the Southwestern CT Area as the fleet of older non-road diesel engines is gradually replaced with newer, lower-emitting engines. However, the required reduction in fuel sulfur content yielded an immediate reduction in sulfate particle emissions from all non-road diesel vehicles.

(e) Non-Road Spark-Ignition Engines and Recreational Engine Standards

On November 8, 2002, EPA promulgated emission standards for groups of previously unregulated non-road engines (67 FR 68242). These emission standards for several groups of nonroad engines, including large spark-ignition engines, such as those used in forklifts and airport ground-service equipment; recreational vehicles using spark-ignition engines, such as off-highway motorcycles, all-terrain vehicles, and snowmobiles; and recreational marine diesel engines. Emission standards from large spark-ignition engines were implemented in two tiers, with Tier 1 starting in 2004 and Tier 2 in 2007. Recreational-vehicle emission standards were phased in from 2006 through 2012. Marine diesel engine standards were phased in from 2006 through 2009. With full implementation of the entire non-road spark-ignition engine and recreational engine standards, an 80 percent reduction in NO_X is expected by 2020, as affected fleets are gradually replaced.

(f) NO_X SIP Call

In October 1998, EPA issued the NO_X SIP Call pursuant to the CAA. This required 22 states (including Connecticut) and the District of Columbia to reduce NO_X emissions from EGUs (i.e., power plants) and non-EGUs, such as industrial boilers, internal combustion engines, and cement kilns. (63 FR 57356, October 27, 1998). The program was intended to reduce emissions in states determined to be significantly contributing to violations of the 1-hour ozone NAAQS in downwind states. Affected states were required to comply with Phase I of the SIP Call beginning in 2003/2004 and with Phase II beginning in 2007. EPA approved Connecticut's NO_X SIP Call rule (NO_X Budget Program) on September 28, 1999 (64 FR 52233). This program was incorporated into Connecticut's CAIR program (see below) in September 2007. Emission reductions resulting from regulations developed in response to the NO_X SIP Call are permanent and enforceable.

(g) CAIR and CSAPR

EPA approved Connecticut's CAIR rules in 2007 (73 FR 4105, September 4, 2007) as a control measure for reducing NO_X emissions from EGUs. As previously discussed, the Court's 2008 remand of CAIR left the rule in place to ''temporarily preserve the environmental values covered by CAIR'' until EPA replaced it with a rule consistent with the Court's opinion, and the Court's August 2012 decision on CSAPR also left CAIR in effect until the legal challenges to CSAPR are resolved. As noted, EPA believes it is appropriate to allow states to rely on CAIR, and the

existing emissions reductions achieved by CAIR, as sufficiently permanent and enforceable pending a valid replacement rule, for purposes such as redesignation.

Furthermore, as previously discussed, the air quality modeling analysis conducted for CSAPR demonstrates that the Southwestern CT Area would be able to attain the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS even in the absence of either CAIR or CSAPR. EPA's modeling projections show that all ambient monitors in the Southwestern CT Area are expected to continue to maintain compliance in the 2012 and 2014 ''no CAIR'' base cases. Therefore, none of the ambient monitoring sites in the Southwestern CT Area are ''receptors'' that EPA projects will have future nonattainment problems or difficulty maintaining the NAAQS.

2. SIP-Approved State Measures

In addition to the federal control measures described above, Connecticut is implementing several state programs that have contributed to significant reductions in ambient levels of direct $PM_{2.5}$ and $PM_{2.5}$ precursors. These are listed on Table 1 and include, for example, regulations to reduce emissions of SO_2 and NOx from major stationary sources, including power plants; low-sulfur fuel requirements; addition of a non-ozone season NOx limit to all sources subject to the NO_X Budget Program; the addition of PM standards to certain fuel-burning equipment and stationary reciprocating internal-combustion engines; updates to the state's motor-vehicle emissions testing and Inspection and Maintenance (I/M) programs; adoption of Low Emission Vehicle (LEV) standards; and limits on NOx emissions from Municipal Waste Combustors. As noted in Table 1, all of the regulations have been approved by EPA into the CT SIP.

Based on the information summarized above, Connecticut has adequately demonstrated that the improvement in air quality is due to permanent and enforceable emissions reductions. EPA concludes that significant reductions result from federal requirements and regulation of precursors under the NOx SIP Call and CAIR, which are expected to continue into the future.

E. Does the Southwestern CT Area have a fully approved maintenance plan pursuant to Section 175a of the CAA?

In conjunction with its request to redesignate the Southwestern CT Area to attainment status, Connecticut submitted a SIP revision to provide for the maintenance of the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS in the Southwestern CT Area until 2025.

1. Maintenance Plan Requirements

Section 175 of the CAA sets forth the elements of a maintenance plan for areas seeking redesignation from nonattainment to attainment. Under CAA section 175A, the plan must demonstrate continued attainment of the applicable NAAQS for at least 10 years after EPA approves an area's redesignation. Eight years after the redesignation, Connecticut must submit a revised maintenance plan demonstrating that attainment will continue to be maintained for the 10 years following the initial 10-year period. To address the possibility of future NAAQS violations, the maintenance plan must contain contingency measures, with a schedule for implementation, as EPA deems necessary, to assure prompt correction of any violations of the 1997 annual or 2006 24-hour $PM_{2.5}$ NAAQS that occur after redesignation of the Area to attainment. The Calcagni Memorandum dated September 4, 1992, provides additional guidance on the content of a maintenance plan. This memorandum states that a $PM_{2.5}$ maintenance plan should include the following: (1) An emissions inventory sufficient to ensure attainment; (2) a demonstration that the plan ensures maintenance of the NAAQS for 10 years following approval of the redesignation request; (3) a commitment to maintain an appropriate monitoring network; (4) a method to verify continued attainment; and (5) a contingency plan to be implemented if NAAQS violations occur during the maintenance period.

2. EPA's Analysis of the Southwestern CT Area Maintenance Plan

a. Attainment Emissions Inventory

An attainment emissions inventory is a comprehensive inventory of the actual emissions from sources within a nonattainment area for a time period used to show that the area has come into attainment with the NAAQS. Inventories used for Connecticut's $PM_{2.5}$ redesignation request were developed as an extension to regional efforts in the Mid-Atlantic/Northeast Visibility Union (MANE–VU) area to create inventories for use in photochemical modeling for the 2008 ozone NAAQS and Regional Haze SIPs. For $PM_{2.5}$ redesignation efforts, MARAMA took the lead in coordinating with several states (including Connecticut) to develop an inventory for 2025 to supplement those already under development (2007, 2017 and 2020 inventories), as well as to modify the 2007 inventory for $PM_{2.5}$ redesignation. A summary of the inventory development process is given below. For more information about how the inventories were developed, as well as quality-assurance procedures, see Appendices in Connecticut's $PM_{2.5}$ Redesignation Request at *http://www.regulations.gov:* Docket number EPA–R01–OAR–2013–0020.

In the Southwestern CT Area, compliance with the 1997 annual $PM_{2.5}$ NAAQS was achieved in 2001 and compliance with the 24-hour NAAQS was achieved in 2008. Therefore, Connecticut chose 2007 as the initial year for the attainment inventory. The end of the maintenance period was established as 2025, with an interim year of 2017, which is consistent with the CAA section 175A(a) requirement that the maintenance plan provide for maintenance of the NAAQS for at least 10 years after EPA approval of the redesignation request.

Emission estimates were developed for EGU point sources, non-EGU point sources, area sources, non-road mobile sources, and on-road mobile sources. The MANE–VU $PM_{2.5}$ redesignation inventories were prepared only for the area classified as nonattainment for the annual and 24-hour $PM_{2.5}$ NAAQS (i.e., in Connecticut, Fairfield County and New Haven Counties). The inventories were developed at the county level for the area-source and mobile-source categories and at the process level for point-source categories, then summed to the county level. EPA concurs with Connecticut that the use of annual inventories was also appropriate for demonstrating continued compliance with the 24-hour $PM_{2.5}$ NAAQS during the maintenance period as analysis of monitoring data for the Southwestern CT Area showed that elevated 24-hour $PM_{2.5}$ levels occur in multiple seasons (primarily summer and winter).

Point source emissions—For the 2007 point-source inventory, CT DEEP provided MARAMA with actual 2007 emissions for all EGU and non-EGU point sources. EGU sources were considered to be only those sources that report hourly emissions to EPA's Clean Air Markets Division (CAMD) database. All other point sources (including non-EGUs in CAMD, small non-CAMD EGUs and all other non-EGUs) were grouped as non-EGU point sources. The 2007 inventory also included banked continuous emission reduction credits (CERCs) for potential use as offsets in new source review permits. MARAMA calculated components of PM emissions (i.e., PM-primary, PM-filterable, and PM-condensable) that were missing from the point-source inventory provided by Connecticut. For EGUs, MARAMA used updated condensable emission factors; for non-EGUs,

MARAMA used a similar process to that used in developing the 2002 MANE–VU Version 3 inventory. For information on $PM_{2.5}$ augmentation processes, see Appendix A of Connecticut's $PM_{2.5}$ Redesignation Request at *http://www.regulations.gov:* Docket number EPA–R01–OAR–2013–0020.

To estimate EGU emissions for future years, MARAMA extrapolated the 2007 EGU emissions based on Annual Energy Outlook (AEO) electricity generation projections. The appropriate AEO 2011 growth factor was applied to the 2007 emissions to calculate a ''growth only'' emission value for 2017 and 2025.

MARAMA developed non-EGU point-source growth factors for Connecticut using employment or fuel consumption projections, depending on the source category. MARAMA extrapolated 2006–2016 employment forecasts from the Connecticut Department of Labor through 2025 to develop emission estimates for non-fuel burning sources such as manufacturing operations. AEO fuel-use projections published in 2010 by the U.S. Energy Information Administration were used to develop growth factors for fuel-consuming sources.

MARAMA examined adopted federal and regional control strategies to determine those that would result in post-2007 emission reductions of $PM_{2.5}$ or $PM_{2.5}$ precursors from non-EGU point sources. They determined that the maximum achievable control technology (MACT) standards for reciprocating internal combustion engines (RICE) and for industrial/commercial/institutional (ICI) boilers and process heaters will provide NO_X or $PM_{2.5}$ emission reductions from several non-EGU source categories during the maintenance period.

Area source emissions—CT DEEP initially instructed MARAMA to use EPA's 2008 National Emissions Inventory (NEI) emission values for all area-source categories for the attainment year inventory. However, during the quality-assurance effort, a number of categories were discovered to be either missing from the 2008 NEI or to have used incorrect emission-factor assumptions for Connecticut. Therefore, substitutions were made from the 2005 NEI or from CT DEEP's draft 2005 periodic emission inventory (PEI). For residential wood combustion (RWC), MARAMA's contractor used EPA's RWC tool with updated 2007 data to produce emission estimates.

MARAMA applied growth factors to the 2007 MANE–VU area-source inventory to account for anticipated changes in fuel use, population and economic activity during the maintenance period. For Connecticut, growth factors were developed using the following sets of data: (1) AEO New England region fuel consumption forecasts; (2) county-level population projections; (3) state-level employment projections; (4) county-level vehicle miles traveled (VMT) projections; and (5) EPA projections for RWC.

On-road mobile sources—EPA's MOVES2010 (MOtor Vehicle Emission Simulator) is now the official model for estimating air-pollution emissions from on-road mobile sources including buses, cars, trucks and motorcycles for SIP purposes. This model replaces MOBILE6.2, EPA's previous mobile source model. To assist in the transition to the new model, EPA developed software tools to convert certain MOBILE6.2 inputs for MOVES.

CT DEEP assembled updated MOVES data sets and performed MOVES runs with updated data for 2009, 2017 and 2025. Instead of developing updated 2007 emission estimates, Connecticut used 2009 MOVES on-road emission estimates in the $PM_{2.5}$ attainment year inventory because (1) EPA had previously approved 2009 transportation conformity MVEBs for Connecticut that were determined using MOBILE6.2, and (2) the use of the lower 2009 on-road emission estimates for 2007 ensured that the total attainment year inventory across all source sectors will be more conservative (i.e., lower) than if 2007 on-road emissions were used. Since emissions through the end of the maintenance period must be no higher than the attainment-year inventory, this approach provides additional assurance that NAAQS compliance will continue through the maintenance period.

Nonroad mobile emissions—Non-road sources include internal combustion engines used to propel marine vessels, airplanes, and locomotives, or to operate equipment such as forklifts, lawn and garden equipment, portable generators, etc. For activities other than marine vessels, airplanes, and railroad locomotives (MAR), the inventory was developed using the most current version of EPA's NONROAD model as embedded in the National Mobile Inventory Model (NMIM). Because the NONROAD model does not include emissions from MAR sources, these emissions were estimated based on data and methodologies used in recent EPA regulatory impact analyses.

The emission inventories for Connecticut show that between 2002 (one of the years for which the Area's nonattainment designation was based) and 2009, an attainment year, in-state emissions were reduced by 679 tons per year (4%) for direct $PM_{2.5}$, 36,166 tons per year (30%) for NO_X, and 9,233 tons per year (29%) for SO_2.

The emission inventories show that emissions of direct $PM_{2.5}$, SO_2, and NO_X are projected to decrease by 1,371 tpy, 5,832 tpy, and 26,147 tpy, respectively, within the 2-county Southwestern CT Area from the 2007 base year to the end of the maintenance period in 2025. *See* Tables 5 and 6 below. In addition, emissions inventories developed by MARAMA for addressing the 2012 $PM_{2.5}$ NAAQS show that VOC emissions are projected to decrease by about 32,695 tpy and ammonia emissions are projected to decrease by 637 tpy statewide between 2007 and 2020. *See* Table 7 below. While the MARAMA emissions inventories for VOC and ammonia are only projected out to 2020, there is no reason to believe that this downward trend will not continue through 2025. Given that the Southwestern CT Area is already attaining the 1997 annual and 2006 24-hour $PM_{2.5}$ standards with the current level of source emissions, the downward trend in the emissions inventories is consistent with continued attainment. Indeed, projected emissions reductions for the precursors that the state is addressing for purposes of the 1997 and 2006 $PM_{2.5}$ NAAQS indicate that the area should continue to attain both the annual and 24-hour NAAQS following the control strategies that the state has already elected to pursue. Even if VOC and ammonia emissions were to increase unexpectedly between 2020 and 2025, the overall emissions reductions projected in direct $PM_{2.5}$, SO_2, and NO_X would be sufficient to offset any increases. For these reasons, EPA believes that local emissions of all of the potential $PM_{2.5}$ precursors will not increase to the extent that they will cause monitored $PM_{2.5}$ levels to violate the 1997 annual or 2006 24-hour $PM_{2.5}$ standards during the maintenance period.

Total	−32,695	−637

EPA concludes that Connecticut has adequately derived and documented the 2007 attainment year and 2017 and 2025 projected-year emissions of $PM_{2.5}$ and $PM_{2.5}$ precursors, including $PM_{2.5}$, SO_2, NO_X, VOC, and ammonia for the Southwestern CT Area.

b. Maintenance Demonstration

As mentioned above, as required by section 175A of the CAA, Connecticut's June 22, 2012 redesignation request included a 10-year maintenance plan for the Southwestern CT Area. This plan demonstrates maintenance by showing that future emissions of $PM_{2.5}$ and $PM_{2.5}$ precursors remain at or below attainment-year emission levels for both the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS. A maintenance demonstration need not be based on modeling. *See Wall* v. *EPA, supra; Sierra Club* v. *EPA, supra. See also* 66 FR at 53099–53100; 68 FR at 25430–32.

Connecticut used 2007 as the base year, 2017 as the interim year, and 2025 as the last year of the maintenance plan. (In addition, per 40 CFR Part 93, a MVEB must be established for the last year of the maintenance plan. MVEBs are discussed in Section V below.) Table 8 shows the emissions inventories for 2007, 2017, and 2025 from Connecticut's June 22, 2012 submittal for the Southwestern CT Area for direct $PM_{2.5}$ and the Area's principal $PM_{2.5}$ precursors, SO_2, and NO_X. The emissions inventory shows a downward trend in $PM_{2.5}$ and $PM_{2.5}$ precursor emissions from 2007 through 2017, and continuing on until 2025. Between 2007 and 2025, emissions are expected to decrease by 43 percent for SO_2, 55 percent for NO_X, and 22 percent for $PM_{2.5}$. As discussed above in the section on ''attainment emissions inventory,'' MARAMA's emissions inventories show that VOC emissions are projected to decrease by about 32,695 tpy and ammonia emissions are projected to decrease by 637 tpy statewide between 2007 and 2020. *See* Table 7 above. While the MARAMA emissions inventories for VOC and ammonia are only projected out to 2020, there is no reason to believe that this downward trend will not continue through 2025.

TABLE 8—COMPARISON OF 2007, 2017, AND 2025 SO_2, NO_X, AND DIRECT $PM_{2.5}$ EMISSION TOTALS FOR THE SOUTHWESTERN CT AREA

[in tpy]

	SO_2	NO_X	$PM_{2.5}$
2007 (attainment)	13,615.9	50,339.1	6,113.0
2017 (interim)	7,909.0	29,501.3	5,029.1
2025 (maintenance)	7,783.7	24,192.2	4,741.7

[12] These emissions estimates are from the emissions inventories developed by MARAMA for use in part in addressing NAAQS requirements for the 2012 $PM_{2.5}$ standards. See Appendix C of Connecticut's June 22, 2012 redesignation request, which is available in the docket for today's rulemaking action.

[13] MARAMA's VOC and NH_3 emission estimates did not include estimates for the EGU and on-road mobile sectors. Emission values in this table represent values taken from EPA's regulatory impact analysis for the PM NAAQS.

TABLE 8—COMPARISON OF 2007, 2017, AND 2025 SO_2, NO_X, AND DIRECT $PM_{2.5}$ EMISSION TOTALS FOR THE SOUTHWESTERN CT AREA—Continued

[in tpy]

	SO_2	NO_X	$PM_{2.5}$
2007 to 2025 (change)	−5,832.2 (−43%)	−26,146.9 (−55%)	−1,371.2 (−22%)

In addition, current air-quality design values (DVs) and air-quality modeling show continued maintenance of both the 1997 annual and 2006 24-hour $PM_{2.5}$ standards during the maintenance period. As shown in Table 9 below, the most recent DVs for the Southwestern CT Area are well below the 1997 annual $PM_{2.5}$ NAAQS of 15 μg/m³ and the 2006 24-hour $PM_{2.5}$ NAAQS of 35 μg/m³.

TABLE 9—AIR-QUALITY ($PM_{2.5}$) DESIGN VALUES (μg/m³) FOR FAIRFIELD AND NEW HAVEN COUNTIES

County	1997 annual NAAQS 2007–2009	1997 annual NAAQS 2008–2010	1997 annual NAAQS 2009–2011	2006 24-hr NAAQS 2007–2009	2006 24-hr NAAQS 2008–2010	2006 24-hr NAAQS 2009–2011
Fairfield	11.3	10.0	9.4	31	28	26
New Haven	11.4	10.3	9.6	31	29	28

The modeling analysis conducted for the Regulatory Impact Analysis for the 2012 $PM_{2.5}$ NAAQS [14] indicates that DVs for the Southwestern CT Area are expected to continue to decline through 2020. In the RIA for the 2012 $PM_{2.5}$ NAAQS, the highest annual DV projected for 2020 is 8.79 μg/m³ for Fairfield County and 8.62 μg/m³ for New Haven County. The highest 24-hour DV projected for 2020 is 22.27 μg/m³ for Fairfield County and 21.78 μg/m³ for New Haven County. Given that precursor emissions are projected to decrease through 2025, it is reasonable to conclude that monitored $PM_{2.5}$ levels in this area will also continue to decrease through 2025.

Thus, EPA believes that there is ample justification to conclude that the Southwestern CT Area should be redesignated, even taking into consideration the emissions of other precursors potentially relevant to $PM_{2.5}$. After consideration of the DC Circuit's January 4, 2013 decision, and for the reasons set forth in this notice, EPA proposes to approve the State's maintenance plan and its request to redesignate the Southwestern CT Area to attainment for the 1997 annual $PM_{2.5}$ standard and for the 2006 24-hour $PM_{2.5}$ standard.

c. Monitoring Network

Connecticut currently operates seven $PM_{2.5}$ monitors in the Connecticut portion of the NY-NJ-CT $PM_{2.5}$ nonattainment area. Three are located in New Haven County, and four are in Fairfield County. In its June 22, 2012 SIP submittal, Connecticut committed to continue to operate all seven of its monitors in accordance with 40 CFR part 58 and to enter all data into the AQS in accordance with federal guidelines. Connecticut has, therefore, addressed the requirement for continued $PM_{2.5}$ monitoring in the Southwestern CT Area.

d. Verification of Continued Attainment

The state has the legal authority to enforce and implement the requirements of the $PM_{2.5}$ maintenance plan. This includes the authority to adopt, implement, and enforce any subsequent emission-control contingency measures determined to be necessary to correct future $PM_{2.5}$ attainment problems. To implement the $PM_{2.5}$ maintenance plan, the state will continue to monitor $PM_{2.5}$ levels in the Southwestern CT Area. Connecticut has also committed to track the progress of the maintenance demonstration by periodically updating its emission inventory. The update will be based, in part, on the annual update of the National Emissions Inventory (NEI), and will indicate new source growth and other changes from the attainment inventory, including any changes in vehicle miles traveled or in traffic patterns.

e. The Maintenance Plan's Contingency Measures

The contingency plan provisions for maintenance plans are designed to promptly correct a violation of the NAAQS that occurs after redesignation. Section 175A of the CAA requires that a maintenance plan include such contingency measures as EPA deems necessary to ensure that a state will promptly correct a violation of the NAAQS that occurs after redesignation. The maintenance plan should identify the events that would ''trigger'' the adoption and implementation of a contingency measure(s), the contingency measure(s) that would be adopted and implemented, and the schedule indicating the time frame by which the state would adopt and implement the measure(s).

As required by section 175A of the CAA, Connecticut's maintenance plan outlines the procedures for the adoption and implementation of contingency measures to further reduce emissions should a violation occur. Connecticut's contingency measures include a Warning Level Response and an Action Level Response. For a Warning Level Response, CT DEEP will track air-quality monitoring data and emission inventories to identify when the Area is at risk of violating either the 1997 annual or 2006 24-hour $PM_{2.5}$ NAAQS. The Warning Level Response will be triggered if either a single year's 98th percentile daily value exceeds 35 μg/m³ or a single year's annual average exceeds 15 μg/m³ at any CT DEEP site in the maintenance area and is verified. CT DEEP will examine available information to identify contributing factors such as atypical meteorological conditions, exceptional events, local changes in source activity, or source malfunctions or noncompliance.

An Action Level Response will be triggered if a verified violation of either $PM_{2.5}$ NAAQS occurs. If an Action Level Response is triggered, as required by

[14] The ''Regulatory Impact Analysis for the Proposed Revisions to the National Ambient Air Quality Standards for Particulate Matter'' is available in the docket for today's rulemaking action.

CAA 175A(d), CT DEEP commits to implementing all measures that were contained in the SIP before the Southwestern CT Area was redesignated to attainment. CT DEEP also commits to pursuing adoption (and submittal to EPA) and implementation of any appropriate regulatory revisions within 18 to 24 months after the verified violation. See letter to EPA dated June 6, 2013, available in the docket for today's action.

CT DEEP will select contingency measures based on cost effectiveness, emission reduction potential, economic and social considerations, or other appropriate factors. Stakeholder input will be solicited before final selection of any contingency measures. Connecticut's candidate contingency measures include, but are not limited to, the following:

- Control measures already adopted, but designed to produce additional reductions after the verified violation occurred (e.g., mobile source measures that involve fleet turnover);
- New control measures that may be adopted for other purposes (e.g., Tier 3 or CALEV3);
- Alternative fuel and/or diesel retrofit programs for fleet vehicle operations;
- New or more stringent $PM_{2.5}$, NO_X or SO_2 controls on stationary sources;
- Wood stove change out program;
- ''No burn'' days during cold weather inversion events;
- Enhanced idle restrictions; and
- Transportation control measures, selected in consultation with Connecticut Department of Transportation (CT DOT) and affected local metropolitan planning organizations (e.g., traffic flow improvements, transit improvements, trip reduction programs, other new or innovative transportation measures).

In addition, NO_X reductions from fleet turnover are happening each year automatically, without any additional rulemaking.

It is unlikely, however, that Connecticut will violate either $PM_{2.5}$ standard. As shown in Table 9 above, the design values in both Fairfield and New Haven Counties are decreasing. The design values for these counties are 9.4 and 9.6 μg/m^3, respectively, compared to an annual standard of 15.0 μg/m^3; they are 26 and 28 μg/m^3, respectively, compared to a 24-hour standard of 35.0 μg/m^3. If either county were to violate one of the $PM_{2.5}$ standards, we would negotiate a timeline and schedule through our regular annual grant negotiations for which we develop priority and commitment (P&C) lists each year.

For the reasons discussed above, EPA believes that the Southwestern CT Area maintenance plan adequately addresses the five basic components of a maintenance plan: Attainment inventory; maintenance demonstration; monitoring network; verification of continued attainment; and a contingency plan. Therefore, EPA is proposing to approve the maintenance plan SIP revision submitted by Connecticut for the Southwestern CT Area as meeting the requirements of CAA section 175A.

V. MVEBs

1. How are MVEBs developed and what are the MVEBs for the Southwestern CT Area?

As part of its June 22, 2012 redesignation request, CT DEEP requested withdrawal of the SIP-approved 2009 motor vehicle emissions budgets (MVEBs) prepared using MOBILE6.2 and approval of 2017 and 2025 MVEBs prepared using MOVES2010. Under the CAA, states are required to submit, at various times, control strategy SIP revisions and maintenance plans for nonattainment areas and for areas seeking redesignation to attainment for a given NAAQS. These emission-control-strategy SIP revisions (*e.g.,* RFP and attainment demonstration SIP revisions) and maintenance plans create MVEBs based on on-road mobile source emissions for the relevant criteria pollutants and/or their precursors, where appropriate, to address pollution from on-road transportation sources. The MVEBs are the portions of the total allowable emissions that are allocated to on-road vehicle use that, together with emissions from all other sources in the area, will provide for attainment, RFP, or maintenance, as applicable. The budget serves as a ceiling on emissions from an area's planned transportation system. Under 40 CFR part 93, a MVEB for an area seeking a redesignation to attainment is established for the last year of the maintenance plan. See the September 27, 2011 notice of direct final approval for a more complete discussion of MVEBs (76 FR 59512).

EPA's substantive criteria for determining the adequacy of MVEBs are set out in 40 CFR 93.118(e)(4). Additionally, to approve a MVEB, EPA must complete a thorough review of the SIP, in this case the $PM_{2.5}$ maintenance plan, and conclude that with the projected level of motor vehicle and all other emissions, the SIP will achieve its overall purpose, in this case providing for maintenance of the 1997 annual and 2006 24-hour $PM_{2.5}$ standards.

EPA's process for determining adequacy of a MVEB consists of three basic steps: (1) Providing public notification of a SIP submission; (2) providing the public the opportunity to comment on the MVEB during a public comment period; and, (3) EPA taking action on the MVEB. The process for determining the adequacy of submitted SIP MVEBs is codified at 40 CFR 93.118.

The availability of the SIP submission with these 2017 and 2025 MVEBs was announced for public comment on EPA's adequacy Web page on November 27, 2012 at: *http://www.epa.gov/otaq/stateresources/transconf/currsips.htm.* The EPA public comment period on adequacy of the 2017 and 2025 MVEBs for the Southwestern CT Area closed on December 27, 2012. EPA did not receive any comments. EPA sent a letter to CT DEEP on January 8, 2013, stating that the 2017 and 2025 MOVES2010 motor vehicle emissions budgets in the June 22, 2012 SIP are adequate for transportation conformity purposes. On February 5, 2013 (78 FR 8122), EPA notified the public through a **Federal Register** notice of adequacy that EPA has found that the 2017 and 2025 MVEBs adequate for transportation conformity purposes. These MVEBs became effective on February 20, 2013. For the Southwestern CT Area, Connecticut must use the MVEBs in any future conformity determination on or after the effective date of the notice of adequacy.

TABLE 10—TRANSPORTATION CONFORMITY BUDGETS FOR THE SOUTHWESTERN CT AREA IN TONS PER YEAR (TPY)

Year	Direct $PM_{2.5}$	NO_X
2017	575.8	12,791.8
2025	516	9,728.1

As shown in Table 10, CT DEEP has determined the 2017 MVEBs for the Southwestern CT Area to be 575.8 tpy for direct $PM_{2.5}$ and 12,791.8 tpy for NO_X. CT DEEP has determined the 2025 MVEBs for the Southwestern CT Area to be 516 tpy for direct $PM_{2.5}$ and 9,728.1 tpy for NO_X. CT DEEP did not provide emission budgets for SO_2, VOC, and ammonia because it concluded, consistent with the presumptions regarding these precursors in the conformity rule at 40 CFR 93.102(b)(2)(v), which predated and was not disturbed by the litigation on the $PM_{2.5}$ implementation rule, that emissions of these precursors from motor vehicles are not significant contributors to the area's $PM_{2.5}$ air quality problem.

EPA issued conformity regulations to implement the 1997 $PM_{2.5}$ NAAQS in July 2004 and May 2005 (69 FR 40004, July 1, 2004 and 70 FR 24280, May 6, 2005, respectively). Those actions were not part of the final rule recently remanded to EPA by the Court of Appeals for the District of Columbia in *NRDC* v. *EPA,* No. 08–1250 (Jan. 4, 2013), in which the Court remanded to EPA the implementation rule for the $PM_{2.5}$ NAAQS because it concluded that EPA must implement that NAAQS pursuant to the PM-specific implementation provisions of subpart 4 of Part D of Title I of the CAA, rather than solely under the general provisions of subpart 1. That decision does not affect EPA's proposed approval of the Southwestern CT Area MVEBs.

First, as noted above, EPA's conformity rule implementing the 1997 $PM_{2.5}$ NAAQS was a separate action from the overall $PM_{2.5}$ implementation rule addressed by the Court and was not considered or disturbed by the decision. Therefore, the conformity regulations were not at issue in *NRDC* v. *EPA*.[15] In addition, as discussed in section IV.A. the New York Metropolitan Area is attaining the 1997 annual $PM_{2.5}$ NAAQS with a 2007–2009 design value of 14.0 $\mu g/m^3$. As shown on Table 9, for the Connecticut portion of this area (i.e., the Southwestern CT Area), the 2007–2009 and 2009–11 design values (DVs) for Fairfield County were 11.3 $\mu g/m^3$ and 9.4 $\mu g/m^3$, respectively. For New Haven County, these values were 11.4 $\mu g/m^3$ and 9.6 $\mu g/m^3$ (see Table 9). All these DVs are well below the annual $PM_{2.5}$ NAAQS of 15 $\mu g/m^3$. The modeling analysis conducted for the RIA for the 2012 PM NAAQS indicates that the DVs for the Southwestern CT Area are expected to continue to decline through 2020. Further, the State's maintenance plan shows continued maintenance through 2025 by demonstrating that NO_X, SO_2, and direct $PM_{2.5}$ emissions continue to decrease through the maintenance period. For VOC and ammonia, RIA inventories for 2007 and 2020 show that both on-road and total emissions for these pollutants are expected to decrease, supporting the state's conclusion, consistent with the presumptions regarding these precursors in the conformity rule, that emissions of these precursors from motor vehicles are not significant contributors to the Area's $PM_{2.5}$ air quality problem and the MVEBs for these precursors are unnecessary. With regard to SO_2, the 2005 final conformity rule (70 FR 24280) based its presumption concerning on-road SO_2 motor vehicle emissions budgets on emissions inventories that show that SO_2 emissions from on-road sources constitute a ''de minimis'' portion of total SO_2 emissions.

2. What are safety margins?

A ''safety margin'' is the difference between the attainment level of emissions (from all sources) and the projected level of emissions (from all sources) in the maintenance plan. The on-road MVEBs for direct $PM_{2.5}$ emissions given in Table 10 above do not include either re-entrained road dust or construction dust from transportation projects. The on-road mobile source emissions when added to emissions from all other inventory sources (stationary, other mobile (e.g., non-road, marine vessels, airplanes, locomotives) and area sources) result in annual emissions inventories lower than the year 2007 attainment emissions inventory. Hence both the 2017 and 2025 projected emission levels provide a ''safety margin'' relative to total emissions in the 2007 attainment year. CT DEEP has allocated a small portion (i.e., 10%) of the safety margin to both the 2017 and 2025 MVEBs. Even if emissions reached the full level of the safety margin, the area would still demonstrate maintenance since emission levels would equal those in the attainment year.

The transportation conformity rule allows areas to allocate all or a portion of a ''safety margin'' to the area's MVEBs (40 CFR 92.124(a)). The MVEBs requested by CT DEEP contain NO_X and direct $PM_{2.5}$ safety margins for mobile sources in 2017 and 2025 smaller than the allowable safety margins reflected in the total emissions inventory for the Southwestern CT Area. *See* Table 11.

TABLE 11—TRANSPORTATION CONFORMITY BUDGETS FOR THE SOUTHWESTERN CT AREA

Year	$PM_{2.5}$ (tpy)	NO_X (tpy)
2017:		
On-Road Inventory	467.4	10,708.0
Safety Margin vs. 2007	1083.9	20,837.8
10% of Safety Margin	108.4	2,083.8
2017 Conformity Budget	575.8	12,791.8
2025:		
On-Road Inventory	378.9	7,113.4
Safety Margin vs. 2007	1371.3	26,146.9
10% of Safety Margin	137.1	2,614.7
2025 Conformity Budget	516.0	9,728.1

Thus, the State is not requesting allocation to the MVEBs of the entire available safety margins reflected in the demonstration of maintenance. Therefore, even though the State has submitted MVEBs that exceed the projected on-road mobile source emissions for 2017 and 2025 contained in the demonstration of maintenance, the differences between the MVEBs and the projected on-road mobile source emissions are well within the safety margins of the $PM_{2.5}$ maintenance demonstration. Further, once allocated to mobile sources, these safety margins will not be available for use by other sources.

EPA has reviewed the submitted budgets for 2017 and 2025, including the added safety margins using the conformity rule's adequacy criteria found at 40 CFR 93.118(e)(4) and the conformity rule's requirements for safety margins found at 40 CFR 93.124(a). EPA has determined that the area can maintain attainment of the 1997 annual and 2006 24-hour $PM_{2.5}$ standards for the relevant maintenance period with on-road mobile source emissions at the levels of the MVEBs since total emissions will still remain under attainment year emission levels. EPA is, therefore, proposing to approve the MOVES-based MVEBs submitted by Connecticut for use in determining transportation conformity in the Southwestern CT Area.

VI. Proposed Actions

After fully considering the D.C. Circuit's decisions in *EME Homer City* on EPA's CSAPR rule, and *NRDC* v. *EPA* on EPA's 1997 $PM_{2.5}$ Implementation rule, EPA is proposing to approve Connecticut's June 22, 2012 request to redesignate the Connecticut portion of the New York-N. New Jersey-Long Island, NY–NJ–CT Area (i.e., the Southwestern CT Area) from nonattainment to attainment for the 1997 annual and 2006 24-hour $PM_{2.5}$

[15] The 2004 rulemaking addressed most of the transportation conformity requirements that apply in $PM_{2.5}$ nonattainment and maintenance areas. The 2005 conformity rule included provisions addressing treatment of $PM_{2.5}$ precursors in MVEBs. *See* 40 CFR 93.102(b)(2). While none of these provisions were challenged in the NRDC case, EPA also notes that the Court declined to address challenges to EPA's presumptions regarding $PM_{2.5}$ precursors in the $PM_{2.5}$ implementation rule. *NRDC* v. *EPA,* at 27, n. 10.

NAAQS and of the associated maintenance plan, including the 2017 and 2025 MVEBs. EPA is proposing to withdraw the SIP-approved 2009 MVEBs prepared using MOBILE6.2.

EPA is also proposing to approve the base-year emissions inventory for the Southwestern CT Area included in Connecticut's June 22, 2012 submittal as meeting the comprehensive emissions inventory requirements of section 172(c)(3) of the CAA.

VII. Statutory and Executive Order Reviews

Under the CAA, redesignation of an area to attainment and the accompanying approval of a maintenance plan under section 107(d)(3)(E) are actions that affect the status of a geographical area and do not impose any additional regulatory requirements on sources beyond those imposed by state law. A redesignation to attainment does not in and of itself create any new requirements, but rather results in the applicability of requirements contained in the CAA for areas that have been redesignated to attainment. Moreover, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, these proposed actions do not impose additional requirements beyond those imposed by state law and the CAA. For that reason, these proposed actions:

- are not ''significant regulatory actions'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- do not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- are certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- do not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- do not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- are not economically significant regulatory actions based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- are not significant regulatory actions subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- are not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- do not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because a determination of attainment is an action that affects the status of a geographical area and does not impose any new regulatory requirements on tribes, impact any existing sources of air pollution on tribal lands, nor impair the maintenance of ozone national ambient air quality standards in tribal lands.

List of Subjects

40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2013–0023; FRL–9392–9]

Receipt of Several Pesticide Petitions Filed for Residues of Pesticide Chemicals in or on Various Commodities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of filing of petitions and request for comment.

SUMMARY: This document announces the Agency's receipt of several initial filings of pesticide petitions requesting the establishment or modification of regulations for residues of pesticide chemicals in or on various commodities.

DATES: Comments must be received on or before August 19, 2013.

ADDRESSES: Submit your comments, identified by docket identification (ID) number and the pesticide petition number (PP) of interest as shown in the body of this document, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: A contact person, with telephone number and email address, is listed at the end of each pesticide petition summary. You may also reach each contact person by mail at Biopesticides and Pollution Prevention Division (BPPD) (7511P) or Registration Division (RD) (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

If you have any questions regarding the applicability of this action to a

particular entity, consult the person listed at the end of the pesticide petition summary of interest.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When submitting comments, remember to:

i. Identify the document by docket ID number and other identifying information (subject heading, **Federal Register** date and page number).

ii. Follow directions. The Agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.

iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

iv. Describe any assumptions and provide any technical information and/or data that you used.

v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

vi. Provide specific examples to illustrate your concerns and suggest alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. What action is the Agency taking?

EPA is announcing its receipt of several pesticide petitions filed under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, requesting the establishment or modification of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. The Agency is taking public comment on the requests before responding to the petitioners. EPA is not proposing any particular action at this time. EPA has determined that the pesticide petitions described in this document contain the data or information prescribed in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petitions. After considering the public comments, EPA intends to evaluate whether and what action may be warranted. Additional data may be needed before EPA can make a final determination on these pesticide petitions.

Pursuant to 40 CFR 180.7(f), a summary of each of the petitions that are the subject of this document, prepared by the petitioner, is included in a docket EPA has created for each rulemaking. The docket for each of the petitions is available online at *http://www.regulations.gov.*

As specified in FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), EPA is publishing notice of the petition so that the public has an opportunity to comment on this request for the establishment or modification of regulations for residues of pesticides in or on food commodities. Further information on the petition may be obtained through the petition summary referenced in this unit.

New Tolerance

1. *PP 2E8083.* (EPA–HQ–OPP–2012–0791). Interregional Research Project Number 4 (IR–4), IR–4 Project Headquarters, 500 College Rd. East, Suite 201 W., Princeton, NJ 08540, requests to establish tolerances in 40 CFR part 180 for residues of the herbicide linuron, (3-(3,4-dichlorophenyl)-1-methoxy-1-methylurea), and its metabolites convertible to 3,4-dichloroaniline, calculated as linuron, in or on cilantro, dried leaves at 27 parts per million (ppm); cilantro, fresh leaves at 3.0 ppm; coriander, seed at 0.01; dill, oil at 4.8 ppm; dill, seed at 0.3 ppm; dillweed, dried leaves at 7.1 ppm; dillweed, fresh leaves at 1.5 ppm; horseradish at 0.05 ppm; parsley, dry leaves at 8.3 ppm; parsley, leaves at 3.0 ppm; and pea, dry, seed at 0.08 ppm. Adequate enforcement methods are available for the determination of linuron in plant and animal commodities. A gas chromatography/mass spectroscopy (GC/MS) detection method involves hydrolysis of linuron and all metabolites by alkaline reflux to 3,4-dichloroaniline, followed by distillation of the 3,4-dichloroaniline into an acid solution. A second method involves extraction of linuron and metabolites using methanol and clean-up of the extract by using an ENVI-Carb solid phase extraction (SPE) column, elution of linuron and its metabolites using methanol followed by methanol-toluene, and concentration of the eluate. The eluate is dissolved in methanol, filtered, and analyzed for linuron and its metabolites using reversed phase high pressure liquid chromatography (HPLC) with MS/MS detection. Contact: Laura Nollen, (RD), (703) 305–7390, email address: *nollen.laura@epa.gov.*

2. *PP 3E8170.* (EPA–HQ–OPP–2013–0235). Interregional Research Project Number 4 (IR–4), IR–4 Project Headquarters, 500 College Rd. East, Suite 201 W., Princeton, NJ 08540, requests to establish tolerances in 40 CFR part 180 for residues of the insecticide chlorantraniliprole, 3-bromo-*N*-[4-chloro-2-methyl-6-[(methylamino)-carbonyl]phenyl]-1-(3-chloro-2-pyridinyl)-1*H*-pyrazole-5-carboxamide, in or on fruit, stone, group12, except cherry, chickasaw plum, and damson plum at 4.0 ppm; nut, tree, group 14–12 at 0.04 ppm; papaya at 4.0 ppm; passionfruit at 4.0 ppm; onion, green, subgroup 3–07B at 3.0 ppm; and spice, subgroup19B at 40 ppm. Since chlorantraniliprole and its metabolic degradates are not of toxicological concern, analytical methods are not applicable. Contact: Laura Nollen, (RD), (703) 305–7390, email address: *nollen.laura@epa.gov.*

3. *PP 2F8131.* (EPA–HQ–OPP–2013–0035). E.I. du Pont de Nemours and Co., 1007 Market St., Wilmington, DE 19898, requests to establish tolerances in 40 CFR part 180 for residues of the herbicide rimsulfuron, in or on sorghum, forage; sorghum, grain; and sorghum, stover at 0.01 ppm. The analytical method DuPont-32277 using reversed-phase high-performance liquid chromatography with electrospray ionization and tandem mass

spectroscopy (HPLC/ESI–MS/MS) detection is used to measure and evaluate the chemical rimsulfuron. Contact: Mindy Ondish, (RD), (703) 605–0723, email address: *ondish.mindy@epa.gov.*

4. *PP 2F8132.* (EPA–HQ–OPP–2013–0034). E.I. du Pont de Nemours and Co., 1007 Market St., Wilmington, DE 19898, requests to establish tolerances in 40 CFR part 180 for residues of the herbicide nicosulfuron, in or on sorghum, forage at 0.4 ppm; sorghum, grain at 0.8 ppm; and sorghum, stover at 0.05 ppm. The analytical method DuPont-32277 using reversed-phase HPLC/ESI–MS/MS detection is used to measure and evaluate the chemical nicosulfuron and its metabolite, IN–V9367. Contact: Mindy Ondish, (RD), (703) 605–0723, email address: *ondish.mindy@epa.gov.*

5. *PP 3F8179.* (EPA–HQ–OPP–2013–0476). Dow AgroSciences, LLC, 9330 Zionsville Rd., Indianapolis, IN 46268, requests to establish a tolerance in 40 CFR part 180 for residues of the insecticide methoxyfenozide, including its metabolites and degradates. Compliance with the tolerance levels is to be determined by measuring only the active ingredient: Methoxyfenozide, (3-methoxy-2-methylbenzoic acid 2-(3,5-dimethylbenzoyl) -2-(1,1-dimethylethyl) hydrazide), in or on pineapple at 0.7 ppm. The proposed tolerance is supported by magnitude of residue studies in pineapple. Liquid chromatography-mass spectroscopy (LC–MS/MS) detection methodology is available for tolerance enforcement. Contact: Olga Odiott, (RD), (703) 308–9369, email address: *odiott.olga@epa.gov.*

Amended Tolerance

1. *PP 2E8083.* (EPA–HQ–OPP–2012–0791). Interregional Research Project Number 4 (IR–4), IR–4 Project Headquarters, 500 College Rd. East, Suite 201 W., Princeton, NJ 08540, requests to amend the tolerance in 40 CFR 180.184(c) by deleting the regional tolerance for residues of the herbicide linuron, (3-(3,4-dichlorophenyl)-1-methoxy-1-methylurea) and its metabolites convertible to 3,4-dichloroaniline, calculated as linuron, in or on parsley, leaves at 0.25 ppm. Contact: Laura Nollen, (RD), (703) 305–7390, email address: *nollen.laura@epa.gov.*

2. *PP 3F8152.* (EPA–HQ–OPP–2013–0411). Bayer CropScience, 2 TW Alexander Dr., Research Triangle Park, NC 27709, requests to amend the tolerance in 40 CFR 180.608 for residues of the insecticide spirodiclofen, 3-(2,4-dichlorophenyl)-2-oxo-1-oxaspiro[4,5]dec-3-en-4-yl ester 2,2-dimethylbutanoate, in or on citrus, oil from 20 ppm to 35 ppm. Adequate analytical methodology using LC/MS/MS detection is available for enforcement purposes. Contact: Rita Kumar, (RD), (703) 308–8291, email address: *kumar.rita@epa.gov.*

3. *PP 3F8161.* (EPA–HQ–OPP–2013–0477). BASF Corporation, 26 Davis Dr., P.O. Box 13528, Research Triangle Park, NC 27709–3528, requests to amend the tolerance in 40 CFR 180.666 for residues of the insecticide fluxapyroxad (BAS 700 F), 1*H*-pyrazole-4-carboxamide,3-(difluoromethyl)-1-methyl-*N*-(3',4',5'-trifluoro[1,1'-biphenyl]-2-yl)-, its metabolites, and degradates, in or on fruit, stone, group 12 from 2.0 ppm to 3.0 ppm. Independently validated analytical methods have been submitted for analyzing residues of parent fluxapyroxad (BAS 700 F) plus metabolites M700F008, M700F048, and M700F002 with appropriate sensitivity in/on fruit, stone, group 12 crops, represented by cherry, peach, and plum for which tolerances have been established. Contact: Olga Odiott, (RD), (703) 308–9369, email address: *odiott.olga@epa.gov.*

New Tolerance Exemption

1. *PP 2E8094.* (EPA–HQ–OPP–2013–0265). The Clorox Company (Clorox), 1221 Broadway, Oakland, CA 94612–1888, requests to establish an exemption from the requirement of tolerance for residues of saturated aliphatic acyclic linear primary alcohols, aldehydes, and acids, under 40 CFR 180.940, when used as pesticide inert ingredients (fragrances) in pesticide formulations used on food-contact surfaces when applied/used in indoor residential settings at a maximum rate of 0.025%. Because Clorox is petitioning for an exemption from the requirement of a tolerance, an enforcement analytical method is not needed. Contact: David Lieu, (RD), (703) 305–0079, email address: *lieu.david@epa.gov.*

2. *PP 2E8116.* (EPA–HQ–OPP–2013–0286). OhSo Clean, Inc., 315 Pacific Ave., San Francisco, CA 94111, requests to establish an exemption from the requirement of a tolerance for residues of copper sulfate pentahydrate (Chemical Abstracts Service Registry Number (CAS No.) 7758–99–8), under 40 CFR 180.940(a), when used as a pesticide inert ingredient in antimicrobial pesticide formulations applied to food-contact surfaces in public eating places, dairy processing equipment, and food processing equipment and utensils. An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation. Contact: David Lieu, (RD), (703) 305–0079, email address: *lieu.david@epa.gov.*

3. *PP 2F7998.* (EPA–HQ–OPP–2013–0102). Linde Electronics and Specialty Gases, One Greenwich St., Suite 100, Stewartsville, NJ 08886, requests to establish an exemption from the requirement of a tolerance for residues of the insecticide ethyl formate in or on fumigated agricultural commodities. The GC analytical method is available to EPA for the detection and measurement of the pesticide residues. Contact: Cheryl Greene, (BPPD), (703) 308–0352, email address: *greene.cheryl@epa.gov.*

4. *PP* 3*F8149.* (EPA–HQ–OPP–2013–0253). Bayer CropScience LP, Biologics, P.O. Box 12014, 2 T.W. Alexander Dr., Research Triangle Park, NC 27709, requests to establish an exemption from the requirement of a tolerance for residues of the insecticide *Streptomyces microflavus,* strain AQ 6121, in or on all agricultural commodities. The petitioner believes no analytical method is needed because it is expected that, when used as proposed, *Streptomyces microflavus,* strain AQ 6121, would not result in residues of toxicological concern. Contact: Michael Glikes, (BPPD), (703) 305–6231, email address: *glikes.michael@epa.gov.*

5. *PP IN–10547.* (EPA–HQ–OPP–2013–0444). Oro-Agri, Inc., 990 Trophy Club Dr., Trophy Club, TX 76262, requests to establish an exemption from the requirement of a tolerance for residues of sweet orange peel tincture (CAS No. 8028–48–6) under 40 CFR 180.910 for pre- and post-harvest crops when used as a pesticide inert ingredient (surfactant and fragrance) when contained at concentrations up to 10% in pesticide formulations and applied to agricultural crops, pre-plant through post-harvest. The petitioner believes no analytical method is needed because this information is not required for the establishment of a tolerance exemption. Contact: Lisa Austin, (RD), (703) 305–7894, email address: *austin.lisa@epa.gov.*

6. *PP IN–10553.* (EPA–HQ–OPP–2013–0284). Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419-8300, requests to establish an exemption from the requirement of a tolerance for residues of polyurethane-type polymers (CAS Nos. 1161844-26-3, 1161844-30-9, 1161844-43-4, 1161844-51-4, 1161844-53-6, 693252-31-2, 162993-60-4, and 630102-86-2), under 40 CFR 180.960, when used as a pesticide inert ingredient (carrier) in or on raw agricultural commodities and

food products. Tolerance exemption descriptors for polymers produced by the reaction of either 1,6-hexane-diisocyanate; 2,4,4-trimethyl-1,6-hexanediisocyanate; 5-isocyanato-1-(isocyanatomethyl)-1,3,3-trimethyI cyclohexane (isophoronediisocyanate); 4,4′- methylene-bis-1, 1′-cyclohexanediisocyanate; 4,4′-methylene-bis-1,1′benzyldiisocyanate; or 1,3-bis-(2-isocyanatopropan-2-yl) benzene with polyethylenglycol and end-capped with one or a mixture of more than one of octanol, decanol, dodecanol, tetradecanol, hexadecanol, octadecanol, and octadec-9-enol or polyethyleneglycol ethers of octanol, decanol, dodecanol, tetradecanol, hexadecanol, octadecanol, and octadec-9-enol. An analytical method to determine the molecular weight of the polymer is dynamic light scattering. The petitioner believes no analytical method is needed because this information is not required for the establishment of a tolerance exemption. Contact: William D. Cutchin, (RD), (703) 305–7990, email address: *cutchin.william@epa.gov.*

7. *PP IN–10559.* (EPA–HQ–OPP–2013–0383). Evonik Goldschmidt Corp., P.O. Box 1299, Hopewell, VA 23860, requests to establish an exemption from the requirement of a tolerance for residues of 2,5-furandione, polymer with ethenylbenzene, hydrolyzed, 3-(dimethylamino)propyl imide, imide with polyethylene-polypropylene glycol 2-aminopropyl Me ether, 2,2'-(1, 2-diazenediyl)bis[2-methylbutanenitrile]-initiated, minimum number average molecular weight (in AMU) 5,816 (CAS No. 1062609–13–5), under 40 CFR 180.960, when used as a pesticide inert ingredient (functioning as a dispersant) in pesticide formulations. The petitioner believes no analytical method is needed because this information is not required for the establishment of a tolerance exemption. Contact: David Lieu, (RD), (703) 305–0079, email address: *lieu.david@epa.gov.*

8. *PP IN–10565.* (EPA–HQ–OPP–2013–0467). Huntsman Corp., 8600 Gosling Rd., The Woodlands, TX 77381, requests to establish an exemption from the requirement of a tolerance for residues of cumenesulfonic acid and its ammonium, calcium, magnesium, potassium, sodium, and zinc salts with no limits when used as pesticide inert ingredients (surfactants, related adjuvants of surfactants) in pesticide formulations under 40 CFR 180.920 and 180.930, in or on all the raw agricultural commodities, including the following with Chemical Abstracts Service Registry Numbers (CASRNs): Benzenesulfonic acid, 4-(1-methylethyl)-, sodium salt (15763–76–5); benzenesulfonic acid, 4-(1-methylethyl)- (16066–35–6); benzenesulfonic acid, 4-(1-methylethyl)-, potassium salt (164524–02–1); benzenesulfonic acid, (1-methylethyl)-, potassium salt (28085–69–0); benzenesulfonic acid, (1-methylethyl)-, sodium salt (1:1) (28348–53–0); benzenesulfonic acid, 2(or 4)-(1-methylethyl)- (28631–63–2); benzene, (1-methylethyl)-, monosulfo deriv., sodium salt (1:1) (32073–22–6); benzenesulfonic acid, (1-methylethyl)-, ammonium salt (1:1) (37475–88–0); benzenesulfonic acid, (1-methylethyl)-(37953–05–2); benzenesulfonic acid, (1-methylethyl)-, magnesium salt (90959–88–9). Prior to the submission of this petition to add cumenesulfonate CASRNs, the EPA reapproved toluenesulfonate and xylenesulfonate hydrotropes in the EPA Decision Documents dated 9/14/2006 and 6/30/2006. The combined documents are available at *http://www.epa.gov/opprd001/inerts/xylenesulfonic.pdf.* Huntsman Corp. is relying on the information in that combined EPA Decision Document to support this petition which includes a chemistry that was also in the Screening Information Data Set (SIDS) Initial Assessment Report for hdrotropes. The SIDS hydrotropes category included cumenesulfonates, toluenesulfonates, and xylenesulfonates. In fact, cumenesulfonate data was used to support the reassessment of the toluenesulfonates and xylenesulfonates in the EPA Decision Document. Huntsman Corp. does not expect the addition of these cumenesulfonate CASRNs to result in additional exposure or risk, and no new data is being submitted with this petition. The petitioner believes no analytical method is needed because this information is not required for the establishment of a tolerance exemption. Contact: William D. Cutchin, (RD), (703) 305–7990, email address: *cutchin.william@epa.gov.*

Amended Tolerance Exemption

1. *PP IN–10544.* (EPA–HQ–OPP–2013–0210). Akzo Nobel Surface Chemistry, LLC, 525 West Van Buren, Chicago, IL 60607–3823, requests to amend an exemption from the requirement of a tolerance under 40 CFR 180.920, 180.930, or 180.960, for residues of [alpha]-alkyl-[omega]-hydroxypoly (oxypropylene) and/or poly(oxyethylene) polymers where the alkyl chain contains a minimum of six carbons, and alkyl-*w*-hydroxypoly (oxypropylene) and/or poly (oxyethylene) polymers where the alkyl chain contains a minimum of six carbons, minimum number average molecular weight (in AMU) 1,100 in or on the raw agricultural commodity growing crops at no limitation. An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation. Contact: William D. Cutchin, (RD), (703) 305–7990, email address: *cutchin.william@epa.gov.*

2. *PP IN–10551.* (EPA–HQ–OPP–2013–0381). Akzo Nobel Surface Chemistry, LLC, 909 Mueller Dr., Chattanooga, TN 37406, requests to revise an existing exemption from the requirement of a tolerance for modified acrylic polymers in 40 CFR 180.960. Akzo Nobel Surface Chemistry, LLC, is requesting that the exemption be revised to include lauryl methacrylate by inserting lauryl methacrylate after hydroxyethyl acrylate and before the following text ''and its sodium, potassium, ammonium, monoethanolamine and triethanolamine salts; the resulting polymer having a minimum number average molecular weight (in amu), 1200.'' This entry begins with the following: Styrene, copolymers with acrylic acid. The petitioner believes no analytical method is needed because this information is not required for the establishment of a tolerance exemption. Contact: Mark Dow, (RD), (703) 305–5533, email address: *dow.mark@epa.gov.*

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 25

[IB DOCKET NO. 13–147; FCC 12–79]

Allegations of Anticompetitive Behavior in Satellite Industry

AGENCY: Federal Communications Commission.

ACTION: Notice of Inquiry.

SUMMARY: The Federal Communications Commission (Commission) seeks comment on whether, and, if so, to what extent, incumbent satellite operators are

inhibiting competition in the market for satellite services, particularly in the fixed-satellite services (FSS) arena. Specifically, the Commission seeks comment on whether FSS operators are warehousing satellite orbital locations and frequency assignments, and preventing competitors from purchasing capacity on incumbent-owned satellites.

DATES: Comments are due on or before August 19, 2013, and reply comments are due on or before September 17, 2013.

ADDRESSES: You may submit comments, identified by IB Docket No. 13–147, by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Federal Communications Commission's Web site: http:///www.fcc.gov/cgb/ecfs*. Follow the instructions for submitting comments.
- *People with Disabilities:* Contact the FCC by email to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.): *FCC504@fcc.gov;* or phone 202–418–0530; or TTY: 202–418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, *see* the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Alan Thomas (202) 418–2338, Satellite Division, International Bureau, Federal Communications Commission, Washington, DC 20554. For additional information concerning the information collection(s) contained in this document, contact Judith B. Herman at 202–418–0214, or via the Internet at *Judith-B.Herman@fcc.gov*.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Notice of Inquiry (Notice) in IB Docket No. 13–147, adopted June 5, 2013, and released on June 7, 2013. The full text of the Notice is available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY–A257, Washington, DC 20554. This document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., Portals II, 445 12th Street SW., Room CY–B402, Washington, DC 20554, telephone 202–488–5300, facsimile 202–488–5563, or via email *FCC@BCPIWEB.com*.

Initial Paperwork Reduction Act of 1995 Analysis: This document does not propose revised information collection requirements.

I. Summary of Notice of Inquiry

A. Background

In this *Notice of Inquiry* (*Notice*) the Commission seeks comment on whether, and, if so, to what extent, incumbent satellite operators are inhibiting competition in the market for satellite services, particularly in the fixed-satellite services arena. This *Notice* results from comments submitted in response to two Congressionally-mandated reports: The *Orbit Act Report* and the *Satellite Competition Report*.

Pursuant to the Open-Market Reorganization for the Betterment of International Telecommunications Act (Orbit Act),[1] the Commission is required to submit an annual report to Congress concerning the progress made with regard to the privatization of INTELSAT and Inmarsat. Some of the comments submitted in preparation of the *Eleventh Orbit Act Report*[2] raised two allegations of anticompetitive behavior: First, that Intelsat and other dominant satellite operators are warehousing scarce orbital resources, *i.e.,* hoarding satellite orbital locations and frequency assignments by failing to replace aging satellites on a timely basis or otherwise failing to provide transponder capacity that reflects current technology. The second allegation is that Intelsat is now a vertically integrated company, *i.e.* able to provide its customers both space and ground communications services, that discriminates against competitors. As a vertically integrated company, Intelsat not only provides satellite services to integrators (resellers) who need satellite bandwidth to fashion their own customer-specific service offerings, but Intelsat also competes against integrators because Intelsat is now able to fashion its own customer-specific service offerings. Consequently, some integrators allege that this dual role has resulted in them being vertically foreclosed or barred by Intelsat from securing satellite bandwidth capacity.

The Commission noted that the *Eleventh Orbit Act Report* was not the appropriate forum in which to resolve such allegations, and stated that the allegations would be addressed in an appropriate forum.

The allegations were again raised in comments considered in the *Third Satellite Competition Report,*[3] a report the Commission annually delivers to Congress regarding the state of competition in the satellite industry.[4] In the *Third Satellite Competition Report,* one commenter expanded upon the warehousing and vertical foreclosure allegations it made in the *Eleventh Orbit Act Report;* the Commission, however, determined that it was unable to reach conclusions regarding these allegations for two reasons. First, the factual record for the *Third Satellite Competition Report* was limited with regard to the warehousing allegations and, second, the evidence was inconclusive whether Intelsat restricts or prevents integrators from obtaining satellite bandwidth capacity. The *Third Satellite Competition Report* concluded that these allegations warranted additional analysis in a separate proceeding where a more detailed record could be developed and explored.

B. Warehousing Allegations

a. Gaps in Service

In the *Notice,* the Commission identified four types of potential warehousing scenarios. In the first scenario, warehousing can result from gaps in service when an operator de-orbits or relocates an in-orbit satellite, but does not immediately place another satellite into the vacated orbital location. Whether such a gap is the result of warehousing or a legitimate exercise of operator flexibility is a determination the Commission makes on a case-by-case basis. In the *Notice,* the Commission asks, for example, whether it should adopt a rule that declares unused spectrum available for reassignment as soon as service is terminated, unless an operator can demonstrate that it terminated service because of an unforeseen catastrophic circumstance. Alternatively, the Commission asks whether permitting some gap in service would strike a better balance between providing an operator flexibility in managing its fleet while still safeguarding against warehousing.

Gaps in service often result in satellite operators inserting replacement satellites that do not operate on all the frequency bands used by the retired or relocated satellite; and while satellite operators sometimes specify the frequencies used by both incoming and outgoing satellites, often they do not,

[1] Open-Market Reorganization for the Betterment of International Telecommunications Act, 47 U.S.C. §§ 701, 706(e) (2000).

[2] *FCC Report to Congress as Required by the ORBIT Act: Eleventh Report,* FCC 10–112, 25 FCC Rcd 7834, 7857–7861(2010)

[3] *Third Report and Analysis of Competitive Market Conditions with respect to Domestic and International Satellite Communications Services,* FCC 11–183, IB Docket Nos. 09–16 and IB 10–99, 26 FCC Rcd 17284, 17346–17353 (2011).

[4] Amendment to Communications Satellite Act, Public Law 109–34, 119 Stat. 377 (2005), *codified at* 47 U.S.C. § 703.

thus requiring that the Commission expend resources and time in order to sort out which frequencies are operational at a particular orbital location. Thus, the Commission asks, for example, whether each replacement application should include a table that lists the frequencies used by both the original and the replacement space station, and whether an application should be considered incomplete if it does not include such a table. The Commission also seeks comment on how to expeditiously address situations where incomplete frequency information is provided.

Additionally, there are instances where a gap in service is caused by unforeseen circumstances. Under the Commission's current rules, requests for emergency replacement satellites are considered on a case-by-case basis and, generally, the Commission grants authority for emergency replacement satellites as long as an operator timely launches a new satellite or relocates an in-orbit satellite into the vacant orbital location. Where the failure of a fully functional five-year old in-orbit satellite would be viewed as a catastrophic failure that excuses a gap in service, the Commission asks, for example, whether the same should be true of a fourteen-year old satellite that fails a few months earlier than expected; relatedly, the Commission asks whether in a non-emergency situation, the satellite operator should have made significant progress on construction of and have concrete launch plans for a replacement satellite, particularly given that it takes two-to-five years to construct and launch a satellite. The Commission also asks, for example, whether it should require satellite operators to submit, in their annual reports, end-of-life projections for all in-orbit satellites, and asks for comment on whether it should propose rules that may allow it to expedite consideration of requests for emergency replacement satellites.

b. Older Replacement Satellites

In the second scenario, warehousing can arise when there is no gap in service but a satellite operator decides to relocate an older, in-orbit satellite to serve as a replacement for a satellite it has de-orbited or moved to another location. These situations potentially restrict transponder capacity and result in an underutilization of spectrum resources because newer technology is not brought into use at that orbital location. As with other potential warehousing situations, the Commission must evaluate these requests on a case-by-case basis; thus, the Commission seeks comment on, for example, the use of older satellites as replacement satellites and whether this practice restricts transponder capacity and results in an underutilization of spectrum resources. Additionally, the Commission requests comment on whether or to what extent allowing operators to use older satellites as replacements precludes the use of newer technologies that can provide improved services to consumers.[5] For example, the Commission asks whether it should permit an operator to replace a 13- or 14- year old satellite with another satellite that is 13- or 14-years old, and whether it should be more concerned about the health of the replacement satellite, rather than its age.

c. License Extensions

With an increase in the useful life of satellites, the third potential warehousing scenario is evidenced by the increase in the number of requests made of the Commission to extend a satellite's license term well beyond its initial license term. While it may be possible for a satellite to operate an additional decade or more beyond its original license term, the Commission asks whether lengthy extensions allow inefficient or partially-functioning satellites to block customer access to newer, state-of-the art satellites. Additionally, the Commission asks whether, for example, prior to granting a license extension, it should require the operator to submit information regarding the satellite's health, and how it might apply license extension limitations to non-U.S. licensed satellites granted market access to the United States.

d. Underutilized Satellites

The fourth potential warehousing scenario concerns underutilized satellites. Regardless of age and for a variety of reasons, satellites may not be operating at full capacity. The Commission seeks comment on whether this creates a concern that the operator is warehousing spectrum, and asks whether it should propose a rule that automatically terminates a space station license if the percentage of unused capacity exceeds a certain amount. Even if the authorization for an underutilized satellite is not cancelled, the Commission asks whether, at a minimum, the unused spectrum should be made available for reassignment. Additionally, the Commission asks whether there are instances in which such ''non-use'' may be acceptable.

2. Vertical Foreclosure Allegations

Although some integrators allege that a vertically-integrated Intelsat has foreclosed them from securing satellite bandwidth capacity, the Commission's focus is on protecting competition rather than protecting particular competitors. Thus, loss of business and profits to integrator firms themselves is not considered a public interest harm if end users, *i.e.,* customers and/or consumers, are not harmed.

a. Analytical Framework

In the *Third Satellite Competition Report,* the Commission described a multi-step framework for examining the vertical foreclosure allegations and determining whether end users are being harmed. The framework, for example, seeks to determine: (1) Whether the alleged foreclosure conduct has or might lessen competition by excluding integrators from acquiring bandwidth capacity, and whether integrators have access to adequate alternatives to satellite bandwidth; (2) whether Intelsat has the ability to compete effectively as a provider of satellite services as well the ability to foreclose competitors; (3) whether Intelsat's vertical integration creates procompetitive cost savings and efficiencies likely to be passed on to end users; or, instead, is likely to result in increased price or degraded service quality; (4) whether any resulting efficiencies from vertical integration are likely passed on to end users; and (5) whether the Commission must determine if vertically integrated satellite operators will, to their advantage and to the detriment of integrators, purchase bandwidth from each other, and whether that relationship might have an impact on competition.

b. Issues for Inquiry

In addition to seeking comment on the multi-step framework, the Commission seeks additional information that can help it evaluate adequately the warehousing and vertical foreclosure allegations. For example, the Commission seeks more details on the nature and scope of the alleged

[5] Most satellite operators are required to submit annual reports to the Commission detailing the status of their space stations. Depending on the service, the operator may have to provide the status of satellite construction and expected launch dates, and a detailed description of the utilization of in-orbit satellites, including outages, and any transponders not available for service. *See* 47 CFR §§ 25.142(c), 25.143(e), 25.145(f)(1), 25.146(l), and 25.210(l). The Commission has proposed to consolidate these reporting requirements into a single rule. *See Comprehensive Review of Licensing and Operating Rules for Satellite Services,* FCC 12–117, Notice of Proposed Rulemaking, 27 FCC Rcd 11619 (2012). Comprehensive Review of Licensing and Operating Rules for Satellite Services, Proposed Rules, 77 FR 67172 (Nov. 8, 2012).

foreclosure, asking that commenters detail the time period, the geographic routes involved, the amount and type of bandwidth capacity (Ku-band, C-band, etc.) involved, and the size of the disputed business, either in absolute terms or relative to the size of the excluded integrators' business, the FSS operators' business, or the total demand of the affected customer(s). The Commission asks whether integrators, for example, have viable options other than using satellite bandwidth capacity, whether integrators can launch their own satellites, and how non-satellite bandwidth options compare to service provide by satellite operators.

The Commission asks commenters about various types of pricing information; information that will aid in measuring cost savings and efficiencies that, if any, result from vertical integration; data on why vertical integration does not reduce costs and create efficiencies; data that quantifies the effect of the vertical integration on the services provided to end users (including changes in the number of bidders, the features and quality of service provided by the selected bidder, and bid rates); data on whether Intelsat vertical integration was facilitated by horizontal collusion among satellite operators, and/or whether the vertical integration has enhanced or deterred coordinated interactions among potential bidders; and comment on appropriate remedies that could be implemented by the Commission.

II. Regulatory Impact Conclusion

This *Notice* seeks data which will be used to assess the warehousing and vertical foreclosure allegations. It does not propose any changes to existing rules.

III. Procedural Matters

A. Ex Parte

The proceeding this *Notice* initiates shall be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

B. Initial Regulatory Flexibility Act

This document does not propose any economic impact on small entities.

C. Initial Paperwork Reduction

This document does not propose new or modified information collection requirements, and does not propose to eliminate any existing information collection requirements.

D. Filing of Comments and Reply Comments

Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47 CFR §§ 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. When filing comments or reply comments, please reference IB Docket No. 13–147. Comments may be filed using: (1) The Commission's Electronic Comment Filing System (ECFS), (2) the Federal Government's eRulemaking Portal, or (3) by filing paper copies. See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1998).

- *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the ECFS: *http://www.fcc.gov/cgb/ecfs/* or the *Federal eRulemaking Portal: http://www.regulations.gov*. Filers should follow the instructions provided on the Web site for submitting comments.
- *Paper Filers:* Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th Street SW., Room TW–A325, Washington, DC 20554. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of before entering the building.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington DC 20554.

People With Disabilities: To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer and Governmental Affairs Bureau at 202–418–0530 (voice) or 202–418–0432 (TTY). Contact the FCC to request reasonable accommodations for filing comments (accessible format documents, sign language interpreters, CART, etc.) by email at: *FCC504@fcc.gov;* phone: 202–418–0530 or TTY: 202–418–0432.

IV. Ordering Clauses

Accordingly, *it is ordered* that, pursuant to sections 1, 4(i), 4(j), 4(o), 301, and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154 (i)–(j) & (o), 301, and 403, section 1.430 of the Commission's Rules, 47 CFR 1.430, this Notice of Inquiry in IB Docket No. 13–47 *is adopted.*

It is further ordered that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center shall send a copy of this Notice of Proposed Rulemaking, including the initial regulatory flexibility act analysis, to the Chief Counsel for Advocacy of the Small

Business Administration, in accordance with Section 603(a) of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* (1981).

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

Endangered and Threatened Wildlife and Plants; Endangered Status for the Sierra Nevada Yellow-Legged Frog and the Northern Distinct Population Segment of the Mountain Yellow-Legged Frog, and Threatened Status for the Yosemite Toad

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; reopening of the public comment period.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the reopening of the public comment period on our April 25, 2013, proposed rule to list the Sierra Nevada yellow-legged frog and the northern distinct population segment (DPS) (populations that occur north of the Tehachapi Mountains) of the mountain yellow-legged frog as endangered species, and the Yosemite toad as a threatened species. We are also reopening the public comment period on our April 25, 2013, proposed rule to designate critical habitat for these species. The 60-day comment period for both proposed rules ended on June 24, 2013. This notice announces reopening of the comment periods to allow all interested parties an additional opportunity to comment on the proposed rules and to submit information on the status of the species and proposed critical habitat. We will consider all comments and information provided by the public during these comment periods in preparation of a final determination on our proposed listings and designation of critical habitat. Accordingly, the final decisions may differ from our proposals. If you submitted comments previously, you do not need to resubmit them because we have already incorporated them into the public record and will fully consider them in preparation of the final rules.

DATES: The comment periods for the proposed rules published April 25, 2013, at 78 FR 24472 and 24516, are reopened. We will consider all comments received or postmarked on or before November 18, 2013. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES** section, below) must be received by 11:59 p.m. Eastern Time on the closing date.

ADDRESSES:

Document availability: You may obtain copies of the proposed rule and related documents on the Internet at *http://www.regulations.gov* at Docket Number FWS–R8–ES–2012–0100 for the proposed listing and Docket Number FWS–R8–ES–2012–0074 for the proposed critical habitat. You can also obtain copies by mail from the Sacramento Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**).

Comment submission: You may submit written comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: *http://www.regulations.gov.* In the Search box, enter FWS–R8–ES–2012–0100 (the docket number for the proposed listing rule) or FWS–R8–ES–2012–0074 (the docket number for the proposed critical habitat rule). On the search results page, under the Comment Period heading in the menu on the left side of your screen, check the box next to ''Open'' to locate this document. Please ensure you have found the correct document before submitting your comments. If your comments will fit in the provided comment box, please use this feature of *http://www.regulations.gov,* as it is most compatible with our comment review procedures. If you attach your comments as a separate document, our preferred file format is Microsoft Word. If you attach multiple comments (such as form letters), our preferred format is a spreadsheet in Microsoft Excel.

(2) *By hard copy:* Submit by U.S. mail or hand-delivery to: Public Comments Processing, Attn: FWS–R8–ES–2012–0100 (if commenting on the proposed listing rule) or FWS–R8–ES–2012–0074 (if commenting on the proposed critical habitat rule); Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, MS 2042–PDM; Arlington, VA 22203.

We request that you send comments only by the methods described above. We will post all information received on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see Request for Information in **SUPPLEMENTARY INFORMATION** for more information).

FOR FURTHER INFORMATION CONTACT: Jan Knight, Deputy Field Supervisor, Sacramento Fish and Wildlife Office, 2800 Cottage Way, Suite W–2605, Sacramento, CA 95825; telephone 916–414–6600; facsimile 916–414–6712. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Background

On April 25, 2013, we published in the **Federal Register** a proposed rule to list the Sierra Nevada yellow-legged frog and the northern distinct population segment (DPS) (populations that occur north of the Tehachapi Mountains) of the mountain yellow-legged frog as endangered species, and the Yosemite toad as a threatened species (78 FR 24472). Also on April 25, 2013, we published in the **Federal Register** a proposed rule to designate critical habitat for these species (78 FR 24516). The 60-day comment period for both proposed rules ended on June 24, 2013.

Information Requested

We are reopening the public comment period for two proposed rules for the Sierra Nevada yellow-legged frog, the northern distinct population segment (DPS) (populations that occur north of the Tehachapi Mountains) of the mountain yellow-legged frog, and the Yosemite toad. We will accept written comments and information during this reopened comment period on our April 25, 2013, proposed rules to list these species (78 FR 24472) and to designate critical habitat (78 FR 24516). For more information on the specific information we are seeking, please see the April 25, 2013, proposed rules.

You may submit your comments and materials concerning the proposed rules by one of the methods listed in **ADDRESSES**. We will not accept comments sent by email or fax, or to an address not listed in **ADDRESSES**. If you submit a comment via *http://www.regulations.gov,* your entire comment—including your personal identifying information—will be posted on the Web site. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on *http://www.regulations.gov.*

Comments previously submitted need not be resubmitted, as they will be fully considered in preparation of the final rules. We intend that any final actions

resulting from these proposals be as accurate as possible and based on the best available scientific and commercial data. We will consider information and recommendations from all interested parties. Your comments are part of the public record, and we will fully consider them in the preparation of our final determinations.

Comments and materials we receive, as well as supporting documentation we used in preparing the proposed rule, will be available for public inspection on *http://www.regulations.gov,* or by appointment, during normal business hours, at the Sacramento Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**).

Authority

The authority for this action is the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Dated: July 9, 2013.

Rowan J. Gould,

Acting Director, U.S. Fish and Wildlife Service.

[FR Doc. 2013–17197 Filed 7–18–13; 8:45 am]

RIN 1018–AZ20; RIN 1018–AX71

Endangered and Threatened Wildlife and Plants; 6-Month Extension of Final Determinations on the Proposed Endangered Status and Proposed Designation of Critical Habitat for Gunnison Sage-Grouse

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rules; Reopening of the Comment Period.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce a 6-month extension of the final determination of whether to list the Gunnison sage-grouse *(Centrocercus minimus)* as endangered and designate critical habitat, and announce the reopening of the comment period on the proposed rules to list the species and to designate critical habitat. We are taking this action based on our finding that there is substantial disagreement regarding the sufficiency and accuracy of the available data relevant to our determinations regarding the proposed listing rule, making it necessary to solicit additional information by reopening the comment period for 45 days. Comments previously submitted need not be resubmitted as they are already incorporated into the public record and will be fully considered in the final rules.

DATES: The comment period end date is September 3, 2013. We request that comments be submitted by 11:59 p.m. Eastern Time on the closing date.

ADDRESSES: You may submit comments by one of the following methods:

(1) Electronically: Go to the Federal eRulemaking Portal: *http://www.regulations.gov.* In the Search box, enter the appropriate Docket No.: FWS–R6–ES–2012–0108 for the proposed endangered status for Gunnison sage-grouse; or FWS–R6–ES–2011–0111 for the proposed designation of critical habitat for Gunnison sage-grouse. You may submit a comment by clicking on ''Comment Now!''

(2) *By Hard Copy: For the proposed endangered status for Gunnison sage-grouse,* submit by U.S. mail or hand-delivery to: Public Comments Processing, Attn: FWS–R6–ES–2012–0108; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, MS 2042–PDM; Arlington, VA 22203.

For the proposed designation of critical habitat for Gunnison sage-grouse, submit by U.S. mail or hand-delivery to: Public Comments Processing, Attn: FWS–R6–ES–2011–0111; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, MS 2042–PDM; Arlington, VA 22203.

We request that you send comments only by the methods described above. We will post all comments on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see the Public Comments section below for more information).

FOR FURTHER INFORMATION CONTACT: Patty Gelatt, Western Colorado Supervisor, U.S. Fish and Wildlife Service, Western Colorado Field Office, 764 Horizon Drive, Building B, Grand Junction, CO 81506–3946; telephone 970–243–2778; facsimile 970–245–6933. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at (800–877–8339).

SUPPLEMENTARY INFORMATION:

Background

On January 11, 2013, we published a proposed rule listing the Gunnison sage-grouse as endangered (78 FR 2486) and a proposed designation of critical habitat for the Gunnison sage-grouse (78 FR 2540) under the Endangered Species Act of 1973, as amended (Act). For a description of previous Federal actions concerning the Gunnison sage-grouse, please refer to the proposed listing rule. We held four public meetings regarding the proposed rule and designation in January and February 2013 and also extended the initial 60-day comment period on these proposals by an additional 21 days, until April 2, 2013 (78 FR 15925, March 13, 2013). We also solicited and received independent scientific review of the information contained in each proposed rule from peer reviewers with expertise in Gunnison sage-grouse or similar species biology, in accordance with our July 1, 1994 peer review policy (59 FR 34270).

Section 4(b)(6) of the Act and its implementing regulation, 50 CFR 424.17(a), requires that we take one of three actions within 1 year of a proposed listing and concurrent proposed designation of critical habitat: (1) Finalize the proposed rules; (2) withdraw the proposed rules; or (3) extend the final determination by not more than 6 months, if there is substantial disagreement among scientists knowledgeable about the species regarding the sufficiency or accuracy of the available data relevant to the determination, for the purposes of soliciting additional data.

During the public comment period, we received multiple comments on the proposed listing and critical habitat designation from scientists with knowledge of the species and others regarding the sufficiency or accuracy of the available data used to support these proposed rulemakings. We also received comments on the proposed rules from scientists with expertise on Gunnison sage-grouse or similar species biology through the peer review process. In particular, commenters raised questions regarding:

(1) *The interpretation of scientific literature in the proposed rulemakings, and scientific literature that we may have overlooked in our analysis.* Specifically, some scientists knowledgeable about the species were concerned with the appropriateness of our interpretation of a study by Aldridge *et al.* (2011) on habitat use by Gunnison sage-grouse near roads and residential developments, and a study by Wisdom *et al.* (2011) which concludes that there are no strongholds for the species. These commenters also suggested that there may be additional, relevant studies that were not analyzed in the proposed rules.

(2) *Gunnison sage-grouse population trends.* Specifically, some scientists

questioned our analysis of the species' population trends in the Gunnison Basin, suggesting we did not account for increasing lek counts and what these scientists consider a low risk of extinction in that population.

(3) *The scope and efficacy of Gunnison County's regulatory mechanisms in addressing threats to Gunnison sage-grouse in the Gunnison Basin.* Specifically, we received comments suggesting that we may have underestimated the extent to which Gunnison County's regulatory mechanisms address residential development and other threats to the species.

(4) *The accuracy of projections about the extent of future residential development within the range of the species.* Specifically, commenters suggested that we may have overestimated the amount of future growth in human populations and development that is expected to occur within the species' range in the Gunnison Basin.

(5) *What constitutes historical habitat and important current habitat for the species.* Specifically, some scientists knowledgeable about the species suggested we may have overestimated the extent of historical Gunnison sage-grouse habitat, and habitat that is important for the species.

As a result of these comments, we find that there is substantial disagreement among scientists knowledgeable about the species regarding the sufficiency and accuracy of the available data that is relevant to our determination of the proposed listing and critical habitat designation. In consideration of these scientific disagreements, we have determined that a 6-month extension of final determinations for these rulemakings is warranted, and are hereby extending the final determinations for 6 months in order to solicit information that will help to clarify these issues and to fully analyze this information. This extension will also allow us to solicit and consider information relating to other substantial disagreements regarding available data that are relevant to our final listing determination. If we determine that listing is warranted, we will designate critical habitat to the maximum extent prudent and determinable.

As noted in the proposed listing rule (78 FR 2486), we were previously required by the terms of a judicially approved settlement agreement to make a final determination on the Gunnison sage-grouse proposed rules no later than September 30, 2013. Therefore, with this 6-month extension, we will make a final determination on the proposed rules no later than March 31, 2014.

Public Comments

We will accept written comments and information during this reopened comment period on our proposed listing for the Gunnison sage-grouse that was published in the **Federal Register** on January 11, 2013 (78 FR 2486), and our proposed critical habitat designation for the Gunnison sage-grouse that was published in the **Federal Register** on January 11, 2013 (78 FR 2540). We will consider information and recommendations from all interested parties. We intend that any final action resulting from these proposals be as accurate as possible and based on the best available scientific and commercial data.

In consideration of the scientific and other disagreements about the data used to support these proposed rulemakings, we are particularly interested in new information and comment regarding:

(1) Whether we have appropriately interpreted the scientific studies cited in the proposed rule, and whether there is additional scientific information we may have overlooked;

(2) Gunnison sage-grouse population trends in each population area;

(3) The scope and effectiveness of regulatory mechanisms enacted by Gunnison County to address threats to the Gunnison sage-grouse;

(4) Projections for future residential development and human population growth within Gunnison sage-grouse range in the Gunnison Basin including portions of Gunnison and Saguache Counties; and

(5) What constitutes historical habitat and important current habitat for the species.

If you previously submitted comments or information on the proposed rule, please do not resubmit them. We have incorporated them into the public record, and we will fully consider them in the preparation of our final determination. Our final determination concerning this proposed listing will take into consideration all written comments and any additional information we received.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section above. We request that you send comments only by the methods described in the **ADDRESSES** section.

If you submit information via *http://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the Web site. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *http://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing the proposed rules, will be available for public inspection on *http://www.regulations.gov,* or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Western Colorado Field Office (see **FOR FURTHER INFORMATION CONTACT**). You may obtain copies of the proposed rules on the Internet at *http://www.regulations.gov* at Docket No. FWS–R6–ES–2012–0108 for the proposed endangered status for Gunnison sage-grouse; or Docket No. FWS–R6–ES–2011–0111 for the proposed designation of critical habitat for Gunnison sage-grouse. Copies of the proposed rules are also available at *http://www.fws.gov/mountain-prairie/species/birds/gunnisonsagegrouse/.* A notice of availability for the draft economic analysis of the proposed designation of critical habitat for the Gunnison sage-grouse will be published in the **Federal Register** in the near future.

Authors

The primary authors of this notice are the staff of the U.S. Fish and Wildlife Service.

Authority

The authority for this action is the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Dated: June 26, 2013.

Stephen Guertin,

Deputy Director, U.S. Fish and Wildlife Service.

50 CFR Part 660

[Docket No. 130528511–3592–01]

RIN 0648–BD31

Fisheries off West Coast States; Pacific Coast Groundfish Fishery Management Plan; Commercial, Limited Entry Pacific Coast Groundfish Fishery; Program Improvement and Enhancement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed action would implement revisions to the Pacific coast groundfish trawl rationalization program (program), a catch share program, and includes clarifications of regulations that affect the limited entry trawl and limited entry fixed gear sectors managed under the Pacific Coast Groundfish Fishery Management Plan (FMP). This action proposes to implement trailing actions for the program that either implement original provisions of the program, including quota share (QS) permit application and transfer regulations, increase flexibility or efficiency, or address minor revisions/clarifications.

DATES: Submit comments on or before August 19, 2013.

ADDRESSES: You may submit comments on this document, identified by NOAA-NMFS-2013-0086, by any of the following methods:

- Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2013-0086,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to William W. Stelle, Jr., Regional Administrator, Northwest Region, NMFS, 7600 Sand Point Way NE., Seattle, WA 98115–0070; Attn: Ariel Jacobs.
- *Fax:* 206–526–6736; Attn: Ariel Jacobs.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

Written comments regarding the burden-hour estimates or other aspects of the collection of information requirements contained in this proposed rule may be submitted to William W. Stelle, Jr., Regional Administrator, Northwest Region, NMFS, 7600 Sand Point Way NE., Seattle, WA 98115–0070, and to OMB by email to *OIRA_Submission@omb.eop.gov,* or fax to 202–395–7285.

FOR FURTHER INFORMATION CONTACT: Ariel Jacobs, 206–526–4491; (fax) 206–526–6736; *Ariel.Jacobs@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Background

In January 2011, NMFS implemented the trawl rationalization program for the Pacific coast groundfish fishery's trawl fleet (*see* 75 FR 78344; Dec. 15, 2010). The program was adopted in 2010 through Amendments 20 and 21 to the FMP and consists of an Individual Fishing Quota (IFQ) program for the shorebased trawl fleet (including whiting and non-whiting fisheries); and cooperative (coop) programs for the at-sea mothership and catcher/processor trawl fleets (whiting only). Since that time, the Pacific Fishery Management Council (Council) and NMFS have been addressing implementation issues as they arise, some of which are the subject of this proposed rule. This proposed action would include the following, by category of (a) implementation of original program, (b) increasing flexibility or efficiency, and (c) minor revisions/clarifications:

(A) Implementation of Original Program

1. Establish quota share (QS) permit application and QS transfer regulations,

(B) Increasing Flexibility or Efficiency

2. Clarify exceptions for lenders from control rules,

3. Change the opt-out requirement for quota pound (QP) deficits,

4. Eliminate double filing of co-op reports (November and March),

5. Revise first receiver site license requirements (FRSL), including site inspection and expiration date,

6. Remove end of the year ban on QP transfers between vessel accounts,

(C) Minor Revisions/Clarifications

7. Remove the term ''permit holder'' from groundfish regulations and replace with ''vessel owner'', ''permit owner'', or ''owner of a vessel registered to a limited entry permit'' as applicable,

8. Revise the process for a permit holder (vessel owner) to change their vessel ownership,

9. Clarify that the processor obligation may be to more than one MS permit,

10. Revise the mothership catcher vessel (MS/CV) endorsement restriction given severability,

11. Clarify sorting requirement for full retention so ''predominant species'' means only one species,

12. Clarify the accumulation limits calculation for compliance with the annual QP vessel limit in vessel accounts,

13. Add a prohibition against failing to establish a new vessel account, following a change in vessel ownership, prior to fishing in the Shorebased IFQ program, and

14. Add a prohibition against landing fish from an IFQ trip to a first receiver without a valid FRSL.

Each of these items is described in greater detail below, including sector(s) of the fishery impacted by the item, rationale for the proposed change, and a discussion of any relevant Council action pertaining to the item.

1. Establish QS Permit Application and QS Transfer Regulations

Proposed implementation of QS transfer regulations would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. The ability to transfer, after the first two years of the program, QS between participants in the Shorebased IFQ sector was approved under the original provisions of the program (see 75 FR 78344), however due to the Reconsideration of the Initial Allocation of Pacific whiting (whiting) to the Shoreside IFQ and Mothership sectors of the fishery, NMFS delayed QS transfer until January 1, 2014 for all species with the exception of widow rockfish (see 77 FR 45508 and 78 FR 18879). By implementing QS transfer regulations, including an application process for new entrants intending to purchase QS, this proposed action will increase flexibility and efficiency for members of this sector, and provide a pathway for new entrants to establish QS permits/accounts and purchase QS.

The Council selected a preliminary preferred alternative (PPA) at its March 2012 meeting to delay the implementation of QS transfer and

divestiture of QS held in excess of the accumulation limits in the shoreside IFQ sector, as well as severability and divestiture in the Mothership sector, pending resolution of the whiting reconsideration. At its September 2012 meeting, the Council recommended that the QS transfer and divestiture periods for the shoreside IFQ sector begin on January 1, 2014 with the deadline to divest shares in excess of the accumulation limits extended to December 31, 2015, and that MS/CV severability begin on September 1, 2014, with a delay of the deadline to divest endorsements and catch history assignments in excess of the accumulation limits extended to August 31, 2016. Therefore, this rule proposes to further develop the process for QS transfers and applications.

NMFS proposes to add a QS permit application process at § 660.140(d)(2)(iii) that would allow each unique QS permit applicant to submit a complete application form, including a Trawl Identification of Ownership Interest Form, between January 1 and November 30 of each year. This application period aligns with the proposed QS trading period below. Upon approval of a QS permit application, NMFS would issue a QS permit and associated QS account with a starting QS percentage balance of zero for each IFQ and individual bycatch quota (IBQ) species. If a QS permit application were denied, an initial administrative determination (IAD) would be mailed to the applicant, who could then appeal the IAD as described at § 660.25(g), subpart C.

NMFS also proposes regulations to more clearly define the process for transfers of QS percentages. All QS permit owners with a renewed QS permit would be able to permanently transfer percentages of QS to other QS permit owners through their online QS account between January 1 and November 30 of each year. Like QP transfers, any transfer of QS would need to be both initiated by the transferor and accepted by the transferee to be a complete transaction. QS would be transferred in increments to the thousandth of a percent (0.001 percent). Any transfer of QS would be registered in the QS account in the current year, but would not be effective for the purposes of allocating QP until the start of the following year. For example, if QS Permit Owner A sold 1.000 percent of Pacific whiting to QS Permit Owner B, the sale of QS would be effective at the time the transfer was accepted by QS Permit Owner B, but no QP would be associated with the sale (QP cannot be transferred between QS accounts—only to vessel accounts). QS Permit Owner A would continue to receive any allocations of Pacific whiting pounds based on the 1.000 percent sold for the remainder of the year. On November 30 of that year (the end of the QS trading period), if QS Permit Owner B still owned the 1.000 percent of Pacific whiting that he purchased from QS Permit Owner A, the QS permit mailed by NMFS would reflect the updated amount of Pacific whiting owned for the following year, and any QP allocated to that 1.000 percent in the following year would be issued to QS Permit Owner B.

Essentially, the QS permit would reflect the amount of QS owned for the purposes of allocating QP in a current year. Regardless of how many QS transfers are made in a given year by the original owner of QS (as given on the QS permit, effective January 1), the original owner will be allocated the QP associated with those percentages. Not until the start of the following year will the new owner(s) of those percentages have the percentages listed on their QS permit and receive the allocation of QP associated with those percentages in their QS account.

Additionally, revisions are proposed for the regulations at § 660.140(d)(3)(i)(C) and (d)(3)(ii)(B)(*2*) that clarify the renewal of QS permits. Currently, all QS permit owners must renew online through the QS account during the October 1–November 30 renewal period each year. Any QS permit owner who does not renew their permit during the renewal period will have their QS account inactivated, and will not receive any allocations of QP based on their QS percentages. The QS permit owner cannot renew their QS permit until the next October 1–November 30 renewal period. Two changes to these current regulations are proposed: (1) Prohibit the transfer of QS to and from QS permits/accounts that have not been renewed, and (2) implement a paper renewal application process for QS permit owners who did not renew their QS permit online during the October 1—November 30 renewal period. The first proposed change to prohibit the transfer of QS to and from QS permits/accounts that have not been renewed aligns with the current process of inactivating accounts associated with non-renewed QS permits. The second proposed change would allow QS permit owners who did not renew their QS permit online during the previous year's renewal period to submit a paper renewal package (QS permit renewal form and Trawl Identification of Ownership Interest Form) after January 1 of the following year. If the paper QS permit renewal was approved in the current year, the QS permit owner would be able to transfer percentages of QS from the time they renew until November 30 of that year. NMFS would not allocate any QP to the QS account until the following calendar year provided they renew during the October 1 to November 30 renewal period of the current year.

For example, if QS permit owner A failed to renew online for the 2014 calendar year by November 30, 2013, QS permit owner A would not be allocated any 2014 QP, and could not transfer QS. If QS permit owner A renews via paper renewal on February 1, 2014, and is approved, they could transfer QS from the time of approval until November 30, 2014; QS permit owner A would not be allocated any QP for 2014. If QS permit owner A renews online for the 2015 calendar year by November 30, 2014, QS permit owner A would be allocated 2015 QP, and could transfer QS in 2015.

2. Clarify Exceptions for Lenders From Control Rules

This proposed action would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and November 2012 Council meetings. At the March 2012 meeting, the Council recommended language that clarified which entities could qualify for exemption from the control rules in response to questions from fishery participants. Further revisions to the control rules were proposed by the Council at the November 2012 meeting.

The current regulations at § 660.140(d)(4)(iii) define control rules for eight categories of participants, with exceptions to three of the categories (§ 660.140(d)(4)(iii)(E–G)) for ''banks and other financial institutions that rely on QS or IBQ as collateral for loans''. The Council motion proposes to add language to the control rules specifying that to qualify as a bank or financial institution for purposes of this paragraph the entity must be regularly or primarily engaged in the business of lending and not engaged in or controlled by entities whose primary business is the harvest, processing, or distribution of fish or fish products. Additionally, the proposed language would require that any lender that wishes to qualify for the exception, and is not a state or federally chartered bank or other financial institution, must disclose to NMFS the identity and share of interest of any entity with a two percent or more ownership interest in the lender, in a manner similar to what is required for the Trawl Identification of Ownership Interest Form as described at § 660.140(d)(4)(iv). Additional

revisions were proposed to make it clear that lenders could access available QP during foreclosure, thereby reducing lenders' risk, and making it more likely that there will be adequate access to financing, and to best facilitate lending in the fishery by providing lenders with security so that they will not run afoul of the control rules by using QS as collateral, and that lenders will be able to protect their interest in that collateral by preventing sale, lease, or other disposition of the QS, QP, or IBQ in the event of a foreclosure.

Therefore NMFS proposes, in accordance with the Council recommendation, to add subparagraphs (*1*) through (*3*) at § 660.140(d)(4)(iii)(G) that clarify the existing exception for banks and other financial institutions that rely on QS or IBQ as collateral for loans. NMFS proposes that to qualify for this exception, a bank or other financial institution must be regularly or primarily engaged in the business of lending and not engaged in or controlled by entities whose primary business is the harvesting, processing, or distribution of fish or fish products. NMFS further proposes that any entity that is not a state or federally chartered bank or financial institution, must submit a letter requesting the exception, and disclose the identity and interest share of any shareholder with a 2% or more ownership interest in the lender through submission of the Trawl Identification of Ownership Interest Form; NMFS will only accept complete applications. Additionally, NMFS proposes to add the revised exception to paragraph (C) at § 660.140(d)(4)(iii), to remove the existing exception from paragraphs (E) and (F), and to add the clause ''with the exception of those activities allowed under paragraphs C and G'' at the end of paragraphs (A), (B), (D), (E), (F), and (H).

3. Change the Opt-Out Requirement for QP Deficits

This proposed action would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended changing the opt-out requirement for QP deficits lasting more than 30 days in order to allow vessels to rejoin the fishery after deficits are cleared. Under existing regulations, any vessel with a documented deficit is prohibited from fishing groundfish and is required to cure the deficit within 30 days. If a vessel carries a deficit for more than 30 days and the amount of the deficit is within the carryover allowance, then the vessel can stay within compliance of the program by opting out of the fishery for the remainder of the year. Vessels that do not opt out, but instead incur a violation, are allowed to rejoin the fishery as soon as the deficit is cured. Deficits greater than the carryover allowance must be brought to within the carryover allowance before the 30-day clock expires, or the vessel will incur a violation.

The 30-day clock with the provision allowing vessels to opt-out for the remainder of the year was originally intended to encourage vessels to cover their overages sooner rather than later. A variety of circumstances may arise under which a vessel incurs a deficit. Current regulations give the vessel two choices, each with potentially substantial adverse consequences: (1) Incur a violation, including the penalty, and preserve the opportunity to participate later in the year, or (2) leave the fishery and forgo all remaining opportunity for the year (unused QP might be sold off to other vessels). Vessels that have carried a known deficit for more than 30 days may avoid a violation by opting out of the fishery for the remainder of the year (so long as the deficit is less than the carryover allowance).

As described above, this provision creates a situation in which a vessel that incurs a violation is allowed to continue in the fishery while a vessel that stays in compliance must opt out for the remainder of the year. Furthermore, to date there have been three events where a vessel was in deficit and approached the 30-day time period before covering their deficit. However, none of them opted-out of the fishery and all were able to cover their deficits within 30 days. While vessels have not been using the opt-out provision, it is uncertain whether or not they have had to pay higher prices for QP in order to avoid being forced into the opt-out/violation choice. Some view this situation as inequitable. Therefore NMFS proposes to change the regulations at § 660.140(b)(1)(iii) and (e)(5)(ii)(A) such that once a vessel has cured a deficit, it may rejoin the fishery, without incurring a violation. NMFS also proposes to remove the phrase ''however, the vessel owner must notify OLE of the owner's intent to invoke the carryover provision to cover the deficit'' from the end of paragraph (A). This requirement is no longer necessary because surplus carryover is not credited to vessel accounts until the spring, and therefore vessel owners with a deficit at the end of a calendar year would have no way to cover that deficit with surplus carryover pounds within the 30-day limit. The following table describes the changes proposed by these revisions.

Table 1. Implications of the alternatives for vessels incurring a deficit that is within the carryover allowance.

Situation of Vessels Incurring a Deficit	Status Quo	Alternative
Vessel covers deficit within 30 days	Vessel not in violation. Vessel can re-enter the fishery as soon as deficit is covered.	Vessel not in violation. Vessel can re-enter the fishery as soon as deficit is covered.
Vessel opts out by 30 days and covers deficit later	Vessel not in violation. Vessel must stay out of the fishery the entire year.	Vessel not in violation. Vessel can re-enter the fishery as soon as deficit is covered.
Vessel does not opt out and covers deficit later	Vessel in violation. Vessel can re-enter the fishery as soon as deficit is covered.	Vessel in violation. Vessel can re-enter the fishery as soon as deficit is covered.

Vessels with deficits ***greater than the deficit carryover allowance*** may not avoid a violation by opting out by 30 days.

4. Eliminate Double Filing of Coop Reports

This proposed action would only affect the Mothership (MS) and Catcher/Processor (C/P) sectors of the Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended eliminating the required annual filing of a preliminary coop report in November, leaving in place the requirement that a final report be submitted in March of the following year.

Currently both MS and C/P coops are required to submit to the Council a preliminary annual report in November and to NMFS a final annual report by March 31 of the following year. Because the fishery is not completed on time for the November meeting and a subsequent final report must be provided by March 31 of the following year, the preliminary report is not necessary. Therefore, NMFS proposes to revise the regulations at § 660.113(c)(3) and at § 660.113(d)(3) to require that both the MS and C/P coops submit an annual, final report to both NMFS and the Council in March of the following year.

5. Revise FRSL Requirements, Including Site Inspection and Expiration Date

This proposed action would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended making several changes to the FRSL regulations in order to make the application process more efficient, to reduce costs of the program, and to decrease the burden on applicants.

Therefore, NMFS proposes to make the following revisions at § 660.140(f)(5): (1) All FRSL will be valid from the effective date identified on the license until June 30; (2) each FRSL holder must have a site inspection for the site given on the license at least once every three years (instead of annually, as currently required); (3) NMFS may require a site inspection more frequently than once every three years as it deems necessary; (4) NMFS may require the presence of a FRSL holder representative at a site inspection, and a site inspection may not be conducted if the FRSL holder fails to make available such a requested representative at the time of inspection; and (5) NMFS may require changes to the catch monitor (CM) plan, and may require that the FRSL holder demonstrate such changes have been implemented at the site prior to acceptance of the FRSL CM plan, which is a requirement for a complete application for a FRSL.

NMFS also proposes further clarifications to the re-registration process at § 660.140(f)(6). First receivers must submit a re-registration application annually, regardless of whether a site inspection is required in that year. For all FRSL holders who submit a complete re-registration application, NMFS will notify those FRSL holders who will be required to have a site inspection during that year. NMFS will mail a FRSL re-registration application to existing license holders on or about February 1 each year. All FRSL will expire on June 30, and those FRSL holders who want to continue to receive IFQ landings without a lapse in their license and have their re-registered license effective beginning on July 1 must submit their complete re-registration application by April 15. For those FRSL holders who submit a re-registration application after April 15 of a given year, NMFS may not be able to issue the license by July 1 of that year, resulting in a lapse of their current FRSL.

6. Remove End of the Year Ban on QP Transfers Between Vessel Accounts

This proposed action would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended that the December 15–31 prohibition on QP transfers between vessel accounts be removed. Under current regulations at § 660.140(e)(3)(iii)(B), the transfer of QP between vessel accounts was prohibited from December 15–31 in order to allow NMFS to complete any needed end-of-the-year account reconciliation. However, over 2011 and through the PIE 1 rule (effective January 1, 2012), NMFS developed and implemented an end-of-the-year account reconciliation process that doesn't occur during December 15–31, but occurs early the following year once more complete catch data are available. Therefore, NMFS proposes that the regulations at § 660.140(e)(3)(iii)(B) be revised to remove the December 15–31 ban on QP transfers between vessel accounts.

7. Remove the Term ''permit holder'' and Change to ''vessel owner'', ''permit owner'', or ''owner of a vessel registered to a limited entry permit'' as Applicable

This proposed action would affect all members of the commercial, limited entry Pacific Coast Groundfish fishery. In regulation, the term ''permit holder'' is the owner of a vessel registered to a limited entry permit. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended that due to confusion among the regulated public regarding who is responsible for regulatory compliance, the term ''permit holder'' should be removed from regulations and replaced by ''vessel owner'' or ''owner of a vessel registered to a limited entry permit.'' In some cases, the regulated public has used the term ''permit owner'' and ''permit holder'' interchangeably, which is not accurate. According to regulations, the permit owner registers their permit to be fished by a particular vessel, causing the vessel owner to be the holder of the permit. ''Permit holder'' and ''vessel owner'' are used interchangeably in regulation while the public uses the term ''permit holder'' and ''permit owner'' interchangeably—causing confusion. In an effort to make the regulations more clear, NMFS proposes to remove the definition for ''permit holder'' at § 660.11, and to replace ''permit holder'' at § 660.25(b)(3)(ii) with ''vessels registered to limited entry permits''; to replace ''permit holder'' with ''vessel owner'' in § 660.25(b)(3)(iv)(C)(4), § 660.25(b)(4) introductory text, § 660.25(b)(4)(iv) introductory text, § 660.25(b)(4)(iv)(A) and (C), § 660.25(b)(4)(v)(D), § 660.25(b)(4)(vi)(B), § 660.25(b)(4)(vii)(A) through (C), (g)(1), in § 660.213(d)(2), and in § 660.231(b)(1); to replace ''permit holder'' with ''vessel holding the permit'' in § 660.25(b)(4)(iv)(B); and, to replace ''permit holder'' in § 660.150(d)(1)(iii)(A)(*1*)(*i*) with ''permit owners''.

8. Revise the Process for a Permit Holder (Vessel Owner) To Change Their Vessel Ownership

This proposed action would affect all members of the commercial, limited entry Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recognized that the regulations at § 660.25(b)(4)(iv) do not clearly describe the process for a permit holder (vessel owner) to request a change in vessel ownership. NMFS proposes to revise these regulations to clarify the process for a vessel owner to request a change in vessel ownership through the Fisheries Permits Office (FPO). The request would include a requirement for a copy of the new vessel registration documentation (USCG or state). Based

on this provision and review of the regulations, NMFS proposes to revise and clarify not only the process to change the ownership of a vessel (i.e., change in vessel owner), but also the process to change the permit registered to a vessel and to change the owner of a limited entry permit. NMFS proposes to revise § 660.25(b)(4)(iv), (v), (vii), and (viii) accordingly.

9. Clarify That the Processor Obligation Could Be to More Than One MS Permit

This proposed action would affect all members of the Mothership sector of the commercial Pacific Coast Groundfish fishery. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended that the regulations regarding the processor obligation should be clarified such that a permit with multiple MS/CV endorsements may obligate each endorsement and associated catch history assignment (CHA) to an MS permit. For example, a trawl permit with two MS/CV endorsements could obligate each endorsement to a different MS permit. Each distinct MS/CV endorsement and associated CHA may only be obligated to one MS permit.

This clarification is a logical extension of allowing multiple endorsements to be registered to a single permit and of the regulations at § 660.150(c)(2)(i)(A) on annual MS sector sub-allocations and at § 660.150(g)(2)(iv)(D) on multiple MS/CV endorsements that allow a permit with multiple MS/CV endorsements and associated CHAs to be registered to more than one coop or to both the coop and non-coop fishery (76 FR 74725, published on December 1, 2011). Therefore, NMFS proposes to revise regulations at § 660.150(c)(7)(i) in order to clarify that the processor obligation could be to more than one MS permit. Additionally, NMFS proposes to revise regulations at § 660.150(g)(2)(iv)(D) in order to clarify the process for a permit with multiple MS/CV endorsements that intends to participate in the non-coop fishery. NMFS also proposes to revise regulations at § 660.25(b)(3)(vii) to remove MS/CV endorsements from the list of endorsements that cannot be transferred separate from the limited entry permit.

10. Revise MS/CV Endorsement Restriction Given Severability

This proposed action would affect all members of the Mothership sector of the commercial Pacific Coast Groundfish fishery. This item was not discussed at a Council meeting, but is a minor revision to the regulations proposed by NMFS. The final Reconsideration of the Allocation of Whiting Rule (78 FR 18879) was effective on April 1, 2013 and allowed limited entry trawl permit holders in the Mothership fishery to request a change (or transfer) of MS/CV endorsement and its CHA beginning September 1, 2014 and required MS/CV-endorsed limited entry trawl permit owners to divest themselves of ownership in permits in excess of the accumulation limits by August 31, 2016. NMFS proposes to revise regulations at § 660.25(b)(3)(vii) to remove MS/CV endorsements from the list of endorsements that cannot be transferred separate from the limited entry permit.

11. Clarify Sorting Requirement for Full Retention so ''predominant species'' Means Only One Species

This proposed action would affect the Pacific Coast Groundfish trawl fishery. This item was not discussed at a Council meeting, but is a minor revision to the regulations proposed by NMFS. Currently, the sorting and weighing requirements for full retention fisheries are not clear regarding use of the term ''predominant species''. Currently the regulations at § 660.112(b)(2)(ii), § 660.130(d)(2)(i), § 660.140(j)(2)(viii), and § 660.140(j)(2)(ix) specify sorting requirements for fish processed by IFQ first receivers. Generally catch must be sorted prior to first weighing, however there is an exception provided to vessels declared into the Shorebased IFQ Program such that they may weigh catch prior to sorting, and then all but the ''predominant species'' must be reweighed. Use of the term ''predominant species'' has created confusion because ''species'' may be interpreted to be singular or plural, however as the term is used in this exception, there can only be a single predominant species identified prior to re-weighing, post-sorting, or it becomes extremely difficult to derive the weight of the predominant species by deducting the combined weight of incidental catch from total catch weight. This exception is also provided to the at-sea sectors of the Pacific whiting fishery at § 660.130(d)(3)(i). For fish processed by Pacific whiting at-sea processing vessels, these regulations specify that catch may be weighed prior to sorting and that then all but the predominant species must then be reweighed. The use of ''predominant species'' in this section of regulations should also refer to a single predominant species for the reasons described above for the Shorebased IFQ Program.

Therefore, ''predominant species'' should refer to a single species, for example in the case of whiting directed trips, it should refer to Pacific whiting. NMFS proposes to revise the regulations at § 660.112(b)(2)(ii), § 660.130(d)(2)(i), § 660.130(d)(3)(i), § 660.140(j)(2)(viii), and § 660.140(j)(2)(ix) to clarify that the term ''predominant species'' refers to a single species.

In reviewing the associated regulatory paragraphs on sorting requirements, it was discovered that PIE 1 (which revised the sorting/weighing requirement for non-whiting IFQ) failed to revise this paragraph. NMFS also proposes a minor revision at § 660.12(a)(8) to remove the reference to ''Pacific whiting sectors'' because the exception applies to non-whiting IFQ as well. This is a minor change resulting from an oversight in PIE 1 (*see* 76 FR 54888). NMFS also proposes to revise § 660.130(d)(2)(ii) for this same reason and remove ''Pacific whiting'' from before ''IFQ trip''.

12. Clarify Accumulation Limits Calculation for Compliance With the Annual QP Vessel Limit in Vessel Accounts

This proposed action would affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was not discussed at a Council meeting, but is a minor revision to the regulations proposed by NMFS. The current description of how annual QP vessel limits are tracked is misleading. NMFS proposes to revise regulations at § 660.140(e)(4)(i) to clarify that the QP counted toward the annual allowable vessel limit is calculated as all QP transferred into a vessel account less all QP transferred out of a vessel account; pending transfers are not included in this calculation until the transaction has been finalized. The method for calculating the annual vessel limit must be independent of catch (used QP) because vessel accounts in deficit could potentially exceed the vessel limit. The calculation for daily vessel limits (unused QP vessel limits) remains the same.

13. Add a Prohibition Against Failing To Establish a New Vessel Account Following a Change in Vessel Ownership and Prior to Fishing in the Shorebased IFQ Program

This proposed action would affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was not discussed at a Council meeting, but is a minor revision to the regulations proposed by NMFS. Current regulations at § 660.140(e)(2)(ii) and (e)(3)(ii) state that any change in vessel ownership, including a change in the legal name of the vessel owner(s), will require the new

owner to register with NMFS for a vessel account. When the owner of a vessel changes, the new owner must request a new vessel account in their name and acquire QP, and may not fish against QP in the old owner's vessel account. Consistent with these regulations, NMFS proposes to add a corresponding prohibition at § 660.112(b) against failing to establish a new registered vessel account in the name of the current vessel owner following a change in ownership of a vessel and prior to fishing in the Shorebased IFQ Program with that vessel.

14. Add a Prohibition on Landing Fish From an IFQ Trip to a First Receiver Without a Valid FRSL

This proposed action would affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. This item was not discussed at a Council meeting, but is a minor revision to the regulations proposed by NMFS. Current regulations at § 660.140(f)(1) state that the FRSL authorizes the holder to ''to receive, purchase, or take custody, control, or possession of an IFQ landing.'' Consistent with this regulation, NMFS proposes to add a corresponding prohibition at § 660.112(b) against landing groundfish taken and retained during an IFQ trip, from the vessel that harvested the fish, to a first receiver that does not hold a valid first receiver site license for the physical location where the IFQ landing occurred.

Classification

Pursuant to section 304(b)(1)(A) of the MSA, the NMFS Assistant Administrator has determined that this proposed rule is consistent with the Pacific Coast Groundfish FMP, other provisions of the MSA, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

A Regulatory Impact Review (RIR) was prepared on the action in its entirety and is included as part of the initial regulatory flexibility analysis (IRFA) on the proposed regulatory changes. The IRFA and RIR describe the impact this proposed rule, if adopted, would have on small entities. A description of the action, why it is being considered, and the legal basis for this action are contained at the beginning of this section in the preamble and in the **SUMMARY** section of the preamble. A copy of the IRFA is available from NMFS (see **ADDRESSES**) and a summary of the IRFA, per the requirements of 5 U.S.C. 603(a), follows:

These regulations are largely administrative in nature and their economic effects are minor in the context of the entire program. In sum, in addition to minor clarifications to terms used within the existing regulations and minor changes in existing application and renewal processes, these proposed regulations: (1) Establish the administrative QS application and trading processes that support the quota share trading regulations that already have been established; (2) reduce the annual reporting burden on the two at-sea coops—instead of providing a preliminary report and final report, the only requirement is to provide a final report; (3) reduce the annual reporting burden on First Receivers as the mandatory scheduling of First Receiver Site License inspection is being shifted from an annual inspection cycle to a triennial cycle unless issues arise; (4) provide an additional two weeks to IFQ fishermen to trade their QPs; (5) increase fishermen's flexibility by allowing fishermen that opt out of the fishery for the year, a chance to return to the fishery in that same year should they resolve their deficits; and, (6) increase the availability of loans to fishermen by providing non-traditional lenders increased opportunity to make additional loans should they be inhibited by the ownership and control limits.

This proposed action includes regulations that implement the original program, increase the flexibility of the program, or make minor revisions/clarifications to the regulations. Relative to the other regulations being proposed, the following will have an impact on the operation of the fishery. The proposed regulations include the administrative processes that implement QS transfer regulations that already have been established. These processes facilitate the trading of QS so that major benefits of the Program can be achieved. (The major economic benefits of this Program are described at 75 FR 78365.) The regulatory reporting burden of existing regulations is being reduced. The mandatory scheduling of First Receiver Site License inspection is being shifted from an annual inspection cycle to a triennial cycle unless issues arise. The annual reports required by each of the two at-sea co-ops reduced from two reports to one per year. Fishermen are being given more time to fish and more options to resolve any deficits they incur. Current rules include a process by which fishermen can opt-out of the fishery for the year when faced with a deficit in their accounts. This process is revised to allow fishermen to re-enter the fishery within the year if they have resolved their deficit though the transfer of additional QPs into their vessel account. To facilitate NMFS' end of the year reconciliation processes, there was a ban on trading QPs from December 15 to December 31. Because it has confidence in its accounting system, NMFS is now lifting this ban so QPs can be traded all year round. The proposed regulations enhance the ability of non-traditional lenders to provide loans to the industry. To prevent excessive control of quota shares or quota pounds by a participant, NMFS developed various regulations. Within these regulations, exceptions were made for banks or financial institutions that are state or federally chartered as these entities are expected to be regularly or primarily engaged in the business of lending and not engaged in or controlled by entities whose primary business is the harvesting, processing, or distribution of fish or fish products. However, there are non-traditional financial institutions such as non-profit revolving loan programs that are not state or federally chartered. These regulations propose a process where, on a case-by-case basis, these non-traditional lenders can request an exception to the control limits.

While this rule has minor clarifications that affect all limited entry permit holders and vessels, this rule mainly affects the following sectors/programs: Shorebased Individual Fishing Quota (IFQ) Program—Trawl Fishery, Mothership Coop (MS) Program—Whiting At-sea Trawl Fishery, and Catcher-Processor (C/P) Coop Program—Whiting At-sea Trawl Fishery. The Shorebased IFQ fishery is managed with individual fishing quotas for most groundfish species, including whiting. Annually, QP are allocated from the shorebased sector allocation based on the individual QS of each QS owner. (QP is expressed as a weight and QS is expressed as a percent of the shorebased allocation for a given species or species group.) QP may be transferred from a QS account to a vessel account or from one vessel account to another vessel account. Vessel accounts are used to track how QP is harvested since QP is used to cover catch (landings and discards) by limited entry trawl vessels of all IFQ species/species groups. Shorebased IFQ catch must be landed at authorized first receiver sites. The IFQ whiting QS were allocated to a mixture of limited entry permit holders and shorebased processors. One non-profit organization received QS based on the ownership of multiple limited entry permits. The MS coop sector can consist

of one or more coops and a non-coop subsector. For a MS coop to participate in the Pacific whiting fishery, it must be composed of MS catcher-vessel (MS/CV) endorsed limited entry permit owners. Each permitted MS coop is authorized to harvest a quantity of whiting based on the sum of the catch history assignments for each member's MS/CV endorsed permit identified in the NMFS accepted coop agreement for a given calendar year. Each MS/CV endorsed permit has an allocation of whiting catch based on its catch history in the fishery. The catch history assignment (CHA) is expressed as a percentage of whiting of the total MS sector allocation. Currently the MS sector is composed of only a single coop. The C/P coop program is a limited access program that applies to vessels in the C/P sector of the Pacific whiting at-sea trawl fishery and is a single voluntary coop. Unlike the MS coop regulations where multiple coops can be formed around the CHAs of each coop's member's endorsed permit, the single C/P coop receives the total Pacific whiting allocation for the C/P sector. Only C/P endorsed limited entry permits can participate in this coop. The Shorebased IFQ Program is composed of 138 QS permits/accounts, 144 vessel accounts, and 51 first receivers. The MS coop fishery is composed of six mothership processor permits and 35 MS/CV endorsed permits The C/P coop is composed of 10 catcher-processor permits. In 2012, these fleets generated about $79 million in ex-vessel revenue: $11 million by the MS sector, $16 million by the CP sector, and $52 million by the Shorebased IFQ Program.

This proposed rule also proposes changes concerning exemptions for lenders from the control rules and revisions to the opt-out provisions. In Amendment 20 to the FMP, limits (by species group and area) on the amount of QS an individual can control (i.e. control limits) and limits on the amount of QPs that may be registered to a vessel for use in a given year (i.e. accumulation limits—sometimes referred to as species caps). The intent of these limits is to prevent excessive control of QS or QP by a participant. The MSA specifically requires the establishment of a maximum share that each limited access privilege holder is permitted to hold, acquire, or use. In defining the term ''control'' banks and other financial institutions were excluded. Although banks and other financial institutions may rely on QS or IBQ as collateral for loans they are not expected to restrict any activity related to QS, QP, or IBQ in ways that constitute ''control.'' However, there is concern about both whether the entities qualifying for this exception are sufficiently defined-especially for non-traditional lenders such as nonprofit revolving loan funds.

Public comment received from the California Fisheries Fund (CFF) illustrates the issue (*http://www.pcouncil.org/wp-content/uploads/E7c_PC_NOV2011BB.pdf*). ''We have already begun to make loans to participants in the groundfish trawl IFQ fishery for vessel purchase and upgrades and gear upgrades/modifications. Two of our loans (one for vessel upgrades and one for gear purchase) are secured in part by QS. We expect to make further loans for quota leasing/acquisition and to aid young new participants in entering the fishery. Many of these loans will likely be secured (in whole or in part) with quota shares or quota pounds as collateral. Unfortunately, proposed language under consideration by the Council exempts only state- and federally-chartered institutions from the control caps. This language would not allow CFF, RSF Social Finance (*www.rsfsocialfinance.org*) and perhaps other likely lenders to avail themselves of the safe harbor. We are concerned that our lending would be seriously curtailed by such language. While we are concerned about exceeding the control cap generally, CFF would be even more likely to exceed the control cap on a species-by-species basis. Since not all permits were allocated quota on an equal basis, as few as 2 permits pledged as collateral could push us over those species caps. A good example of this is Yelloweye rockfish—several permits appear to have been allocated more than 1% QS and the control cap is only 2.6%.''

Given the nature and variety of financial institutions, it is difficult to develop an explicit exception that encompasses non-traditional lenders. Therefore, NMFS is proposing an exception process for financial institutions that are not banks. A bank or financial institution is defined as a state or federally chartered entity that must be regularly or primarily engaged in the business of lending and not engaged in or controlled by entities whose primary business is the harvesting, processing, or distribution of fish or fish products. Any non-bank entity that wishes to qualify for this exception must submit a letter requesting the exception and a Trawl Identification of Ownership Interest Form. All shareholders that have a two percent or more ownership interest share in the lender must be identified. The lender must make subsequent annual submissions of the Trawl Identification of Ownership Interest Form to maintain the exception.

The proposed action to change the opt-out requirement for QP deficits would only affect the Shorebased IFQ sector of the Pacific Coast Groundfish fishery. NMFS is proposing changes to the ''opt-out'' requirements because inequities between a vessel that incurs a violation and is allowed to continue in the fishery compared to a vessel that stays in compliance and opts-outs for the remainder of the year-relying on future carryover pounds to resolve any deficit. The changes to the opt-requirements allow vessels that opt out the ability to return to the fishery if at some time during the year, the vessel resolves its deficit issue. This item was addressed by the Council at the March and April 2012 Council meetings. At its April 2012 meeting, the Council recommended changing the opt-out requirement for QP deficits lasting more than 30 days, in order to allow vessels to rejoin the fishery after deficits are cleared. Under the status quo, any vessel with a documented deficit is prohibited from fishing groundfish and is required to cure the deficit within 30 days. If a vessel carries a deficit for more than 30 days and the amount of the deficit is within the carry-over allowance, then the vessel can stay within compliance of the program by opting out of the fishery for the remainder of the year. Vessels which do not opt out, but instead incur a violation, are allowed to rejoin the fishery as soon as the deficit is cured. Deficits greater than the carryover allowance must be brought within the carryover allowance before the 30-day clock expires, or the vessel will incur a violation.

A variety of circumstances may arise under which a vessel incurs a deficit. When a deficit is incurred early in the year, it may not be possible to acquire QP for certain species at a reasonable price because of uncertainties about bycatch rates and tight QP markets for constraining species. Later in the year, QP could become more readily available. However, current regulations give the vessel two choices, each with potentially substantial adverse consequences: (1) Incur a violation, including the penalty and subsequent consequences of a violation record, and preserve the opportunity to participate later in the year, or (2) leave the fishery and forgo all remaining opportunity for the year (unused QP might be sold off to other vessels). Vessels that have carried a known deficit for more than 30 days may avoid a violation by opting out of the fishery for the remainder of

the year (so long as the deficit is less than the carryover allowance). The 30-day clock with the provision allowing vessels to opt-out for the remainder of the year was originally intended to encourage vessels to cover their overages sooner rather than later.

However, as described above, this provision creates a situation in which a vessel that incurs a violation is allowed to continue in the fishery while a vessel that stays in compliance must opt out for the remainder of the year. Furthermore, to date there have been three events where a vessel was in deficit and approached the 30-day time period before covering their deficit. In two of these cases the deficit involved target species, and the vessel did not cover the deficit because it was participating in another fishery and chose to wait until the end of the 30-day period before covering their deficit. In the third situation, the deficit involved a large quantity of an overfished species. In all three situations the deficits were larger than the carryover amount (10 percent) and the vessels were not eligible to opt out. While vessels have not been using the opt-out provision, it is uncertain whether or not they have had to pay higher prices for QP in order to avoid being forced into the opt-out/violation choice. Some view this situation as inequitable. In order to correct this perceived inequity, NMFS proposes to change the regulations at § 660.140(e)(5)(ii)(A) so that once a vessel has cured a deficit, it may rejoin the fishery without incurring a violation.

The Small Business Administration has established size criteria for all major industry sectors in the US, including fish harvesting and fish processing businesses. A business involved in fish harvesting is a small business if it is independently owned and operated and not dominant in its field of operation (including its affiliates) and if it has combined annual receipts not in excess of $4.0 million for all its affiliated operations worldwide. A seafood processor is a small business if it is independently owned and operated, not dominant in its field of operation, and employs 500 or fewer persons on a full time, part time, temporary, or other basis, at all its affiliated operations worldwide. A business involved in both the harvesting and processing of seafood products is a small business if it meets the $4.0 million criterion for fish harvesting operations. A wholesale business servicing the fishing industry is a small business if it employs 100 or fewer persons on a full time, part time, temporary, or other basis, at all its affiliated operations worldwide. For marinas and charter/party boats, a small business is one with annual receipts not in excess of $7.0 million. These regulations also affect a class of financial institutions. NMFS believes that the following standard applies for All Other Non-depository Credit Intermediaries—$6 million in average annual receipts as the maximum annual receipts for small entities.

As part of the permit application processes for the non-tribal fisheries, based on a review of the SBA size criteria, applicants are asked if they considered themselves a ''small'' business and to provide detailed ownership information. Many companies participate in two or more of these sectors. All MS/CV participants are involved in the shorebased IFQ sector while two of the three CP companies also participate in both the shorebased IFQ sector and in the MS sector. Many companies own several QS accounts or own vessel accounts. Taking into account cross participation, multiple accounts, and affiliation between entities, NMFS estimates that there are 143 fishery related entities directly affected by these proposed regulations, 99 of which are considered to be ''small'' businesses.

NMFS is not familiar with the financial industry; the following is a tentative projection of the potential number of small lenders affected by this rule. Public comment received by the PFMC indicates that there are possibly two lenders that are the most likely lenders to apply for the lender's exception. Based on SBA criteria and review of information associated with these lenders, both these lenders can be considered ''large'' entities based on either the amount of their business activities or by their affiliation with large entities. However, there are a number of small lenders that may qualify for the ''exception.'' A review of the North American Industry Classification System used by the U.S. Census Bureau suggests that the likely entities that may seek an exception fall into the ''NAICS 522298-All Other Non-depository Credit Intermediation'' category. This category includes lenders that, for example, provide short-term inventory, credit, agricultural lending, and consumer cash lending secured by personal property. U.S. Census data indicates that in 2011, there were 730 entities within the NAICS 522298 classification operating in the states of Washington, Oregon, and California—the states most likely to have lenders that will work with the West Coast industry. In assessing various lenders that participate in SBA programs that fall within the NAICS 522298 classification, SBA estimated that over 95 percent of these participants did not exceed the applicable small business size standard and are, therefore to be considered small entities (73 FR 75507; December 11, 2008). Applying this percentage suggests that there are approximately 695 small lenders in the states of Washington, Oregon, and California that are potential beneficiaries of this rule.

As this proposed rule is primarily administrative in nature, NMFS does not believe that the proposed changes would have a significant impact on small entities; these changes were recommended by the industry to increase flexibility or efficiency. As such, NMFS has not identified significant alternatives. Through the rulemaking process associated with this action, we are requesting comments on this conclusion.

No Federal rules have been identified that duplicate, overlap, or conflict with the alternatives. Public comment is hereby solicited, identifying such rules. A copy of this analysis is available from NMFS (see **ADDRESSES**).

This proposed rule contains a collection-of-information requirement subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been submitted to OMB for approval. Public reporting burden for the QS permit/account application form is estimated to average 30 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Public reporting burden for the online QS transfer form is estimated to average 10 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Public reporting burden for the online QP transfer form (from a QS account to a vessel account, or vessel account to another vessel account) is estimated to average 8 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Public reporting burden for the trawl identification of ownership interest form for new entrants, including lenders, is estimated to average 45 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data

needed, and completing and reviewing the collection of information. Public reporting burden for the first receiver site license application form for re-registering applicants is estimated to average 110 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Public reporting burden for the mothership cooperative permit application form is estimated to average 4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Public reporting burden for the catcher/processor cooperative permit application form is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Public comment is sought regarding: whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the burden estimate; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information, including through the use of automated collection techniques or other forms of information technology. Send comments on these or any other aspects of the collection of information to NMFS, Northwest Region at the **ADDRESSES** above, and email to *OIRA_Submission@omb.eop.gov,* or fax to 202–395–7285.

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number.

This proposed rule was developed after meaningful consultation and collaboration, through the Council process, with the tribal representative on the Council. The proposed regulations have no direct effect on the tribes.

List of Subjects in 50 CFR Part 660

Fisheries, Fishing, and Indian fisheries.

Dated: July 11, 2013.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, performing the functions and duties of the Assistant Administrator for Fisheries, National Marine Fisheries Service.

For the reasons stated in the preamble, 50 CFR part 660 is proposed to be amended as follows:

PART 660—FISHERIES OFF WEST COAST STATES

■ 1. The authority citation for part 660 is revised to read as follows:

Authority: 16 U.S.C. 1801 *et seq.,* 16 U.S.C. 773 *et seq.,* and 16 U.S.C. 7001 *et seq.*

§ 660.11 [Amended]

■ 2. In § 660.11, remove the definition for ''Permit holder''.

■ 3. In § 660.12, revise paragraph (a)(8) to read as follows:

§ 660.12 General groundfish prohibitions.

* * * * *

(a) * * *

(8) Fail to sort, prior to the first weighing after offloading, those groundfish species or species groups for which there is a trip limit, size limit, scientific sorting designation, quota, harvest guideline, ACT, ACL or OY, if the vessel fished or landed in an area during a time when such trip limit, size limit, scientific sorting designation, quota, harvest guideline, ACT, ACL or OY applied; except as specified at § 660.130(d).

* * * * *

■ 4. In § 660.25 revise paragraphs (b)(3)(ii), (b)(3)(iv)(C)(*4*), (b)(3)(vii), (b)(4) introductory text, add paragraph (b)(4)(i)(G), revise paragraphs (b)(4)(iv) introductory text, (b)(4)(iv)(A) through (C), (b)(4)(v)(B) and (D), (b)(4)(vi)(B), (b)(4)(vii) introductory text, (b)(4)(vii)(A) through (C), (b)(4)(viii), and (g)(1) to read as follows:

§ 660.25 Permits.

* * * * *

(b) * * *

(3) * * *

(ii) *Gear endorsement.* There are three types of gear endorsements: Trawl, longline and pot (trap). When limited entry ''A''-endorsed permits were first issued, some vessel owners qualified for more than one type of gear endorsement based on the landings history of their vessels. Each limited entry ''A''-endorsed permit has one or more gear endorsement(s). Gear endorsement(s) assigned to the permit at the time of issuance will be permanent and shall not be modified. While participating in the limited entry fishery, the vessel registered to the limited entry ''A''-endorsed permit is authorized to fish the gear(s) endorsed on the permit. While participating in the limited entry, fixed gear primary fishery for sablefish described at § 660.231, a vessel registered to more than one limited entry permit is authorized to fish with any gear, except trawl gear, endorsed on at least one of the permits registered for use with that vessel. Vessels registered to limited entry permits may be used to fish with open access gear, subject to the crossover provisions at § 660.60 (h)(7)(ii), except that vessels registered to sablefish-endorsed permits fishing in the sablefish primary season described at § 660.231, may not fish with open access gear against those limits. An MS permit does not have a gear endorsement.

* * * * *

(iv) * * *

(C) * * *

(*4*) Any partnership or corporation with any ownership interest in a limited entry permit with a sablefish endorsement or in the vessel registered to the permit shall document the extent of that ownership interest with NMFS via the Identification of Ownership Interest Form sent to the permit owner through the annual permit renewal process and whenever a change in permit owner, vessel owner, and/or vessel registration occurs as described at paragraph (b)(4)(iv) and (v) of this section. NMFS will not renew a sablefish-endorsed limited entry permit through the annual renewal process described at paragraph (b)(4)(i) of this section, or approve a change in permit owner, vessel owner, and/or vessel registration unless the Identification of Ownership Interest Form has been completed. Further, if NMFS discovers through review of the Identification of Ownership Interest Form that an individual person, partnership, or corporation owns or holds more than 3 permits and is not authorized to do so under paragraph (b)(3)(iv)(C)(2) of this section, the individual person, partnership or corporation will be notified and the permits owned or held by that individual person, partnership, or corporation will be void and reissued with the vessel status as ''unidentified'' until the permit owner owns and/or holds a quantity of permits appropriate to the restrictions and requirements described in paragraph (b)(3)(iv)(C)(2) of this section. If NMFS discovers through review of the Identification of Ownership Interest Form that a partnership or corporation has had a change in membership since November 1, 2000, as described in paragraph

(b)(3)(iv)(C)(3) of this section, the partnership or corporation will be notified, NMFS will void any existing permits, and reissue any permits owned and/or held by that partnership or corporation in ''unidentified'' status with respect to vessel registration until the partnership or corporation is able to register ownership of those permits to persons authorized under this section to own sablefish-endorsed limited entry permits.

* * * * *

(vii) *Endorsement and exemption restrictions.* ''A'' endorsements, gear endorsements, sablefish endorsements and sablefish tier assignments, and C/P endorsements may not be registered to another permit owner (i.e., change in permit ownership or ownership interest) or to another vessel (i.e., change in vessel registration) separately from the limited entry permit. At-sea processing exemptions, specified at paragraph (b)(6) of this section, are associated with the vessel and not with the limited entry permit and may not be registered to another permit owner or to another vessel without losing the exemption.

(4) *Limited entry permit actions—renewal, combination, stacking, change of permit owner or vessel owner, and change in vessel registration*

* * * * *

(i) * * *

(G) At the time of renewal, NMFS will notify owners of limited entry permits and vessel owners if vessel ownership information for a vessel registered to the permit is not current. NMFS will not renew a limited entry permit registered to a vessel for which vessel ownership information is not current.

* * * * *

(iv) *Changes in permit owner and/or vessel owner—*

(A) *General.* Change in permit owner and/or vessel owner applications must be submitted to NMFS with the appropriate documentation described at paragraphs (b)(4)(vii) and (viii) of this section. The permit owner may convey the limited entry permit to a different person. The new permit owner will not be authorized to use the permit until the change in permit owner has been registered with and approved by NMFS. NMFS will not approve a change in permit owner for a limited entry permit with a sablefish endorsement that does not meet the ownership requirements for such permit described at paragraph (b)(3)(iv)(C) of this section. NMFS will not approve a change in permit owner for a limited entry permit with an MS/CV endorsement or an MS permit that does not meet the ownership requirements for such permit described at § 660.150(g)(3), and § 660.150(f)(3), respectively. NMFS considers the following as a change in permit owner that would require registering with and approval by NMFS, including but not limited to: Selling the permit to another individual or entity; adding an individual or entity to the legal name on the permit; or removing an individual or entity from the legal name on the permit. A change in vessel owner includes any changes to the name(s) of any or all vessel owners, as registered with USCG or a state. The new owner(s) of a vessel registered to a limited entry permit must report any change in vessel ownership to NMFS within 30 calendar days after such change has been registered with the USCG or a state licensing agency.

(B) *Effective date.* The change in permit ownership or change in the vessel holding the permit will be effective on the day the change is approved by NMFS, unless there is a concurrent change in the vessel registered to the permit. Requirements for changing the vessel registered to the permit are described at paragraph (b)(4)(v) of this section.

(C) *Sablefish-endorsed permits.* If a permit owner submits an application to register a sablefish-endorsed limited entry permit to a new permit owner or vessel owner during the primary sablefish season described at § 660.231 (generally April 1 through October 31), the initial permit owner must certify on the application form the cumulative quantity, in round weight, of primary season sablefish landed against that permit as of the application signature date for the then current primary season. The new permit owner or vessel owner must sign the application form acknowledging the amount of landings to date given by the initial permit owner. This certified amount should match the total amount of primary season sablefish landings reported on state landing receipts. As required at § 660.12(b), any person landing sablefish must retain on board the vessel from which sablefish is landed, and provide to an authorized officer upon request, copies of any and all reports of sablefish landings from the primary season containing all data, and in the exact manner, required by the applicable state law throughout the primary sablefish season during which a landing occurred and for 15 days thereafter.

* * * * *

(v) * * *

(B) *Application.* Change in vessel registration applications must be submitted to NMFS with the appropriate documentation described at paragraphs (b)(4)(vii) and (viii) of this section. At a minimum, a permit owner seeking to change vessel registration of a limited entry permit shall submit to NMFS a signed application form and his/her current limited entry permit before the first day of the cumulative limit period in which they wish to fish. If a permit owner provides a signed application and current limited entry permit after the first day of a cumulative limit period, the permit will not be effective until the succeeding cumulative limit period. NMFS will not approve a change in vessel registration until it receives a complete application, the existing permit, a current copy of the USCG 1270, and other required documentation.

* * * * *

(D) *Sablefish-endorsed permits.* If a permit owner submits an application to register a sablefish-endorsed limited entry permit to a new vessel during the primary sablefish season described at § 660.231 (generally April 1 through October 31), the initial permit owner must certify on the application form the cumulative quantity, in round weight, of primary season sablefish landed against that permit as of the application signature date for the then current primary season. The new permit owner or vessel owner associated with the new vessel must sign the application form acknowledging the amount of landings to date given by the initial permit owner. This certified amount should match the total amount of primary season sablefish landings reported on state landing receipts. As required at § 660.12(b), any person landing sablefish must retain on board the vessel from which sablefish is landed, and provide to an authorized officer upon request, copies of any and all reports of sablefish landings from the primary season containing all data, and in the exact manner, required by the applicable state law throughout the primary sablefish season during which a landing occurred and for 15 days thereafter.

* * * * *

(vi) * * *

(B) *Limited entry fixed gear and trawl-endorsed permits (without MS/CV or C/P endorsements).* Limited entry fixed gear and trawl-endorsed permits (without MS/CV or C/P endorsements) may not be registered for use with a different vessel more than once per calendar year, except in cases of death of a vessel owner or if the vessel registered to the permit is totally lost as defined in § 660.11. The exception for death of a vessel owner applies for a

vessel owned by a partnership or a corporation if the person or persons with at least 50 percent of the ownership interest in the entity dies.

* * * * *

(vii) *Application and supplemental documentation.* Permit owners may request a change in vessel registration and/or change in permit owner or vessel owner by submitting a complete application form. In addition, a permit owner applying for a change in vessel registration and/or change in permit owner of a limited entry permit has the burden to submit evidence to prove that qualification requirements are met. If a change in vessel owner occurs, the new vessel owner has the burden to submit evidence to prove that qualification requirements are met. The following evidentiary standards apply:

(A) For a request to change a vessel registration and/or change a permit owner or vessel owner, the permit owner must provide NMFS with a current copy of the USCG Form 1270 for vessels of 5 net tons or greater, or a current copy of a state registration form for vessels under 5 net tons.

(B) For a request to change a vessel registration and/or change a permit owner or vessel owner for sablefish-endorsed permits with a tier assignment for which a corporation or partnership is listed as permit owner and/or vessel owner, an Identification of Ownership Interest Form must be completed and included with the application form.

(C) For a request to change a permit owner for an MS permit or for a request to change a vessel registration and/or change a permit owner or vessel owner for an MS/CV-endorsed limited entry trawl permit, an Identification of Ownership Interest Form must be completed and included with the application form.

* * * * *

(viii) *Application forms available.* Application forms for a change in vessel registration, permit owner, or vessel owner are available at: NMFS Northwest Region, Sustainable Fisheries Division, ATTN: Fisheries Permit Office, 7600 Sand Point Way, NE., Seattle, WA 98115; or *http://www.nwr.noaa.gov/fisheries/management/groundfish_permits/limited_entry_permits.html.* Contents of the application, and required supporting documentation, are also specified in the application form. Only complete applications will be processed.

* * * * *

(g) * * *

(1) *General.* For permit actions, including issuance, renewal, change in vessel registration and/or change in permit owner or vessel owner, and endorsement upgrade, the Assistant Regional Administrator for Sustainable Fisheries will make an IAD on the action. In cases where the applicant disagrees with the IAD, the applicant may appeal that decision. Final decisions on appeals of IADs regarding issuance, renewal, change in vessel registration and/or change in permit owner or vessel owner, and endorsement upgrade, will be made in writing by the Regional Administrator acting on behalf of the Secretary of Commerce and will state the reasons therefore. This section describes the procedures for appealing the IAD on permit actions made in this title under subparts C through G of part 660. Additional information regarding appeals of an IAD related to the trawl rationalization program is contained in the specific program sections under subpart D of part 660.

* * * * *

■ 5. In § 660.111, under the definition of ''Accumulation limits'', revise paragraph (1)(ii) for the definition for ''Vessel limits'' to read as follows:

§ 660.111 Trawl fishery—definitions.

* * * * *

(1) * * *

(ii) *Vessel limits* means the maximum amount of QP a vessel can hold, acquire, and/or use during a calendar year, and specify the maximum amount of QP that may be registered to a single vessel during the year (QP Vessel Limit) and, for some species, the maximum amount of unused QP registered to a vessel account at any one time (Unused QP Vessel Limit), as described at § 660.140(e)(4). Compliance with the QP vessel limit (annual limit) is calculated as all QPs transferred in minus all QPs transferred out of the vessel account.

* * * * *

■ 6. In § 660.112, add paragraphs (b)(1)(xvi) and (b)(1)(xvii), and revise paragraph (b)(2)(ii) to read as follows:

§ 660.112 Trawl fishery—prohibitions.

* * * * *

(b) * * *

(1) * * *

(xvi) Fail to establish a new registered vessel account in the name of the current vessel owner, following a change in ownership of a vessel, prior to fishing in the Shorebased IFQ Program with that vessel.

(xvii) Land groundfish taken and retained during an IFQ trip, from the vessel that harvested the fish, to a first receiver that does not hold a valid first receiver site license for the physical location where the IFQ landing occurred.

* * * * *

(2) * * *

(ii) Fail to sort fish received from a IFQ landing prior to first weighing after offloading as specified at § 660.130(d)(2) for the Shorebased IFQ Program, with the following exception. Vessels with a valid Shorebased IFQ Program declaration as specified at § 660.13(d)(5)(iv)(A) making an IFQ landing, may weigh catch on a bulk scale or automatic hopper scale before sorting as described at § 660.140(j)(2)(viii), for Pacific whiting taken with midwater trawl gear, and at § 660.140(j)(2)(ix)(A), for all other IFQ landings. For this exception, all catch in the landing other than the single predominant species must then be reweighed. The weight of a single predominant species is determined by deducting the weight of all other species from the total weight of the landing.

* * * * *

■ 7. In § 660.113, revise paragraphs (c)(3) and (d)(3) to read as follows:

§ 660.113 Trawl fishery—recordkeeping and reporting.

* * * * *

(c) * * *

(3) *Annual coop report.* The designated coop manager for the mothership coop must submit an annual report to NMFS and the Council by March 31 each year, before a coop permit is issued for that year. The annual coop report will contain information about the previous year's fishery, including:

(i) The mothership sector's annual allocation of Pacific whiting and the permitted mothership coop allocation;

(ii) The mothership coop's actual retained and discarded catch of Pacific whiting, salmon, Pacific halibut, rockfish, groundfish, and other species on a vessel-by-vessel basis;

(iii) A description of the method used by the mothership coop to monitor performance of coop vessels that participated in the fishery;

(iv) A description of any actions taken by the mothership coop in response to any vessels that exceed their allowed catch and bycatch; and

(v) Plans for the current year's mothership coop fishery, including the companies participating in the cooperative, the harvest agreement, and catch monitoring and reporting requirements.

* * * * *

(d) * * *

(3) *Annual coop report.* The designated coop manager for the C/P

coop must submit an annual report to NMFS and the Council by March 31 each year, before a coop permit is issued for that year. The annual coop report will contain information about the previous year's fishery, including:

(i) The C/P sector's annual allocation of Pacific whiting;

(ii) The C/P coop's actual retained and discarded catch of Pacific whiting, salmon, Pacific halibut, rockfish, groundfish, and other species on a vessel-by-vessel basis;

(iii) A description of the method used by the C/P coop to monitor performance of cooperative vessels that participated in the fishery;

(iv) A description of any actions taken by the C/P coop in response to any vessels that exceed their allowed catch and bycatch; and

(v) Plans for the current year's C/P coop fishery, including the companies participating in the cooperative, the harvest agreement, and catch monitoring and reporting requirements.

* * * * *

■ 8. In § 660.130, revise paragraphs (d)(2)(i), (d)(2)(ii) and (d)(3)(i) to read as follows:

§ 660.130 Trawl fishery—management measures.

* * * * *

(d) * * *

(2) * * *

(i) *First receivers.* Fish landed at IFQ first receivers (including shoreside processing facilities and buying stations that intend to transport catch for processing elsewhere) must be sorted, prior to first weighing after offloading from the vessel and prior to transport away from the point of landing, with the following exception. Vessels with a valid Shorebased IFQ Program declaration as specified at § 660.13(d)(5)(iv)(A) making an IFQ landing, may weigh catch on a bulk scale or automatic hopper scale before sorting as described at § 660.140(j)(2)(viii), for Pacific whiting taken with midwater trawl gear, and at § 660.140(j)(2)(ix)(A), for all other IFQ landings. For this exception, all catch in the landing other than the single predominant species must then be reweighed. The weight of a single predominant species is determined by deducting the weight of all other species from the total weight of landing.

(ii) *Catcher vessels.* All catch must be sorted to the species groups specified in paragraph (d)(1) of this section for vessels with limited entry permits, except those retaining all catch during a IFQ trip. The catch must not be discarded from the vessel and the vessel must not mix catch from hauls until the observer has sampled the catch. Prohibited species must be sorted according to the following species groups: Dungeness crab, Pacific halibut, Chinook salmon, other salmon. Non-groundfish species must be sorted as required by the state of landing.

* * * * *

(3) * * *

(i) Pacific whiting at-sea processing vessels may use an accurate in-line conveyor or hopper type scale to derive an accurate total catch weight prior to sorting. Immediately following weighing of the total catch, the catch must be sorted to the species groups specified in paragraph (d)(1) of this section and all incidental catch (groundfish and non-groundfish species) must be accurately accounted for and the weight of incidental catch deducted from the total catch weight to derive the weight of a single predominant species.

* * * * *

■ 9. In § 660.140,

■ a. Revise paragraph (b)(1)(iii);

■ b. Add paragraph (d)(2)(iii), revise paragraphs (d)(3)(i)(A) and (C), (d)(3)(ii)(B)(*2*) and (*3*)(*ii*), delete paragraph (d)(3)(ii)(B)(*3*)(*iii*), and revise paragraph (d)(4)(iii);

■ c. Revise paragraphs (e)(3)(iii)(B), (e)(4)(i), and (e)(5)(ii)(A);

■ d. Revise paragraphs (f)(2)(ii), (f)(3) introductory text, (f)(3)(i) and (ii),(f)(3)(iii)(A) and (B), add paragraph (f)(3)(iii)(C)(*12*), and revise paragraph (f)(3)(iii)(D);

■ e. Revise paragraphs (f)(5) and (f)(6), and

■ f. Revise paragraphs (j)(2)(viii) and (j)(2)(ix)(B), to read as follows:

§ 660.140 Shorebased IFQ Program.

* * * * *

(b) * * *

(1) * * *

(iii) All IFQ species/species group catch (landings and discards) must be covered by QP or IBQ pounds. Any deficit (negative balance in a vessel account) must be cured within 30 calendar days from the date the deficit from that trip is documented in the vessel account, unless the deficit is within the limits of the carryover provision at paragraph (e)(5) of this section, in which case the vessel account owner must declare out of the Shorebased IFQ Program, and must eliminate the deficit prior to re-entry into the fishery in the current year, or within 30 days after the issuance of QP or IBQ pounds for the following year.

* * * * *

(d) * * *

(2) * * *

(iii) *QS permit application process.* NMFS will accept a QS permit application from January 1 to November 30 of each calendar year. QS permit applications received between December 1 and December 31 will be processed by NMFS in the following calendar year. NMFS will issue only one QS permit to each unique person, as defined at § 660.11 subject to the eligibility requirements at § 660.140(d)(2)(i). Each applicant must submit a complete application. A complete application includes a QS permit application form, payment of required fees, complete documentation of QS permit ownership on the Trawl Identification of Ownership Interest Form as required under paragraph (d)(4)(iv) of this section, and a complete economic data collection form if required under § 660.114. NMFS may require additional documentation as it deems necessary to make a determination on the application. The QS permit application will be considered incomplete until the required information is submitted.

(A) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD that either approves or disapproves the application. If approved, the QS permit serves as the IAD. If disapproved, the IAD will provide the reasons for this determination. If the applicant does not appeal the IAD within 30 calendar days, the IAD becomes the final decision of the Regional Administrator acting on behalf of the Secretary of Commerce.

(B) *Effective date.* The QS permit is effective on the date given on the permit and remains effective until the end of the calendar year.

(C) *Appeals.* If NMFS does not accept the QS permit application, the applicant may appeal the IAD consistent with the general permit appeals process defined at § 660.25(g).

(3) * * *

(i) * * *

(A) QS permits expire at the end of each calendar year, and must be renewed between October 1 and November 30 of each year in order to remain in effect the following year. A complete QS permit renewal package must be received by NMFS no later than November 30 to be accepted by NMFS. A QS permit owner may submit a paper renewal package after January 1 of the following year as described in paragraph (d)(3)(i)(C) of this section.

* * * * *

(C) A complete QS permit renewal package must be received by November 30 of each calendar year. If a complete QS permit renewal package is not received by November 30, NMFS will not renew the QS permit, the associated

QS account will not be activated in the following calendar year, and QS may not be transferred. NMFS will not issue QP or IBQ pounds associated with the non-renewed QS permit for that year. Any QP or IBQ pounds derived from the QS or IBQ in the inactive QS account will be distributed to the active QS accounts in proportion to the QS or IBQ for each IFQ species given on the renewed QS permit. If a QS permit is not renewed during the October 1 through November 30 renewal period, the QS permit owner may renew after January 1 in the following year by submission of a paper renewal application, or may renew the QS permit during the next October 1 through November 30 renewal period. For renewals submitted after January 1, QPs allocated as specified at paragraph (d)(1) of this section will not be allocated to the QS account in that year. The QS permit owner will be able to transfer QS percentages from the time the QS account is activated until November 30 of that calendar year.

* * * * *

(3) * * *

(ii) * * *

(B) * * *

(*2*) *Transfer of QS or IBQ between QS accounts.* Beginning January 1, 2014, QS permit owners may transfer QS (except for widow rockfish QS) or IBQ to another owner of a QS permit, subject to accumulation limits and approval by NMFS. The prohibition on transferability of widow rockfish QS is extended indefinitely pending final action on reallocation of widow rockfish QS, or a NMFS determination that no such reallocation will occur, except under U.S. court order or authorization and as approved by NMFS. QS or IBQ is transferred as a percent, divisible to one-thousandth of a percent (i.e., greater than or equal to 0.001%). QS or IBQ cannot be transferred to a vessel account. Owners of non-renewed QS permits may not transfer QS. QP in QS accounts cannot be transferred between QS accounts. NMFS will allocate QP based on the QS percentages as listed on a QS permit that was renewed during the previous October 1 through November 30 renewal period. QS transfers will be recorded in the QS account but will not become effective for purposes of allocating QPs until the following year. QS or IBQ may not be transferred between December 1 through December 31 each year. Any QS transaction that is pending as of December 1 will be administratively retracted. NMFS will allocate QP for the following year based on the QS percentages as of December 1 of each year.

* * * * *

(*3*) * * *

(*ii*) The QS account transfer function will be reactivated by NMFS from the date that QS accounts are credited with additional QP to allow QS permit owners to transfer QP to vessel accounts only for those IFQ species with additional QP.

(4) * * *

(iii) *Control.* Control means, but is not limited to, the following:

(A) The person has the right to direct, or does direct, in whole or in part, the business of the entity to which the QS or IBQ are registered, with the exception of those activities allowed under paragraphs C and G;

(B) The person has the right to limit the actions of or replace, or does limit the actions of or replace, the chief executive officer, a majority of the board of directors, any general partner, or any person serving in a management capacity of the entity to which the QS or IBQ are registered, with the exception of those activities allowed under paragraphs C and G;

(C) The person, excluding banks and other financial institutions that rely on QS or IBQ as collateral for loans as described under paragraph (G) below, has the right to direct, or does direct, and/or the right to prevent or delay, or does prevent or delay, the transfer of QS or IBQ, or the resulting QP or IBQ pounds;

(D) The person, through loan covenants or any other means, has the right to restrict, or does restrict, and/or has a controlling influence over the day to day business activities or management policies of the entity to which the QS or IBQ are registered, with the exception of those activities allowed under paragraphs C and G;

(E) The person, has the right to restrict, or does restrict, any activity related to QS or IBQ or QP or IBQ pounds, including, but not limited to, use of QS or IBQ, or the resulting QP or IBQ pounds, or disposition of fish harvested under the resulting QP or IBQ pounds, with the exception of those activities allowed under paragraphs C and G;

(F) The person has the right to control, or does control, the management of, or to be a controlling factor in, the entity to which the QS or IBQ, or the resulting QP or IBQ pounds, are registered, with the exception of those activities allowed under paragraphs C and G;

(G) The person, excluding banks and other financial institutions that rely on QS or IBQ as collateral for loans, has the right to cause or prevent, or does cause or prevent, the sale, lease or other disposition of QS or IBQ, or the resulting QP or IBQ pounds; and

(*1*) To qualify for this exception, a bank or other financial institution must be regularly or primarily engaged in the business of lending and not engaged in or controlled by entities whose primary business is the harvesting, processing, or distribution of fish or fish products.

(*2*) Any state or federally chartered bank or financial institution that meets the requirement of paragraph (*1*) does not need to submit additional information to NMFS.

(*3*) Any entity that is not a state or federally chartered bank or financial institution, must submit a letter requesting the exception and disclose the identity and interest share of any shareholder with a 2% or more ownership interest in the lender through submission of the Trawl Identification of Ownership Interest Form (see § 660.140(d)(4)(iv)). The lender must make subsequent annual submissions of the letter and Trawl Identification of Ownership Interest Form to maintain the exception. Letters requesting the exception and complete Trawl Identification of Ownership Interest Forms may be submitted to NMFS, Northwest Region, Permits Office, ATTN: Fisheries Permit Office, Bldg. 1, 7600 Sand Point Way NE., Seattle, WA 98115. NMFS will only accept complete applications.

(H) The person has the ability through any means whatsoever to control or have a controlling influence over the entity to which QS or IBQ is registered, with the exception of those activities allowed under paragraphs C and G.

* * * * *

(e) * * *

(3) * * *

(iii) * * *

(B) *Transfer procedures.* QP or IBQ pound transfers from one vessel account to another vessel account must be accomplished via the online vessel account. To make a transfer, a vessel account owner must initiate a transfer request by logging onto the online vessel account. Following the instructions provided on the Web site, the vessel account owner must enter pertinent information regarding the transfer request including, but not limited to: IFQ species, amount of QP or IBQ pounds to be transferred for each IFQ species (in whole pound increments); name and any other identifier of the eligible transferee (e.g., USCG documentation number or state registration number, as applicable) of

the eligible vessel account receiving the transfer; and the value of the transferred QP or IBQ pounds. The online system will verify whether all information has been entered and whether the transfer complies with vessel limits, as applicable. If the information is not accepted, an electronic message will record as much in the transferor's vessel account explaining the reason(s). If the information is accepted, the online system will record the pending transfer in both the transferor's and the transferee's vessel accounts. The transferee must approve the transfer by electronic signature. If the transferee accepts the transfer, the online system will record the transfer and confirm the transaction in both accounts through a transaction confirmation notice. Once the transferee accepts the transaction, the transaction is final and permanent. QP or IBQ pounds may be transferred between vessel accounts at any time during January 1 through December 31 each year unless otherwise notified by NMFS.

* * * * *

(4) * * *

(i) *Vessel limits.* For each IFQ species or species group specified in this paragraph, vessel accounts may not have QP or IBQ pounds in excess of the QP vessel limit (annual limit) in any year, and, for species covered by unused QP vessel limits (daily limit), may not have QP or IBQ pounds in excess of the unused QP vessel limit at any time. The QP vessel limit (annual limit) is calculated as all QPs transferred in minus all QPs transferred out of the vessel account. The unused QP vessel limits (daily limit) is calculated as unused available QPs plus any pending outgoing transfer of QPs.

* * * * *

(5) * * *

(ii) * * *

(A) The vessel account owner declares out of the Shorebased IFQ Program for the year in which the deficit occurred. The vessel account owner must submit a signed, dated, and notarized letter to OLE, declaring out of the Shorebased IFQ Program for the remainder of the year and invoking the carryover provision to cover the deficit. Signed, dated, and notarized letters may be submitted to NMFS, Northwest Region, Office of Law Enforcement, ATTN VMS, Bldg. 1, 7600 Sand Point Way NE., Seattle, WA 98115. If the vessel account owner covers the deficit later within the same calendar year, the vessel may re-enter the Shorebased IFQ Program. If the deficit occurs less than 30 days before the end of the calendar year, exiting out of the Shorebased IFQ Program for the remainder of the year is not required.

* * * * *

(f) * * *

(2) * * *

(ii) An IFQ first receiver must have a separate first receiver site license for each unique physical location where the IFQ first receiver will receive, purchase or take custody, control, or take possession of an IFQ landing from a vessel.

* * * * *

(3) *Application process.* Persons interested in being licensed as an IFQ first receiver for a specific physical location must submit a complete application for a first receiver site license to NMFS, Northwest Region, ATTN: Fisheries Permit Office, Bldg. 1, 7600 Sand Point Way NE., Seattle, WA 98115. NMFS will only consider complete applications for approval. A complete application includes:

(i) *State license.* The license owner must provide a copy of a valid license issued by the state in which they operate that allows the person to receive fish from a catcher vessel.

(ii) *Application form.* A completed IFQ first receiver application form provided by NMFS, signed and dated by an authorized representative of the first receiver. To be considered complete, the form must also be notarized.

* * * * *

(iii) * * *

(A) *Catch monitoring plan review process.* NMFS will accept a catch monitoring plan if it includes all the required elements specified in paragraph (f)(3)(iii)(C) of this section and conforms with the actual operations and layout at the site. A site inspection is required for new first receiver site licenses. For re-registration of an existing first receiver site license, the site must be inspected at least once every three years or more frequently, as deemed necessary by NMFS, or by a NMFS designated representative. If NMFS does not accept a catch monitoring plan for any reason, a new or revised catch monitoring plan may be required of the first receiver.

(B) *Arranging a site inspection.* After receiving a complete application for a first receiver site license, if a site inspection is required, NMFS will contact the applicant to schedule a site inspection. A complete application for a first receiver site license must include the proposed catch monitoring plan. NMFS may request a representative of the first receiver to be at the site at the time of inspection. If the requested representative of the first receiver is not made available for the inspection, the site inspection may be postponed until the requested representative of the first receiver is made available.

* * * * *

(C) * * *

(*12*) *Applicant contact.* Print the name of the first receiver, physical location of the first receiver, name and phone number of the applicant, and the date of the application. The applicant must sign the catch monitoring plan.

* * * * *

(D) *Catch monitoring plan acceptance period and changes.* NMFS will accept a catch monitoring plan if it includes the required elements specified in paragraph (f)(3)(iii)(C) of this section and conforms with the actual operations and layout at the site. For the first receiver site license to remain in effect, the owner or manager must notify NMFS in writing of any and all changes made in IFQ first receiver operations or layout that do not conform to the catch monitoring plan.

* * * * *

(5) *Effective dates.* The first receiver site license is valid from the effective date identified on the license until June 30, or until the state license required by paragraph (f)(2)(i) of this section is no longer effective, whichever occurs first. A first receiver site license may not be valid for more than 365 days.

(6) *Re-registration of FRSL in subsequent years.* Existing first receiver site license holders must reapply annually by following the application process specified in paragraph (f)(3) of this section. If the existing license holder fails to reapply, the first receiver site license will expire as specified in paragraph (f)(5) of this section. For existing first receiver site license holders to continue to receive IFQ landings without a lapse in the effectiveness of their first receiver site license, the following re-registration deadlines apply:

(i) NMFS will mail a first receiver site license application to existing license holders on or about February 1 each year.

(ii) Applicants who want to have their new license effective for July 1 must submit their complete re-registration application to NMFS by April 15. For those first receiver site license holders who do not submit a complete re-registration application by April 15, NMFS may not be able to issue the new license by July 1 of that calendar year, and will issue the new license as soon as practicable.

* * * * *

(j) * * *

(2) * * *

(viii) *Pacific whiting.* For Pacific Whiting taken with midwater trawl gear, IFQ first receivers may use an in-line conveyor or hopper type scale to derive an accurate total catch weight prior to sorting. Immediately following weighing of the total catch and prior to processing or transport away from the point of landing, the catch must be sorted to the species groups specified at § 660.130(d) and all incidental catch (groundfish and non groundfish species) must be accurately weighed and the weight of incidental catch deducted from the total catch weight to derive the weight of a single predominant species.

(ix) * * *

(B) An in-line conveyor or automatic hopper scale may be used to weigh the single predominant species after catch has been sorted. Other species must be weighed in a manner that facilitates tracking of the weights of those species.

* * * * *

■ 10. In § 660.150, revise paragraphs (c)(7)(i), (d)(1)(iii)(A)(*1*)(*i*), and (g)(2)(iv)(D) to read as follows:

§ 660.150 Mothership (MS) Coop Program.

* * * * *

(c) * * *

(7) * * *

(i) *Processor obligation.* Through the annual MS/CV-endorsed limited entry permit renewal process, the MS/CV-endorsed permit owner must identify to NMFS to which MS permit the MS/CV permit owner intends to obligate the catch history assignment associated with that permit if they are participating in the MS coop fishery. Only one MS permit may be designated for each MS/CV endorsement and associated catch history assignment.

* * * * *

(d) * * *

(1) * * *

(iii) * * *

(A) * * *

(*1*) * * *

(*i*) A list of all vessels and permit owners participating in the coop and their share of the allocated catch history assignments which must match the amount distributed to individual permit owners by NMFS.

* * * * *

(g) * * *

(2) * * *

(iv) * * *

(D) A limited entry trawl permit owner with multiple MS/CV-endorsements and associated CHA on a single permit may assign each distinct MS/CV endorsement and catch history assignment separately to coop(s) or the non-coop fishery. In such cases, as part of the coop permit application process, specified at paragraph (d)(1)(iii) of this section, the permit owner must specify on the coop permit application form which MS/CV endorsement and associated CHA is specifically registered to a particular coop.

* * * * *

■ 11. In § 660.213, revise paragraph (d)(2) to read as follows:

§ 660.213 Fixed gear fishery—recordkeeping and reporting.

* * * * *

(d) * * *

(2) For participants in the sablefish primary season, the cumulative limit period to which this requirement applies is April 1 through October 31 or, for an individual vessel owner, when the tier limit for the permit(s) registered to the vessel has been reached, whichever is earlier.

■ 12. In § 660.216, revise paragraph (a)(1) to read as follows:

§ 660.216 Fixed gear fishery—observer requirements.

(a) * * *

(1) When NMFS notifies the vessel owner, operator, or the manager of a catcher vessel, specified at § 660.16(c), of any requirement to carry an observer, the catcher vessel may not be used to fish for groundfish without carrying an observer.

* * * * *

■ 13. In § 660.231, revise paragraph (b)(1) to read as follows:

§ 660.231 Limited entry fixed gear sablefish primary fishery.

* * * * *

(b) * * *

(1) *Season dates.* North of 36° N. lat., the sablefish primary season for the limited entry, fixed gear, sablefish-endorsed vessels begins at 12 noon local time on April 1 and closes at 12 noon local time on October 31, or closes for an individual vessel owner when the tier limit for the permit(s) registered to the vessel has been reached, whichever is earlier, unless otherwise announced by the Regional Administrator through the routine management measures process described at § 660.60(c).

* * * * *

■ 14. In § 660.316, revise paragraph (a)(1) to read as follows:

§ 660.316 Open access fishery—observer requirements.

(a) * * *

(1) When NMFS notifies the vessel owner, operator, or the vessel manager of a catcher vessel, specified at § 660.16(c), of any requirement to carry an observer, the catcher vessel may not be used to fish for groundfish without carrying an observer.

Vol. 78, No. 139
Friday, July 19, 2013

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Marine Recreational Information Program Fishing Effort Survey.

OMB Control Number: 0648–0652.

Form Number(s): NA.

Type of Request: Regular submission (revision of a current information collection).

Number of Respondents: 153,000.

Average Hours per Response: 10 minutes.

Burden Hours: 25,500.

Needs and Uses: This request is for revision of a current information collection. The title will be changed from ''Marine Recreational Information Program'' to ''Marine Recreational Information Program Fishing Effort Survey''.

Marine recreational anglers are surveyed to collect catch and effort data, fish biology data, and angler socioeconomic characteristics. These data are required to carry out provisions of the Magnuson-Stevens Fishery Conservation and Management Act (MSA, 16 U.S.C. 1801 et seq.), as amended, regarding conservation and management of fishery resources.

Marine recreational fishing effort data have traditionally been collected through the Coastal Household Telephone Survey, a random-digit-dial telephone survey of coastal county residences. Amendments to the MSA require the development of an improved data collection program for recreational fisheries. To meet these requirements, the National Oceanic and Atmospheric Administration's (NOAA) Fisheries has designed and tested new approaches for sampling and surveying recreational anglers. Revision: A mail survey that samples from residential address frames and collects information on the number of marine recreational anglers and the number of recreational fishing trips is currently being tested in MA, NY, NC and FL. The survey will be expanded to all Atlantic and Gulf coast states (except TX), HI and Puerto Rico.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: *OIRA_Submission@omb.eop.gov.*

Copies of the above information collection proposal can be obtained by calling or writing Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482–0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov.*

Dated: July 15, 2013.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

[FR Doc. 2013–17299 Filed 7–18–13; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Southwest Region Permit Family of Forms.

OMB Control Number: 0648–0204.

Form Number(s): NA.

Type of Request: Regular submission (extension of a current information collection).

Number of Respondents: 1,761.

Average Hours per Response: Highly Migratory Species (HMS) permit renewals, 6 minutes; Coastal Pelagic Species (CPS) permit renewals, 15 minutes; CPS permit appeals, 2 hours; CPS transfers, 30 minutes; experimental fishing permits (EFPs), 1 hour.

Burden Hours: 135.

Needs and Uses: This request is for r extension of a current information collection. Under the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. 1801 et *seq.,* permits are required for persons to participate in Federally-managed fisheries off the West Coast. There are three types of permits: basic fishery permits for HMS, limited entry permits for CPS and EFPs. Appeals and certain waiver requests may also be submitted. Transfer applications may also be required.

The permit application forms provide basic information about permit holders and the vessels and gear being used. This information is important for understanding the nature of the fisheries and provides a link to participants. It also aids in enforcement of regulations.

Affected Public: Business or other for-profit organizations.

Frequency: Annually, biannually and on occasion.

Respondent's Obligation: Mandatory.

OMB Desk Officer: *OIRA_Submission@omb.eop.gov.*

Copies of the above information collection proposal can be obtained by calling or writing Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482–0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov.*

Dated: July 15, 2013.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

Foreign-Trade Zones Board

[B–23–2013]

Foreign-Trade Zone 93—Raleigh-Durham, North Carolina, Authorization of Production Activity, Southern Lithoplate, Inc. (Aluminum Printing Plates), Youngsville, North Carolina

On March 18, 2013, the Triangle J Council of Governments, grantee of FTZ 93, submitted a notification of proposed production activity to the Foreign-Trade Zones (FTZ) Board on behalf of Southern Lithoplate, Inc., within Site 5 of FTZ 93, in Youngsville, North Carolina.

The notification was processed in accordance with the regulations of the FTZ Board (15 CFR part 400), including notice in the **Federal Register** inviting public comment (78 FR 17635, 3–22–2013). The FTZ Board has determined that no further review of the activity is warranted at this time. The production activity described in the notification is authorized, subject to the FTZ Act and the Board's regulations, including Section 400.14.

Dated: July 16, 2013.

Andrew McGilvray,

Executive Secretary.

DEPARTMENT OF COMMERCE

International Trade Administration

Proposed Information Collection; Comment Request; Implementation of Tariff Rate Quota Established Under Title V of the Trade and Development Act of 2000 for Imports of Certain Worsted Wool Fabric

AGENCY: International Trade Administration (ITA).

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before September 17, 2013.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Laurie Mease, Office of Textiles and Apparel, Telephone: 202–482–3400, Fax: 202–482–2331, Email: *Laurie.Mease@trade.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

Title V of the Trade and Development Act of 2000 (''the Act'') as amended by the Trade Act of 2002, the Miscellaneous Trade Act of 2004, the Pension Protection Act of 2006, and the Emergency Economic Stabilization Act of 2008, contains several provisions to assist the wool products industries. These include the establishment of tariff rate quotas (''TRQ'') for a limited quantity of worsted wool fabrics. The Act requires the President to fairly allocate the TRQ to persons who cut and sew men's and boys' worsted wool suits and suit-like jackets and trousers in the United States, and who apply for an allocation based on the amount of suits they produce in the prior year. The Act specifies factors to be addressed in considering such requests. On December 1, 2000, the President issued Proclamation 7383 that, among other things, delegates authority to the Secretary of Commerce to allocate the TRQ and to issue regulations to implement these provisions. On January 22, 2001, the Department of Commerce published regulations establishing procedures for allocation of the tariff rate quotas (66 FR 6459, 15 CFR 335). The interim regulations were adopted, without change, as a final rule published on October 24, 2005 (70 FR 61363).

The TRQ was originally effective for goods entered or withdrawn from warehouse for consumption, on or after January 1, 2001, and was to remain in force through 2003. On August 6, 2002, President Bush signed into law the Trade Act of 2002, which includes several amendments to Title V of the Act including the extension of the program through 2005. On December 3, 2004, the Act was further amended pursuant to the Miscellaneous Trade Act of 2004, Public Law 108–429, by increasing the TRQ for worsted wool fabric with average fiber diameters greater than 18.5 microns, HTS 9902.51.11, to an annual total level of 5.5 million square meters, and extending it through 2007, and increasing the TRQ for average fiber diameters of 18.5 microns or less, HTS 9902.51.15 (previously 9902.51.12), to an annual total level of 5 million square meters and extending it through 2006. On August 17, 2006, the Act was further amended pursuant to the Pension Protection Act of 2006, Public Law 109–280, which extended both TRQs, 9902.51.11 and 9902.51.15, through 2009. The Emergency Economic Stabilization Act of 2008 extended the TRQs through 2014.

The Department must collect certain information in order to fairly allocate the TRQ to eligible persons. In order to be eligible for an allocation, an applicant must submit an application. An applicant must provide the following information in the format set forth in the application form provided by the Department:

(1) Identification. Applicant's name, address, telephone number, email address, and federal tax identification number; name of person submitting the application, and title, or capacity in which the person is acting for the applicant.

(2) Production Information. Name and address of each plant or location where Worsted Wool Suits, Worsted Wool Suit-Type Jackets, and Worsted Wool Trousers were cut and sewn by the applicant and the name and address of all plants or locations that cut and sewed such products on behalf of the applicant. Production data, including the following: the quantity and value of the Worsted Wool Suits, Worsted Wool Suit-Type Jackets, and Worsted Wool Trousers cut and sewn in the United States by applicant, or on behalf of applicant, from fabric owned by applicant. This data must indicate actual production (not estimates) of Worsted Wool Suits, Worsted Wool Suit-Type Jackets and Worsted Wool Trousers containing at least 85 percent worsted wool fabric by weight with an average diameter of 18.5 microns or less. This data must also indicate actual production (not estimates) of Worsted Wool Suits, Worsted Wool Suit-Type Jackets and Worsted Wool Trousers containing at least 85 percent worsted wool fabric by weight with average diameter greater than 18.5 microns. Production data must be provided for the first six months of the year of the application. This data will be annualized for the purpose of making Tariff Rate Quota allocation.

(3) Worsted Wool Fabric. Data indicating the quantity and value of the Worsted Wool Fabric used in reported production.

(4) Certification. A statement by the applicant, or on behalf of the applicant, by an employee, officer or agent, with

personal knowledge of the matters set out in the application, certifying that the information contained therein is complete and accurate, signed and sworn before a Notary Public, and acknowledging that false representations to a federal agency may result in criminal penalties under federal law.

Not later than September 30 of each Tariff Rate Quota Year, a licensee that will not import the full quantity granted in a license during the Tariff Rate Quota Year shall surrender the allocation that will not be used to the Department for purposes of reallocation. The surrender shall be final, and shall apply only to that Tariff Rate Quota Year.

Revision: Forms for surrender and reallocation have been developed in order to create a standardized method of reporting such information. The information collected on the surrender and reallocation application is utilized to determine the eligibility of applicants for additional quota and the amount of additional quota they shall receive. The information includes:

(1) Identification. Licensee's name and the license control number. (2) The amount surrendered and/or the amount requested for reallocation.

II. Method of Collection

The information collection forms will be provided via the Internet and by mail to requesting firms.

III. Data

OMB Control Number: 0625–0240.

Form Number(s): ITA–4139, ITA–4140P.

Type of Review: Regular submission (revision to a currently approved information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 20.

Estimated Time Per Response: 3 hours.

Estimated Total Annual Burden Hours: 160.

Estimated Total Annual Cost to Public: $450.

IV. Request for Comments

Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and costs) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: July 15, 2013.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

[A–570–920]

Lightweight Thermal Paper From the People's Republic of China: Rescission of Antidumping Duty Review; 2011–2012

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* July 19, 2013.

FOR FURTHER INFORMATION CONTACT: Eve Wang or Eugene Degnan, AD/CVD Operations, Office 8, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230, at (202) 482–6231 or (202) 482–0414, respectively.

SUMMARY: The Department of Commerce (''Department'') is rescinding the 2011–2012 antidumping duty administrative review on lightweight thermal paper from the People's Republic of China (''PRC'') because Appleton Papers Inc. (''Petitioner''), timely withdrew its request for review.

SUPPLEMENTARY INFORMATION:

Background

On November 5, 2012, the Department published a notice of opportunity to request an administrative review of the antidumping duty order on lightweight thermal paper from the PRC.[1] The period of review (''POR'') is November 1, 2011, through October 31, 2012. On November 30, 2012, the Department received a timely request from Petitioner to conduct an administrative review of Shanghai Hanhong Paper Co., Ltd. and Hanhong International Limited; Guangdong Guanhao High-Tech Co., Ltd.; Henan Province Jianghe Paper Co., Ltd., Jianghe Paper Co., Ltd., and JHT Paper; New Pride Co., Ltd.; and Shenzhen Taizhou Industrial Development Co., Ltd. In this case, there were no other requests for an administrative review by any other party. Pursuant to this request, the Department initiated an administrative review of the antidumping duty order on lightweight thermal paper from the PRC for the POR.[2] On April 1, 2013, Petitioner withdrew its request for review for all of the aforementioned parties for which it had made a review request.

Scope of the Order

The merchandise covered by this review includes certain lightweight thermal paper, which is thermal paper with a basis weight of 70 grams per square meter (g/m^2) (with a tolerance of $\pm$ 4.0 g/m^2) or less; irrespective of dimensions;[3] with or without a base coat[4] on one or both sides; with thermal active coating(s)[5] on one or both sides that is a mixture of the dye and the developer that react and form an image when heat is applied; with or without a top coat;[6] and without an adhesive backing. Certain lightweight thermal paper is typically (but not exclusively) used in point-of-sale applications such as ATM receipts, credit card receipts, gas pump receipts, and retail store receipts. The merchandise subject to this review may be classified in the Harmonized Tariff Schedule of the United States (''HTSUS'') under subheadings 3703.10.60, 4811.59.20, 4811.90.8040, 4811.90.9090, 4820.10.20, 4823.40.00, 4811.90.8030, 4811.90.8050, 4811.90.9030, and

[1] *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review,* 77 FR 66437 (November 5, 2012).

[2] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews and Request for Revocation in Part,* 77 FR 77017 (December 31, 2012).

[3] Lightweight thermal paper is typically produced in jumbo rolls that are slit to the specifications of the converting equipment and then converted into finished slit rolls. Both jumbo and converted rolls (as well as lightweight thermal paper in any other form, presentation, or dimension) are covered by the scope of these orders.

[4] A base coat, when applied, is typically made of clay and/or latex and like materials and is intended to cover the rough surface of the paper substrate and to provide insulating value.

[5] A thermal active coating is typically made of sensitizer, dye, and co-reactant.

[6] A top coat, when applied, is typically made of polyvinyl acetone, polyvinyl alcohol, and/or like materials and is intended to provide environmental protection, an improved surface for press printing, and/or wear protection for the thermal print head.

Although HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the order is dispositive.

Rescission of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), the Secretary will rescind an administrative review, in whole or in part, if the party that requested the review withdraws the request within 90 days of the date of publication of the notice of initiation of the requested review. In this case, Petitioner timely withdrew its request for a review, and no other interested party requested a review of the aforementioned parties. Therefore, the Department is rescinding the administrative review of the antidumping duty order on lightweight thermal paper from the PRC covering the period November 1, 2011, through October 31, 2012, in its entirety, in accordance with 19 CFR 351.213(d)(1).

Assessment

The Department will instruct U.S. Customs and Border Protection (''CBP'') to assess antidumping duties on all appropriate entries of lightweight thermal paper from the PRC during the POR at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). The Department intends to issue appropriate assessment instructions to CBP 15 days after the publication of this notice in the **Federal Register**.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the POR.

This notice also serves as a reminder to parties subject to administrative protective order (''APO'') of their responsibility concerning the disposition of proprietary information disclosed under APO, in accordance with 19 CFR 351.305 and as explained in the APO itself. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This notice is in accordance with section 777(i)(1) of the Tariff Act of 1930, as amended, and 19 CFR 351.213(d)(4).

Dated: July 15, 2013.

Christian Marsh,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[FR Doc. 2013–17386 Filed 7–18–13; 8:45 am]

BILLING CODE 3510–DS–P

4811.90.8020 (for gift wrap, a non-subject product) and 4811.90.8040 (for ''other'' including lightweight thermal paper). HTSUS subheading 4811.90.9000 was a classification for lightweight thermal paper until July 1, 2005. Effective that date, subheading 4811.90.9000 was replaced with 4811.90.9010 (for tissue paper, a non-subject product) and 4811.90.9090 (for ''other,'' including lightweight thermal paper).

[8] As of January 1, 2009, the International Trade Commission deleted HTSUS subheadings 4811.90.8040 and 4811.90.9090 and added HTSUS subheadings 4811.90.8030, 4811.90.8050, 4811.90.9030, and 4811.90.9050 to the HTSUS (2009). *See* HTSUS (2009), available at <*ww.usitc.gov*>. These HTSUS subheadings were added to the scope of the order in lightweight thermal paper's underlying investigation.

International Trade Administration

[A–570–985]

Xanthan Gum From the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value and Antidumping Duty Order

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (the ''Department'') and the International Trade Commission (''ITC''), the Department is issuing an antidumping duty order on xanthan gum from the People's Republic of China (''PRC''). In addition, the Department is amending its final determination to correct a ministerial error.

DATES: *Effective Date:* July 19, 2013.

FOR FURTHER INFORMATION CONTACT: Brandon Farlander or Erin Kearney, AD/CVD Operations, Office 4, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–0182 or (202) 482–0167, respectively.

SUPPLEMENTARY INFORMATION:

Background

On June 4, 2013, the Department published the final determination of sales at less than fair value in the antidumping duty investigation of xanthan gum from the PRC.[1] On July 12, 2013, the ITC notified the Department of its final determination pursuant to section 735(b)(1)(A)(ii) of the Tariff Act of 1930, as amended (''the Act''), that an industry in the United States is threatened with material injury by reason of imports of xanthan gum from the PRC.[2]

Scope of the Order

The scope of this order covers dry xanthan gum, whether or not coated or blended with other products. Further, xanthan gum is included in this order regardless of physical form, including, but not limited to, solutions, slurries, dry powders of any particle size, or unground fiber.

Xanthan gum that has been blended with other product(s) is included in this scope when the resulting mix contains 15 percent or more of xanthan gum by dry weight. Other products with which xanthan gum may be blended include, but are not limited to, sugars, minerals, and salts.

Xanthan gum is a polysaccharide produced by aerobic fermentation of *Xanthomonas campestris.* The chemical structure of the repeating pentasaccharide monomer unit consists of a backbone of two P–1,4-D-Glucose monosaccharide units, the second with a trisaccharide side chain consisting of P-D-Mannose-(1,4)- P-DGlucuronic acid-(1,2)-a-D-Mannose monosaccharide units. The terminal mannose may be pyruvylated and the internal mannose unit may be acetylated.

Merchandise covered by the scope of this order is classified in the Harmonized Tariff Schedule (''HTS'') of the United States at subheading 3913.90.20. This tariff classification is provided for convenience and customs purposes; however, the written description of the scope is dispositive.

Amendment to the Final Determination

On June 4, 2013, the Department published its affirmative final determination in this proceeding.[3] In accordance with 19 CFR 351.224(b), the Department disclosed to interested parties the details of its calculations for the final determination on May 30, 2013. On June 4, 2013, CP Kelco U.S. (''Petitioner''), petitioner in this investigation, and Neimenggu Fufeng Biotechnologies Co., Ltd. (aka Inner

[1] *See Xanthan Gum From the People's Republic of China: Final Determination of Sales at Less Than Fair Value,* 78 FR 33351 (June 4, 2013) (''*Final Determination*'').

[2] *See Xanthan Gum from Austria and China,* USITC Publication 4411, Investigation Nos. 731–TA–1202–1203 (Final) (July 2013).

[3] *See Final Determination.*

Mongolia Fufeng Biotechnologies Co., Ltd.) (''Fufeng'') and Deosen Biochemical (''Deosen''), respondents in this investigation, timely submitted ministerial error allegations and requested, pursuant to 19 CFR 351.224, that the Department correct the alleged ministerial errors. On June 10, 2013, Petitioner submitted rebuttal comments to Deosen's ministerial error allegations, and Fufeng submitted rebuttal comments to Petitioner's ministerial error allegations. On June 11, 2013, the Department rejected Fufeng's rebuttal comments and allowed Fufeng to re-submit its rebuttal comments, which Fufeng did on June 12, 2013.

After analyzing all interested party comments and rebuttals, we have determined that, in accordance with section 735(e) of the Act and 19 CFR 351.224(e), a ministerial error was made with respect to the treatment of the coal ash by-product in Fufeng's margin calculation.[4]

In the *Final Determination,* we determined that a number of companies, in addition to the mandatory respondents, qualified for a separate rate.[5] Since the weighted-average dumping margin for the separate rate respondents is based on the average of the weighted-average dumping margins for the mandatory respondents, and the weighted-average dumping margin for Fufeng changed as a result of the aforementioned ministerial error, we have revised the calculation of the dumping margin for the separate rate respondents in the amended final determination. The amended dumping margins are provided, below.

Antidumping Duty Order

In accordance with section 735(d) of the Act, the ITC has notified the Department of its final determination in this investigation, in which it found that an industry in the United States is threatened with material injury within the meaning of section 735(b)(1)(A)(ii) of the Act. Therefore, in accordance with section 735(c)(2) of the Act, we are publishing this antidumping duty order. In accordance with section 736(a)(1) of the Act, the Department will direct U.S. Customs and Border Protection (''CBP'') to assess, upon further instruction by the Department, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price (or constructed export price) of the merchandise, for all relevant entries of xanthan gum from the PRC.

Pursuant to section 736(b)(2) of the Act, duties shall be assessed on subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the ITC's notice of final determination if that determination is based on the threat of material injury, other than threat of material injury described in section 736(b)(1) of the Act.[6] In addition, section 736(b)(2) of the Act requires CBP to release any bond or other security, and refund any cash deposit made of estimated antidumping duties posted since the Department's preliminary antidumping duty determination.[7]

Suspension of Liquidation

Because the ITC's final determination is based on the threat of material injury and is not accompanied by a finding that injury would have resulted but for the imposition of suspension of liquidation of entries since the Department's preliminary determination, section 736(b)(2) of the Act is applicable. Therefore, the Department will instruct CBP to terminate the suspension of liquidation for entries of xanthan gum from the PRC entered, or withdrawn from warehouse, for consumption prior to the publication of the ITC's final determination and refund any cash deposits of estimated antidumping duties made between the publication of the Department's preliminary determination on January 10, 2013, and the publication of the ITC's final determination. Furthermore, we will instruct CBP to continue to suspend liquidation on all unliquidated entries of xanthan gum from the PRC entered, or withdrawn from warehouse, for consumption on or after the date of publication of the ITC's notice of final determination of threat of material injury in the **Federal Register**.

Effective on the date of publication of the ITC's notice of final determination in the **Federal Register**, CBP will require, pursuant to section 736(a)(3) of the Act, at the same time as importers would normally deposit estimated duties on this subject merchandise, a cash deposit equal to the weighted-average dumping margins listed below.[8] The rate for the PRC-wide entity applies to all exporter and producer combinations not specifically listed.

Amended Final Determination of Antidumping Investigation

The weighted-average dumping margins are as follows:

Exporter	Producer	Weighted-average dumping margin (percent)
Neimenggu Fufeng Biotechnologies Co., Ltd (aka Inner Mongolia Fufeng Biotechnologies Co., Ltd.)/Shandong Fufeng Fermentation Co., Ltd.	Neimenggu Fufeng Biotechnologies Co., Ltd. (aka Inner Mongolia Fufeng Biotechnologies Co., Ltd.)/Shandong Fufeng Fermentation Co., Ltd.	12.90
Deosen Biochemical Ltd	Deosen Biochemical Ltd./Deosen Biochemical (Ordos) Ltd	128.32
A.H.A. International Co., Ltd	Shandong Fufeng Fermentation Co., Ltd	70.61
A.H.A. International Co., Ltd	Deosen Biochemical Ltd	70.61
CP Kelco (Shandong) Biological Company Limited	CP Kelco (Shandong) Biological Company Limited	70.61
Hebei Xinhe Biochemical Co. Ltd	Hebei Xinhe Biochemical Co. Ltd	70.61
Shanghai Smart Chemicals Co. Ltd	Deosen Biochemical Ltd	70.61
PRC-Wide Entity*		154.07

*The PRC-wide entity includes Shandong Yi Lian Cosmetics Co., Ltd., Shanghai Echem Fine Chemicals Co., Ltd., Sinotrans Xiamen Logistics Co., Ltd., and Zibo Cargill HuangHelong Bioengineering Co., Ltd

[4] For a detailed discussion of the alleged ministerial errors, as well as the Department's analysis, *see* Memorandum to Paul Piquado, Assistant Secretary for Import Administration, from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, regarding, ''Final Determination of Antidumping Duty Investigation of Xanthan Gum from the People's Republic of China: Allegation of Ministerial Errors,'' dated June 28, 2013.

[5] *See Final Determination,* 78 FR at 33353.

[6] Section 736(b)(1) of the Act states that ''{i}f the {ITC}, in its final determination under section 735(b), finds material injury or threat of material injury which, but for the suspension of liquidation under section 733(d)(2) would have led to a finding of material injury, then entries of the subject merchandise, the liquidation of which has been suspended under section 733(d)(2), shall be subject to the imposition of antidumping duties under section 731.''

[7] *See Xanthan Gum from the People's Republic of China: Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination,* 77 FR 2252 (January 10, 2013) (''*Preliminary Determination*'').

[8] *See* section 736(a)(3) of the Act.

This notice constitutes the antidumping duty order with respect to xanthan gum from the PRC pursuant to section 736(a) of the Act. Interested parties may contact the Department's Central Records Unit, Room 7043 of the main Commerce building, for copies of an updated list of antidumping duty orders currently in effect.

This order and amended final determination are published in accordance with sections 735(e), 736(a) and 777(i) of the Act, and 19 CFR 351.211 and 351.224(e).

Dated: July 15, 2013.

Paul Piquado,

Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

[Docket No. 120921480–2480–01]

Announcing Approval of Federal Information Processing Standard 186–4, Digital Signature Standard

AGENCY: National Institute of Standards and Technology (NIST), Department of Commerce.

ACTION: Notice.

SUMMARY: This notice announces the Secretary of Commerce's approval of Federal Information Processing Standard (FIPS) 186–4, Digital Signature Standard (DSS). FIPS 186–4 specifies three techniques for the generation and verification of digital signatures that can be used for the protection of data: The Digital Signature Algorithm (DSA), the Elliptic Curve Digital Signature Algorithm (ECDSA) and the Rivest-Shamir Adelman Algorithm (RSA). This revision includes a clarification of terms, a reduction of restrictions on the use of random number generators and the retention and use of prime number generation seeds, a correction of wording and typographical errors, and further aligns the FIPS with Key Cryptography Standard (PKCS) #1. FIPS 186–4 is available at *http://csrc.nist.gov/publications/PubsFIPS.html.*

DATES: The changes are effective on July 19, 2013.

FOR FURTHER INFORMATION CONTACT: Elaine Barker (301) 975–2911, National Institute of Standards and Technology, 100 Bureau Drive, Mail Stop 8930, Gaithersburg, MD 20899–8930, email: *Elaine.Barker@nist.gov.*

SUPPLEMENTARY INFORMATION: FIPS 186, first published on May 19, 1994 (59 FR 26208), specified a digital signature algorithm (DSA) to generate and verify digital signatures. Later revisions (FIPS 186–1, which was published in the **Federal Register** on December 15, 1998 (63 FR 69049) and FIPS 186–2, which was published on February 15, 2000 (65 FR 7507)) adopted two additional algorithms: The Elliptic Curve Digital Signature Algorithm (ECDSA) and the RSA digital signature algorithm. FIPS 186–3, which was adopted on June 9, 2009 (74 FR 27287), increased the key sizes allowed for DSA, provided additional requirements for the use of ECDSA and RSA, and included requirements for obtaining the assurances necessary for valid digital signatures. FIPS 186–3 also replaced the specifications for random number generators that had been provided in the previous versions of the FIPS with a reference to SP 800–90 for obtaining random numbers.

The changes to FIPS 186–3 include: (1) Clarifications of terms used within previous versions of the FIPS, (2) allowing the use of any random bit/number generator that is approved for use in FIPS 140–2-validated modules, (3) reducing restrictions on the retention and use of prime number generation seeds for generating RSA key pairs, (4) correcting statements regarding the generation of the integer *k* for DSA and ECDSA, (5) correcting a typological error in the processing steps for ECDSA, (6) correcting the wording for the criteria for generating RSA key pairs, and (7) aligning the specification for the use of a salt in the RSASSA–PSS digital signature scheme with Public Key Cryptography Standard (PKCS) #1.

NIST published a **Federal Register** Notice (77 FR 21538) on April 10, 2012 to request public comments on the proposed revisions to FIPS 186–3. We received two sets of comments from private sector organizations. The following summarizes the comments received during the public comment period, and includes NIST's response to each comment:

Comment: One commenter stated that the informative text in Section 5 indicates that the NIST-recommended elliptic curves have a cofactor of one, whereas, for the ten binary curves, the cofactors actually vary from two to four.

Response: That informative text was not included in FIPS 186–4, as the statement is not critical to the intent of the change.

Comment: One commenter stated that the definition of len(*a*) given in Section 2.3 of FIPS 186–3 is not sufficient, since it begs the question about whether or not leading zero bits are counted in the length.

Response: The FIPS was modified to include a revised definition for len(*a*), as suggested by the commenter.

Comment: One commenter stated that Table 1 of Section 6.1.1 of FIPS 186–3 includes an incorrect expression for the bit length of powers of two.

Response: As this expression is not critical to the table, NIST deleted the expression from the FIPS.

Comment: One commenter stated that in Appendix B.3.1, Table B.1 of FIPS 186–3, the inequality operators are confusing. These table entries should be replaced by explicit minimum and maximum values.

Response: NIST considered and rejected the request, as the table entries are specified correctly.

Revised FIPS 186–4 is available electronically from the NIST Web site at: *http://csrc.nist.gov/publications/fips/index.html.*

Authority: In accordance with the Information Technology Management Reform Act of 1996 (Pub. L. 104–106) and the Federal Information Security Management Act of 2002 (FISMA) (Pub. L. 107–347), the Secretary of Commerce is authorized to approve Federal Information Processing Standards (FIPS). NIST activities to develop computer security standards to protect federal sensitive (unclassified) information systems are undertaken pursuant to specific responsibilities assigned to NIST by section 20 of the National Institute of Standards and Technology Act (15 U.S.C. 278g–3), as amended.

E.O. 12866: This notice has been determined not to be significant for the purposes of E.O. 12866.

Dated: July 15, 2013.

Willie E. May,

Associate Director for Laboratory Programs.

National Oceanic and Atmospheric Administration

RIN 0648–XC767

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice of availability.

SUMMARY: This notice advises the public that three direct take permits have been issued pursuant to the Endangered Species Act of 1973 (ESA) for operation,

monitoring, and evaluation of hatchery programs rearing and releasing spring Chinook salmon in the Wenatchee River basin of Washington state, and that the decision documents are available upon request.

DATES: Permits 18118, 18120, and 18121 were issued on July 2, 2013, subject to certain conditions set forth therein. Subsequent to issuance, the necessary countersignatures by the applicants were received. The permits expire on July 1, 2026.

ADDRESSES: Requests for copies of the decision documents or any of the other associated documents should be directed to the Salmon Management Division, NOAA's National Marine Fisheries Service, 1201 NE Lloyd Blvd., Suite 1100, Portland, OR97232. The documents are also available on the Internet at *www.nwr.noaa.gov*.

FOR FURTHER INFORMATION CONTACT: Amilee Wilson, Lacey, WA, at phone number: (360) 753–5820, email: *amilee.wilson@noaa.gov*

SUPPLEMENTARY INFORMATION: This notice is relevant to the following species and evolutionarily significant units (ESUs) pursuant to section 10 (a)(1)(A) of the Endangered Species Act.

Chinook salmon (*Oncorhynchus tshawytscha*): endangered, naturally produced and artificially propagated Upper Columbia River spring.

Dated: July 16, 2013.

Angela Somma,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

Gulf of Mexico Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; Public Meetings.

SUMMARY: The Gulf of Mexico Fishery Management Council (Council) will hold a meeting of the Standing, Special Mackerel and Special Reef Fish Scientific and Statistical Committees (SSC).

DATES: The meeting will be held from 1 p.m. on Tuesday, August 6 until 12 noon on Thursday, August 8, 2013.

ADDRESSES: The meeting will be held at the Gulf of Mexico Fishery Management Council, 2203 North Lois Avenue, Suite 1100, Tampa, FL, 33607.

FOR FURTHER INFORMATION CONTACT: Mr. Steven Atran, Senior Fishery Biologist, Gulf of Mexico Fishery Management Council; telephone: (813) 348–1630; fax: (813) 348–1711; email: *steven.atran@gulfcouncil.org.*

SUPPLEMENTARY INFORMATION: The items of discussion in the committee meeting agendas are as follows:

Standing and Special Mackerel SSC Agenda, Tuesday, August 6, 2013, 1 p.m. until 3 p.m.

1. Introductions and Adoption of Mackerel SSC Agenda
2. Approval of May 29, 2013 Standing and Special Mackerel SSC summary minutes
3. SEDAR 28 Spanish mackerel benchmark assessment results
   a. Assessment results based on 30% SPR proxy for MSY
   b. Review of weighted average PDFs
   c. Consideration for approval of assessment
   d. Recommendation of ABC
4. Overview of ongoing Coastal Migratory Pelagics Amendments
   a. CMP Amendment 19—Bag limit sales, trip limits, latent gill net permits
   b. CMP Amendment 20—Boundaries, transit provision
5. Other business

Standing and Special Reef Fish SSC Agenda, Tuesday, August 6, 2013, 3 p.m. Until 5 p.m.; Wednesday, August 7, 2013, 8:30 a.m. Until 5 p.m.; Thursday, August 8, 2013, 8:30 a.m. Until 12 Noon

1. Approval of May 29–31, 2013 Standing and Special Reef Fish SSC summary minutes
2. MRIP Revisions of OFLs and ABCs for Several Species and Species Groupings
   a. Summary of Draft Framework Action
   b. Review of methodology for revising OFLs and ABCs
   c. Recommendations for OFLs and ABCs
3. Gray Triggerfish Review
   a. Updated indices of abundance and yield projections
   b. Consideration of ABC revision for 2014
4. Red Snapper 2013–2015 ABCs under 2013 Quota Alternatives
   a. Yield projections
   b. Consideration of ABC revision for 2014—Patterson
5. ABC Control Rule Revisions
   a. Tier structure of ABC control rule
   b. Tier 3 revisions (e.g., Martell et al.)
   c. Incorporating Scientific Uncertainty into the PDF
   d. Other control rule considerations
6. Overview of ongoing Reef Fish Actions
   a. Red snapper allocation
   b. Red snapper IFQ revisions
   c. Amendment 39—Regional management of recreational red snapper
   d. Intersector trading of allocations
   e. Definition of for-hire fishing
7. Selection of SSC representative at August 26–30, 2013 Council meeting
8. Other business
   a. Review of SEDAR Assessment Schedule/Priorities

For meeting materials see folder ''SSC meeting—2013–08'' on Gulf Council ftp server: *http://ftp.gulfcouncil.org?user=anonymous;* or by calling (813) 348–1630.

Although other non-emergency issues not on the agenda may come before the Scientific and Statistical Committees for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal action during these meetings. Actions of the Scientific and Statistical Committees will be restricted to those issues specifically identified in the agenda and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take action to address the emergency.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kathy Pereira at the Council Office (see **ADDRESSES**), at least 5 working days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XC765

Fisheries of the South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 32 Assessment Workshop webinars.

SUMMARY: The SEDAR 32 assessment of the South Atlantic stock of Gray Triggerfish will consist of: A Data Workshop; a series of Assessment webinars; and a Center for Independent Experts (CIE) Desk Review. See **SUPPLEMENTARY INFORMATION.**

DATES: SEDAR 32 additional Gray Triggerfish Assessment webinars will be held from 1 p.m. until 5 p.m. on the following dates: August 14, 2013; September 11, 2013; September 25, 2013; October 17, 2013; October 30, 2013; November 13, 2013; December 11, 2013; and January 8, 2014.

ADDRESSES:

Meeting address: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Julia Byrd at SEDAR (see **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information. Please request webinar invitations at least 24 hours in advance of each webinar.

SEDAR address: 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Julia Byrd, SEDAR Coordinator; telephone: (843) 571–4366; email: *julia.byrd@safmc.net.*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions, have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a three-step process including: (1) Data Workshop; (2) Assessment Process utilizing webinars; and (3) Review Process utilizing a Workshop or a Desk Review. The product of the Data Workshop is a data report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The product of the Assessment Process is a stock assessment report which describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The assessment is independently peer reviewed at the Review Workshop or through a CIE Desk Review. The product of the Review Workshop is a Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. The products of the CIE Desk Review are individual reports documenting each reviewer's opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, Highly Migratory Species Management Division, and Southeast Fisheries Science Center. Participants include: Data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and non-governmental organizations (NGOs); international experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion in the Assessment webinars are as follows:

1. Participants will employ assessment models to evaluate stock status, estimate population benchmarks and management criteria, and project future conditions. The assessment models will use the recommended datasets from the Data Workshop.

2. Participants will recommend the most appropriate methods and configurations for determining stock status and estimating population parameters.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is accessible to people with disabilities. Requests for auxiliary aids should be directed to the SEDAR office (see **ADDRESSES**) at least 10 business days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801.

Dated: July 16, 2013.

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to a Wharf Construction Project

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization.

SUMMARY: In accordance with the regulations implementing the Marine Mammal Protection Act (MMPA) as amended, notification is hereby given that we have issued an incidental harassment authorization (IHA) to the U.S. Navy (Navy) to incidentally harass, by Level B harassment only, six species of marine mammals during construction activities associated with a wharf construction project in Hood Canal, Washington.

DATES: This authorization is effective from July 16, 2013, through February 15, 2014.

ADDRESSES: A copy of the IHA and related documents may be obtained by visiting the internet at: *http://www.nmfs.noaa.gov/pr/permits/incidental.htm* or by writing to Michael Payne, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910. A memorandum describing our adoption of the Navy's Environmental Impact Statement (2011) and our associated Record of Decision, prepared pursuant to the National Environmental Policy Act, are also available at the same site. Documents cited in this notice may also be viewed, by appointment, during regular business hours, at the aforementioned address.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''. . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.''

Section 101(a)(5)(D) of the MMPA established an expedited process by which citizens of the U.S. can apply for an authorization to incidentally take small numbers of marine mammals by harassment. Section 101(a)(5)(D) establishes a 45-day time limit for NMFS review of an application followed by a 30-day public notice and comment period on any proposed authorizations for the incidental harassment of marine mammals. Within 45 days of the close of the comment period, NMFS must either issue or deny the authorization. Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: ''Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].''

Summary of Request

We received an application on December 10, 2012, from the Navy for the taking of marine mammals incidental to pile driving and removal in association with a wharf construction project in the Hood Canal at Naval Base Kitsap in Bangor, WA (NBKB). The Navy submitted a revised version of the application on May 6, 2013, which we deemed adequate and complete. The wharf construction project is a multi-year project; this IHA would cover only the second year of the project, from July 16, 2013, through February 15, 2014. We previously issued an IHA to the Navy for the first year of work associated with this project; that IHA was valid from July 16, 2012, through February 15, 2013 (77 FR 42279; July 18, 2012). Pile driving and removal activities in a given year may occur only within an approved in-water work window from July 16-February 15. Six species of marine mammals may be affected by the specified activities: Steller sea lion (*Eumetopias jubatus monteriensis*), California sea lion (*Zalophus californianus californianus*), harbor seal (*Phoca vitulina richardii*), killer whale (transient only; *Orcinus orca*), Dall's porpoise (*Phocoenoides dalli dalli*), and harbor porpoise (*Phocoena phocoena vomerina*). These species may occur year-round in the Hood Canal, with the exception of the Steller sea lion, which is typically present only from fall to late spring (October to mid-April), and the California sea lion, which is typically present from late summer to late spring (August to early June). The killer whale and Dall's porpoise have been observed in Hood Canal but do not regularly occur there.

NBKB provides berthing and support services to Navy submarines and other fleet assets. The Navy plans to continue construction of the Explosive Handling Wharf #2 (EHW–2) facility at NBKB in order to support future program requirements for submarines berthed at NBKB. The Navy has determined that construction of EHW–2 is necessary because the existing EHW alone will not be able to support future program requirements. Under the specified activities—which include only the portion of the project that would be completed under this 1-year IHA—a maximum of 195 pile driving days would occur. All piles will be driven with a vibratory hammer for their initial embedment depths, while select piles may be finished with an impact hammer for proofing, as necessary. Proofing involves striking a driven pile with an impact hammer to verify that it provides the required load-bearing capacity, as indicated by the number of hammer blows per foot of pile advancement. Sound attenuation measures (i.e., bubble curtain) will be used during all impact hammer operations.

For pile driving activities, the Navy used thresholds recommended by NMFS for assessing project impacts, outlined later in this document. The Navy assumed practical spreading loss and used empirically-measured source levels from other similar pile driving events to estimate potential marine mammal exposures. Predicted exposures are outlined later in this document. The calculations predict that only Level B harassment will occur associated with pile driving or construction activities.

Description of the Specified Activity

NBKB is located on the Hood Canal approximately twenty miles (32 km) west of Seattle, Washington (see Figures 2–1 through 2–4 in the Navy's application). The specified activities with the potential to cause harassment of marine mammals within the waterways adjacent to NBKB, under the MMPA, are vibratory and impact pile driving operations, as well as vibratory removal of falsework piles, associated with the wharf construction project. The specified activities that would be authorized by this IHA would occur between July 16, 2013, and February 15, 2014. The allowable season for in-water work, including pile driving, at NBKB is July 16 through February 15, which was established by the Washington Department of Fish and Wildlife in coordination with NMFS and the U.S. Fish and Wildlife Service (USFWS) to protect juvenile salmon protected under the Endangered Species Act (ESA). Additional details regarding the specified geographic area and construction plans for the project were described in our **Federal Register** notice of proposed authorization (78 FR 29705; May 21, 2013; hereafter, the FR notice); please see that document or the Navy's application for more information.

As part of the Navy's sea-based strategic deterrence mission, the Navy Strategic Systems Programs directs research, development, manufacturing, testing, evaluation, and operational support for the TRIDENT Fleet Ballistic Missile program. Development of necessary facilities for handling of explosive materials is part of these duties. The EHW–2 will consist of two components: (1) The wharf proper (or Operations Area), including the warping wharf; and (2) two access trestles. Please see Figures 1–1 and 1–2 of the Navy's application for conceptual and schematic representations of the EHW–2.

For the entire project, a total of up to 1,250 permanent piles ranging in size between 24–48 in (0.6–1.2 m) in diameter will be driven in-water to construct the wharf, with up to three vibratory rigs and one impact driving rig operating simultaneously. Construction will also involve temporary installation of up to 150 falsework piles used as an aid to guide permanent piles to their proper locations. Falsework piles, which are removed upon installation of the permanent piles, will likely be steel pipe piles and will be driven and removed using a vibratory driver. It has not been determined exactly what parts or how much of the project will be constructed in any given year; however, a maximum of 195 days of pile driving may occur per in-water work window. The analysis contained herein is based upon the maximum of 195 pile driving days, rather than any specific number of piles driven. Table 1 summarizes the number and nature of piles required for the entire project, rather than what subset of piles may be expected to be driven during the second year of construction planned for this IHA.

TABLE 1—SUMMARY OF PILES REQUIRED FOR WHARF CONSTRUCTION

[in total]

Feature	Quantity
Total number of permanent in-water piles.	Up to 1,250
Size and number of main wharf piles.	24-in: 140 36-in: 157 48-in: 263
Size and number of warping wharf piles.	24-in: 80 36-in: 190
Size and number of lightning tower piles.	24-in: 40 36-in: 90
Size and number of trestle piles.	24-in: 57 36-in: 233
Falsework piles	Up to 150, 18- to 24-in
Maximum pile driving duration.	195 days (under 1-year IHA)

Pile installation will employ vibratory pile drivers to the greatest extent possible, and the Navy anticipates that most piles will be able to be vibratory driven to within several feet of the required depth. Pile drivability is, to a large degree, a function of soil conditions and the type of pile hammer. Recent experience at two other construction locations along the NBKB waterfront indicates that most piles should be able to be driven with a vibratory hammer to proper embedment depth. However, difficulties during pile driving may be encountered as a result

of obstructions that may exist throughout the project area. Such obstructions may consist of rocks or boulders within the glacially overridden soils. If difficult driving conditions occur, increased usage of an impact hammer will be required. The Navy estimates that up to five piles may be proofed in a day, requiring a maximum total of 1,000 strikes from the impact hammer. Under a worst-case scenario (i.e., difficult subsurface driving conditions encountered), as many as three piles might require driving with an impact hammer to their full embedment depth. With proofing of two additional piles, this scenario would result in as many as 6,400 impact pile strikes in a day. Please see the FR notice (78 FR 29705; May 21, 2013) for more detail.

Impact pile driving during the first half of the in-water work window (July 16 to September 15) will only occur between 2 hours after sunrise and 2 hours before sunset to protect breeding marbled murrelets (*Brachyramphus marmoratus;* an ESA-listed bird under the jurisdiction of the USFWS). Between September 16 and February 15, construction activities occurring in the water will occur during daylight hours (sunrise to sunset). Other construction (not in-water) may occur between 7 a.m. and 10 p.m., year-round.

Description of Work Completed

During the first in-water work season, and during the period of validity of the first IHA issued for this project, the contractor completed installation of 184 piles to support the main segment of the access trestle. Driven piles ranged in size from 24- to 36-in diameter. A maximum of two vibratory rigs were operated concurrently and only one impact hammer rig was operated at a time. Due to delays in beginning construction, pile driving did not begin until September 28, 2012, and occurred on 78 days between that date and the end of the work window on February 15, 2013. Primarily vibratory driving was conducted; of the 78 pile driving days, both vibratory and impact driving occurred on 19 days and impact driving alone occurred on only three days. During the second season, installation of the piling for the wharf deck is expected to be completed, and it is likely that contractors will more closely approach the notional activity levels contemplated in this analysis (i.e., 195 days total driving, with both impact and vibratory driving occurring on each day). However, the activity level is the maximum possible, and unforeseen delays inherent to any construction schedule mean that it is not likely that the maximum activity level will actually occur.

Description of Sound Sources and Distances to Thresholds

An in-depth description of sound sources in general was provided in the FR notice (78 FR 29705; May 21, 2013). Significant sound-producing in-water construction activities associated with the project include impact and vibratory pile driving and vibratory pile removal.

NMFS uses generic sound exposure thresholds to determine when an activity that produces sound might result in impacts to a marine mammal such that a take by harassment might occur. To date, no studies have been conducted that examine impacts to marine mammals from pile driving sounds from which empirical sound thresholds have been established. Current NMFS practice (in relation to the MMPA) regarding exposure of marine mammals to sound is that cetaceans and pinnipeds exposed to sound levels of 180 and 190 dB root mean square (rms; note that all underwater sound levels in this document are referenced to a pressure of 1 μPa) or above, respectively, are considered to have been taken by Level A (i.e., injurious) harassment, while behavioral harassment (Level B) is considered to have occurred when marine mammals are exposed to sounds at or above 120 dB rms for continuous sound (such as will be produced by vibratory pile driving) and 160 dB rms for pulsed sound (produced by impact pile driving), but below injurious thresholds. For airborne sound, pinniped disturbance from haul-outs has been documented at 100 dB (unweighted) for pinnipeds in general, and at 90 dB (unweighted) for harbor seals (note that all airborne sound levels in this document are referenced to a pressure of 20 μPa). NMFS uses these levels as guidelines to estimate when harassment may occur. NMFS is currently revising these acoustic guidelines. For more information on that process, please visit *http://www.nmfs.noaa.gov/pr/acoustics/guidelines.htm.*

Sound levels can be greatly reduced during impact pile driving using sound attenuation devices. The Navy is required to use sound attenuation devices for all impact pile driving, and has elected to use bubble curtains. Bubble curtains work by creating a column of air bubbles rising around a pile from the substrate to the water surface. The air bubbles absorb and scatter sound waves emanating from the pile, thereby reducing the sound energy. A confined bubble curtain contains the air bubbles within a flexible or rigid sleeve made from plastic, cloth, or pipe. Confined bubble curtains generally offer higher attenuation levels than unconfined curtains because they may physically block sound waves and they prevent air bubbles from migrating away from the pile.

The literature presents a wide array of observed attenuation results for bubble curtains (e.g., Oestman *et al.,* 2009, Coleman, 2011, Caltrans, 2012). The variability in attenuation levels is due to variation in design, as well as differences in site conditions and difficulty in properly installing and operating in-water attenuation devices. As a general rule, reductions of greater than 10 dB cannot be reliably predicted. In the acoustic modeling conducted by the Navy to assess project impacts, they assumed that use of a bubble curtain could reasonably result in 10 dB of attenuation, and reduced the proxy source levels accordingly. Since that initial assessment was completed, site-specific measurements from the Navy's 2011 Test Pile Project (TPP; Illingworth & Rodkin, Inc., 2012), as well as difficulties encountered by the Navy's contractors in properly deploying bubble curtains, have shown that 8 dB (or possibly less) may be a more realistic assumption regarding average SPL (rms) reduction. However, the prior assumption of 10 dB attenuation is carried forward here. The Navy has committed to implementing conservative shutdown zones, as indicated by empirical, site-specific measurements that are larger than those predicted from the modeling results in order to ensure that the 180/190 dB zones are encompassed by protective measures. Prior to any future IHAs, we will work with the Navy to more accurately account for the mitigating effects of bubble curtain usage. In addition, to avoid loss of attenuation from design and implementation errors, the Navy has incorporated contractual requirements regarding specific bubble curtain design specifications, including testing requirements for air pressure and flow prior to initial impact hammer use, and a requirement for placement on the substrate.

Distance to Sound Thresholds

Pile driving generates underwater noise that can potentially result in disturbance to marine mammals in the project area. Please see the FR notice (78 FR 29705; May 21, 2013) for a detailed description of the calculations and information used to estimate distances to relevant threshold levels. Transmission loss, or the decrease in acoustic intensity as an acoustic

pressure wave propagates out from a source, was estimated as so-called ''practical spreading loss''. This model follows a geometric propagation loss based on the distance from the pile, resulting in a 4.5 dB reduction in level for each doubling of distance from the source. In the model used here, the sound pressure level (SPL) at some distance away from the source (e.g., driven pile) is governed by a measured source level, minus the transmission loss of the energy as it dissipates with distance.

The intensity of pile driving sounds is greatly influenced by factors such as the type of piles, hammers, and the physical environment in which the activity takes place. A large quantity of literature regarding SPLs recorded from pile driving projects is available for consideration. In order to determine reasonable SPLs and their associated effects on marine mammals that are likely to result from pile driving at NBKB, studies with similar properties to the specified activity were evaluated, including measurements conducted for driving of steel piles at NBKB as part of the TPP (Illingworth & Rodkin, Inc., 2012). During the TPP, SPLs from driving of 24-, 36-, and 48-in piles by impact and vibratory hammers were measured. Sound levels associated with vibratory pile removal are assumed to be the same as those during vibratory installation (Reyff, 2007)—which is likely a conservative assumption—and have been taken into consideration in the modeling analysis. Overall, studies which met the following parameters were considered: (1) Pile size and materials: Steel pipe piles (30–72 in diameter); (2) Hammer machinery: Vibratory and impact hammer; and (3) Physical environment: shallow depth (less than 100 ft [30 m]).

Representative data for pile driving SPLs recorded from similar construction activities in recent years were presented in the FR notice (78 FR 29705; May 21, 2013). For impact pile driving, distances to the marine mammal sound thresholds were calculated with the assumption of a 10 dB reduction in source levels from the use of a bubble curtain. For impact driving, a source value of 195 dB RMS re 1µPa at 10 m (185 dB used as proxy value) was the average value reported from the listed studies, and is consistent with measurements from the TPP and Carderock Pier pile driving projects at NBKB, which had similar pile materials (48- and 42-inch hollow steel piles, respectively), water depth, and substrate type as the EHW–2 project site. For vibratory pile driving, the Navy selected the most conservative value (72-in piles; 180 dB rms re 1µPa at 10 m) available when initially assessing EHW–2 project impacts, prior to the first year of the project. Since then, data from the TPP have become available that indicate, on average, a lower source level for vibratory pile driving (172 dB rms re 1µPa for 48-inch steel piles). However, for consistency we have maintained the initial conservative assumption regarding source level for vibratory driving. All calculated distances to and the total area encompassed by the marine mammal sound thresholds are provided in Table 2. Predicted distances to thresholds for different sources are shown in Figures 6–1 and 6–2 of the Navy's application.

Under the maximum construction scenario, up to three vibratory drivers will operate simultaneously with one impact driver. Although radial distance and area associated with the zone ensonified to 160 dB rms (the behavioral harassment threshold for pulsed sounds, such as those produced by impact driving) are presented in Table 2 for reference, this zone would be subsumed by the 120 dB rms zone produced by vibratory driving. Thus, behavioral harassment of marine mammals associated with impact driving is not considered further here. Since the 160 dB threshold and the 120 dB threshold both indicate behavioral harassment, pile driving effects in the two zones are equivalent. Although such a day is not planned, if only the impact driver is operated on a given day, incidental take on that day would likely be lower because the area ensonified to levels producing Level B harassment would be smaller (although actual take would be determined by the numbers of marine mammals in the area on that day). The use of multiple vibratory rigs at the same time will result in a small additive effect with regard to produced SPLs; however, because the sound field produced by vibratory driving will be truncated by land in the Hood Canal, no increase in actual sound field produced will occur. There will be no overlap in the 190/180-dB sound fields produced by rigs operating simultaneously.

TABLE 2—CALCULATED DISTANCE(S) TO AND AREA ENCOMPASSED BY UNDERWATER MARINE MAMMAL SOUND THRESHOLDS DURING PILE INSTALLATION

Threshold	Distance (m)	Area, km[2]
Impact driving, pinniped injury (190 dB)	4.9	0.0001
Impact driving, cetacean injury (180 dB)	22	0.002
Impact driving, disturbance[2] (160 dB)	724	1.65
Vibratory driving, pinniped injury (190 dB)	2.1	< 0.0001
Vibratory driving, cetacean injury (180 dB)	10	0.0003
Vibratory driving, disturbance (120 dB)	[3] 13,800	[3] 41.4 (15.98)

[1] SPLs used for calculations were: 185 dB for impact and 180 dB for vibratory driving.
[2] Area of 160-dB zone presented for reference. Estimated incidental take calculated on basis of larger 120-dB zone.
[3] Hood Canal average width at site is 2.4 km (1.5 mi), and is fetch limited from N to S at 20.3 km (12.6 mi). Calculated range (over 222 km) is greater than actual sound propagation through Hood Canal due to intervening land masses. 13.8 km (8.6 mi) is the greatest line-of-sight distance from pile driving locations unimpeded by land masses, which would block further propagation of sound. 15.98 km is the approximate actual area encompassing the 120-dB zone, as demonstrated by modeling results.

Hood Canal does not represent open water, or free field, conditions. Therefore, sounds will attenuate as they encounter land masses or bends in the canal. As a result, the calculated distance and areas of impact for the 120 dB threshold cannot actually be attained at the project area. See Figure 6–1 of the Navy's application for a depiction of the size of areas in which each underwater sound threshold is predicted to occur at the project area due to pile driving.

Pile driving can generate airborne sound that could potentially result in disturbance to marine mammals (specifically, pinnipeds) which are hauled out or at the water's surface. As a result, the Navy analyzed the potential for pinnipeds hauled out or swimming at the surface near NBKB to be exposed to airborne SPLs that could result in Level B behavioral harassment. A spherical spreading loss model (i.e., 6 dB reduction in sound level for each

doubling of distance from the source), in which there is a perfectly unobstructed (free-field) environment not limited by depth or water surface, is appropriate for use with airborne sound and was used to estimate the distance to the airborne thresholds.

As was discussed for underwater sound from pile driving, the intensity of pile driving sounds is greatly influenced by factors such as the type of piles, hammers, and the physical environment in which the activity takes place. In order to determine reasonable airborne SPLs and their associated effects on marine mammals that are likely to result from pile driving at NBKB, studies with similar properties to the Navy's project, as described previously, were evaluated.

Based on in-situ recordings from similar construction activities, the Navy previously considered the maximum airborne sound levels that would result from impact and vibratory pile driving as 118 dB and 96 dB (at 15 m), respectively (Blackwell *et al.,* 2004; Laughlin, 2010). During the TPP, impact driving was measured at 109 dB and vibratory driving at 102 dB (at 15 m). We have retained the previous values for impact assessment because the value for impact driving, as used in the combined rig scenario, results in a more conservative ZOI than does the TPP measurement. The Navy has analyzed the combined sound field produced under the multi-rig scenario and calculated the radial distances to the 90 and 100 dB airborne thresholds as 361 m and 114 m, respectively, equating to areas of 0.41 km^2 and 0.04 km^2, respectively.

There are no haul-out locations within these zones, which are encompassed by the zones estimated for underwater sound. Protective measures would be in place out to the distances calculated for the underwater thresholds, and the distances for the airborne thresholds would be covered fully by mitigation and monitoring measures in place for underwater sound thresholds. Construction sound associated with the project would not extend beyond the buffer zone for underwater sound that would be established to protect pinnipeds. No haul-outs or rookeries are located within the airborne harassment radii. See Figure 6–2 of the Navy's application for a depiction of the size of areas in which each airborne sound threshold is predicted to occur at the project area due to pile driving. We recognize that pinnipeds in water that are within the area of ensonification for airborne sound could be incidentally taken by either underwater or airborne sound or both. We consider these incidences of harassment to be accounted for in the take estimates for underwater sound.

Acoustic Monitoring

During the first year of construction for EHW–2, the Navy conducted acoustic monitoring as required under the IHA. During year one, 24- to 36-in diameter piles were primarily driven, by vibratory and impact driving. Only one 48-in pile was driven, so no data are provided for that pile size. All piles were steel pipe piles. Primary objectives for the acoustic monitoring were to characterize underwater and airborne source levels for each pile size and hammer type and to verify distances to relevant threshold levels by characterizing site-specific transmission loss. Select results are reproduced here; the interested reader may find the entire reports posted at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm.*

TABLE 3—ACOUSTIC MONITORING RESULTS FROM 2012–13 ACTIVITIES AT EHW–2

Pile size (in)	Hammer type [1]	n	Underwater			Airborne	
			RL [3]	SD [4]	TL [5]	RL [6]	SD
24	Impact	41	179	24.1	18.6	103	1.0
36	Impact	26	188	5.0	14.9	102	2.2
24	Vibratory	71	163	8.3	15.3	95	3.7
36	Vibratory	113	169	4.3	16.8	103	3.2

[1] All data for impact driving include use of bubble curtain.
[2] n = sample size, or number of measured pile driving events.
[3] Received level at 10 m, presented in dB re: 1 μPa rms.
[4] Standard deviation.
[5] Transmission loss (log_{10}).
[6] Received level at 15 m, presented in dB re: 20 μPa rms (Z-weighted L_{eq}).

For vibratory driving, measured source levels were below the 180-dB threshold. Calculation of average distances to the 120-dB threshold was complicated by variability in propagation of sound at greater distances, variability in measured sounds from event to event, and the difficulty of making measurements, given noise from wind and wave action, in the far field. Also, as observed during previous monitoring events at NBKB, measured levels in shallower water at the far side of Hood Canal are sometimes louder than measurements made closer to the source in the deeper open channel. These events are unexplained. Average radial distances to the 120-dB threshold were 2,765 m for 24-in piles and 10,483 m for 36-in piles. However, the topography of Hood Canal realistically constrains distances to 7,000 m to the south of the project area. For impact driving, calculated average zones (provided for 36-in piles) were as follows: 190-dB zone at 12 m; 180-dB zone at 45 m; and 160-dB zone at 670 m. Measurements of impact driving for 24-in piles showed a high degree of variation (standard deviation of 24.1) because many of these piles were driven either on land or in extremely shallow water, while others were driven in deeper water more characteristic of typical driving conditions for EHW–2.

Sound levels during soft starts were typically lower than those levels at the initiation and completion of continuous vibratory driving. However, levels during continuous driving varied considerably and were at times lower than those produced during the soft starts. It is difficult to assign a level that describes how much lower the soft start sound levels were than continuous levels. Similarly inconclusive results were seen from monitoring associated with the TPP.

Comments and Responses

We published a notice of receipt of the Navy's application and proposed IHA in the **Federal Register** on May 21, 2013 (78 FR 29705). NMFS received comments from the Marine Mammal Commission (Commission). The Commission's comments and our responses are provided here, and the comments have been posted on the

internet at: *http://www.nmfs.noaa.gov/pr/permits/incidental.htm.*

Comment 1: The Commission recommends that we require the Navy to re-estimate the number of harbor seal takes using more recent survey data from Tannenbaum *et al.* (2009, 2011), which is based on the total estimated population rather than the Navy's rationale of reducing the density for the proportion of seals hauled out and older data.

Response: As described in greater detail in the FR notice, there are two sources of information from which a suitable density estimate may be derived for harbor seals. These include aerial surveys of Hood Canal (358.4 km^2) conducted in 1999 and vessel-based marine wildlife surveys conducted by the Navy in nearshore waters of NBKB (3.9 km^2) during July through September 2008 and November through May 2009–10. Despite the time lapse, these survey efforts produce comparable results. Because harbor seals, unlike sea lions, form a resident population in Hood Canal and are not known to be attracted to the NBKB waterfront by any foraging or haul-out opportunity, it is the opinion of both NMFS and the Navy that it is preferable to use the density value that is derived from a survey of the entire population. The Tannenbaum *et al.* (2009, 2011) data are not based on the total estimated population, but on surveys of a very small section of Hood Canal (approximately one percent of the Hood Canal area along the NBKB waterfront).

Based on the 1999 surveys, which also form the basis for the most recent abundance estimates provided in NMFS' Stock Assessment Report for the Washington inland waters stock of harbor seals, Jeffries *et al.* (2003) estimated the abundance of harbor seals in the Hood Canal as 1,088 individuals. The resulting density is 3.04 animals/km^2; however, use of this density in estimating take would make the assumption that 100 percent of the animals would be in the water at all times. Therefore, a factor derived from Huber *et al.* (2001)—only 35 percent of seals are in the water at any given time—was applied to correct for animals out of the water and not available to be exposed to underwater sound; the resulting corrected density of seals in the water at any given time is 1.06 animals/km^2. We note here that previous analyses for Navy actions at NBKB used a corrected density of 1.31 animals/km^2 that was based on an erroneous understanding of the survey area used by Jeffries *et al.* (2003). The Navy requested that we retain the higher density for take estimation associated with this IHA because their analyses were already complete, and because the higher density would produce an overestimate of take. A separate request for incidental take authorization, for the barge mooring project at NBKB, uses the lower density estimate based off of an accurate understanding of the survey area used by Jeffries *et al.* (2003). The reason for the discrepancy was clearly explained (see page 29728 at 78 FR 29705; May 21, 2013).

The Commission disagrees with this approach because of their contention that (1) an instantaneous estimate of animals in the water at a given time does not produce an accurate assessment of the number of individuals that may enter the water over the daily duration of the activity and (2) use of the uncorrected density would be consistent with our decision to base the number of takes of sea lions on average monthly maximum abundance estimates at NBKB haul-out sites, under the assumption that each individual present would enter the water and therefore be exposed to underwater sound that may result in behavioral harassment at some point on any given day. With regard to the second point, we note that consistency between approaches for sea lions and for harbor seals would not be appropriate. Sea lions are attracted to the NBKB waterfront by the presence of submarines and other haul-out opportunities. Site-specific data therefore better reflects the nature of sea lion occurrence than does a regional density. With regard to the first point, as acknowledged in the FR notice (78 FR 29705; May 21, 2013), we recognize that over the course of a day, while the proportion of animals in the water may not vary significantly, different individuals may enter and exit the water. That is, it is probable that greater than 35 percent of seals will enter the water at some point during the day. No data exist regarding fine-scale harbor seal movements within the project area on time durations of less than a day, thus precluding an assessment of ingress or egress of different animals through the action area. As such, it is impossible, given available data, to determine exactly what number of individuals above 35 percent may potentially be exposed to underwater sound. Therefore, we are left to make a decision, on the basis of limited available information, regarding which of these two scenarios (i.e., 100 percent vs. 35 percent of harbor seals are in the water and exposed to sound) produces a more accurate estimate of the potential incidents of take.

First, we understand that hauled-out harbor seals are necessarily at haul-outs. No significant harbor seal haul-outs are located within or near the action area. Harbor seals observed in the vicinity of the NBKB shoreline are rarely hauled-out (for example, in formal surveys during 2007–08, approximately 86 percent of observed seals were swimming), and when hauled-out, they do so opportunistically (i.e., on floating booms rather than established haul-outs). Harbor seals are typically unsuited for using manmade haul-outs at NBKB, which are used by sea lions. Primary harbor seal haul-outs in Hood Canal are located at significant distance (20 km or more) from the action area in Dabob Bay or further south (see Figure 4–1 in the Navy's application), meaning that animals casually entering the water from haul-outs or flushing due to some disturbance at those locations would not be exposed to underwater sound from the project; rather, only those animals embarking on foraging trips and entering the action area may be exposed.

Second, we know that harbor seals in Hood Canal are not likely to have a uniform distribution as is assumed through use of a density estimate, but are likely to be relatively concentrated near areas of interest such as the haul-outs found in Dabob Bay or foraging areas. The majority of the action area consists of the Level B harassment zone in deeper waters of Hood Canal; past observations from surveys and required monitoring have confirmed that harbor seals are less abundant in these waters.

Third, a typical pile driving day (in terms of the actual time spent driving) is much shorter than the 8–15 hours cited by the Commission as a representative pile driving day. Construction scheduling and notional production rates in concert with typical delays mean that hammers are active for only some small fraction of time on pile driving ''days''. During the first year of construction for EHW–2, vibratory pile driving occurred on 75 days, but only for an approximate total time of 71 hours.

What we know tells us that (1) The turnover of harbor seals (in and out of the water) is occurring primarily outside the action area and would not be expected to result in a greater number of individuals entering the action area within a given day and being harassed than is assumed; (2) there are likely to be significantly fewer harbor seals in the majority of the action area than would be indicated by the uncorrected density; and (3) pile driving actually occurs over a limited timeframe on any given day, reducing the amount of time over which new individuals might enter the action area within a given day. These factors lead us to believe that the corrected

density is likely to more closely approximate the number of seals that may be found in the action area than does the uncorrected density, and there are no existing data that would indicate that the proportion of individuals entering the water within the predicted area of effect during pile driving would be dramatically larger than 35 percent. Therefore, the Commission's suggestion that 100 percent of the population be used to estimate density would likely result in a gross exaggeration of potential take. Moreover, because the Navy is typically unable to determine from field observations whether the same or different individuals are being exposed, each observation is recorded as a new take, although an individual theoretically would only be considered as taken once in a given day.

Finally, we note that during the course of four previous IHAs over two years (2011–12), the Navy has been authorized for 6,725 incidents of incidental harassment (corrected for actual number of pile driving days). The total estimate of actual incidents of take (observed takes and observations extrapolated to unobserved area) was 868. This is almost certainly negatively biased, but the huge disparity does provide confirmation that we are not significantly underestimating takes.

Comment 2: The Commission recommends that we require the Navy to implement soft start procedures after 15 minutes if pile driving or removal is delayed or shut down because of the presence of a marine mammal within or approaching the shutdown zone.

Response: We do not believe the recommendation would be effective in reducing the number or intensity of incidents of harassment—in fact, we believe that implementation of this recommendation may actually increase the number of incidents of harassment by extending the overall project duration—while imposing a high cost in terms of operational practicability. We note here that, while the Commission recommends use of the measure to avoid serious injury (i.e., injury that will result in death of the animal), such an outcome is extremely unlikely even in the absence of any mitigation measures (as described in the FR notice at 78 FR 29705; May 21, 2013). Given that conclusion, we address our response to the potential usefulness of the measure in avoidance of non-serious injury (i.e., Level A harassment).

Soft start is required for the first impact pile driving of each day and, subsequently, after any impact pile driving stoppage of 30 minutes or greater. The purpose of a soft start is to provide a ''warning'' to animals by initiating the production of underwater sound at lower levels than are produced at full operating power. This warning is presumed to allow animals the opportunity to move away from an unpleasant stimulus and to potentially reduce the intensity of behavioral reactions to noise or prevent injury of animals that may remain undetected in the zone ensonified to potentially injurious levels. However, soft start requires additional time, resulting in a larger temporal footprint for the project. That is, soft start requires a longer cumulative period of pile driving (i.e., hours) but, more importantly, leads to a longer overall duration (i.e., more days on which pile driving occurs). In order to maximize the effectiveness of soft start while minimizing the implementation costs, we require soft start after a period of extended and unobserved relative silence (i.e., at the beginning of the day, after the end of the required 30-minute post-activity monitoring period, or after 30 minutes with no impact driving). It is after these periods that marine mammals are more likely to closely approach the site (because it is relatively quiet) and less likely to be observed prior to initiation of the activity (because continuous monitoring has been interrupted).

The Commission justifies this recommendation on the basis of the potential for undetected animals to remain in the shutdown zone, and describes various biases (i.e., availability, detection, and perception) on an observer's ability to detect an animal. We do not believe that time is a factor in determining the influence of these biases on the probability of observing an animal in the shutdown zone. That is, an observer is not more likely to detect the presence of an animal at the 15-minute mark of continuous monitoring than after 30 minutes (it is established that soft start is required after any unmonitored period). Therefore, requiring soft start after 15 minutes (i.e., more soft starts) is not likely to result in increased avoidance of injury. Finally, we do not believe that the use of soft start may be expected to appreciably reduce the potential for injury where the probability of detection is high (e.g., small, shallow zones with good environmental conditions). Rather, the primary purpose of soft start under such conditions is to reduce the intensity of potential behavioral reactions to underwater sound in the disturbance zone.

As noted by the Commission, there are multiple reasons why marine mammals may remain in a shutdown zone and yet be undetected by observers. Animals are missed because they are underwater (availability bias) or because they are available to be seen, but are missed by observers (perception and detection biases) (e.g., Marsh and Sinclair, 1989). Negative bias on perception or detection of an available animal may result from environmental conditions, limitations inherent to the observation platform, or observer ability. While missed detections are possible in theory, this would require that an animal would either (a) remain submerged (i.e., be unavailable) for periods of time approaching or exceeding 15 minutes and/or (b) remain undetected while at the surface. We provide further site-specific detail below.

First, environmental conditions in the Hood Canal are typically excellent and, unlike the moving aerial or vessel-based observation platforms for which detectability bias is often a concern, the observers here will be positioned in the most suitable locations to ensure high detectability (randomness of observations is not a concern, as it is for abundance sampling). We believe that the probability of detecting animals within the shutdown zones proposed for this action approaches 100 percent. The 190 dB zone for pinnipeds is small, with radial distance of only 20 m, while the 180 dB zone for cetaceans (85 m) is notional only—no cetaceans have ever been recorded as entering the security area bounded by the floating port security barrier. Regarding availability, the most abundant species, and therefore the species most likely to be present in the mitigation zones, are the harbor seal and California sea lion.

It is generally unlikely that a pinniped would remain within approximately 20 m of an active construction zone, in the absence of any known foraging opportunities or other attractant of any significance, for an extended period of time. However, some harbor seals have been known to frequent the areas surrounding existing wharves at NBKB. Even when this situation does occur, the possibility that individuals would remain submerged for a period of time exceeding 15 minutes is discountable.

Dive behavior for harbor seals, including typical duration, is influenced by a variety of factors, such as behavioral context, local bathymetric conditions, and the specific physiological characteristics of the animal (e.g., Harkonen, 1987a,b; Eguchi and Harvey, 2005). Dive depth may be expected to correlate well with dive duration. However, Eguchi and Harvey (2005) showed that average dive durations in Monterey Bay, where available depths are much deeper than

those in the nearshore environment at NBKB, were only 4.8 and 5.5 minutes for females and males, respectively. Although fine-scale population structure exists for harbor seals on a geographic basis from California to Alaska (Carretta *et al.,* 2011), similar results have been obtained in Alaska and Washington. Dive durations for harbor seals from three locations across the Gulf of Alaska were typically less than 4 minutes across factors (Hastings *et al.,* 2004). Closer to the action area in Puget Sound waters, Suryan and Harvey (1998) reported dive depths ranging from 3.2–4.6 min. Importantly, those durations were reduced in nearshore waters similar to those in the shutdown zone (1.5–3.6 min). Conversely, dive durations were somewhat longer during milling behavior, which is sometimes observed in the action area. However, surface intervals (which ranged from 0.6–0.9 min) showed a significantly positive correlation to dive duration (Suryan and Harvey, 1998), meaning that longer dives, or periods of high availability bias, are followed by periods of relatively greater availability.

Sea lions employ a shallow epipelagic foraging strategy, and numerous studies have reported mean dive times of approximately 2 minutes for California sea lions (e.g., Feldkamp *et al.,* 1989 [mean dive time less than 3 min]; Weise *et al.,* 2006 [mean dive time 1.9 ± 1.6 min]). Kuhn *et al.* (2003) cite published values for sea lion aerobic dive limits ranging from 2.3–5.8 minutes and, while it is possible that sea lions may dive beyond these limits when foraging on the benthos, significantly longer dive durations would not be expected in shallow waters. In addition, while short surface intervals are also possible, longer values are typical of data found in the literature for animals engaged in foraging (e.g., Costa *et al.* (2007) report a mean surface interval of 1.6 minutes). Sea lions will typically spend a much greater proportion of time at the surface when not foraging, and behavioral observations in the nearshore action area show that California sea lions are typically traveling, likely to haul-out opportunities at Delta Pier.

Under the typically excellent observation conditions found in the Hood Canal, we believe that surfaced animals would be observed. Based on the foregoing factors, we have high confidence in the ability of observers to detect marine mammals in the shutdown zones estimated for this project in the Hood Canal.

Comment 3: The Commission recommends that we require the Navy to consult with the Washington State Department of Transportation and/or the California Department of Transportation to (1) determine whether soft start procedures can be used safely with the vibratory hammers that the Navy plans to use prior to eliminating the Navy's requirement to implement those measures and (2) clarify and troubleshoot the sound attenuation device implementation procedures to ensure the device's efficacy.

Response: We concur with the first part of the Commission's recommendation and will facilitate the suggested consultation. However, this cannot be accomplished prior to issuance of the IHA due to the Navy's operational needs. Accordingly, we deem vibratory soft starts to not currently be practicable due to safety concerns. We will determine whether the potentially significant human safety issue is inherent to implementation of the measure or is due to operator error prior to issuing any further IHAs to the Navy for pile driving activities in 2014 and beyond.

With regard to sound attenuation device implementation, we previously required the Navy to use such a device and to require that their contractors ensure: (1) that the device be capable of achieving attenuation performance of 10 dB of reduction and (2) that the device is properly deployed such that no reduction in performance may be attributable to operator error. However, because recent observations indicate that achievement of 10 dB of attenuation performance may not be reasonable, we now stipulate simply that the Navy must make the necessary contractual requirements to ensure that the device is capable of achieving optimal performance, and that deployment of the device is implemented properly such that no reduction in performance may be attributable to faulty deployment. Compliance with this stipulation is incumbent upon the Navy and it would not be appropriate for us to dictate the manner of compliance, including requirements for consultation with third parties.

Comment 4: The Commission recommends that we require the Navy to monitor the extent of the disturbance zone using additional shore- or vessel-based observers beyond the waterfront restricted area to (1) determine the numbers of marine mammals taken during pile driving and removal activities and (2) characterize the effects on those mammals.

Response: We believe that we have developed, in consultation with the Navy, a strategy that is appropriate to accomplish the stated objectives of the Commission's recommendation. The Commission states that the goal is not simply to employ a strategy that ensures monitoring out to a certain distance, but rather to employ a strategy that provides the information necessary to determine if the construction activities have adverse effects on marine mammals and to describe the nature and extent of those effects. We agree with that statement, and note that the Navy does not simply monitor within defined zones, ignoring occurrences outside those zones. The mitigation strategy is designed to implement shutdown of activity only for marine mammal occurrence within designated zones, but all observations of marine mammals and any observed behavior, whether construed as a reaction to project activity or not, are recorded regardless of distance to project activity. This information is coupled with the results of previous acoustic monitoring data (i.e., sound levels recorded at multiple defined distances from the activity) to draw conclusions about the impact of the activity on marine mammals. Importantly, the larger monitoring effort conducted by the Navy in deeper waters of Hood Canal during their 2011 project monitoring was an important piece of the Navy's overall monitoring strategy for the ongoing suite of actions at NBKB and may reasonably be used as a reference for the current activities. Using that information, as well as the results of required monitoring associated with the 2011–12 Test Pile Program, 2011–13 rehabilitation of the existing Explosives Handling Wharf, and the first year of construction for the EHW–2, we believe we have gained a sufficient understanding of marine mammal behavior in response to the specified activities, as well as occurrence and behavior within the Level B harassment zone in deeper waters beyond the waterfront restricted area, which is intensively monitored. We also note that the de facto zone of monitoring effort has been expanded for the duration of the concurrent barge mooring effort, as observers monitoring the waterfront at that location will also be collecting information on occurrence and potential reactions of marine mammals.

The Commission urges us to consider a more comprehensive approach to assessment of effects of activities co-located in time and space. We believe that the Navy has designed a comprehensive, multi-year approach for its monitoring strategy. It is not fiscally feasible, or the best use of resources, to deploy multiple vessel-based observers for year after year of similar activities. A strategic approach demands front-loaded effort that, when properly

designed, provides utility for subsequent years. Beginning in 2008, the Navy began to expand their efforts to better understand nature and frequency of occurrence for wildlife at NBKB. Opportunistic haul-out surveys and vessel-based wildlife surveys have been useful in evaluating the potential effects of construction activities. At the initiation of the recent construction activities, the Navy mounted an intensive monitoring effort, including deep-water monitoring (that was not mitigation-specific) and comprehensive acoustic monitoring, with the express purpose of providing a robust body of data that would form a reference for evaluation of future effects of similar activities. In addition, the Navy has proactively secured funding and sought collaboration with NMFS and other experts to conduct future surveys of Washington inland waters that will provide much-needed updates to our understanding of marine mammal abundance and distribution in the region.

Comment 5: The Commission recommends that we complete an analysis of the impact of the proposed activities together with the cumulative impacts of all the other pertinent risk factors (including but not limited to the Navy's concurrent barge mooring project) for marine mammals in the Hood Canal area.

Response: Section 101(a)(5)(D) of the MMPA requires NMFS to make a determination that the harassment incidental to a specified activity will have a negligible impact on the affected species or stocks of marine mammals, and will not result in an unmitigable adverse impact on the availability of marine mammals for taking for subsistence uses. Neither the MMPA nor NMFS' implementing regulations specify how to consider other activities and their impacts on the same populations. However, consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into the negligible impact analysis via their impacts on the environmental baseline (e.g., as reflected in the density/distribution and status of the species, population size and growth rate, and ambient noise).

In addition, cumulative effects were addressed in the Navy's Environmental Impact Statement and in the biological opinion prepared for this action, as well as in the NEPA analyses prepared for other actions conducted at the NBKB waterfront. These documents, as well as the relevant Stock Assessment Reports, are part of NMFS' Administrative Record for this action, and provided the decision-maker with information regarding other activities in the action area that affect marine mammals, an analysis of cumulative impacts, and other information relevant to the determination made under the MMPA.

Comment 6: The Commission recommends that we encourage the Navy to combine future requests for IHAs for all activities that would occur in the same general area and within the same year rather than segmenting those activities and their associated impacts by requesting separate authorizations.

Response: We agree with the Commission's recommendation and have encouraged the Navy to do so. However, we do not have the statutory authority to require the Navy to combine such requests. With our encouragement, the Navy is working to develop a regionally comprehensive approach to environmental compliance for reasonably foreseeable small actions, such as pile replacement and repair projects. A major project such as the current EHW–2 construction would likely remain as a standalone effort due to constraints related to planning, funding, and contracting.

Comment 7: The Commission recommends that we require the Navy to use the same data (e.g., source levels, sound attenuation factors, densities), methods, and justification for all pile driving and removal activities that occur during the same timeframe at NBKB.

Response: We concur with the Commission's recommendation and will require consistency from the Navy in future IHA requests. However, we are not overly concerned here because where there are inconsistencies they are due to use of conservative approaches. For example, in discussing source levels used for determining mitigation zones, the Commission notes that the Navy used a conservative estimate (i.e., the maximum source level) for the barge mooring project, but did not do so for the EHW–2. While the approach differs, conservatism is also built into the estimation of mitigation zones for EHW–2, not through use of a conservative source level, but by using the maximum radial distances to relevant thresholds, as measured during in site-specific acoustic monitoring. The modeled zones for the EHW–2 project were 22 and 5 m for the 180 and 190 dB zones, respectively, but the zones required of the Navy are 85 and 20 m, respectively. This more conservative approach was adopted at the urging and with the concurrence of the Commission in 2012. The Commission states that it is unclear why these inconsistencies are present, however, in each case the reason for the inconsistency and the rationale for our decision that use of an inconsistent approach is acceptable, if not desirable, is clearly presented in the associated FR notices.

Description of Marine Mammals in the Area of the Specified Activity

There are seven marine mammal species, four cetaceans and three pinnipeds, which may inhabit or transit through the waters nearby NBKB in the Hood Canal. These include the transient killer whale, harbor porpoise, Dall's porpoise, Steller sea lion, California sea lion, harbor seal, and humpback whale. The Steller sea lion and humpback whale are the only marine mammals that may occur within the Hood Canal that are listed under the Endangered Species Act (ESA); the humpback whale is listed as endangered and the eastern distinct population segment (DPS) of Steller sea lion is listed as threatened. The Steller sea lion is typically present in low numbers in the Hood Canal only from approximately October through mid-April. The humpback whale is not typically present in Hood Canal, with no confirmed sightings found in the literature or the Orca Network database (*http://www.orcanetwork.org/*) prior to January and February 2012, when one individual was observed repeatedly over a period of several weeks. No sightings have been recorded since that time and we consider the humpback whale to be a rare visitor to Hood Canal at most. While the southern resident killer whale is resident to the inland waters of Washington and British Columbia, it has not been observed in the Hood Canal in over 15 years. Therefore, these three stocks were excluded from further analysis. The FR notice (78 FR 29705; May 21, 2013) summarizes the population status and abundance of these species, and the Navy's application provides detailed life history information.

Potential Effects of the Specified Activity on Marine Mammals

We have determined that pile driving, as outlined in the project description, has the potential to result in behavioral harassment of marine mammals that may be present in the project vicinity while construction activity is being conducted. Pile driving could potentially harass those pinnipeds that are in the water close to the project site, whether exposed to airborne or underwater sound. The FR notice (78 FR 29705; May 21, 2013) provides a detailed description of marine mammal hearing and of the potential effects of

these construction activities on marine mammals.

Anticipated Effects on Habitat

The specified activities at NBKB will not result in permanent impacts to habitats used directly by marine mammals, such as haul-out sites, but may have potential short-term impacts to food sources such as forage fish and salmonids. There are no rookeries or major haul-out sites within 10 km (6.2 mi), foraging hotspots, or other ocean bottom structures of significant biological importance to marine mammals that may be present in the marine waters in the vicinity of the project area. Therefore, the main impact issue associated with the specified activity will be temporarily elevated sound levels and the associated direct effects on marine mammals, as discussed previously in this document. The most likely impact to marine mammal habitat occurs from pile driving effects on likely marine mammal prey (i.e., fish) near NBKB and minor impacts to the immediate substrate during construction activity associated with the EHW–2 project. The FR notice (78 FR 29705; May 21, 2013) describes these potential impacts in greater detail.

Summary of Previous Monitoring

The Navy complied with the mitigation and monitoring required under the previous authorization for this project. In accordance with the 2012 IHA, the Navy submitted a Year 1 Marine Mammal Monitoring Report (2012–2013), covering the period of July 16 through February 15. Due to delays in beginning the project the first day of monitored pile driving activity occurred on September 28, 2012, and a total of 78 days of pile driving occurred between then and February 14, 2013. That total included 56 days of vibratory driving only, three days of only impact driving, and 19 days where both vibratory and impact driving occurred. Marine mammal monitoring occurred the before, during, and after each pile driving event. During the course of these activities, the Navy did not exceed the take levels authorized under the IHA. For more detail, including full monitoring results and analysis, please see the monitoring report at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm*.

Mitigation

In order to issue an incidental take authorization (ITA) under Section 101(a)(5)(D) of the MMPA, we must, where applicable, set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (where relevant).

Measurements from similar pile driving events were coupled with practical spreading loss to estimate zones of influence (ZOIs; see ''Estimated Take by Incidental Harassment''); these values were used to develop mitigation measures for pile driving activities at NBKB. The ZOIs effectively represent the mitigation zones that will be established around each pile to prevent Level A harassment to marine mammals, while providing estimates of the areas within which Level B harassment might occur. In addition to the measures described later in this section, the Navy will employ the following standard mitigation measures:

(a) Conduct briefings between construction supervisors and crews, marine mammal monitoring team, acoustical monitoring team, and Navy staff prior to the start of all pile driving activity, and when new personnel join the work, in order to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures.

(b) Comply with applicable equipment sound standards and ensure that all construction equipment has sound control devices no less effective than those provided on the original equipment.

(c) For in-water heavy machinery work other than pile driving (using, e.g., standard barges, tug boats, barge-mounted excavators, or clamshell equipment used to place or remove material), if a marine mammal comes within 10 m, operations shall cease and vessels shall reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include the following activities: (1) movement of the barge to the pile location; (2) positioning of the pile on the substrate via a crane (i.e., stabbing the pile); (3) removal of the pile from the water column/substrate via a crane (i.e., deadpull); or (4) the placement of sound attenuation devices around the piles. For these activities, monitoring will take place from 15 minutes prior to initiation until the action is complete.

Monitoring and Shutdown for Pile Driving

The following measures will apply to the Navy's mitigation through shutdown and disturbance zones:

Shutdown Zone—For all pile driving and removal activities, the Navy will establish a shutdown zone intended to contain the area in which SPLs equal or exceed the 180/190 dB rms acoustic injury criteria. The purpose of a shutdown zone is to define an area within which shutdown of activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area), thus preventing injury, serious injury, or death of marine mammals. Modeled distances for shutdown zones are shown in Table 2. However, during impact pile driving, the Navy would implement a minimum shutdown zone of 85 m radius for cetaceans and 20 m for pinnipeds around all pile driving activity. The modeled injury threshold distances are approximately 22 and 5 m, respectively, but the distances are increased based on in-situ recorded sound pressure levels from the TPP. During vibratory driving, the shutdown zone would be 10 m distance from the source for all animals. These precautionary measures are intended to act conservatively in the implementation of the measure and further reduce any possibility of acoustic injury, as well as to account for any undue reduction in the modeled zones stemming from the assumption of 10 dB attenuation from use of a bubble curtain.

Disturbance Zone—Disturbance zones are the areas in which SPLs equal or exceed 160 and 120 dB rms (for pulsed and non-pulsed sound, respectively). Disturbance zones provide utility for monitoring conducted for mitigation purposes (i.e., shutdown zone monitoring) by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring of disturbance zones enables observers to be aware of and communicate the presence of marine mammals in the project area but outside the shutdown zone and thus prepare for potential shutdowns of activity. However, the primary purpose of disturbance zone monitoring is for documenting incidents of Level B harassment; disturbance zone monitoring is discussed in greater detail later (see ''Monitoring and Reporting''). Nominal radial distances for disturbance zones are shown in Table 2. Given the size of the disturbance zone for vibratory pile driving, it is impossible to guarantee that all animals would be observed or to make comprehensive observations of fine-scale behavioral reactions to sound, and only a portion of the zone (e.g., what may be reasonably observed by visual observers stationed within the water

front restricted area [WRA]) will be monitored.

In order to document observed incidences of harassment, monitors record all marine mammal observations, regardless of location. The observer's location, as well as the location of the pile being driven, is known from a GPS. The location of the animal is estimated as a distance from the observer, which is then compared to the location from the pile. If acoustic monitoring is being conducted for that pile, a received SPL may be estimated, or the received level may be estimated on the basis of past or subsequent acoustic monitoring. It may then be determined whether the animal was exposed to sound levels constituting incidental harassment in post-processing of observational and acoustic data, and a precise accounting of observed incidences of harassment created. Therefore, although the predicted distances to behavioral harassment thresholds are useful for estimating incidental harassment for purposes of authorizing levels of incidental take, actual take may be determined in part through the use of empirical data. That information may then be used to extrapolate observed takes to reach an approximate understanding of actual total takes.

Monitoring Protocols—Monitoring would be conducted before, during, and after pile driving activities. In addition, observers shall record all incidences of marine mammal occurrence, regardless of distance from activity, and shall document any behavioral reactions in concert with distance from piles being driven. Observations made outside the shutdown zone will not result in shutdown; that pile segment would be completed without cessation, unless the animal approaches or enters the shutdown zone, at which point all pile driving activities will be halted. Monitoring will take place from 15 minutes prior to initiation through 15 minutes post-completion of pile driving activities. Pile driving activities include the time to remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes. Please see the Marine Mammal Monitoring Plan (available at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm*), developed by the Navy in agreement with us, for full details of the monitoring protocols.

The following additional measures apply to visual monitoring:

(1) Monitoring will be conducted by qualified observers, who will be placed at the best vantage point(s) practicable to monitor for marine mammals and implement shutdown/delay procedures when applicable by calling for the shutdown to the hammer operator. Qualified observers are trained biologists, with the following minimum qualifications:

- Visual acuity in both eyes (correction is permissible) sufficient for discernment of moving targets at the water's surface with ability to estimate target size and distance; use of binoculars may be necessary to correctly identify the target;
- Advanced education in biological science, wildlife management, mammalogy, or related fields (bachelor's degree or higher is required);
- Experience and ability to conduct field observations and collect data according to assigned protocols (this may include academic experience);
- Experience or training in the field identification of marine mammals, including the identification of behaviors;
- Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
- Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates and times when in-water construction activities were suspended to avoid potential incidental injury from construction sound of marine mammals observed within a defined shutdown zone; and marine mammal behavior; and
- Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

(2) Prior to the start of pile driving activity, the shutdown zone will be monitored for 15 minutes to ensure that it is clear of marine mammals. Pile driving will only commence once observers have declared the shutdown zone clear of marine mammals; animals will be allowed to remain in the shutdown zone (i.e., must leave of their own volition) and their behavior will be monitored and documented. The shutdown zone may only be declared clear, and pile driving started, when the entire shutdown zone is visible (i.e., when not obscured by dark, rain, fog, etc.). In addition, if such conditions should arise during impact pile driving that is already underway, the activity will be halted.

(3) If a marine mammal approaches or enters the shutdown zone during the course of pile driving operations, activity will be halted and delayed until either the animal has voluntarily left and been visually confirmed beyond the shutdown zone or 15 minutes have passed without re-detection of the animal. Monitoring will be conducted throughout the time required to drive a pile.

Sound Attenuation Devices

Bubble curtains shall be used during all impact pile driving. The device will distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column, and the lowest bubble ring shall be in contact with the mudline for the full circumference of the ring. Testing of the device by comparing attenuated and unattenuated strikes is not possible because of requirements in place to protect marbled murrelets (an ESA-listed bird species under the jurisdiction of the USFWS). However, in order to avoid loss of attenuation from design and implementation errors in the absence of such testing, a performance test of the device shall be conducted prior to initial use. The performance test shall confirm the calculated pressures and flow rates at each manifold ring. In addition, the contractor shall also train personnel in the proper balancing of air flow to the bubblers and shall submit an inspection/performance report to the Navy within 72 hours following the performance test.

Timing Restrictions

In Hood Canal, designated exist timing restrictions for pile driving activities to avoid in-water work when salmonids and other spawning forage fish are likely to be present. The in-water work window is July 16-February 15. The initial months (July to September) of the timing window overlap with times when Steller sea lions are not expected to be present within the project area. Until September 23, impact pile driving will only occur starting two hours after sunrise and ending two hours before sunset due to marbled murrelet nesting season. After September 23, in-water construction activities will occur during daylight hours (sunrise to sunset).

Soft Start

The use of a soft-start procedure is believed to provide additional protection to marine mammals by warning or providing a chance to leave the area prior to the hammer operating at full capacity, and typically involves a requirement to initiate sound from vibratory hammers for fifteen seconds at reduced energy followed by a 30-second waiting period. This procedure is repeated two additional times. However,

implementation of soft start for vibratory pile driving during previous pile driving work at NBKB has led to equipment failure and serious human safety concerns; those issues were detailed in the FR notice (78 FR 29705; May 21, 2013). Therefore, vibratory soft start is not required as a mitigation measure for this project, as we have determined it to not currently be practicable due to safety concerns. We have further determined this measure unnecessary to providing the means of effecting the least practicable impact on marine mammals and their habitat. For impact driving, soft start will be required, and contractors will provide an initial set of strikes from the impact hammer at reduced energy, followed by a 30-second waiting period, then two subsequent reduced energy strike sets. The reduced energy of an individual hammer cannot be quantified because of variation in individual drivers. The actual number of strikes at reduced energy will vary because operating the hammer at less than full power results in ''bouncing'' of the hammer as it strikes the pile, resulting in multiple ''strikes''. Soft start for impact driving will be required at the beginning of each day's pile driving work and at any time following a cessation of impact pile driving of 30 minutes or longer.

We have carefully evaluated the applicant's mitigation measures and considered a range of other measures in the context of ensuring that we prescribe the means of effecting the least practicable impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another: (1) The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals; (2) the proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and (3) the practicability of the measure for applicant implementation, including consideration of personnel safety, and practicality of implementation.

Based on our evaluation of the applicant's planned measures, as well as any other potential measures that may be relevant to the specified activity, we have determined that these mitigation measures provide the means of effecting the least practicable impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

In order to issue an ITA for an activity, section 101(a)(5)(D) of the MMPA states that we must, where applicable, set forth ''requirements pertaining to the monitoring and reporting of such taking''. The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for ITAs must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the action area. Please see the Navy's Marine Mammal Monitoring Plan for full details of the requirements for monitoring and reporting.

Visual Marine Mammal Observations

The Navy will collect sighting data and behavioral responses to construction for marine mammal species observed in the region of activity during the period of activity. All observers will be trained in marine mammal identification and behaviors and are required to have no other construction-related tasks while conducting monitoring. The Navy will monitor the shutdown zone and disturbance zone before, during, and after pile driving, with observers located at the best practicable vantage points. Based on our requirements, the Marine Mammal Monitoring Plan would implement the following procedures for pile driving:

- MMOs would be located at the best vantage point(s) in order to properly see the entire shutdown zone and as much of the disturbance zone as possible.
- During all observation periods, observers will use binoculars and the naked eye to search continuously for marine mammals.
- If the shutdown zones are obscured by fog or poor lighting conditions, pile driving at that location will not be initiated until that zone is visible. Should such conditions arise while impact driving is underway, the activity would be halted.
- The shutdown and disturbance zones around the pile will be monitored for the presence of marine mammals before, during, and after any pile driving or removal activity.

Individuals implementing the monitoring protocol will assess its effectiveness using an adaptive approach. Monitoring biologists will use their best professional judgment throughout implementation and seek improvements to these methods when deemed appropriate. Any modifications to protocol will be coordinated between NMFS and the Navy.

Data Collection

We require that observers use approved data forms. Among other pieces of information, the Navy will record detailed information about any implementation of shutdowns, including the distance of animals to the pile and description of specific actions that ensued and resulting behavior of the animal, if any. In addition, the Navy will attempt to distinguish between the number of individual animals taken and the number of incidences of take. We require that, at a minimum, the following information be collected on the sighting forms:

- Date and time that monitored activity begins or ends;
- Construction activities occurring during each observation period;
- Weather parameters (e.g., percent cover, visibility);
- Water conditions (e.g., sea state, tide state);
- Species, numbers, and, if possible, sex and age class of marine mammals;
- Description of any observable marine mammal behavior patterns, including bearing and direction of travel, and if possible, the correlation to SPLs;
- Distance from pile driving activities to marine mammals and distance from the marine mammals to the observation point;
- Locations of all marine mammal observations; and
- Other human activity in the area.

Reporting

A draft report must be submitted to NMFS within 90 calendar days of the completion of the in-water work window. The report will include marine mammal observations pre-activity, during-activity, and post-activity during pile driving days, and will also provide descriptions of any problems encountered in deploying sound attenuating devices, any adverse responses to construction activities by marine mammals and a complete description of all mitigation shutdowns and the results of those actions and a refined take estimate based on the number of marine mammals observed during the course of construction. A final report must be submitted within 30 days following resolution of comments on the draft report.

Estimated Take by Incidental Harassment

With respect to the activities described here, the MMPA defines ''harassment'' as: ''Any act of pursuit,

torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].''

All anticipated takes will be by Level B harassment, involving temporary changes in behavior. The planned mitigation and monitoring measures are expected to minimize the possibility of injurious or lethal takes such that take by Level A harassment, serious injury or mortality is considered discountable. However, it is unlikely that injurious or lethal takes would occur even in the absence of the planned mitigation and monitoring measures.

If a marine mammal responds to a stimulus by changing its behavior (e.g., through relatively minor changes in locomotion direction/speed or vocalization behavior), the response may or may not constitute taking at the individual level, and is unlikely to affect the stock or the species as a whole. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on animals or on the stock or species could potentially be significant (Lusseau and Bejder, 2007; Weilgart, 2007). Given the many uncertainties in predicting the quantity and types of impacts of sound on marine mammals, it is common practice to estimate how many animals are likely to be present within a particular distance of a given activity, or exposed to a particular level of sound. This practice potentially overestimates the numbers of marine mammals taken. For example, during the past ten years, killer whales have been observed within the project area twice. On the basis of that information, an estimated amount of potential takes for killer whales is presented here. However, while a pod of killer whales could potentially visit again during the project timeframe, and thus be taken, it is more likely that they will not. Although incidental take of killer whales and Dall's porpoises was authorized for 2011–12 activities at NBKB on the basis of past observations of these species, no such takes were recorded and no individuals of these species were observed. Similarly, estimated actual take levels (observed takes extrapolated to the remainder of unobserved but ensonified area) were significantly less than authorized levels of take for the remaining species.

The project area is not believed to be particularly important habitat for marine mammals, nor is it considered an area frequented by marine mammals, although harbor seals are year-round residents of Hood Canal and sea lions are known to haul-out on submarines and other man-made objects at the NBKB waterfront (although typically at a distance of a mile or greater from the project site). Therefore, behavioral disturbances that could result from anthropogenic sound associated with these activities are expected to affect only a relatively small number of individual marine mammals, although those effects could be recurring over the life of the project if the same individuals remain in the project vicinity.

The Navy has requested authorization for the potential taking of small numbers of Steller sea lions, California sea lions, harbor seals, transient killer whales, Dall's porpoises, and harbor porpoises in the Hood Canal that may result from pile driving during construction activities associated with the wharf construction project described previously in this document.

Marine Mammal Densities

The Navy is in the process of developing, with input from regional marine mammal experts, estimates of marine mammal densities in Washington inland waters for the Navy Marine Species Density Database (NMSDD). A technical report will describe methodologies used to derive these densities, which are generally considered the best available information for Washington inland waters, except where specific local abundance information is available. Initial take estimates and impact assessment for the EHW–2 project relied on data available at the time the application was submitted, including survey efforts in the project area. For future projects at NBKB, it is likely that the NMSDD densities will be used in assessing project impacts. However, because the NMSDD report is not complete, and because use of the previous density or abundance information results in more conservative (i.e., higher) take estimates, the approach to take estimation used for the first year of EHW–2 construction is largely retained here. Please see Appendix A of the Navy's application for more information on the NMSDD information.

For all species, the most appropriate information available was used to estimate the number of potential incidences of take. For harbor seals, this involved published literature describing harbor seal research conducted in Washington and Oregon as well as more specific counts conducted in Hood Canal (Huber *et al.,* 2001; Jeffries *et al.,* 2003). Killer whales are known from two periods of occurrence (2003 and 2005) and are not known to preferentially use any specific portion of the Hood Canal. Therefore, density was calculated as the maximum number of individuals present at a given time during those occurrences (London, 2006), divided by the area of Hood Canal. The best information available for the remaining species in Hood Canal came from surveys conducted by the Navy at the NBKB waterfront or in the vicinity of the project area.

Beginning in April 2008, Navy personnel have recorded sightings of marine mammals occurring at known haul-outs along the NBKB waterfront, including docked submarines or other structures associated with NBKB docks and piers and the nearshore pontoons of the floating security fence. Sightings of marine mammals within the waters adjoining these locations were also recorded. Sightings were attempted whenever possible during a typical work week (i.e., Monday through Friday), but inclement weather, holidays, or security constraints often precluded surveys. These sightings took place frequently, although without a formal survey protocol. During the surveys, staff visited each of the above-mentioned locations and recorded observations of marine mammals. Surveys were conducted using binoculars and the naked eye from shoreline locations or the piers/wharves themselves. Because these surveys consist of opportunistic sighting data from shore-based observers, largely of hauled-out animals, there is no associated survey area appropriate for use in calculating a density from the abundance data. Data were compiled for the period from April 2008 through December 2012 for analysis here, and these data provide the basis for take estimation for Steller and California sea lions. Other information, including sightings data from other Navy survey efforts at NBKB, is available for these two species, but these data provide the most conservative (i.e., highest) local abundance estimates (and thus the highest estimates of potential take).

In addition, vessel-based marine wildlife surveys were conducted according to established survey protocols during July through September 2008 and November through May 2009–10 (Tannenbaum *et al.,* 2009, 2011). Eighteen complete surveys of the nearshore area resulted in observations of four marine mammal species (harbor seal, California sea lion, harbor porpoise, and Dall's porpoise). These surveys operated along pre-determined

transects parallel to the shoreline from the nearshore out to approximately 1,800 ft (549 m) from shoreline, at a spacing of 100 yd, and covered the entire NBKB waterfront (approximately 3.9 km^2 per survey) at a speed of 5 kn or less. Two observers recorded sightings of marine mammals both in the water and hauled out, including date, time, species, number of individuals, age (juvenile, adult), behavior (swimming, diving, hauled out, avoidance dive), and haul-out location. Positions of marine mammals were obtained by recording distance and bearing to the animal with a rangefinder and compass, noting the concurrent location of the boat with GPS, and, subsequently, analyzing these data to produce coordinates of the locations of all animals detected. These surveys resulted in the only observation of a Dall's porpoise near NBKB.

The Navy also conducted vessel-based line transect surveys in Hood Canal on non-construction days during the 2011 TPP in order to collect additional data for species present in Hood Canal. These surveys detected three marine mammal species (harbor seal, California sea lion, and harbor porpoise), and included surveys conducted in both the main body of Hood Canal, near the project area, and baseline surveys conducted for comparison in Dabob Bay, an area of Hood Canal that is not affected by sound from Navy actions at the NBKB waterfront. The surveys operated along pre-determined transects that followed a double saw-tooth pattern to achieve uniform coverage of the entire NBKB waterfront. The vessel traveled at a speed of approximately 5 kn when transiting along the transect lines. Two observers recorded sightings of marine mammals both in the water and hauled out, including the date, time, species, number of individuals, and behavior (swimming, diving, etc.). Positions of marine mammals were obtained by recording the distance and bearing to the animal(s), noting the concurrent location of the boat with GPS, and subsequently analyzing these data to produce coordinates of the locations of all animals detected. Sighting information for harbor porpoises was corrected for detectability ($g(0) = 0.54$; Barlow, 1988; Calambokidis *et al.,* 1993; Carretta *et al.,* 2001). Distance sampling methodologies were used to estimate densities of animals for the data. This information provides the best information for harbor porpoises.

The cetaceans, as well as the harbor seal, appear to range throughout Hood Canal; therefore, the analysis for this IHA assumes that harbor seal, transient killer whale, harbor porpoise, and Dall's porpoise are uniformly distributed in the project area. However, it should be noted that there have been no observations of cetaceans within the floating security barriers at NBKB; these barriers thus appear to effectively prevent cetaceans from approaching the shutdown zones. Although the Navy will implement a precautionary shutdown zone for cetaceans, anecdotal evidence suggests that cetaceans are not at risk of Level A harassment at NBKB even from louder activities (e.g., impact pile driving). The remaining species that occur in the project area, Steller sea lion and California sea lion, do not appear to utilize most of Hood Canal. The sea lions appear to be attracted to the man-made haul-out opportunities along the NBKB waterfront while dispersing for foraging opportunities elsewhere in Hood Canal. California sea lions were not reported during aerial surveys of Hood Canal (Jeffries *et al.,* 2000), and Steller sea lions have only been documented at the NBKB waterfront.

Description of Take Calculation

The take calculations presented here rely on the best data currently available for marine mammal populations in the Hood Canal. The methodology for estimating take was described in detail in the FR notice (78 FR 29705; May 21, 2013). The ZOI impact area is the estimated range of impact to the sound criteria. The distances specified in Table 2 were used to calculate ZOIs around each pile. All impact pile driving take calculations were based on the estimated threshold ranges assuming attenuation of 10 dB from use of a bubble curtain. The ZOI impact area took into consideration the possible affected area of the Hood Canal from the pile driving site furthest from shore with attenuation due to land shadowing from bends in the canal. Because of the close proximity of some of the piles to the shore, the narrowness of the canal at the project area, and the maximum fetch, the ZOIs for each threshold are not necessarily spherical and may be truncated.

While pile driving can occur any day throughout the in-water work window, and the analysis is conducted on a per day basis, only a fraction of that time (typically a matter of hours on any given day) is actually spent pile driving. Acoustic monitoring conducted as part of the TPP demonstrated that Level B harassment zones for vibratory pile driving are likely to be significantly smaller than the zones estimated through modeling based on measured source levels and practical spreading loss. Also of note is the fact that the effectiveness of mitigation measures in reducing takes is typically not quantified in the take estimation process. Here, we do explicitly account for an assumed level of efficacy for use of the bubble curtain, but not for the soft start associated with impact driving. In addition, equating exposure with response (i.e., a behavioral response meeting the definition of take under the MMPA) is simplistic and conservative assumption. For these reasons, these take estimates are likely to be conservative.

Airborne Sound—No incidents of incidental take resulting solely from airborne sound are likely, as distances to the harassment thresholds would not reach areas where pinnipeds may haul out. Harbor seals can haul out at a variety of natural or manmade locations, but the closest known harbor seal haul-out is at the Dosewallips River mouth (London, 2006) and Navy waterfront surveys and boat surveys have found it rare for harbor seals to haul out along the NBKB waterfront (Agness and Tannenbaum, 2009; Tannenbaum *et al.,* 2009, 2011; Navy, 2010). Individual seals have occasionally been observed hauled out on pontoons of the floating security fence within the restricted areas of NBKB, but this area is not with the airborne disturbance ZOI. Nearby piers are elevated well above the surface of the water and are inaccessible to pinnipeds, and seals have not been observed hauled out on the adjacent shoreline. Sea lions typically haul out on submarines docked at Delta Pier, approximately one mile from the project site.

We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with heads above water. However, these animals would previously have been 'taken' as a result of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Multiple incidents of exposure to sound above NMFS' thresholds for behavioral harassment are not believed to result in increased behavioral disturbance, in either nature or intensity of disturbance reaction. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted.

The derivation of density or abundance estimates for each species, as well as further description of the rationale for each take estimate, was described in detail in the FR notice (78 FR 29705; May 21, 2013). A summary of

the information and assumptions that went into take estimates for each species is provided here. Total take estimates are presented in Table 4.

• California sea lions—Data from waterfront surveys at NBKB was most appropriate, because haul-out opportunities provided by submarines at Delta Pier are the primary attractant for sea lions in the project vicinity and local abundances are higher than indicated by regional densities. In order to provide a margin of conservatism, the monthly averages for maximum daily numbers observed (in a given month) were used to estimate an average maximum daily abundance for the work window. Exposures were calculated assuming 31 individuals could be present, and therefore exposed to sound exceeding the behavioral harassment threshold, on each day of pile driving.

• Steller sea lions—The same data were used for Steller sea lions as for California sea lions, for the same reasons. Exposures were calculated assuming two individuals could be present, and therefore exposed to sound exceeding the behavioral harassment threshold, on each day of pile driving.

• Harbor seals—Data from Huber *et al.* (2001) and Jeffries *et al.* (2003) were used to produce a corrected instantaneous density for harbor seals in Hood Canal that accounts for animals in the water versus hauled out at any given time. Recently, the Navy discovered errors in those calculations (a smaller area was assumed for Hood Canal than was used in the initial surveys) that resulted in a higher density (1.31 vs. 1.06 animals/km^2). The earlier density was retained here as it provides a more conservative estimate of potential incidences of behavioral harassment.

• Killer whales—Regional density values produce an estimate of zero incidences of harassment. However, pods of transient killer whales have been observed in Hood Canal in 2003 and 2005, for a minimum of 59 days. In order to account for the possibility that killer whales could be present, we assume a pod size of six whales and a residence time of half the previous minimum (to account for likely avoidance of harassing stimuli) for estimating potential incidences of behavioral harassment (six individuals present for thirty days). We believe that this is likely a very conservative estimate.

• Dall's porpoise—Regional density values produce an estimate of zero incidences of harassment. However, a Dall's porpoise has been observed in waters off of NBKB, and the Navy has requested take authorization for this species. In order to account for possible presence of this species, and in the absence of information indicating any particular proportion of days, we assume that one porpoise could be present on each day of pile driving. This is not likely to be a very realistic estimate, as no Dall's porpoise has been observed in the past two years of monitoring at NBKB. It is, however, a reasonable compromise between the only available information and the Navy's request for take authorization.

• Harbor porpoise—Surveys from 2011 collected in waters off of NBKB provide the best data for this species. Preliminary results from those surveys indicated a density of 0.25 animals/km^2, and this value was used by the Navy in initial impact assessments. Additional data subsequently produced a revised density estimate of 0.149 animals/km^2; however, the Navy has requested that we retain the earlier value as it produces a more conservative estimate of potential incidences of behavioral harassment.

Potential takes could occur if individuals of these species are present in the vicinity when pile driving is occurring. Individuals that are taken could exhibit behavioral changes such as increased swimming speeds, increased surfacing time, or decreased foraging. Most likely, individuals may move away from the sound source and be temporarily displaced from the areas of pile driving. Potential takes by disturbance would likely have a negligible short-term effect on individuals and not result in population-level impacts.

TABLE 4—NUMBER OF POTENTIAL INCIDENTAL TAKES OF MARINE MAMMALS WITHIN VARIOUS ACOUSTIC THRESHOLD ZONES

Species	Density/ abundance	Underwater		Airborne	Total authorized takes
		Impact injury threshold [1]	Vibratory disturbance threshold (120 dB) [2]	Impact disturbance threshold [3]	
California sea lion	[4] 31.2	0	6,045	0	6,045
Steller sea lion	[4] 1.7	0	390	0	390
Harbor seal	1.31	0	10,530	0	10,530
Killer whale	[5] 0.0019	0	180	N/A	180
Dall's porpoise	[5] 0.000001	0	195	N/A	195
Harbor porpoise	0.250	0	1,950	N/A	1,950

[1] Acoustic injury threshold for impact pile driving is 190 dB for pinnipeds and 180 dB for cetaceans.

[2] The 160-dB acoustic harassment zone associated with impact pile driving would always be subsumed by the 120-dB harassment zone produced by vibratory driving. Therefore, takes are not calculated separately for the two zones.

[3] Acoustic disturbance threshold is 100 dB for sea lions and 90 dB for harbor seals. We do not believe that pinnipeds would be available for airborne acoustic harassment because they are not known to regularly haul-out at locations inside the zone in which airborne acoustic harassment could occur.

[4] Figures presented are abundance numbers, not density, and are calculated as the average of average daily maximum numbers per month. Abundance numbers are rounded to the nearest whole number for take estimation.

[5] Density values not used for take estimation. Assumptions are that a pod of six killer whales could be present for thirty days and that one Dall's porpoise could be present on each day of pile driving.

Negligible Impact and Small Numbers Analysis and Determinations

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''. . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.'' In making a negligible impact determination, NMFS considers a variety of factors, including but not limited to: (1) The number of anticipated mortalities; (2) the number and nature of anticipated injuries; (3) the number, nature, intensity, and duration of Level B harassment; and (4) the context in which the take occurs.

Small Numbers Analysis

The numbers of animals authorized to be taken for Steller and California sea lions and for Dall's porpoises would be considered small relative to the relevant stocks or populations (less than one percent for Steller sea lions and Dall's porpoise and less than three percent for California sea lions) even if each estimated taking occurred to a new individual—an extremely unlikely scenario. For pinnipeds occurring at the NBKB waterfront, there will almost certainly be some overlap in individuals present day-to-day and, for the Dall's porpoise, given the rare occurrence of this species in the Hood Canal it seems likely that for the number of takes contemplated here to occur, at least one to several individuals would have to remain in the area for an extended period of time. Further, for the pinniped species, these takes could potentially occur only within some small portion of the overall regional stock. For example, of the estimated 296,500 California sea lions, only certain adult and subadult males—believed to number approximately 3,000–5,000 by Jeffries *et al.* (2000)—travel north during the non-breeding season. That number has almost certainly increased with the population of California sea lions—the 2000 Stock Assessment Report for California sea lions reported an estimated population size of 204,000–214,000 animals—but likely remains a relatively small portion of the overall population.

For harbor seals, animals found in Hood Canal belong to a closed, resident population estimated at approximately 1,000 animals by Jeffries *et al.* (2003), and takes are likely to occur only within some portion of that closed population, rather than to animals from the Washington inland waters stock as a whole. The animals that are resident to Hood Canal, to which any incidental take would accrue, represent only seven percent of the best estimate of regional stock abundance. For transient killer whales, we estimate take based on an assumption that a single pod of whales, comprising six individuals, is present in the vicinity of the project area for the entire duration of the project. These six individuals represent a small number of transient killer whales, for which a conservative minimum estimate of 354 animals was given in the 2011 Stock Assessment Reports.

Little is known about harbor porpoise use of Hood Canal, and prior to monitoring associated with recent pile driving projects at NBKB, it was believed that harbor porpoises were infrequent visitors to the area. It is unclear from the limited information available what relationship harbor porpoise occurrence in Hood Canal may hold to the regional stock or whether similar usage of Hood Canal may be expected to be recurring. It is unknown how many unique individuals are represented by sightings in Hood Canal, although it is unlikely that these animals represent a large proportion of the overall stock. While we believe that the authorized numbers of incidental take would likely to occur to a much smaller number of individuals, the number of incidences of take relative to the stock abundance (approximately eighteen percent) remains within the bounds of what we consider to be small numbers.

As described in the FR notice (78 FR 29705; May 21, 2013) and summarized here, the estimated number of potential incidences of harassment for these species are likely much higher than will realistically occur. This is because (1) We use the maximum possible number of days (195) in estimating take, despite the fact that multiple delays and work stoppages are likely to result in a significantly lower number of actual pile driving days; (2) estimates for harbor porpoise and harbor seal rely on density estimates that are higher than what we consider to be the best available information; (3) sea lion estimates rely on the averaged maximum daily abundances per month, rather than simply an overall average which would provide a much lower abundance figure; and (4) the estimates for killer whale and Dall's porpoise use sparse information to attempt to account for the potential presence of species that have not been observed in Hood Canal since 2005 and 2008 (when a single individual was observed), respectively. In addition, with the exception of the bubble curtain, potential efficacy of mitigation measures in terms of reduction in numbers and/or intensity of incidences of take has not been quantified. Therefore, these take numbers are likely to be conservative.

Negligible Impact Analysis

Pile driving activities associated with the wharf construction project, as outlined previously, have the potential to disturb or displace marine mammals. Specifically, the specified activities may result in take, in the form of Level B harassment (behavioral disturbance) only, from airborne or underwater sounds generated from pile driving. Potential takes could occur if individuals of these species are present in the ensonified zone when pile driving is happening, which is likely to occur because (1) Harbor seals, which are frequently observed along the NBKB waterfront, are present within the WRA; (2) sea lions, which are less frequently observed, transit the WRA en route to haul-outs to the south at Delta Pier; or (3) cetaceans or pinnipeds transit the larger Level B harassment zone outside of the WRA.

No injury, serious injury, or mortality is anticipated given the methods of installation and measures designed to minimize the possibility of injury to marine mammals. The potential for these outcomes is minimized through the construction method and the implementation of the planned mitigation measures. Specifically, vibratory hammers will be the primary method of installation, and this activity does not have significant potential to cause injury to marine mammals due to the relatively low source levels produced (less than 190 dB) and the lack of potentially injurious source characteristics. Impact pile driving produces short, sharp pulses with higher peak levels and much sharper rise time to reach those peaks. When impact driving is necessary, required measures (use of a sound attenuation system, which reduces overall source levels as well as dampening the sharp, potentially injurious peaks, and implementation of shutdown zones) significantly reduce any possibility of injury. Likewise, Level B harassment will be reduced to the level of least practicable adverse impact through the use of mitigation measures described herein. that, given sufficient ''notice'' through mitigation measures including soft start (for impact driving), marine mammals are expected to move away from a sound source that is annoying prior to its becoming potentially injurious, and the likelihood that marine mammal detection ability by trained observers is high under the environmental conditions described for Hood Canal, enabling the implementation of shutdowns to avoid injury, serious injury, or mortality.

Effects on individuals that are taken by Level B harassment, on the basis of reports in the literature as well as monitoring from past projects at NBKB, will likely be limited to reactions such as increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring). Most likely, individuals will simply move away from the sound source and be temporarily displaced from the areas of pile driving, although even this reaction has been observed primarily only in association with impact pile driving. In response to vibratory driving, harbor seals (which may be somewhat habituated to human

activity along the NBKB waterfront) have been observed to orient towards and sometimes move towards the sound.

For pinnipeds, no rookeries are present in the project area, there are no haul-outs other than those provided opportunistically by man-made objects, and the project area is not known to provide foraging habitat of any special importance. No cetaceans are expected within the WRA. The pile driving activities analyzed here are similar to other nearby construction activities within the Hood Canal, including two recent projects conducted by the Navy at the same location (test pile project and EHW–1 pile replacement project) as well as work conducted in 2005 for the Hood Canal Bridge (SR–104) by the Washington Department of Transportation, which have taken place with no reported injuries or mortality to marine mammals, and no known long-term adverse consequences from behavioral harassment.

In summary, this negligible impact analysis is founded on the following factors: (1) The possibility of injury, serious injury, or mortality may reasonably be considered discountable; (2) the anticipated incidences of Level B harassment consist of, at worst, temporary modifications in behavior; (3) the absence of any major rookeries and only a few isolated and opportunistic haul-out areas near or adjacent to the project site; (4) the absence of cetaceans within the WRA and generally sporadic occurrence outside the WRA; (5) the absence of any other known areas or features of special significance for foraging or reproduction within the project area; (6) the presumed efficacy of the planned mitigation measures in reducing the effects of the specified activity to the level of least practicable impact. In addition, with the exception of the Steller sea lion (eastern DPS only), none of these stocks are listed under the ESA or considered of special status (e.g., depleted or strategic) under the MMPA. Five of the stocks for which take is authorized, including the Steller sea lion, are thought to be increasing. Insufficient information is available to determine population trends for the sixth stock (Dall's porpoise). In combination, we believe that these factors, as well as the available body of evidence from other similar activities, including those conducted at the same time of year and in the same location, demonstrate that the potential effects of the specified activity will have only short-term effects on individuals. The specified activity is not expected to impact rates of recruitment or survival and will therefore not result in population-level impacts.

Determinations

The number of marine mammals actually incidentally harassed by the project will depend on the distribution and abundance of marine mammals in the vicinity of the survey activity. However, we find that the number of potential takings authorized (by level B harassment only), which we consider to be a conservative, maximum estimate, is small relative to the relevant regional stock or population numbers, and that the effect of the activity will be mitigated to the level of least practicable impact through implementation of the mitigation and monitoring measures described previously. Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, we find that the total taking from the activity will have a negligible impact on the affected species or stocks.

Impact on Availability of Affected Species or Stock for Taking for Subsistence Uses

No tribal subsistence hunts are held in the vicinity of the project area; thus, temporary behavioral impacts to individual animals will not affect any subsistence activity. Further, no population or stock level impacts to marine mammals are anticipated or authorized. As a result, no impacts to the availability of the species or stock to the Pacific Northwest treaty tribes are expected as a result of the activities. Therefore, no relevant subsistence uses of marine mammals are implicated by this action.

Endangered Species Act (ESA)

There are two ESA-listed marine mammal species with known occurrence in the project area: the Eastern DPS of the Steller sea lion, listed as threatened, and the humpback whale, listed as endangered. Because of the potential presence of these species, the Navy engaged in a formal consultation with the NMFS Northwest Regional Office (NWR) under Section 7 of the ESA. We also initiated separate consultation with NWR because of our proposal to authorize the incidental take of Steller sea lions under the first IHA for EHW–2 construction. NWR's Biological Opinion, issued on September 29, 2011, concluded that the effects of pile driving activities at NBKB were likely to adversely affect, but not likely to jeopardize the continued existence of the eastern DPS of Steller sea lion. The Steller sea lion does not have critical habitat in the action area. Subsequent to the completion of the biological opinion, NWR prepared an Incidental Take Statement (ITS) to be appended to the opinion.

NWR compared the ITS, as well as the effects analysis and conclusions in the Biological Opinion, with the amount of and conditions on take proposed in the IHA and determined that the effects of issuing an IHA to the Navy for the taking of Steller sea lions incidental to construction activities are consistent with those described in the opinion. The September 29, 2011 Biological Opinion remains valid and the proposed MMPA authorization provided no new information about the effects of the action, nor did it change the extent of effects of the action, or any other basis to require reinitiation of the opinion. Therefore, the September 29, 2011 Biological Opinion meets the requirements of section 7(a)(2) of the ESA and implementing regulations at 50 CFR 402 for both the Navy construction action, as well as our action to issue an IHA under the MMPA, and no further consultation is required. NWR has issued a new ITS and appended it to the 2011 Biological Opinion upon issuance of the IHA.

National Environmental Policy Act (NEPA)

The Navy prepared an Environmental Impact Statement and issued a Record of Decision for this project. We acted as a cooperating agency in the preparation of that document, and reviewed the EIS and the public comments received and determined that preparation of additional NEPA analysis was not necessary. We subsequently adopted the Navy's EIS and issued our own Record of Decision for the issuance of the first IHA on July 6, 2012.

We reviewed the Navy's application for a renewed IHA for ongoing construction activities for 2013–14 and the 2012–13 monitoring report. Based on that review, we determined that the action follows closely the previous IHA and does not present any substantial changes, or significant new circumstances or information relevant to environmental concerns which would require preparation of a new or supplemental NEPA document. Therefore, we have determined that a new or supplemental Environmental Assessment or EIS is unnecessary, and, after review of public comments, reaffirm our 2012 ROD. The 2012 NEPA documents are available for review at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm.*

Authorization

As a result of these determinations, we have issued an IHA to the Navy to conduct the described activities in the Hood Canal from the period of July 16, 2013, through February 15, 2014, provided the previously described mitigation, monitoring, and reporting requirements are incorporated.

Dated: July 11, 2013.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XC647

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to a Barge Mooring Project

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization.

SUMMARY: In accordance with the regulations implementing the Marine Mammal Protection Act (MMPA) as amended, notification is hereby given that we have issued an incidental harassment authorization (IHA) to the U.S. Navy (Navy) to incidentally harass, by Level B harassment only, four species of marine mammals during construction activities associated with a barge mooring project in Hood Canal, Washington.

DATES: This authorization is effective from July 16, 2013, through September 30, 2013.

ADDRESSES: A copy of the IHA and related documents may be obtained by visiting the internet at: *http://www.nmfs.noaa.gov/pr/permits/incidental.htm* or by writing to Michael Payne, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East West Highway, Silver Spring, MD 20910. A memorandum describing our adoption of the Navy's Environmental Assessment (2013) and our associated Finding of No Significant Impact, prepared pursuant to the National Environmental Policy Act, are also available at the same site. Documents cited in this notice may also be viewed, by appointment, during regular business hours, at the aforementioned address.

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''. . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.''

Section 101(a)(5)(D) of the MMPA established an expedited process by which citizens of the U.S. can apply for an authorization to incidentally take small numbers of marine mammals by harassment. Section 101(a)(5)(D) establishes a 45-day time limit for NMFS review of an application followed by a 30-day public notice and comment period on any proposed authorizations for the incidental harassment of marine mammals. Within 45 days of the close of the comment period, NMFS must either issue or deny the authorization. Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: ''Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].''

Summary of Request

We received an application on February 6, 2013, from the Navy for the taking of marine mammals incidental to pile driving and removal in association with a barge mooring project in the Hood Canal at Naval Base Kitsap in Bangor, WA (NBKB). The Navy submitted a revised version of the application on April 8, 2013, which we deemed adequate and complete. The barge mooring project is expected to require approximately eight weeks and will occur between July 16 and September 30, 2013. Four species of marine mammals are expected to be affected by the specified activities: California sea lion (*Zalophus californianus californianus*), harbor seal (*Phoca vitulina richardii*), harbor porpoise (*Phocoena phocoena vomerina*), and killer whale (transient only; *Orcinus orca*). These species may occur year-round in the Hood Canal, with the exception of the California sea lion, which is only present from late summer to late spring (August to early June).

NBKB provides berthing and support services to Navy submarines and other fleet assets. Commander Submarine Development Squadron Five (CSDS–5) is a tenant command on NBKB and is the working repository for deep ocean technology and operational, at-sea application of that technology. CSDS–5 currently moors and operates a research barge at the Service Pier on NBKB and plans to install mooring for a new larger research barge equipped with upgraded technology necessary for continuing the Navy mission. CSDS–5 currently conducts research equipment operations from an existing 115-ft by 35-ft barge with a 4-ft draft that was constructed in 1940 and cannot accommodate the new research equipment. A new larger barge measuring 260 ft by 85 ft with a 10-ft draft will replace the existing barge. Activities associated with the project include the removal of an existing mooring dolphin, the relocation and addition of floating pier sections, and the installation of up to twenty steel piles to support the barge, electrical transformer platform, and relocated pier sections (see Figures 1–2 and 1–3 in the Navy's application). All steel piles will be driven with a vibratory hammer for their initial embedment depths and may be finished with an impact hammer for proofing, as necessary. Proofing involves striking a driven pile with an impact hammer to verify that it provides the required load-bearing capacity, as indicated by the number of hammer blows per foot of pile advancement. Sound attenuation measures (i.e.,

bubble curtain) will be used during all impact hammer operations.

For pile driving activities, the Navy used thresholds recommended by NMFS for assessing project impacts, outlined later in this document. The Navy assumed practical spreading loss and used empirically-measured source levels from a similar project conducted at NBKB to estimate potential marine mammal exposures. Predicted exposures are outlined later in this document. The calculations predict that only Level B harassments will occur associated with pile driving or construction activities.

Description of the Specified Activity

NBKB is located on the Hood Canal approximately twenty miles (32 km) west of Seattle, Washington (see Figures 1–1 and 2–1 in the Navy's application). The specified actions with the potential to cause harassment of marine mammals within the waterways adjacent to NBKB, under the MMPA, are vibratory and impact pile driving and removal of piles via vibratory driver associated with the barge mooring project. All in-water construction activities within the Hood Canal are only permitted during July 16–February 15 in order to protect spawning fish populations; however, the entire barge mooring project is scheduled to be completed by September 30, 2013. Additional details regarding the specified geographic area and construction plans for the project were described in our **Federal Register** notice of proposed authorization (78 FR 30273; May 22, 2013; hereafter, the FR notice); please see that document or the Navy's application for more information.

The project consists of three components: The relocation and addition to the Port Operations pier, the removal of existing infrastructure, and the installation of the CSDS–5 research barge mooring piles. The barge mooring project is expected to require approximately forty work days and will occur only between July 16 and September 30, 2013. Figures 2–2 and 2–3 of the Navy's application contain details of the project area and site plan. The project is expected to require the installation of sixteen hollow steel pipe piles, including four 20-in diameter piles, three 24-in diameter piles, five 36-in diameter piles, and four 48-in diameter piles. Although only four 48-in piles are expected to be necessary, we include an additional four 48-in piles (for a total of eight 48-in piles and twenty total piles) in the effects analysis in the event that contingency piles are required. The 48-in piles will be the primary mooring supports for the new barge. In addition, one 24-in diameter pile will be removed using vibratory pile driving equipment.

The Navy expects that a maximum of four piles can be driven per day, although this total is unlikely to be reached due to various delays that may be expected during construction work. The total number of days for both extraction and installation are not likely to exceed twenty workdays. Piles will be installed using mainly vibratory pile driving, although some piles may require impact driving to ensure load bearing capacity (proofing) or if substrate conditions do not allow the pile to reach the specified tip elevation with a vibratory driver. When the impact driver is required, the Navy expects that 500 strikes will be necessary per pile, resulting in approximately 2,000 strikes per day under the maximum scenario. All piles driven with an impact hammer will be surrounded by a bubble curtain over the full water column to minimize in-water noise.

Description of Sound Sources and Distances to Thresholds

An in-depth description of sound sources in general was provided in the FR notice (78 FR 30273; May 22, 2013). Significant sound-producing in-water construction activities associated with the project include impact and vibratory pile driving.

NMFS uses generic sound exposure thresholds to determine when an activity that produces sound might result in impacts to a marine mammal such that a take by harassment might occur. To date, no studies have been conducted that examine impacts to marine mammals from pile driving sounds from which empirical sound thresholds have been established. Current NMFS practice (in relation to the MMPA) regarding exposure of marine mammals to sound is that cetaceans and pinnipeds exposed to sound levels of 180 and 190 dB root mean square (rms; note that all underwater sound levels in this document are referenced to a pressure of 1 μPa) or above, respectively, are considered to have been taken by Level A (i.e., injurious) harassment, while behavioral harassment (Level B) is considered to have occurred when marine mammals are exposed to sounds at or above 120 dB rms for continuous sound (such as will be produced by vibratory pile driving) and 160 dB rms for pulsed sound (produced by impact pile driving), but below injurious thresholds. For airborne sound, pinniped disturbance from haul-outs has been documented at 100 dB (unweighted) for pinnipeds in general, and at 90 dB (unweighted) for harbor seals (note that all airborne sound levels in this document are referenced to a pressure of 20 μPa). NMFS uses these levels as guidelines to estimate when harassment may occur. NMFS is currently revising these acoustic guidelines. For more information on that process, please visit *http://www.nmfs.noaa.gov/pr/acoustics/guidelines.htm.*

Sound levels can be greatly reduced during impact pile driving using sound attenuation devices. The Navy is required to use sound attenuation devices for all impact pile driving, and has elected to use bubble curtains. Bubble curtains work by creating a column of air bubbles rising around a pile from the substrate to the water surface. The air bubbles absorb and scatter sound waves emanating from the pile, thereby reducing the sound energy. A confined bubble curtain contains the air bubbles within a flexible or rigid sleeve made from plastic, cloth, or pipe. Confined bubble curtains generally offer higher attenuation levels than unconfined curtains because they may physically block sound waves and they prevent air bubbles from migrating away from the pile.

The literature presents a wide array of observed attenuation results for bubble curtains (e.g., Oestman *et al.,* 2009, Coleman, 2011, Caltrans, 2012). The variability in attenuation levels is due to variation in design, as well as differences in site conditions and difficulty in properly installing and operating in-water attenuation devices. As a general rule, reductions of greater than 10 dB cannot be reliably predicted. On the basis of existing data regarding bubble curtain efficacy, as well as site-specific measurements from the Navy's 2011 Test Pile Project (TPP; Illingworth & Rodkin, Inc., 2012), we have determined that 8 dB is a reasonable assumption regarding average SPL (rms) reduction. To avoid loss of attenuation from design and implementation errors, the Navy has required specific bubble curtain design specifications, including testing requirements for air pressure and flow prior to initial impact hammer use, and a requirement for placement on the substrate.

Distance to Sound Thresholds

Pile driving generates underwater noise that can potentially result in disturbance to marine mammals in the project area. Please see the FR notice (78 FR 30273; May 22, 2013) for a detailed description of the calculations and information used to estimate distances to relevant threshold levels.

Transmission loss, or the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source, was estimated as so-called ''practical spreading loss.'' This model follows a geometric propagation loss based on the distance from the pile, resulting in a 4.5 dB reduction in level for each doubling of distance from the source. In the model used here, the sound pressure level (SPL) at some distance away from the source (e.g., driven pile) is governed by a measured source level, minus the transmission loss of the energy as it dissipates with distance.

The intensity of pile driving sounds is greatly influenced by factors such as the type of piles, hammers, and the physical environment in which the activity takes place. The Navy previously conducted measurements for driving of steel piles at NBKB as part of the TPP (Illingworth & Rodkin, Inc., 2012), and we have determined that use of those values is appropriate to determine reasonable SPLs and their associated effects on marine mammals that are likely to result from pile driving at NBKB. During the TPP, SPLs from driving of 24-, 36-, and 48-in piles by impact and vibratory hammers were measured. Because 20-in piles were not measured during the TPP, we use sound pressure levels from the 24-in piles as a conservative estimate. Sound levels associated with vibratory pile removal are assumed to be the same as those during vibratory installation (Reyff, 2007)—which is likely a conservative assumption—and have been taken into consideration in the modeling analysis.

Representative data for pile driving SPLs recorded from the TPP were presented in the FR notice (78 FR 30273; May 22, 2013). Because it is unknown what size pile may be driven on any given day, the most conservative values (i.e., highest) were used, with practical spreading loss, to estimate distances to relevant thresholds. For impact pile driving, distances to the marine mammal sound thresholds were calculated with the assumption of an 8 dB reduction in source levels from the use of a bubble curtain. Source values (at 10 m) used for calculations were 188 dB for impact driving (196 dB as a representative value, less 8 dB of sound attenuation from use of a bubble curtain) and 172 dB for vibratory driving. For airborne sound during the TPP, vibratory driving was measured at 102 dB and impact driving at 109 dB (both at 15 m). These values were used, with spherical spreading loss, to estimate distances to relevant thresholds. All calculated distances to and the total area encompassed by the marine mammal sound thresholds are provided in Tables 1 and 2. Predicted distances to thresholds for different sources are shown in Figures 6–1 through 6–4 of the Navy's application.

TABLE 1—DISTANCES TO RELEVANT SOUND THRESHOLDS AND AREAS OF ENSONIFICATION

Description	Effective source level (dB at 10 m)	Distance to threshold (m) and associated area of ensonification (km^2)			
		190 dB	180 dB	160 dB	120 dB
Steel piles, impact	188	7, 0.0002	34, 0.0036	736, 1.702	n/a
Steel piles, vibratory	172	1, <0.0001	3, <0.0001	n/a	[1] 29,286, 16.1

[1] This distance cannot actually be attained at the project location. The area presented is actual.

TABLE 2—DISTANCES TO RELEVANT SOUND THRESHOLDS AND AREAS OF ENSONIFICATION, AIRBORNE SOUND

Group	Threshold, re 20 μPa rms (unweighted)	Distance to threshold (m) and associated area of ensonification (km^2)	
		Impact driving	Vibratory driving
Harbor seals	90 dB	134, 0.0564	60, 0.0113
California sea lions	100 dB	42, 0.0055	19, 0.0011

There are no haul-out locations within the airborne harassment zones, which are encompassed by the zones estimated for underwater sound. Protective measures will be in place out to the distances calculated for the underwater thresholds, and the distances for the airborne thresholds will be covered fully by mitigation and monitoring measures in place for underwater sound thresholds. We recognize that pinnipeds in water that are within the area of ensonification for airborne sound could be incidentally taken by either underwater or airborne sound or both. We consider these incidences of harassment to be accounted for in the take estimates for underwater sound.

Comments and Responses

We published a notice of receipt of the Navy's application and proposed IHA in the **Federal Register** on May 22, 2013 (78 FR 30273). NMFS received comments from the Marine Mammal Commission (Commission). The Commission's comments and our responses are provided here, and the comments have been posted on the internet at: *http://www.nmfs.noaa.gov/pr/permits/incidental.htm.*

Comment 1: The Commission recommends that we require the Navy to re-estimate the number of harbor seal takes using more recent survey data from Tannenbaum *et al.* (2009, 2011), which is based on the total estimated population, rather than the Navy's methodology of reducing the density for the proportion of seals hauled out and older data.

Response: As described in greater detail in the FR notice, there are two sources of information from which a suitable density estimate may be derived for harbor seals. These include aerial surveys of Hood Canal (358.4 km^2) conducted in 1999 and vessel-based marine wildlife surveys conducted by the Navy in nearshore waters of NBKB (3.9 km^2) during July through September 2008 and November through May 2009–10. Despite the time lapse, these survey efforts produce comparable results. Because harbor seals, unlike sea lions, form a resident population in Hood Canal and are not known to be attracted to the NBKB waterfront by any foraging or haul-out

opportunity, it is the opinion of both NMFS and the Navy that it is preferable to use the density value that is derived from a survey of the entire population. The Tannenbaum *et al.* (2009, 2011) data are not based on the total estimated population, but on surveys of a very small section of Hood Canal (approximately one percent of the Hood Canal area along the NBKB waterfront).

Based on the 1999 surveys, which also form the basis for the most recent abundance estimates provided in NMFS' Stock Assessment Report for the Washington inland waters stock of harbor seals, Jeffries *et al.* (2003) estimated the abundance of harbor seals in the Hood Canal as 1,088 individuals. The resulting density is 3.04 animals/km^2; however, use of this density in estimating take would make the assumption that 100 percent of the animals would be in the water at all times. Therefore, a factor derived from Huber *et al.* (2001)—only 35 percent of seals are in the water at any given time—was applied to correct for animals out of the water and not available to be exposed to underwater sound; the resulting corrected density of seals in the water at any given time is 1.06 animals/km^2.

The Commission disagrees with this approach because of their contention that (1) an instantaneous estimate of animals in the water at a given time does not produce an accurate assessment of the number of individuals that may enter the water over the daily duration of the activity and (2) use of the uncorrected density would be consistent with our decision to base the number of takes of sea lions on average monthly maximum abundance estimates at NBKB haul-out sites, under the assumption that each individual present would enter the water and therefore be exposed to underwater sound that may result in behavioral harassment at some point on any given day. With regard to the second point, we note that consistency between approaches for sea lions and for harbor seals would not be appropriate. Sea lions are attracted to the NBKB waterfront by the presence of submarines and other haul-out opportunities. Site-specific data therefore better reflects the nature of sea lion occurrence than does a regional density.

With regard to the first point, as acknowledged in the FR notice (78 FR 30273; May 22, 2013), we recognize that over the course of a day, while the proportion of animals in the water may not vary significantly, different individuals may enter and exit the water. That is, it is probable that greater than 35 percent of seals will enter the water at some point during the day. No data exist regarding fine-scale harbor seal movements within the project area on time durations of less than a day, thus precluding an assessment of ingress or egress of different animals through the action area. As such, it is impossible, given available data, to determine exactly what number of individuals above 35 percent may potentially be exposed to underwater sound. Therefore, we are left to make a decision, on the basis of limited available information, regarding which of these two scenarios (i.e., 100 percent vs. 35 percent of harbor seals are in the water and exposed to sound) produces a more accurate estimate of the potential incidents of take.

First, we understand that hauled-out harbor seals are necessarily at haul-outs. No significant harbor seal haul-outs are located within or near the action area. Harbor seals observed in the vicinity of the NBKB shoreline are rarely hauled-out (for example, in formal surveys during 2007–08, approximately 86 percent of observed seals were swimming), and when hauled-out, they do so opportunistically (i.e., on floating booms rather than established haul-outs). Harbor seals are typically unsuited for using manmade haul-outs at NBKB, which are used by sea lions. Primary harbor seal haul-outs in Hood Canal are located at significant distance (20 km or more) from the action area in Dabob Bay or further south (see Figure 4–1 in the Navy's application), meaning that animals casually entering the water from haul-outs or flushing due to some disturbance at those locations would not be exposed to underwater sound from the project; rather, only those animals embarking on foraging trips and entering the action area may be exposed.

Second, we know that harbor seals in Hood Canal are not likely to have a uniform distribution as is assumed through use of a density estimate, but are likely to be relatively concentrated near areas of interest such as the haul-outs found in Dabob Bay or foraging areas. The majority of the action area consists of the Level B harassment zone in deeper waters of Hood Canal; past observations from surveys and required monitoring have confirmed that harbor seals are less abundant in these waters.

Third, a typical pile driving day (in terms of the actual time spent driving) is much shorter than the 8–15 hours cited by the Commission as a representative pile driving day. Construction scheduling and notional production rates in concert with typical delays mean that hammers are active for only some small fraction of time on pile driving ''days''. For example, during the first year of construction for the second explosives handling wharf (EHW–2; a separate action occurring at NBKB), vibratory pile driving occurred on 75 days, but only for an approximate total time of 71 hours.

What we know tells us that (1) The turnover of harbor seals (in and out of the water) is occurring primarily outside the action area and would not be expected to result in a greater number of individuals entering the action area within a given day and being harassed than is assumed; (2) there are likely to be significantly fewer harbor seals in the majority of the action area than would be indicated by the uncorrected density; and (3) pile driving actually occurs over a limited timeframe on any given day, reducing the amount of time over which new individuals might enter the action area within a given day. These factors lead us to believe that the corrected density is likely to more closely approximate the number of seals that may be found in the action area than does the uncorrected density, and there are no existing data that would indicate that the proportion of individuals entering the water within the predicted area of effect during pile driving would be dramatically larger than 35 percent. Therefore, the Commission's suggestion that 100 percent of the population be used to estimate density would likely result in a gross exaggeration of potential take. Moreover, because the Navy is typically unable to determine from field observations whether the same or different individuals are being exposed, each observation is recorded as a new take, although an individual theoretically would only be considered as taken once in a given day.

Finally, we note that during the course of four previous IHAs over two years (2011–12), the Navy has been authorized for 6,725 incidents of incidental harassment (corrected for actual number of pile driving days). The total estimate of actual incidents of take (observed takes and observations extrapolated to unobserved area) was 868. This is almost certainly negatively biased, but the huge disparity does provide confirmation that we are not significantly underestimating takes.

Comment 2: The Commission recommends that we require the Navy to implement soft start procedures after 15 minutes if pile driving or removal is delayed or shut down because of the presence of a marine mammal within or approaching the shutdown zone.

Response: We do not believe the recommendation would be effective in reducing the number or intensity of incidents of harassment—in fact, we believe that implementation of this

recommendation may actually increase the number of incidents of harassment by extending the overall project duration—while imposing a high cost in terms of operational practicability. We note here that, while the Commission recommends use of the measure to avoid serious injury (i.e., injury that will result in death of the animal), such an outcome is extremely unlikely even in the absence of any mitigation measures (as described in the FR notice at 78 FR 30273; May 22, 2013). Given that conclusion, we address our response to the potential usefulness of the measure in avoidance of non-serious injury (i.e., Level A harassment).

Soft start is required for the first impact pile driving of each day and, subsequently, after any impact pile driving stoppage of 30 minutes or greater. The purpose of a soft start is to provide a ''warning'' to animals by initiating the production of underwater sound at lower levels than are produced at full operating power. This warning is presumed to allow animals the opportunity to move away from an unpleasant stimulus and to potentially reduce the intensity of behavioral reactions to noise or prevent injury of animals that may remain undetected in the zone ensonified to potentially injurious levels. However, soft start requires additional time, resulting in a larger temporal footprint for the project. That is, soft start requires a longer cumulative period of pile driving (i.e., hours) but, more importantly, leads to a longer overall duration (i.e., more days on which pile driving occurs). In order to maximize the effectiveness of soft start while minimizing the implementation costs, we require soft start after a period of extended and unobserved relative silence (i.e., at the beginning of the day, after the end of the required 30-minute post-activity monitoring period, or after 30 minutes with no impact driving). It is after these periods that marine mammals are more likely to closely approach the site (because it is relatively quiet) and less likely to be observed prior to initiation of the activity (because continuous monitoring has been interrupted).

The Commission justifies this recommendation on the basis of the potential for undetected animals to remain in the shutdown zone, and describes various biases (i.e., availability, detection, and perception) on an observer's ability to detect an animal. We do not believe that time is a factor in determining the influence of these biases on the probability of observing an animal in the shutdown zone. That is, an observer is not more likely to detect the presence of an animal at the 15-minute mark of continuous monitoring than after 30 minutes (it is established that soft start is required after any unmonitored period). Therefore, requiring soft start after 15 minutes (i.e., more soft starts) is not likely to result in increased avoidance of injury. Finally, we do not believe that the use of soft start may be expected to appreciably reduce the potential for injury where the probability of detection is high (e.g., small, shallow zones with good environmental conditions). Rather, the primary purpose of soft start under such conditions is to reduce the intensity of potential behavioral reactions to underwater sound in the disturbance zone.

As noted by the Commission, there are multiple reasons why marine mammals may remain in a shutdown zone and yet be undetected by observers. Animals are missed because they are underwater (availability bias) or because they are available to be seen, but are missed by observers (perception and detection biases) (e.g., Marsh and Sinclair, 1989). Negative bias on perception or detection of an available animal may result from environmental conditions, limitations inherent to the observation platform, or observer ability. While missed detections are possible in theory, this would require that an animal would either (a) remain submerged (i.e., be unavailable) for periods of time approaching or exceeding 15 minutes and/or (b) remain undetected while at the surface. We provide further site-specific detail below.

First, environmental conditions in the Hood Canal are typically excellent and, unlike the moving aerial or vessel-based observation platforms for which detectability bias is often a concern, the observers here will be positioned in the most suitable locations to ensure high detectability (randomness of observations is not a concern, as it is for abundance sampling). We believe that the probability of detecting animals within the shutdown zones proposed for this action approaches 100 percent. The shutdown zones are small, with radial distances of only 10 m and 36 m for the 190- and 180-dB zones, respectively, while the 180 dB zone for cetaceans is notional only—no cetaceans have ever been recorded as entering the security area bounded by the floating port security barrier. Regarding availability, the most abundant species, and therefore the species most likely to be present in the mitigation zones, are the harbor seal and California sea lion.

It is generally unlikely that a pinniped would remain within 10 m of an active construction zone, in the absence of any known foraging opportunities or other attractant of any significance, for an extended period of time. However, some harbor seals have been known to frequent the areas surrounding existing wharves at NBKB. Even when this situation does occur, the possibility that individuals would remain submerged for a period of time exceeding 15 minutes is discountable.

Dive behavior for harbor seals, including typical duration, is influenced by a variety of factors, such as behavioral context, local bathymetric conditions, and the specific physiological characteristics of the animal (e.g., Harkonen, 1987a,b; Eguchi and Harvey, 2005). Dive depth may be expected to correlate well with dive duration. However, Eguchi and Harvey (2005) showed that average dive durations in Monterey Bay, where available depths are much deeper than those in the nearshore environment at NBKB, were only 4.8 and 5.5 minutes for females and males, respectively. Although fine-scale population structure exists for harbor seals on a geographic basis from California to Alaska (Carretta *et al.,* 2011), similar results have been obtained in Alaska and Washington. Dive durations for harbor seals from three locations across the Gulf of Alaska were typically less than 4 minutes across factors (Hastings *et al.,* 2004). Closer to the action area in Puget Sound waters, Suryan and Harvey (1998) reported dive depths ranging from 3.2–4.6 min. Importantly, those durations were reduced in nearshore waters similar to those in the shutdown zone (1.5–3.6 min). Conversely, dive durations were somewhat longer during milling behavior, which is sometimes observed in the action area. However, surface intervals (which ranged from 0.6–0.9 min) showed a significantly positive correlation to dive duration (Suryan and Harvey, 1998), meaning that longer dives, or periods of high availability bias, are followed by periods of relatively greater availability.

Sea lions employ a shallow epipelagic foraging strategy, and numerous studies have reported mean dive times of approximately 2 minutes for California sea lions (e.g., Feldkamp *et al.,* 1989 [mean dive time less than 3 min]; Weise *et al.,* 2006 [mean dive time 1.9±1.6 min]). Kuhn *et al.* (2003) cite published values for sea lion aerobic dive limits ranging from 2.3–5.8 minutes and, while it is possible that sea lions may dive beyond these limits when foraging on the benthos, significantly longer dive durations would not be expected in shallow waters. In addition, while short surface intervals are also possible,

longer values are typical of data found in the literature for animals engaged in foraging (e.g., Costa *et al.* (2007) report a mean surface interval of 1.6 minutes). Sea lions will typically spend a much greater proportion of time at the surface when not foraging, and behavioral observations in the nearshore action area show that California sea lions are typically traveling, likely to haul-out opportunities at Delta Pier.

Under the typically excellent observation conditions found in the Hood Canal, we believe that surfaced animals would be observed. Based on the foregoing factors, we have high confidence in the ability of observers to detect marine mammals in the shutdown zones estimated for this project in the Hood Canal.

Comment 3: The Commission recommends that we require the Navy to consult with the Washington State Department of Transportation and/or the California Department of Transportation to (1) determine whether soft start procedures can be used safely with the vibratory hammers that the Navy plans to use prior to eliminating the Navy's requirement to implement those measures and (2) clarify and troubleshoot the sound attenuation device implementation procedures to ensure the device's efficacy.

Response: We concur with the first part of the Commission's recommendation and will facilitate the suggested consultation. However, this cannot be accomplished prior to issuance of the IHA due to the Navy's operational needs. Accordingly, we deem vibratory soft starts to not currently be practicable due to safety concerns. We will determine whether the potentially significant human safety issue is inherent to implementation of the measure or is due to operator error prior to issuing any further IHAs to the Navy for pile driving activities in 2014 and beyond.

With regard to sound attenuation device implementation, we previously required the Navy to use such a device and to require that their contractors ensure: (1) That the device be capable of achieving attenuation performance of 10 dB of reduction and (2) that the device is properly deployed such that no reduction in performance may be attributable to operator error. However, because recent observations indicate that achievement of 10 dB of attenuation performance may not be reasonable, we now stipulate simply that the Navy must make the necessary contractual requirements to ensure that the device is capable of achieving optimal performance, and that deployment of the device is implemented properly such that no reduction in performance may be attributable to faulty deployment. Compliance with this stipulation is incumbent upon the Navy and it would not be appropriate for us to dictate the manner of compliance, including requirements for consultation with third parties.

Comment 4: The Commission recommends that we require the Navy to monitor the extent of the disturbance zone using additional shore- or vessel-based observers throughout Hood Canal to (1) determine the numbers of marine mammals taken during pile driving and removal activities and (2) characterize the effects on those mammals.

Response: We believe that we have developed, in consultation with the Navy, a strategy that is appropriate to accomplish the stated objectives of the Commission's recommendation. The Commission states that the goal is not simply to employ a strategy that ensures monitoring out to a certain distance, but rather to employ a strategy that provides the information necessary to determine if the construction activities have adverse effects on marine mammals and to describe the nature and extent of those effects. We agree with that statement, and note that the Navy does not simply monitor within defined zones, ignoring occurrences outside those zones. The mitigation strategy is designed to implement shutdown of activity only for marine mammal occurrence within designated zones, but all observations of marine mammals and any observed behavior, whether construed as a reaction to project activity or not, are recorded regardless of distance to project activity. This information is coupled with the results of previous acoustic monitoring data (i.e., sound levels recorded at multiple defined distances from the activity) to draw conclusions about the impact of the activity on marine mammals. Importantly, the larger monitoring effort conducted by the Navy in deeper waters of Hood Canal during their 2011 project monitoring was an important piece of the Navy's overall monitoring strategy for the ongoing suite of actions at NBKB and may reasonably be used as a reference for the current activities. Using that information, as well as the results of required monitoring associated with the 2011–12 Test Pile Program, 2011–13 rehabilitation of the existing Explosives Handling Wharf, and the first year of construction for the EHW–2, we believe we have gained an acceptable understanding of marine mammal behavior in response to the specified activities, as well as occurrence and behavior within the Level B harassment zone in deeper waters beyond the waterfront restricted area, which is intensively monitored. We also note that the de facto zone of monitoring effort has been expanded for this project, as observers monitoring the concurrent EHW–2 project will also be collecting information on occurrence and potential reactions of marine mammals.

The Commission urges us to consider a more comprehensive approach to assessment of effects of activities co-located in time and space. We believe that the Navy has designed a comprehensive, multi-year approach for its monitoring strategy. It is not fiscally feasible, or the best use of resources, to deploy multiple vessel-based observers for year after year of similar activities. A strategic approach demands front-loaded effort that, when properly designed, provides utility for subsequent years. Beginning in 2008, the Navy began to expand their efforts to better understand nature and frequency of occurrence for wildlife at NBKB. Opportunistic haul-out surveys and vessel-based wildlife surveys have been useful in evaluating the potential effects of construction activities. At the initiation of the recent construction activities, the Navy mounted an intensive monitoring effort, including deep-water monitoring that was not mitigation-specific and comprehensive acoustic monitoring, with the express purpose of providing a robust body of data that would form a reference for evaluation of future effects of similar activities. In addition, the Navy has proactively secured funding and sought collaboration with NMFS and other experts to conduct future surveys of Washington inland waters that will provide much-needed updates to our understanding of marine mammal abundance and distribution in the region.

Comment 5: The Commission recommends that we complete an analysis of the impact of the proposed activities together with the cumulative impacts of all the other pertinent risk factors (including but not limited to the Navy's concurrent EHW–2 project) for marine mammals in the Hood Canal area.

Response: Section 101(a)(5)(D) of the MMPA requires NMFS to make a determination that the harassment incidental to a specified activity will have a negligible impact on the affected species or stocks of marine mammals, and will not result in an unmitigable adverse impact on the availability of marine mammals for taking for subsistence uses. Neither the MMPA nor NMFS' implementing regulations specify how to consider other activities

and their impacts on the same populations. However, consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into the negligible impact analysis via their impacts on the environmental baseline (e.g., as reflected in the density/distribution and status of the species, population size and growth rate, and ambient noise).

In addition, cumulative effects were addressed in the Navy's Environmental Assessment prepared for this action, as well as in the NEPA analyses and biological opinions prepared for other actions conducted at the NBKB waterfront. These documents, as well as the relevant Stock Assessment Reports, are part of NMFS' Administrative Record for this action, and provided the decision-maker with information regarding other activities in the action area that affect marine mammals, an analysis of cumulative impacts, and other information relevant to the determination made under the MMPA.

Comment 6: The Commission recommends that we encourage the Navy to combine future requests for IHAs for all activities that would occur in the same general area and within the same year rather than segmenting those activities and their associated impacts by requesting separate authorizations.

Response: We agree with the Commission's recommendation and have encouraged the Navy to do so. However, we do not have the statutory authority to require the Navy to combine such requests. With our encouragement, the Navy is working to develop a regionally comprehensive approach to environmental compliance for reasonably foreseeable small actions, such as pile replacement and repair projects. A major project such as the concurrent EHW–2 construction would likely remain as a standalone effort due to constraints related to planning, funding, and contracting.

Comment 7: The Commission recommends that we require the Navy to use the same data (e.g., source levels, sound attenuation factors, densities), methods, and justification for all pile driving and removal activities that occur during the same timeframe at NBKB.

Response: We concur with the Commission's recommendation and will require consistency from the Navy in future IHA requests. However, we are not overly concerned here because where there are inconsistencies they are due to use of conservative approaches. For example, in discussing source levels used for determining mitigation zones, the Commission notes that the Navy used a conservative estimate (i.e., the maximum source level) for the barge mooring project, but did not do so for the EHW–2 project. While the approach differs, conservatism is also built into the estimation of mitigation zones for EHW–2, not through use of a conservative source level, but by using the maximum radial distances to relevant thresholds, as measured during in site-specific acoustic monitoring. The modeled zones for the EHW–2 project were 22 and 5 m for the 180 and 190 dB zones, respectively, but the zones required of the Navy are 85 and 20 m, respectively. This more conservative approach was adopted at the urging and with the concurrence of the Commission in 2012. The Commission states that it is unclear why these inconsistencies are present, however, in each case the reason for the inconsistency and the rationale for our decision that use of an inconsistent approach is acceptable, if not desirable, is clearly presented in the associated FR notices.

Description of Marine Mammals in the Area of the Specified Activity

There are seven marine mammal species, four cetaceans and three pinnipeds, which may inhabit or transit through the waters nearby NBKB in the Hood Canal. These include the transient killer whale, harbor porpoise, Dall's porpoise (*Phocoenoides dalli dalli*), Steller sea lion (eastern stock only; *Eumetopias jubatus monteriensis*), California sea lion, harbor seal, and humpback whale (*Megaptera novaeangliae*). The Steller sea lion and humpback whale are the only marine mammals that may occur within the Hood Canal that are listed under the Endangered Species Act (ESA); the humpback whale is listed as endangered and the eastern distinct population segment (DPS) of Steller sea lion is listed as threatened. The Steller sea lion is typically present in low numbers in the Hood Canal only from approximately October through mid-April. The humpback whale is not typically present in Hood Canal, with no confirmed sightings found in the literature or the Orca Network database (*http://www.orcanetwork.org/*) prior to January and February 2012, when one individual was observed repeatedly over a period of several weeks. No sightings have been recorded since that time and we consider the humpback whale to be a rare visitor to Hood Canal at most. While the southern resident killer whale is resident to the inland waters of Washington and British Columbia, it has not been observed in the Hood Canal in over 15 years. Therefore, these three stocks were excluded from further analysis. The FR notice (78 FR 30273; May 22, 2013) summarizes the population status and abundance of these species, and the Navy's application provides detailed life history information.

Potential Effects of the Specified Activity on Marine Mammals

We have determined that pile driving, as outlined in the project description, has the potential to result in behavioral harassment of marine mammals that may be present in the project vicinity while construction activity is being conducted. Pile driving could potentially harass those pinnipeds that are in the water close to the project site, whether exposed to airborne or underwater sound. The FR notice (78 FR 30273; May 22, 2013) provides a detailed description of marine mammal hearing and of the potential effects of these construction activities on marine mammals.

Anticipated Effects on Habitat

The planned activities at NBKB will not result in permanent impacts to habitats used directly by marine mammals, such as haul-out sites, but may have potential short-term impacts to food sources such as forage fish and salmonids. There are no rookeries or major haul-out sites within 10 km (6.2 mi), foraging hotspots, or other ocean bottom structures of significant biological importance to marine mammals that may be present in the marine waters in the vicinity of the project area. Therefore, the main impact issue associated with the specified activity will be temporarily elevated sound levels and the associated direct effects on marine mammals, as discussed previously in this document. The most likely impact to marine mammal habitat occurs from pile driving effects on likely marine mammal prey (i.e., fish) near NBKB and minor impacts to the immediate substrate during construction activity associated with the barge mooring project. The FR notice (78 FR 30273; May 22, 2013) describes these potential impacts in greater detail.

Mitigation

In order to issue an incidental take authorization (ITA) under Section 101(a)(5)(D) of the MMPA, we must, where applicable, set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar

significance, and on the availability of such species or stock for taking for certain subsistence uses (where relevant).

Measurements from similar pile driving elsewhere at NBKB were coupled with practical spreading loss to estimate zones of influence (ZOIs; see ''Estimated Take by Incidental Harassment''); these values were used to develop mitigation measures for pile driving activities at NBKB. The ZOIs effectively represent the mitigation zones that will be established around each pile to prevent Level A harassment to marine mammals, while providing estimates of the areas within which Level B harassment might occur. In addition to the measures described later in this section, the Navy will employ the following standard mitigation measures:

(a) Conduct briefings between construction supervisors and crews, marine mammal monitoring team, acoustical monitoring team, and Navy staff prior to the start of all pile driving activity, and when new personnel join the work, in order to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures.

(b) Comply with applicable equipment sound standards and ensure that all construction equipment has sound control devices no less effective than those provided on the original equipment.

(c) For in-water heavy machinery work other than pile driving (using, e.g., standard barges, tug boats, barge-mounted excavators, or clamshell equipment used to place or remove material), if a marine mammal comes within 10 m, operations shall cease and vessels shall reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include the following activities: (1) Movement of the barge to the pile location; (2) positioning of the pile on the substrate via a crane (i.e., stabbing the pile); (3) removal of the pile from the water column/substrate via a crane (i.e., deadpull); or (4) the placement of sound attenuation devices around the piles. For these activities, monitoring will take place from 15 minutes prior to initiation until the action is complete.

Monitoring and Shutdown for Pile Driving

The following measures will apply to the Navy's mitigation through shutdown and disturbance zones:

Shutdown Zone—For all pile driving and removal activities, the Navy will establish a shutdown zone intended to contain the area in which SPLs equal or exceed the 180/190 dB rms acoustic injury criteria. The purpose of a shutdown zone is to define an area within which shutdown of activity will occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area), thus preventing injury, serious injury, or death of marine mammals. Radial distances for shutdown zones are shown in Table 1. However, a minimum shutdown zone of 10 m will be established during all pile driving and removal activities, regardless of the estimated zone. These precautionary measures are intended to prevent the already unlikely possibility of physical interaction with construction equipment and to further reduce any possibility of acoustic injury.

Disturbance Zone—Disturbance zones are the areas in which SPLs equal or exceed 160 and 120 dB rms (for pulsed and non-pulsed sound, respectively). Disturbance zones provide utility for monitoring conducted for mitigation purposes (i.e., shutdown zone monitoring) by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring of disturbance zones enables observers to be aware of and communicate the presence of marine mammals in the project area but outside the shutdown zone and thus prepare for potential shutdowns of activity. However, the primary purpose of disturbance zone monitoring is for documenting incidents of Level B harassment; disturbance zone monitoring is discussed in greater detail later (see ''Monitoring and Reporting''). Nominal radial distances for disturbance zones are shown in Tables 1 and 2. Given the size of the disturbance zone for vibratory pile driving, it is impossible to guarantee that all animals will be observed or to make comprehensive observations of fine-scale behavioral reactions to sound, and only a portion of the zone (e.g., what may be reasonably observed by visual observers stationed within the waterfront restricted area [WRA]) will be monitored.

In order to document observed incidences of harassment, monitors record all marine mammal observations, regardless of location. The observer's location, as well as the location of the pile being driven, is known from a GPS. The location of the animal is estimated as a distance from the observer, which is then compared to the location from the pile. If acoustic monitoring is being conducted for that pile, a received SPL may be estimated, or the received level may be estimated on the basis of past or subsequent acoustic monitoring. It may then be determined whether the animal was exposed to sound levels constituting incidental harassment in post-processing of observational and acoustic data, and a precise accounting of observed incidences of harassment created. Therefore, although the predicted distances to behavioral harassment thresholds are useful for estimating incidental harassment for purposes of authorizing levels of incidental take, actual take may be determined in part through the use of empirical data. That information may then be used to extrapolate observed takes to reach an approximate understanding of actual total takes.

Monitoring Protocols—Monitoring will be conducted before, during, and after pile driving activities. In addition, observers shall record all incidences of marine mammal occurrence, regardless of distance from activity, and shall document any behavioral reactions in concert with distance from piles being driven. Observations made outside the shutdown zone will not result in shutdown; that pile segment will be completed without cessation, unless the animal approaches or enters the shutdown zone, at which point all pile driving activities will be halted. Monitoring will take place from 15 minutes prior to initiation through 30 minutes post-completion of pile driving activities. Pile driving activities include the time to remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes. Please see the Marine Mammal Monitoring Plan (available at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm*), developed by the Navy in agreement with us, for full details of the monitoring protocols.

The following additional measures apply to visual monitoring:

(1) Monitoring will be conducted by qualified observers, who will be placed at the best vantage point(s) practicable to monitor for marine mammals and implement shutdown/delay procedures when applicable by calling for the shutdown to the hammer operator. Qualified observers are trained biologists, with the following minimum qualifications:

- Visual acuity in both eyes (correction is permissible) sufficient for discernment of moving targets at the water's surface with ability to estimate target size and distance; use of binoculars may be necessary to correctly identify the target;
- Advanced education in biological science, wildlife management, mammalogy, or related fields (bachelor's degree or higher is required);

• Experience and ability to conduct field observations and collect data according to assigned protocols (this may include academic experience);
• Experience or training in the field identification of marine mammals, including the identification of behaviors;
• Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
• Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates and times when in-water construction activities were suspended to avoid potential incidental injury from construction sound of marine mammals observed within a defined shutdown zone; and marine mammal behavior; and
• Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

(2) Prior to the start of pile driving activity, the shutdown zone will be monitored for 15 minutes to ensure that it is clear of marine mammals. Pile driving will only commence once observers have declared the shutdown zone clear of marine mammals; animals will be allowed to remain in the shutdown zone (i.e., must leave of their own volition) and their behavior will be monitored and documented. The shutdown zone may only be declared clear, and pile driving started, when the entire shutdown zone is visible (i.e., when not obscured by dark, rain, fog, etc.). In addition, if such conditions should arise during impact pile driving that is already underway, the activity will be halted.

(3) If a marine mammal approaches or enters the shutdown zone during the course of pile driving operations, activity will be halted and delayed until either the animal has voluntarily left and been visually confirmed beyond the shutdown zone or 15 minutes have passed without re-detection of the animal. Monitoring will be conducted throughout the time required to drive a pile.

Sound Attenuation Devices

Bubble curtains shall be used during all impact pile driving. The device will distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column, and the lowest bubble ring shall be in contact with the mudline for the full circumference of the ring. Testing of the device by comparing attenuated and unattenuated strikes is not possible because of requirements in place to protect marbled murrelets (an ESA-listed bird species under the jurisdiction of the USFWS). However, in order to avoid loss of attenuation from design and implementation errors in the absence of such testing, a performance test of the device shall be conducted prior to initial use. The performance test shall confirm the calculated pressures and flow rates at each manifold ring. In addition, the contractor shall also train personnel in the proper balancing of air flow to the bubblers and shall submit an inspection/performance report to the Navy within 72 hours following the performance test.

Timing Restrictions

In Hood Canal, designated timing restrictions exist for pile driving activities to avoid in-water work when salmonids and other spawning forage fish are likely to be present. The in-water work window is July 16–February 15. The barge mooring project will occur during a portion of that period, from July 16–September 30. During the majority of this timeframe, impact pile driving will only occur starting two hours after sunrise and ending two hours before sunset due to marbled murrelet nesting season. After September 23, in-water construction activities will occur during daylight hours (sunrise to sunset).

Soft Start

The use of a soft-start procedure is believed to provide additional protection to marine mammals by warning or providing a chance to leave the area prior to the hammer operating at full capacity, and typically involves a requirement to initiate sound from vibratory hammers for fifteen seconds at reduced energy followed by a 30-second waiting period. This procedure is repeated two additional times. However, implementation of soft start for vibratory pile driving during previous pile driving work at NBKB has led to equipment failure and serious human safety concerns; those issues were detailed in the FR notice (78 FR 30273; May 22, 2013). Therefore, vibratory soft start is not required as a mitigation measure for this project, as we have determined it to not currently be practicable due to safety concerns. We have further determined this measure unnecessary to providing the means of effecting the least practicable impact on marine mammals and their habitat. For impact driving, soft start will be required, and contractors will provide an initial set of strikes from the impact hammer at reduced energy, followed by a 30-second waiting period, then two subsequent reduced energy strike sets. The reduced energy of an individual hammer cannot be quantified because of variation in individual drivers. The actual number of strikes at reduced energy will vary because operating the hammer at less than full power results in ''bouncing'' of the hammer as it strikes the pile, resulting in multiple ''strikes''. Soft start for impact driving will be required at the beginning of each day's pile driving work and at any time following a cessation of impact pile driving of 30 minutes or longer.

We have carefully evaluated the applicant's mitigation measures and considered a range of other measures in the context of ensuring that we prescribe the means of effecting the least practicable impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another: (1) The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals; (2) the proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and (3) the practicability of the measure for applicant implementation, including consideration of personnel safety, and practicality of implementation.

Based on our evaluation of the applicant's planned measures, as well as any other potential measures that may be relevant to the specified activity, we have determined that these mitigation measures provide the means of effecting the least practicable impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

In order to issue an ITA for an activity, section 101(a)(5)(D) of the MMPA states that we must, where applicable, set forth ''requirements pertaining to the monitoring and reporting of such taking''. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for ITAs must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area. Please see the Navy's Marine Mammal Monitoring Plan for

full details of the requirements for monitoring and reporting.

Visual Marine Mammal Observations

The Navy will collect sighting data and behavioral responses to construction for marine mammal species observed in the region of activity during the period of activity. All observers will be trained in marine mammal identification and behaviors and are required to have no other construction-related tasks while conducting monitoring. The Navy will monitor the shutdown zone and disturbance zone before, during, and after pile driving, with observers located at the best practicable vantage points. Based on our requirements, the Navy will implement the following procedures for pile driving:

- MMOs will be located at the best vantage point(s) in order to properly see the entire shutdown zone and as much of the disturbance zone as possible.
- During all observation periods, observers will use binoculars and the naked eye to search continuously for marine mammals.
- If the shutdown zones are obscured by fog or poor lighting conditions, pile driving at that location will not be initiated until that zone is visible. Should such conditions arise while impact driving is underway, the activity will be halted.
- The shutdown and disturbance zones around the pile will be monitored for the presence of marine mammals before, during, and after any pile driving or removal activity.

Individuals implementing the monitoring protocol will assess its effectiveness using an adaptive approach. Monitoring biologists will use their best professional judgment throughout implementation and seek improvements to these methods when deemed appropriate. Any modifications to protocol will be coordinated between NMFS and the Navy.

Data Collection

We require that observers use approved data forms. Among other pieces of information, the Navy will record detailed information about any implementation of shutdowns, including the distance of animals to the pile and description of specific actions that ensued and resulting behavior of the animal, if any. In addition, the Navy will attempt to distinguish between the number of individual animals taken and the number of incidences of take. We require that, at a minimum, the following information be collected on the sighting forms:

- Date and time that monitored activity begins or ends;
- Construction activities occurring during each observation period;
- Weather parameters (e.g., percent cover, visibility);
- Water conditions (e.g., sea state, tide state);
- Species, numbers, and, if possible, sex and age class of marine mammals;
- Description of any observable marine mammal behavior patterns, including bearing and direction of travel, and if possible, the correlation to SPLs;
- Distance from pile driving activities to marine mammals and distance from the marine mammals to the observation point;
- Locations of all marine mammal observations; and
- Other human activity in the area.

Reporting

A draft report will be submitted to NMFS within 90 working days of the completion of marine mammal monitoring. The report will include marine mammal observations pre-activity, during-activity, and post-activity during pile driving days, and will also provide descriptions of any adverse responses to construction activities by marine mammals and a complete description of all mitigation shutdowns and the results of those actions and a refined take estimate based on the number of marine mammals observed during the course of construction. A final report will be prepared and submitted within 30 days following resolution of comments on the draft report.

Estimated Take by Incidental Harassment

With respect to the activities described here, the MMPA defines ''harassment'' as: ''Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].''

All anticipated takes will be by Level B harassment, involving temporary changes in behavior. The planned mitigation and monitoring measures are expected to minimize the possibility of injurious or lethal takes such that take by Level A harassment, serious injury or mortality is considered discountable. However, it is unlikely that injurious or lethal takes would occur even in the absence of the planned mitigation and monitoring measures.

If a marine mammal responds to a stimulus by changing its behavior (e.g., through relatively minor changes in locomotion direction/speed or vocalization behavior), the response may or may not constitute taking at the individual level, and is unlikely to affect the stock or the species as a whole. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on animals or on the stock or species could potentially be significant (Lusseau and Bejder, 2007; Weilgart, 2007). Given the many uncertainties in predicting the quantity and types of impacts of sound on marine mammals, it is common practice to estimate how many animals are likely to be present within a particular distance of a given activity, or exposed to a particular level of sound. This practice potentially overestimates the numbers of marine mammals taken. For example, during the past ten years, killer whales have been observed within the project area twice. On the basis of that information, an estimated amount of potential takes for killer whales is presented here. However, while a pod of killer whales could potentially visit again during the project timeframe, and thus be taken, it is more likely that they will not. Although incidental take of killer whales and Dall's porpoises was authorized for 2011–12 activities at NBKB on the basis of past observations of these species, no such takes were recorded and no individuals of these species were observed. Similarly, estimated actual take levels (observed takes extrapolated to the remainder of unobserved but ensonified area) were significantly less than authorized levels of take for the remaining species.

The project area is not believed to be particularly important habitat for marine mammals, nor is it considered an area frequented by marine mammals, although harbor seals are year-round residents of Hood Canal and sea lions are known to haul-out on submarines and other man-made objects at the NBKB waterfront (although typically at a distance of a mile or greater from the project site). Therefore, behavioral disturbances that could result from anthropogenic sound associated with these activities are expected to affect only a relatively small number of individual marine mammals, although those effects could be recurring over the life of the project if the same individuals remain in the project vicinity.

The Navy has requested authorization for the incidental taking of small numbers of California sea lions, harbor

seals, transient killer whales, and harbor porpoises in the Hood Canal that may result from pile driving during construction activities associated with the barge mooring project described previously in this document.

The humpback whale is not expected to occur in the project area, and Steller sea lions are not expected to occur during the project timeframe. The earliest documented occurrence of Steller sea lions at NBKB occurred on September 30, 2010, when five individuals were observed at Delta Pier during daily surveys. During monitoring associated with the 2011 TPP, Steller sea lions were documented as arriving on October 8, but had not previously been regularly observed prior to November.

Marine Mammal Densities

For all species, the best scientific information available was used to derive density estimates and the maximum appropriate density value for each species for each site was used in the marine mammal take assessment calculation. These values were derived or confirmed by experts convened to develop such information for use in Navy environmental compliance efforts in the Pacific Northwest (Navy, 2013). For harbor seals, this involved published literature describing harbor seal research conducted in Washington and Oregon as well as more specific counts conducted in Hood Canal (Huber *et al.,* 2001; Jeffries *et al.,* 2003). The best information available for the remaining species in Hood Canal came from surveys conducted by the Navy at the NBKB waterfront or in the vicinity of the project area.

Beginning in April 2008, Navy personnel have recorded sightings of marine mammals occurring at known haul-outs along the NBKB waterfront, including docked submarines or other structures associated with NBKB docks and piers and the nearshore pontoons of the floating security fence. Sightings of marine mammals within the waters adjoining these locations were also recorded. Sightings were attempted whenever possible during a typical work week (i.e., Monday through Friday), but inclement weather, holidays, or security constraints often precluded surveys. These sightings took place frequently, although without a formal survey protocol. During the surveys, staff visited each of the above-mentioned locations and recorded observations of marine mammals. Surveys were conducted using binoculars and the naked eye from shoreline locations or the piers/wharves themselves. Because these surveys consist of opportunistic sighting data from shore-based observers, largely of hauled-out animals, there is no associated survey area appropriate for use in calculating a density from the abundance data. Data were compiled for the period from April 2008 through December 2012 for analysis in this IHA, and these data provide the basis for take estimation for California sea lions. Please note that, although we erroneously stated in the FR notice that data were compiled only through November 2011, the data actually displayed in Table 6 of that document was indeed compiled through December 2012. Other information, including sightings data from other Navy survey efforts at NBKB, is available for this species, but these data provide the most conservative (i.e., highest) local abundance estimates (and thus the highest estimates of potential take).

In addition, vessel-based marine wildlife surveys were conducted according to established survey protocols during July through September 2008 and November through May 2009–10 (Tannenbaum *et al.,* 2009, 2011). Eighteen complete surveys of the nearshore area resulted in observations of four marine mammal species (harbor seal, California sea lion, harbor porpoise, and Dall's porpoise). These surveys operated along pre-determined transects parallel to the shoreline from the nearshore out to approximately 1,800 ft (549 m) from shoreline, at a spacing of 100 yd, and covered the entire NBKB waterfront (approximately 3.9 km^2 per survey) at a speed of 5 kn or less. Two observers recorded sightings of marine mammals both in the water and hauled out, including date, time, species, number of individuals, age (juvenile, adult), behavior (swimming, diving, hauled out, avoidance dive), and haul-out location. Positions of marine mammals were obtained by recording distance and bearing to the animal with a rangefinder and compass, noting the concurrent location of the boat with GPS, and, subsequently, analyzing these data to produce coordinates of the locations of all animals detected. These surveys resulted in the only observation of a Dall's porpoise near NBKB.

The Navy also conducted vessel-based line transect surveys in Hood Canal on non-construction days during the 2011 TPP in order to collect additional data for species present in Hood Canal. These surveys detected three marine mammal species (harbor seal, California sea lion, and harbor porpoise), and included surveys conducted in both the main body of Hood Canal, near the project area, and baseline surveys conducted for comparison in Dabob Bay, an area of Hood Canal that is not affected by sound from Navy actions at the NBKB waterfront. The surveys operated along pre-determined transects that followed a double saw-tooth pattern to achieve uniform coverage of the entire NBKB waterfront. The vessel traveled at a speed of approximately 5 kn when transiting along the transect lines. Two observers recorded sightings of marine mammals both in the water and hauled out, including the date, time, species, number of individuals, and behavior (swimming, diving, etc.). Positions of marine mammals were obtained by recording the distance and bearing to the animal(s), noting the concurrent location of the boat with GPS, and subsequently analyzing these data to produce coordinates of the locations of all animals detected. Sighting information for harbor porpoises was corrected for detectability ($g(0) = 0.54$; Barlow, 1988; Calambokidis *et al.,* 1993; Carretta *et al.,* 2001). Distance sampling methodologies were used to estimate densities of animals for the data. This information provides the best information for harbor porpoises.

The cetaceans, as well as the harbor seal, appear to range throughout Hood Canal; therefore, the analysis in this proposed IHA assumes that harbor seal, transient killer whale, harbor porpoise, and Dall's porpoise are uniformly distributed in the project area. However, it should be noted that there have been no observations of cetaceans within the floating security barriers at NBKB; these barriers thus appear to effectively prevent cetaceans from approaching the shutdown zones. Although the Navy will implement a precautionary shutdown zone for cetaceans, anecdotal evidence suggests that cetaceans are not at risk of Level A harassment at NBKB even from louder activities (e.g., impact pile driving). The California sea lion does not appear to utilize most of Hood Canal. The sea lions appear to be attracted to the man-made haul-out opportunities along the NBKB waterfront while dispersing for foraging opportunities elsewhere in Hood Canal. California sea lions were not reported during aerial surveys of Hood Canal (Jeffries *et al.,* 2000).

Description of Take Calculation

The take calculations presented here rely on the best data currently available for marine mammal populations in the Hood Canal. The formula was developed for calculating take due to pile driving activity and applied to each group-specific sound impact threshold. The formula is founded on the following assumptions:

- Mitigation measures (e.g., bubble curtain) will be utilized, as discussed previously;
- All marine mammal individuals potentially available are assumed to be present within the relevant area, and thus incidentally taken;
- An individual can only be taken once during a 24-h period; and,
- There were will be twenty total days of activity.
- Exposures to sound levels above the relevant thresholds equate to take, as defined by the MMPA.

The calculation for marine mammal takes is estimated by:

Exposure estimate = (n * ZOI) * days of total activity

Where:

n = density estimate used for each species/season

ZOI = sound threshold ZOI impact area; the area encompassed by all locations where the SPLs equal or exceed the threshold being evaluated

n * ZOI produces an estimate of the abundance of animals that could be present in the area for exposure, and is rounded to the nearest whole number before multiplying by days of total activity.

The ZOI impact area is the estimated range of impact to the sound criteria. The distances specified in Table 1 were used to calculate ZOIs around each pile. All impact pile driving take calculations were based on the estimated threshold ranges assuming attenuation of 8 dB from use of a bubble curtain. The ZOI impact area took into consideration the possible affected area of the Hood Canal from the pile driving site furthest from shore with attenuation due to land shadowing from bends in the canal. Because of the close proximity of some of the piles to the shore, the narrowness of the canal at the project area, and the maximum fetch, the ZOIs for each threshold are not necessarily spherical and may be truncated.

While pile driving can occur any day throughout the in-water work window, and the analysis is conducted on a per day basis, only a fraction of that time (typically a matter of hours on any given day) is actually spent pile driving. Acoustic monitoring conducted as part of the TPP demonstrated that Level B harassment zones for vibratory pile driving are likely to be significantly smaller than the zones estimated through modeling based on measured source levels and practical spreading loss. Also of note is the fact that the effectiveness of mitigation measures in reducing takes is typically not quantified in the take estimation process. Here, we do explicitly account for an assumed level of efficacy for use of the bubble curtain, but not for the soft start associated with impact driving. In addition, equating exposure with response (i.e., a behavioral response meeting the definition of take under the MMPA) is simplistic and conservative assumption. For these reasons, these take estimates are likely to be conservative.

Airborne Sound—No incidents of incidental take resulting solely from airborne sound are likely, as distances to the harassment thresholds will not reach areas where pinnipeds may haul out. Harbor seals can haul out at a variety of natural or manmade locations, but the closest known harbor seal haul-out is at the Dosewallips River mouth (London, 2006) and Navy waterfront surveys and boat surveys have found it rare for harbor seals to haul out along the NBKB waterfront (Agness and Tannenbaum, 2009; Tannenbaum *et al.,* 2009, 2011; Navy, 2010). Individual seals have occasionally been observed hauled out on pontoons of the floating security fence within the restricted areas of NBKB, but this area is not with the airborne disturbance ZOI. The Service Pier is elevated at least twenty feet above the surface of the water and is inaccessible to pinnipeds, and seals have not been observed hauled out on the floating Port Operations pier sections or on the shoreline adjacent to the Service Pier. Sea lions typically haul out on submarines docked at Delta Pier, approximately one mile from the project site.

We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with heads above water. However, these animals will previously have been 'taken' as a result of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Multiple incidents of exposure to sound above NMFS' thresholds for behavioral harassment are not believed to result in increased behavioral disturbance, in either nature or intensity of disturbance reaction. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted.

California Sea Lion—California sea lions occur regularly in the vicinity of the project site from August through mid-June, as determined by Navy waterfront surveys conducted from April 2008 through December 2012 (Table 3). With regard to the range of this species in Hood Canal and the project area, it is assumed on the basis of waterfront observations (Agness and Tannenbaum, 2009; Tannenbaum *et al.,* 2009, 2011) that the opportunity to haul out on submarines docked at Delta Pier is a primary attractant for California sea lions in Hood Canal, as they are not typically observed elsewhere in Hood Canal. Their haul-out sites are not within the largest underwater ZOI, because sound will encounter land before reaching the haul-out site (see Figure 6–2 in the Navy's application). Abundance is calculated as the monthly average of the maximum number observed in a given month, as opposed to the overall average (Table 3). That is, the maximum number of animals observed on any one day in a given month was averaged for 2008–12, providing a monthly average of the maximum daily number observed. The largest monthly average (58 animals) was recorded in November, as was the largest single daily count (81 in 2011). The first California sea lion was observed at NBKB in August 2009, and their occurrence has been increasing since that time (Navy, 2012).

California sea lion density for Hood Canal was calculated to be 0.28 animals/km^2 for purposes of the Navy Marine Species Density Database (Navy, 2013). However, this density was derived by averaging data collected year-round. This project will occur during the months when California sea lions are the least abundant in Hood Canal, so it is more appropriate to use data collected at the NBKB waterfront during those months (August-September; we exclude July because it is likely that the majority of work will occur in August and September). In addition, local observations show that sea lions are attracted to haul-out opportunities at NBKB, resulting in greater local abundance than is indicated by the NMSDD density value. In our analysis contained in the FR notice (78 FR 30273; May 22, 2013), and based on the Navy's request for take authorization, we considered the highest number of individual California sea lions observed hauled out at NBKB during the July-September timeframe (i.e., 33), which occurred at the end of September 2010. Exposures were calculated assuming 33 individuals could be present, and therefore exposed to sound exceeding the behavioral harassment threshold, on each day of pile driving. We noted in that document that this was an extremely conservative methodology, but chose to carry it forward. However, in subsequent discussions with the Marine Mammal Commission, we determined that this conservative

methodology was likely unwarranted and resulted in unrealistic take estimates (i.e., a much greater take estimate for California sea lions than for harbor seals), given the observed primacy of harbor seals in waterfront observations for other actions at NBKB. Therefore, we have determined that it is more appropriate to use the monthly average from August-September, which considers the much lower observed abundances from August and early September (when the majority of project activity is likely to be completed). We still conservatively assume that all individuals potentially present (i.e., seven individuals; see Table 3) will be taken on any given day of activity.

TABLE 3—CALIFORNIA SEA LION SIGHTING INFORMATION FROM NBKB, APRIL 2008–DECEMBER 2012

Month	Number of surveys	Number of surveys with animals present	Frequency of presence [1]	Abundance [2]
January	47	36	0.77	31.0
February	50	43	0.86	38.0
March	47	45	0.96	53.3
April	67	55	0.82	45.4
May	72	58	0.81	29.4
June	73	17	0.23	7.4
July	61	1	0.02	0.6
August	65	12	0.18	2.6
September	54	31	0.57	20.4
October	65	61	0.94	51.8
November	56	56	1	60.2
December	54	44	0.81	49.6
Total or average (Aug–Sep only)	119	43	0.36	10.7

Totals (number of surveys) and averages (frequency and abundance) presented for project period (August–September) only. Information from other months presented for reference. Average abundance is weighted by monthly survey effort.

[1] Frequency is the number of surveys with California sea lions present/number of surveys conducted.

[2] Abundance is calculated as the monthly average of the maximum daily number observed in a given month.

Harbor Seal—Jeffries *et al.* (2003) conducted aerial surveys of the harbor seal population in Hood Canal in 1999 for the Washington Department of Fish and Wildlife and reported 711 harbor seals hauled out. The authors adjusted this abundance with a correction factor of 1.53 to account for seals in the water, which were not counted, and estimated that there were 1,088 harbor seals in Hood Canal. The correction factor (1.53) was based on the proportion of time seals spend on land versus in the water over the course of a day, and was derived by dividing one by the percentage of time harbor seals spent on land. These data came from tags (VHF transmitters) applied to harbor seals at six areas (Grays Harbor, Tillamook Bay, Umpqua River, Gertrude Island, Protection/Smith Islands, and Boundary Bay, BC) within two different harbor seal stocks (the coastal stock and the inland waters of WA stock) over four survey years. The Hood Canal population is part of the inland waters stock, and while not specifically sampled, Jeffries *et al.* (2003) found the VHF data to be broadly applicable to the entire stock. The tagging research in 1991 and 1992 conducted by Huber *et al.* (2001) and Jeffries *et al.* (2003) used the same methods for the 1999 and 2000 survey years. These surveys indicated that approximately 35 percent of harbor seals are in the water versus hauled out on a daily basis (Huber *et al.,* 2001; Jeffries *et al.,* 2003). Exposures were calculated using a density derived from the number of harbor seals that are present in the water at any one time (35 percent of 1,088, or approximately 381 individuals), divided by the area of the Hood Canal (358.44 km^2) and the formula presented previously. The aforementioned area of Hood Canal represents a change from that cited previously for authorizations associated with Navy activities in Hood Canal, and represents a correction to our understanding of the methodology used in *Jeffries et al.* (2003).

We recognize that over the course of the day, while the proportion of animals in the water may not vary significantly, different individuals may enter and exit the water. However, fine-scale data on harbor seal movements within the project area on time durations of less than a day are not available. Previous monitoring experience from Navy actions conducted from in the same project area has indicated that this density provides an appropriate estimate of potential exposures. However, the density of harbor seals calculated in this manner (1.06 animals/km^2) is corroborated by results of the Navy's vessel-based marine mammal surveys at NBKB in 2008 and 2009–10, in which an average of five individual harbor seals per survey was observed in the 3.9 km^2 survey area (density = 1.3 animals/km^2) (Tannenbaum *et al.,* 2009, 2011).

Killer Whales—Transient killer whales are uncommon visitors to Hood Canal, and may be present anytime during the year. Transient pods (six to eleven individuals per event) were observed in Hood Canal for lengthy periods of time (59–172 days) in 2003 (January-March) and 2005 (February-June), feeding on harbor seals (London, 2006). These whales used the entire expanse of Hood Canal for feeding. West Coast transient killer whales most often travel in small pods (Baird and Dill 1996). Houghton reported to the Navy, from unpublished data, that the most commonly observed group size in Puget Sound (defined as from Admiralty Inlet south and up through Skagit Bay) from 2004–2010 data is six whales.

The density value derived for the Navy Marine Species Density Database is 0.0019 animals/km^2 (Navy, 2013), which would result in a prediction that zero animals will be harassed by the project activities. However, while transient killer whales are rare in the Hood Canal, it is possible that a pod of animals could be present. In the event that this occurred, the animals would not assume a uniform distribution as is implied by the density estimate. Therefore, we conservatively assume that a single pod of whales (defined as six whales) could be present in the

vicinity of the project for the entire duration.

Dall's Porpoise

Dall's porpoises may be present in the Hood Canal year-round and could occur as far south as the project site. Their use of inland Washington waters, however, is mostly limited to the Strait of Juan de Fuca. One individual has been observed by Navy staff in deeper waters of Hood Canal (Tannenbaum *et al.,* 2009, 2011). The Navy Marine Species Density Database assumes a negligible value of 0.001 animals/1,000 km^2 for Dall's porpoises in the Hood Canal, which represents species that have historically been observed in an area but have no regular presence. Use of this density value results in a prediction that zero animals will be exposed to sound above the behavioral harassment threshold, and the Navy has not requested any take authorization for Dall's porpoises.

Harbor Porpoise

During vessel-based line transect surveys on non-construction days during the TPP, harbor porpoises were frequently sighted within several kilometers of the base, mostly to the north or south of the project area, but occasionally directly across from the Bangor waterfront on the far side of Toandos Peninsula. Harbor porpoise presence in the immediate vicinity of the base (i.e., within 1 km) remained low. These data were used to generate a density for Hood Canal. Based on guidance from other line transect surveys conducted for harbor porpoises using similar monitoring parameters (e.g., boat speed, number of observers) (Barlow, 1988; Calambokidis *et al.,* 1993; Caretta *et al.,* 2001), the Navy determined the effective strip width for the surveys to be one kilometer, or a perpendicular distance of 500 m from the transect to the left or right of the vessel. The effective strip width was set at the distance at which the detection probability for harbor porpoises was equivalent to one, which assumes that all individuals on a transect are detected. Only sightings occurring within the effective strip width were used in the density calculation. By multiplying the trackline length of the surveys by the effective strip width, the total area surveyed during the surveys was 471.2 km^2. Thirty-eight individual harbor porpoises were sighted within this area, resulting in a density of 0.0806 animals per km^2. To account for availability bias, or the animals which are unavailable to be detected because they are submerged, the Navy utilized a g(0) value of 0.54, derived from other similar line transect surveys (Barlow, 1988; Calambokidis *et al.,* 1993; Carretta *et al.,* 2001). This resulted in a corrected density of 0.149 harbor porpoises per km^2. For comparison, 274.27 km^2 of trackline survey effort in nearby Dabob Bay produced a corrected density estimate of 0.203 harbor porpoises per km^2.

TABLE 4—NUMBER OF POTENTIAL INCIDENTAL TAKES OF MARINE MAMMALS WITHIN VARIOUS ACOUSTIC THRESHOLD ZONES

Species	Density	Underwater		Total authorized takes
		Impact injury threshold [1]	Vibratory disturbance threshold (120 dB) [2]	
California sea lion	[4] 0.28	0	220	220
Harbor seal	1.06	0	340	340
Killer whale	[5] 0.0019	0	120	120
Dall's porpoise	0.000001	0	0	0
Harbor porpoise	0.149	0	40	40

[1] Acoustic injury threshold for impact pile driving is 190 dB for pinnipeds and 180 dB for cetaceans.
[2] Impact pile driving will always occur on the same day as vibratory pile driving, and the 160-dB acoustic harassment zone associated with impact pile driving is considered subsumed by the 120-dB harassment zone produced by vibratory driving. Therefore, takes are not calculated separately for the two zones.
[4] A maximum abundance estimate of 11 animals present per day during the project timeframe was used for take estimation.
[5] Here we assume that a single pod of transient killer whales (defined as six whales) may be present for the duration of the work period (twenty days).

Negligible Impact and Small Numbers Analysis and Determinations

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''. . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.'' In making a negligible impact determination, NMFS considers a variety of factors, including but not limited to: (1) The number of anticipated mortalities; (2) the number and nature of anticipated injuries; (3) the number, nature, intensity, and duration of Level B harassment; and (4) the context in which the take occurs.

Small Numbers Analysis

The proposed numbers of animals authorized to be taken for California sea lions, harbor seals, and harbor porpoise would be considered small relative to the relevant stocks or populations (less than one percent for California sea lions and harbor porpoise and less than three percent for harbor seals) even if each estimated taking occurred to a new individual—an extremely unlikely scenario, as, for pinnipeds occurring at the NBKB waterfront, there will almost certainly be some overlap in individuals present day-to-day. Further, for the pinniped species, these takes could potentially occur only within some small portion of the overall regional stock. Of the estimated 296,500 California sea lions, only certain adult and subadult males—believed to number approximately 3,000–5,000 by Jeffries *et al.* (2000)—travel north during the non-breeding season. That number has almost certainly increased with the population of California sea lions—the 2000 Stock Assessment Report for California sea lions reported an estimated population size of 204,000–214,000 animals—but likely remains a relatively small portion of the overall population. For harbor seals, animals found in Hood Canal belong to a closed, resident population estimated at approximately 1,000 animals by Jeffries *et al.* (2003), and takes are likely to occur only within some portion of that closed population, rather than to animals from the Washington inland

waters stock as a whole. For transient killer whales, we estimate take based on an assumption that a single pod of whales, comprising six individuals, is present in the vicinity of the project area for the entire duration of the project. These six individuals represent a small number of transient killer whales, for which a conservative minimum estimate of 354 animals was given in the 2011 Stock Assessment Reports. With the exception of the bubble curtain, potential efficacy of mitigation measures in terms of reduction in numbers and/or intensity of incidences of take has not been quantified. Therefore, these take numbers are likely to be conservative.

Negligible Impact Analysis

Pile driving activities associated with the barge mooring project, as outlined previously, have the potential to disturb or displace marine mammals. Specifically, the proposed activities may result in take, in the form of Level B harassment (behavioral disturbance) only, from airborne or underwater sounds generated from pile driving. Potential takes could occur if individuals of these species are present in the ensonified zone when pile driving is happening, which is likely to occur because (1) Harbor seals, which are frequently observed along the NBKB waterfront, are present within the WRA; (2) sea lions, which are less frequently observed, transit the WRA en route to haul-outs to the north at Delta Pier; or (3) cetaceans or pinnipeds transit the larger Level B harassment zone outside of the WRA.

No injury, serious injury, or mortality is anticipated given the methods of installation and measures designed to minimize the possibility of injury to marine mammals. The potential for these outcomes is minimized through the construction method and the implementation of the planned mitigation measures. Specifically, vibratory hammers will be the primary method of installation, and this activity does not have significant potential to cause injury to marine mammals due to the relatively low source levels produced (less than 190 dB) and the lack of potentially injurious source characteristics. Impact pile driving produces short, sharp pulses with higher peak levels and much sharper rise time to reach those peaks. When impact driving is necessary, required measures (use of a sound attenuation system, which reduces overall source levels as well as dampening the sharp, potentially injurious peaks, and implementation of shutdown zones) significantly reduce any possibility of injury. Likewise, Level B harassment will be reduced to the level of least practicable adverse impact through the use of mitigation measures described herein. that, given sufficient ''notice'' through mitigation measures including soft start (for impact driving), marine mammals are expected to move away from a sound source that is annoying prior to its becoming potentially injurious, and the likelihood that marine mammal detection ability by trained observers is high under the environmental conditions described for Hood Canal, enabling the implementation of shutdowns to avoid injury, serious injury, or mortality.

Effects on individuals that are taken by Level B harassment, on the basis of reports in the literature as well as monitoring from past projects at NBKB, will likely be limited to reactions such as increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring). Most likely, individuals will simply move away from the sound source and be temporarily displaced from the areas of pile driving, although even this reaction has been observed primarily only in association with impact pile driving. In response to vibratory driving, harbor seals (which may be somewhat habituated to human activity along the NBKB waterfront) have been observed to orient towards and sometimes move towards the sound.

For pinnipeds, no rookeries are present in the project area, there are no haul-outs other than those provided opportunistically by man-made objects, and the project area is not known to provide foraging habitat of any special importance. No cetaceans are expected within the WRA. The pile driving activities analyzed here are similar to other nearby construction activities within the Hood Canal, including two recent projects conducted by the Navy at the same location (test pile project and EHW–1 pile replacement project) as well as work conducted in 2005 for the Hood Canal Bridge (SR–104) by the Washington Department of Transportation, which have taken place with no reported injuries or mortality to marine mammals, and no known long-term adverse consequences from behavioral harassment.

In summary, this negligible impact analysis is founded on the following factors: (1) The possibility of injury, serious injury, or mortality may reasonably be considered discountable; (2) the anticipated incidences of Level B harassment consist of, at worst, temporary modifications in behavior; (3) the absence of any major rookeries and only a few isolated and opportunistic haul-out areas near or adjacent to the project site; (4) the absence of cetaceans within the WRA and generally sporadic occurrence outside the WRA; (5) the absence of any other known areas or features of special significance for foraging or reproduction within the project area; (6) the presumed efficacy of the planned mitigation measures in reducing the effects of the specified activity to the level of least practicable impact. In addition, none of these stocks are listed under the ESA or considered of special status (e.g., depleted or strategic) under the MMPA, and all four are thought to be increasing. In combination, we believe that these factors, as well as the available body of evidence from other similar activities, including those conducted at the same time of year and in the same location, demonstrate that the potential effects of the specified activity will have only short-term effects on individuals. The specified activity is not expected to impact rates of recruitment or survival and will therefore not result in population-level impacts.

Determinations

While the number of marine mammals potentially incidentally harassed will depend on the distribution and abundance of marine mammals in the vicinity of the survey activity, we find that the number of potential takings, by level B harassment only, is small relative to the relevant regional stock or population numbers, and that the effect of the activity will be mitigated to the level of least practicable impact through implementation of the mitigation and monitoring measures described previously. Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, we find that the total taking from the activity will have a negligible impact on the affected species or stocks.

Impact on Availability of Affected Species or Stock for Taking for Subsistence Uses

No tribal subsistence hunts are held in the vicinity of the project area; thus, temporary behavioral impacts to individual animals will not affect any subsistence activity. Further, no population or stock level impacts to marine mammals are anticipated or authorized. As a result, no impacts to the availability of the species or stock to the Pacific Northwest treaty tribes are expected as a result of the activities. Therefore, no relevant subsistence uses of marine mammals are implicated by this action.

Endangered Species Act (ESA)

There are no ESA-listed marine mammals expected to occur in the action area during the proposed action timeframe; therefore, no consultation under the ESA is required for such species.

National Environmental Policy Act (NEPA)

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), as implemented by the regulations published by the Council on Environmental Quality (40 CFR parts 1500–1508), the Navy prepared an Environmental Assessment (EA) to consider the direct, indirect and cumulative effects to the human environment resulting from the barge mooring project. NMFS made the Navy's EA available to the public for review and comment, in relation to its suitability for adoption by NMFS in order to assess the impacts to the human environment of issuance of an IHA to the Navy. Also in compliance with NEPA and the CEQ regulations, as well as NOAA Administrative Order 216–6, NMFS has reviewed the Navy's EA, determined it to be sufficient, and adopted that EA and signed a Finding of No Significant Impact (FONSI) on July 3, 2013. The Navy's EA and NMFS' FONSI for this action may be found at *http://www.nmfs.noaa.gov/pr/permits/incidental.htm.*

Authorization

As a result of these determinations, we have issued an IHA to the Navy to conduct the described activities in the Hood Canal from the period of July 16, 2013, through September 30, 2013, provided the previously described mitigation, monitoring, and reporting requirements are incorporated.

Dated: July 10, 2013.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2013–17405 Filed 7–18–13; 8:45 am]

BILLING CODE 3510–22–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase from People Who Are Blind or Severely Disabled.

ACTION: Proposed Additions to and Deletions from the Procurement List.

SUMMARY: The Committee is proposing to add services to the Procurement List that will be provided by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes products and services previously furnished by such agencies.

DATES: *Comments Must Be Received On Or Before:* 8/19/2013.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 10800, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION OR TO SUBMIT COMMENTS CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the services listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following services are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Services

Service Type/Location: Custodial Service, Superior National Forest Supervisors Office, 8901 Grand Avenue, Duluth, MN
NPA: Goodwill Industries Vocational Enterprises, Inc., Duluth, MN
Contracting Activity: Department of Agriculture, Forest Service, Superior National Forest, Duluth, MN
Service Type/Location: Vehicle Marshaling Service, GSA Rocky Mountain Region, Rapid City, SD
NPA: BH Services, Inc., Elsworth AFB, SD
Contracting Activity: GSA/FSS Regional Fleet MGT Office, Fort Worth, TX
Service Type/Location: Secure Document Destruction Service, Blanchfield Army Community Hospital, 2424 20th Street, Fort Campbell, KY
NPA: Goodwill Industries of Kentucky, Inc., Louisville, KY
Contracting Activity: DEPT OF THE ARMY, W40M SOUTHEAST RGNL CONTRG OFC, FORT GORDON, GA
Service Type/Location: Janitorial Service, US Immigration and Customs Enforcement, VA Hudson Valley HealthCare System Campus, Building 7 (Floors 1, 2, 3 & Basement), Route 9D, Castle Point, NY
NPA: Occupations, Inc., Middletown, NY
Contracting Activity: DEPARTMENT OF HOMELAND SECURITY, U.S. IMMIGRATION AND CUSTOMS ENFORCEMENT, WASHINGTON, DC

Deletions

The following products and services are proposed for deletion from the Procurement List:

Products

NSN: 8465–01–592–1361—Sheath, Combination Tool Plastic
NPA: Development Workshop, Inc., Idaho Falls, ID
Contracting Activity: General Services Administration, Fort Worth, TX
NSN: 8125–00–NIB–0031—Spray Bottle, GS High Dilution 256 Neutral Disinfectant, Silk Screened, 12–32oz bottles
NPA: Susquehanna Association for the Blind and Vision Impaired, Lancaster, PA
Contracting Activity: Department Of Veterans Affairs, NAC, Hines, IL

Services

Service Type/Location: Industrial Laundry Service, Bureau of Engraving and Printing, 9000 Blue Mound Road, Fort Worth, TX
NPA: Goodwill Industrial Services of Fort Worth, Inc., Fort Worth, TX
Contracting Activity: Dept of Treasury, Bureau Of Engraving And Printing, Washington DC
Service Types/Location: Mailroom/Communications Center Operation, Administrative Service, Department of Agriculture, Farm Service Agency, 6501 Beacon Drive, Kansas City, MO
NPA: JobOne, Independence, MO
Contracting Activity: Dept of Agriculture, Farm Service Agency, Kansas City Acquisition Branch, Kansas City, MO

Barry S. Lineback,

Director, Business Operations.

BILLING CODE 6353–01–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2013–OS–0161]

Proposed Collection; Comment Request

AGENCY: Defense Finance and Accounting Service (DFAS), DoD.

ACTION: Notice.

In compliance with Section 3506(c)(2)(A) of the *Paperwork Reduction Act of 1995,* the DFAS announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the

proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 17, 2013.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

• *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information. Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at *http://www.regulations.gov* for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Finance and Accounting Services-Cleveland, 1240 East 9th Street, NP 7th Floor, Cleveland, OH 44199, ATTN: Ms. Laurie Eldridge, *laurie.eldridge@dfas.mil,* 216–204–3631.

Title; Associated Form; and OMB Number: DD Form 397, Claim Certification and Voucher for Death Gratuity Payment, OMB 0730–0017.

Needs and Uses: The information collection requirement allows the government to collect the signatures and information needed to pay a death gratuity. Pursuant to 10 U.S.C. 1475–1480, a designated beneficiary (ies) or next-of-kin can receive a death gratuity payment for a deceased service member. This form serves as a record of the disbursement. The DoD Financial Management Regulation (FMR), Volume 7A, Chapter 36, defines the eligible beneficiaries and procedures for payment. To provide internal controls for this benefit, and to comply with the above-cited statutes, the information requested is needed to substantiate the receipt of the benefit.

Affected Public: Individuals or Households.

Annual Burden Hours: 230.5 hours.

Number of Respondents: 461.

Responses Per Respondent: 1.

Average Burden Per Response: 30 minutes.

Frequency: On occasion.

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

The Service Casualty Office completes the upper portion of the DD Form 397 and provides the form to the beneficiaries. The beneficiaries complete their portion of the form and then sign and have it witnessed. Once the documents are completed, they are forwarded to DFAS for payment.

Dated: July 12, 2013.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Office of the Secretary

[Docket ID: DoD–2013–OS–0158]

Proposed collection; comment request

AGENCY: National Geospatial-Intelligence Agency, DoD.

ACTION: Notice.

In compliance with Section 3506(c)(2)(A) of the *Paperwork Reduction Act of 1995,* the National Geospatial-Intelligence Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 17, 2013.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

• *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information. Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at *http://www.regulations.gov* for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Polygraph Branch Chief, Security and Installations Division, Personnel Security, National Geospatial-Intelligence Agency, 7500 GEOINT Drive, Springfield, VA 22150.

Title; Associated Form; and OMB Number: National Geospatial-Intelligence Agency Polygraph Records, OMB Control Number 0704–TBD.

Needs and Uses: The information collection requirement is necessary to ensure integrity in the polygraph examination process, document polygraph results, assist with security eligibility determinations and employment or assignment suitability decisions in accordance with applicable laws, regulations and guidance, and to assist with investigations into possible violations of NGA rules and regulations, including the possible loss or compromise of classified or protected NGA information.

Affected Public: Individuals

Annual Burden Hours: 400

Number of Respondents: 2,400

Responses per Respondent: 1

Average Burden per Response: 10 minutes

Frequency: On occasion

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

Respondents are NGA employees, military and contractor personnel who provide personal and professional information to the agency to conduct a polygraph examination. NGA Polygraph Records System is the central system for agency personnel to maintain and, where necessary, disseminate employee information to ensure integrity in the polygraph examination process, document polygraph results, assist with security eligibility determinations and employment or assignment suitability decisions in accordance with applicable laws, regulations and guidance, and to assist with investigations into possible violations of NGA rules and regulations, including the possible loss or compromise of classified or protected NGA information. Without the system, NGA would not be able to perform personnel security activities resulting in not being able to protect agency assets, conduct mission-related activities protecting national security.

Dated: July 11, 2013.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Finance and Accounting Services-Cleveland, 1240 East 9th Street, Cleveland, OH 44199, ATTN: Mr. Charles Moss, *charles.moss@dfas.mil,* 216–204–4426.

Title; Associated Form; and OMB Number: DD Form 2788, Child Annuitant's School Certification, OMB Number 0730–0001.

Needs and Uses: In accordance with 10 U.S.C. 1447 and DoD Financial Management Regulation, 7000.14–R, Volume 7B, a child annuitant between the age of 18 and 22 years of age must provide evidence of intent to continue study or training at a recognized educational institution. The certificate is required for the school semester or other period in which the school year is divided

Affected Public: Individuals

Annual Burden Hours: 7,200 hours

Number of Respondents: 3600

Responses Per Respondent: 2

Average Burden per Response: 1 hour

Frequency: Once each semester of full time school, ages 18 to 22

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

The Child Annuitant's School Certification form is submitted to the child for completion and returned to this agency. The child will certify as to his or her intent for future enrollment and a school official must certify on the past or present school enrollment of the child. By not obtaining school certification, overpayment of annuities to children would exist. This information may be collected from some schools which are non-profit institutions such as religious institutions. If information is not received after the end of each school enrollment, over disbursements of an annuity would be made to a child who elected not to continue further training or study.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Finance and Accounting Services—Columbus, Ohio, 3990 E. Broad Street, Columbus, Ohio 43216, ATTN: Ms. Kenna Robinett, Account Management and Provisioning System (AMPS) Program Manager, Enterprise Systems. Telephone: (614) 701–2451 or Mr. Marcus Ritter, Project Manager, (317–212–6547); and Defense Logistics Agency (DLA), AMPS Program Manager, Mr. Walter B. Gooch, System Manager, Branch Chief, External Solutions, DLA Richmond VA, 8000 Jefferson Davis Highway, Richmond, Virginia 23237. Telephone: (804) 279–3075.

Title; Associated Form; and OMB Number: Account Management and Provisioning System (AMPS); OMB Control Number: 0730–TBD.

Needs and Uses: The information collection requirement is necessary to maintain information for operations to control and track access to secure networks, computer systems, and databases. Records are maintained on electronic storage media. The SSNs are used to allow Non-DoD individuals to create a user account within AMPS, and for AMPS to track those users. Additionally, the SSN is used for systems that limit system rights based on that number. For example, in the Defense Civilian Pay System (DCPS), a user is not allowed to access their pay records, and that is managed through the SSN.

Affected Public: Individuals or Households

Annual Burden Hours: 209 hours

Number of Respondents: 2500

Responses per Respondent: 1

Average Burden per Response: 5 minutes

Frequency: On occasion

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

AMPS does not extract or interface with any other system to obtain PII information for users. All users are required to set-up a user account to use AMPS. AMPS is Common Access Card (CAC) enabled and DoD employees will access AMPS via their CAC. AMPS can extract user data from the Electronic Data Interchange-Personnel Identifier (EDI/PI) to help set-up the user account. Any user that is not issued a CAC will enter their information into AMPS to create a user account, and will be given a user ID and password to access the system.

The following are examples of information collected from users: User names; SSN (for individuals not in possession of a CAC such as newly hired Federal employees); U.S. citizenship status (i.e., U.S. Citizen, Foreign National, other); physical and electronic address; work telephone numbers; organization; office symbol; contractor/employee status; computer logon addresses, passwords, and user identification codes; type of access/permissions required; verification of need to know; dates of mandatory information assurance awareness training; and security clearance data. The system also captures details about programs, databases, functions, and sites accessed and/or used; dates and times of use; and information products created, received, or altered during use. The records may also contain details about access or functionality problems telephoned in for technical support along with resolution. For individuals who telecommute from home or a telework center, the records may contain the electronic address and telephone number at that location. For contractors, the system also contains the company name, contract number, and contract expiration date.

Dated: July 11, 2013.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Office of the Secretary

[Docket ID DoD–2013–OS–0090]

Notice of Availability for Sharpe Permit Relinquishment Project Environmental Assessment Finding of No Significant Impact

AGENCY: Defense Logistics Agency, DoD.

ACTION: Notice of Availability (NOA) for Sharpe Permit Relinquishment Project Environmental Assessment (EA) Finding of No Significant Impact (FONSI).

SUMMARY: On April 30, 2013, Defense Logistics Agency (DLA) published a NOA in the **Federal Register** (78 FR 25258–25259) announcing the publication of the Sharpe Permit Relinquishment Project EA. The EA was available for a 30-day public comment period which ended May 30, 2013. The EA was prepared as required under the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4331 et seq.). No comments were received during the comment period. This FONSI documents the decision of DLA to relinquish the permit for use and occupancy of the Sharpe Army Depot, currently known as Defense Distribution Depot San Joaquin, California—Sharpe (Sharpe Site) with a determination that no significant impacts on the human environment are associated with this decision.

FOR FURTHER INFORMATION CONTACT: Defense Distribution Depot San Joaquin, California—Sharpe Public Affairs Office, P.O. Box 960001, Stockton, CA 95296–0001, ATTN: Sharpe Permit Relinquishment Project. (209) 839–4226. *DDJCPublicAffairsOffice@dla.mil*.

SUPPLEMENTARY INFORMATION: DLA has occupied the Sharpe Site since 1990 under a Memorandum of Agreement with the U.S. Department of the Army (Army). DLA is proposing to move its operations from the Sharpe Site to its Defense Distribution Depot San Joaquin, California—Tracy (Tracy Site). Currently, DLA has co-existing operations at both facilities. Consolidation of operations at one facility would increase efficiency of DLA operations by reducing redundancies, thereby reducing operational costs.

Purpose and Need for Action: The purpose of the Sharpe Permit Relinquishment Project is to return the land and improvements at the Sharpe Site to the Army as DLA has proposed consolidation of its operations from the Sharpe Site to its nearby Tracy Site.

Consolidation of the operations into one facility increases efficiency of DLA operations and reduces operational costs. The consolidation would not substantially alter other non-DLA operations at the Sharpe site and the federal government will continue ongoing environmental restoration efforts at the Sharpe Site following the permit relinquishment.

Proposed Action and Alternatives: Under the proposed action, DLA would relinquish occupancy and use of the property and return the Sharpe Site to the Army who owns the land and the improvements thereon. DLA wants to consolidate activities currently performed at the Sharpe Site to its existing facilities at the Tracy Site and potentially other DLA facilities. Land and improvements associated with the property would be conveyed back to the Army. The Army would assume all management responsibilities associated with the property. No new construction or ground disturbing activities at the Tracy Site would result from the proposed action. As an alternative to the proposed action, DLA considered taking no action. The no action alternative would have maintained existing conditions through continued occupancy and use of the facility by DLA. Under this alternative, the Army would not resume occupancy and use of the property and DLA would continue to operate the facility until the conclusion of its current permit on April 11, 2020. The no action alternative would not satisfy the project's purpose and need; however, the alternative was included in the environmental analysis to provide a baseline for comparison with the proposed action and was analyzed in accordance with Council on Environmental Quality regulations for implementing NEPA.

An additional alternative was considered, but eliminated from further consideration. This alternative included relocating Sharpe operations to a nearby commercially available site. This alternative was dismissed from further consideration because there would be additional security risks associated with operations conducted at non-secured facilities, as well as additional operational costs.

Potential Environmental Impacts: Potential environmental impacts of the proposed action have been assessed and compared to the impacts of the no action alternative. The proposed action is expected to have the following impacts:

- Minor short-term adverse impacts to air quality, noise, and traffic during the transportation of supplies and materials from the Sharpe Site to other DLA facilities.
- A reduction in traffic at the Sharpe Site, which would lessen potential traffic-related affects to burrowing owls with a long-term negligible beneficial impact on the biological resources at the Sharpe Site.
- A reduction in the work force at the Sharpe Site and an increased work force at the Tracy Site. As such, there would be a long-term negligible adverse impact on the socioeconomic resources on the local Lathrop area and a long-term negligible beneficial impact on the socioeconomic resources on the local Tracy area.
- A temporary increase in economic activities resulting in a short-term and negligible economic beneficial impact for the local economies.

Determination: DLA has determined that implementation of the proposed action will not have a significant effect on the human environment. Human environment was interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment. Specifically, no highly uncertain or controversial impacts, unique or unknown risks, or cumulatively significant effects were identified. Implementation of the proposed action will not result in the loss or destruction of significant scientific, cultural, or historic resources and implementation of the proposed action will not violate any federal, state, or local laws. Based on the results of the analyses performed during the preparation of the environmental assessment, David Rodriquez, Director, DLA Installation Support, concludes the proposed action to relinquish the permit to use and occupy the Sharpe site does not constitute a major federal action significantly affecting the quality of the human environment within the context of the NEPA. Therefore, an environmental impact statement for the proposed action is not required.

Dated: July 16, 2013.

Office of the Secretary

Meeting of the National Commission on the Structure of the Air Force

AGENCY: Director of Administration and Management, DoD.

ACTION: Notice of Advisory Committee Meeting.

SUMMARY: Under the provisions of the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150, the Department of Defense (DoD) announces that the following Federal advisory committee meeting of the National Commission on the Structure of the Air Force (''the Commission'') will take place.

DATES: *Date of Closed Meeting, including Hearing and Commission Discussion:* Monday, July 22, 2013.

ADDRESSES: 2521 South Clark Street, Suite 525, Crystal City, VA 22202, from 8:30 a.m. to 4:00 p.m.

FOR FURTHER INFORMATION CONTACT: Mrs. Marcia Moore, Designated Federal Officer, National Commission on the Structure of the Air Force, 1950 Defense Pentagon Room 3A874, Washington, DC 20301–1950. Email: *dfoafstrucomm@osd.mil.* Desk (703) 545–9113. Facsimile (703) 692–5625.

SUPPLEMENTARY INFORMATION:

Purpose of Meeting: The members of the Commission will hear testimony from individual witnesses and then will discuss the information presented at the hearings.

Agenda

July 22, 2013—Closed Meeting, Including Hearing and Commission Discussion: DoD speakers will provide classified information on the roles, missions and capabilities of the various DoD components and how they contribute to the national defense strategy, the integration of force requirements, and DoD's strategies and capabilities to address conflicts and threats. Confirmed speakers include: Mr. David Ochmanek, Deputy Assistant Secretary of Defense for Force Development, Office of the Secretary of Defense; and Major General Timothy Ray, U.S. Air Force, Director, Operational Planning, Policy and Strategy, Deputy Chief of Staff, Operations, Plans and Requirements, Headquarters, U.S. Air Force, Vice Admiral Kurt Tidd, Director of Operations, Joint Chiefs of Staff, and Major General James McLaughlin, Commander, 24th Air Force and Commander, Air Forces Cyber, Joint Base San Antonio—Lackland, Texas. Specific agenda topics include:

1. The translation of deploy-to-dwell rates into the percentage of the force, by component, when actually deployed.
2. The differences among the components in their ability to plan and generate forces.
3. The long term demand for rotational forces.
4. Assessment of the non-warplan-driven requirement for the reserve forces.
5. The Department's use of the Joint Operational Planning and Execution System and the current and future operations plans of the Combatant Commanders.
6. As a follow up to the Commissioner's interest in how well the active, reserve, and Guard forces manage their joint capabilities in the use of and response to cyber warfare, General McLaughlin will brief the Commissioners on its mission.

Meeting Accessibility: In accordance with section 10(d) of the FACA, 5 U.S.C. 552b, and 41 CFR 102–3.155, the DoD has determined that the meeting scheduled for July 22, 2013 will be closed to the public. Specifically, the Director of Administration and Management, with the coordination of the DoD FACA Attorney, has determined in writing that this portion of the meeting will be closed to the public because it will discuss classified information and matters covered by 5 U.S.C. 552b(c)(1).

Written Comments: Pursuant to 41 CFR 102–3.105(j) and 102–3.140 and section 10(a)(3) of the FACA, the public or interested organizations may submit written comments to the Commission in response to the stated agenda of the closed meeting or the Commission's mission. The Designated Federal Officer (DFO) will review all submitted written statements. Written comments should be submitted to Mrs. Marcia Moore, DFO, via facsimile or electronic mail, the preferred modes of submission. Each page of the comment must include the author's name, title or affiliation, address, and daytime phone number. The DFO will ensure that the written statements are provided to the membership for their consideration. All contact information may be found in **FOR FURTHER INFORMATION CONTACT.** Due to difficulties finalizing the meeting agenda and obtaining the required statutory determinations to approve closing the scheduled meeting of July 22, 2013, to the public for the National Commission on the Structure of the Air Force the requirements of 41 CFR 102–3.150(a) were not met. Accordingly, the Advisory Committee Management Officer for the Department of Defense, pursuant to 41 CFR 102–3.150(b), waives the 15-calendar day notification requirement.

Background

The National Commission on the Structure of the Air Force was established by the National Defense Authorization Act for Fiscal Year 2013 (Pub. L. 112–239). The Department of Defense sponsor for the Commission is the Director of Administration and Management. The Commission is tasked to submit a report, containing a comprehensive study and recommendations, by February 1, 2014 to the President of the United States and the Congressional defense committees. The report will contain a detailed statement of the findings and conclusions of the Commission, together with its recommendations for such legislation and administrative actions it may consider appropriate in light of the results of the study. The comprehensive study of the structure of the U.S. Air Force will determine whether, and how, the structure should be modified to best fulfill current and anticipated mission requirements for the U.S. Air Force in a manner consistent with available resources.

The evaluation factors under consideration by the Commission are for a U.S. Air Force structure that—(a) Meets current and anticipated requirements of the combatant commands; (b) achieves an appropriate balance between the regular and reserve components of the Air Force, taking advantage of the unique strengths and capabilities of each; (c) ensures that the regular and reserve components of the Air Force have the capacity needed to support current and anticipated homeland defense and disaster assistance missions in the United States; (d) provides for sufficient numbers of regular members of the Air Force to provide a base of trained personnel from which the personnel of the reserve components of the Air Force could be recruited; (e) maintains a peacetime rotation force to support operational tempo goals of 1:2 for regular members of the Air Forces and 1:5 for members of the reserve components of the Air Force; and (f) maximizes and appropriately balances affordability, efficiency, effectiveness, capability, and readiness.

Dated: July 16, 2013.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Navy

[Docket ID: USN–2013–0031]

Proposed Collection; Comment Request

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

In compliance with Section 3506(c)(2)(A) of the *Paperwork Reduction Act of 1995,* the Department of the Navy announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 17, 2013.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

• *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at *http://www.regulations.gov* for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Marine Corps Marathon Office, Attn: Angela Huff, P.O. Box 188, Quantico, VA 22134, or call the Marine Corps Marathon Office at (703) 432–1159.

Title; Associated Form; and OMB Number: Marine Corps Marathon Race Applications; OMB Control Number 0703–0053.

Needs and Uses: The information collection requirement is necessary to obtain and record the information of runners to conduct the races, for timing purposes and for statistical use.

Affected Public: Individuals or households.

Annual Burden Hours: 5,283.

Marine Corps Marathon—5 min burden.

Burden hours: 30,000 runners × 5 min = 144,240 min = 2,404 hours.

Healthy Kids Fun Run—5 min burden.

Burden hours: 3,600 runners × 5 min = 18,000 min = 300 hours.

Marine Corps Marathon 10K—5 min burden.

Burden hours: 10,000 runners × 5 min = 50,000 min = 833.33 hours.

Marine Corps Historic Half—5 min burden.

Burden hours: 8,000 runners × 5 min = 40,000 min = 666.67 hours.

Semper Fred 5k—5 min burden.

Burden hours: 1,500 runners × 5 min = 7,500 min = 125 hours.

Marine Corps Historic Half 10k—5 min burden.

Burden hours: 1,000 runners × 5 min = 5,000 min = 50 hours.

Marine Corps Marathon Race Series to include MCM 1775, Run Amuck, Crossroads 4 Miler and Turkey Trot—5 min burden.

Burden hours: 9,000 runners × 5 min = 45,000 min = 750 hours.

Marine Corps Marathon Triathlon—5 min burden.

Burden hours: 300 runners × 5 min = 1,500 min = 25 hours.

Number of Respondents: 63,400.

Responses per Respondent: 1.

Average Burden per Response: 5 minutes.

Frequency: Annually.

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

Respondents are runners who are signing up for the Marine Corps Marathon races held by the Marine Corps Marathon office, Marine Corps Base Quantico. The seven races defined under OMB number 0703–0053 are the Marine Corps Marathon, the Marine Corps Marathon 10K, and the Marine Corps Marathon Healthy Kids Fun Run, Marine Corps Historic Half, Semper Fred 5K, Marine Corps Marathon Race Series to include Marine Corps 17.75K (former Run 2 Register), Run Amuck, Run Stock and Crossroads 4 miler (former 12K/5K). The additional races to be added to the OMB number are the Marine Corps Historic Half 10K, the Crossroads 4 miler, and Quantico Triathlon. The Marine Corps Marathon office records all runners to conduct the races in preparation and execution of the races and to record statistical information for sponsors, media and for economic impact studies. Collecting this data of the runners is essential for putting on the races.

Dated: July 11, 2013.

BILLING CODE 5001–06–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. IC13–18–000; FERC–547]

Commission Information Collection Activities; Comment Request; Extension

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, 44 U.S.C. 3506(c)(2)(A), the Federal Energy Regulatory Commission (Commission or FERC) is soliciting public comment on the currently approved information collection, FERC–547 (Gas Pipeline Rates: Refund Report Requirements).

DATES: Comments on the collection of information are due September 17, 2013.

ADDRESSES: You may submit comments (identified by Docket No. IC13–18–000) by either of the following methods:

• *eFiling at Commission's Web site: http://www.ferc.gov/docs-filing/efiling.asp.*

• *Mail/Hand Delivery/Courier:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: *http://www.ferc.gov/help/submission-guide.asp.* For user assistance contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at: (866) 208–3676 (toll-free), or (202) 502–8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *http://www.ferc.gov/docs-filing/docs-filing.asp.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov*, telephone at (202) 502–8663, and fax at (202) 273–0873.

SUPPLEMENTARY INFORMATION:

Title: Gas Pipeline Rates: Refund Report Requirements.

OMB Control No.: 1902–0084.

Type of Request: Three-year extension of the FERC–547 information collection requirements with no changes to the current reporting requirements.

Abstract: The Commission uses FERC–547 (Gas Pipeline Rates: Refund Report Requirements) to implement the

statutory refund provisions governed by Sections 4, 5 and 16 of the Natural Gas Act (NGA).[1] Sections 4 and 5 authorize the Commission to order a refund (with interest) for any portion of a natural gas company's increased rate or charge found to be unjust or unreasonable. Refunds may also be instituted by a natural gas company as a stipulation to a Commission-approved settlement agreement or a provision under the company's tariff. Section 16 of the NGA authorizes the Commission to prescribe rules and regulations necessary to administer its refund mandates. The Commission's refund reporting requirements are located in 18 CFR 154.501 and 154.502.

The Commission uses the data to monitor refunds owed by natural gas companies to ensure that the flow-through of refunds owed by these companies are made as expeditiously as possible and to assure that refunds are made in compliance with the Commission's regulations.

Type of Respondents: Natural gas companies.

Estimate of Annual Burden:[2] The Commission reduces its estimate of the total Public Reporting Burden for this information collection from the estimate made three years ago based on the number of filings received over the previous three years (from an average of 30 respondents to an average of 11 respondents currently).

FERC–547: GAS PIPELINE RATES: REFUND REPORT REQUIREMENTS

	Number of respondents	Number of responses per respondent	Total number of responses	Average burden hours per response	Estimated total annual burden
	(A)	(B)	(A) × (B) = (C)	(D)	(C) × (D)
Natural Gas Companies	11	1	11	75	825

The total estimated annual cost burden to respondents is $57,750. [825 hours * $70/hour[3] = $57,750].

Comments: Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Dated: July 12, 2013.

[Project No. 2381–063]

PacifiCorp, St. Anthony Hydro LLC; Notice of Application Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Types of Application:* Application for Partial Transfer and Amendment of License.

b. *Project No.:* 2381–063.

c. *Date Filed:* June 11, 2013.

d. *Applicants:* PacifiCorp (transferor) and St. Anthony Hydro LLC (transferee).

e. *Name of Project:* Ashton-St. Anthony Project.

f. *Location:* On the Henry's Fork of the Snake River, in Fremont County, Idaho.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Applicants Contact:* Mr. John P. Sample, Assistant General Counsel, PacifiCorp, 825 NE Multnomah Street, Suite 1500, Portland, OR 97232–2135, (503) 813–6688, *john.sample@pacificorp.com.*

Mr. Ted S. Sorenson, Member, St. Anthony Hydro LLC, 5203 South 11th East, Idaho Falls, ID 83404, (208) 522–8069, *ted@tsorenson.net.*

i. *FERC Contact:* Mr. Jeremy Jessup, (202) 502–6779, *Jeremy.Jessup@ferc.gov.*

j. Deadline for filing comments, motions to intervene, and protests, is 30 days from the issuance date of this notice by the Commission. All documents may be filed electronically via the Internet. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site at *http://www.ferc.gov/docs-filing/efiling.asp.* If unable to be filed electronically, documents may be paper-filed. To paper-file, an original and seven copies should be mailed to: Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments.

Please include the project number (P–2381–063) on any comments, motions, or recommendations filed.

k. *Description of Request:* The applicants request to transfer the St. Anthony development from PacifiCorp to St. Anthony Hydro LLC. PacifiCorp also requests that the Commission amend the license for Project No. 2381 effective upon the partial transfer of license from PacifiCorp to St. Anthony Hydro LLC, to delete all references in the license to the St. Anthony development and remove it from the project boundary. Upon completion of the partial transfer of the license to St. Anthony Hydro LLC, the applicants request that FERC re-designate the St. Anthony development with a new project number.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 502–8371. This filing may also be viewed on the Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number excluding the last three digits in the docket number field to access the

[1] 15 U.S.C. 717–717w.

[2] The Commission defines burden as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, reference 5 Code of Federal Regulations 1320.3.

[3] FY2013 Estimated Average Hourly Cost per FTE, including salary + benefits.

document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item (h) above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents:* Any filing must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis and otherwise comply with the requirements of 18 CFR 4.34(b). All motions to intervene, protests, or comments should relate to project works which are the subject of the application. Agencies may obtain copies of the application directly from the applicant. A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the particular application. If an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency. A copy of all other filings in reference to this application must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 4.34(b) and 385.2010.

Dated: July 12, 2013.

Federal Energy Regulatory Commission

[Project No. 7320–042]

Erie Boulevard Hydropower, L.P.; Notice of Application Tendered for Filing With the Commission, Soliciting Additional Study Requests, and Establishing Procedural Schedule for Relicensing and a Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New Major License.

b. *Project No.:* 7320–042.

c. *Date Filed:* July 1, 2013.

d. *Applicant:* Erie Boulevard Hydropower, L.P.

e. *Name of Project:* Chasm Hydroelectric Project.

f. *Location:* On the Salmon River, in Franklin County, New York. No federal lands are occupied by the project works or located within the project boundary.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C .791 (a)–825(r).

h. *Applicant Contact:* Steven Murphy, Compliance Specialist, Brookfield Renewable Power—New York West Operations, 33 West 1st Street South, Fulton, NY, 13069; (315) 589–6130; email—*steven.murphy@brookfieldpower.com.*

i. *FERC Contact:* John Mudre at (202) 502–8902; or email at *john.mudre@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See,* 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. *Deadline for filing additional study requests and requests for cooperating agency status:* August 30, 2013.

All documents may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and five copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

m. This application is not ready for environmental analysis at this time.

n. The existing Chasm Project consists of: (1) A 201-foot-long, 32-foot-high maximum height concrete gravity-type dam having a spillway section with crest elevation 1,283.8 feet mean sea level (msl). about 100 feet long, surmounted by 2-foot-high flashboards and having an intake section with steel trash racks and headgates; (2) a reservoir having a surface area of about 22 acres and a gross storage capacity of 74 acre-feet at normal pool elevation of 1,285.8 feet msl; (3) a 7-foot-diameter welded steel pipeline approximately 3,355 feet in length connecting to a 6-foot-diameter steel manifold pipeline just upstream of the powerhouse; (4) a powerhouse containing three Francis-type generating units having a total rated capacity of 3,350 kilowatts operated under a 268-foot head and at a flow of 195 cubic feet per second; (5) a 20-foot-wide, 850-foot-long tailrace; (6) a 4.2-megavolt ampere, 2.4/34.5-kilovolt (kV) transformer; (7) a 410-foot-long, 34.5-kV transmission line; and (8) appurtenant facilities.

o. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support. DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 13102–003]

Birch Power Company; Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Major License (5 Megawatts or less).

b. *Project No.:* 13102–003.

c. *Date filed:* July 2, 2013.

d. *Applicant:* Birch Power Company.

e. *Name of Project:* Demopolis Lock and Dam Hydroelectric Project.

f. *Location:* At the U.S. Army Corps of Engineers' Demopolis Lock and Dam, on the Tombigbee River, west of the city of Demopolis in Marengo and Sumter Counties, Alabama. Lands managed by the Federal government are located within the project boundary.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Nicholas E. Josten, GeoSense, 2742 Saint Charles Ave, Idaho Falls, ID 83404, (208) 528–6152.

i. *FERC Contact:* Michael Spencer, (202) 502–6093, *michael.spencer@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See,* 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. *Deadline for filing additional study requests and requests for cooperating agency status:* September 2, 2013.

All documents may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at 1–866–208–3676, or for TTY, (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and five copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

m. The application is not ready for environmental analysis at this time.

n. The proposed project would utilize the existing U.S. Army Corps of Engineers' Demopolis Lock and Dam and Reservoir, and would consist of the following new facilities: (1) A 900-foot-long intake channel; (2) a powerhouse adjacent to the north end of the existing dam containing two turbine-generator units for a total installed capacity of 48,000 kilowatts; (3) a 200-foot-long tailrace channel; and (4) a 4.4 mile-long 115 kilo-Volt transmission line. The project is estimated to generate an average of 213,000 megawatt-hours annually.

o. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP13–509–000]

DCP Midstream, LP; Notice of Application

Take notice that on July 1, 2013, DCP Midstream, LP (DCP), filed an application pursuant to Section 7(c) of the Natural Gas Act and Part 157 of the Commission's Regulations, for a limited certificate authorizing DCP to construct and operate a 7.6-mile, 16-inch diameter pipeline located in Weld County, Colorado, (the Lucerne Residue Pipeline). The Lucerne Residue Pipeline will connect DCP's new non-jurisdictional natural gas processing facilities (Lucerne II Gas Plant) with the interstate natural gas pipeline system. DCP requests for waivers of certain of the Commission's rate, tariff and accounting regulatory requirements regarding the proposed Lucerne Residue Pipeline. The filing may also be viewed on the web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@gerc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

DCP is a non-jurisdictional gas gathering company having facilities in Texas, Oklahoma, New Mexico, Louisiana, Colorado, Kansas, Arkansas, and Wyoming. DCP generally operates these facilities to deliver raw gas to processing plants. To address the new development of Niobrara Shale in the Denver-Julesburg Basin (DJ Basin), DCP proposes to construct the Lucerne Residue Pipeline connecting Lucerne II Gas Plant with an interstate pipeline, Colorado Interstate Gas Company (CIG). The Lucerne Residue Pipeline has a design capacity of 230 MMcf/day and will be used for transportation of natural gas solely on behalf of DCP without payment of any additional charge for the service. DCP does not intend to transport gas through the Lucerne Residue Pipeline for shippers other than DCP. The pipeline will be constructed entirely inside DCP's right of way and costs about $12 million.

Any questions regarding this application should be directed to Katie Rice, Director, Regulatory Affairs, DCP Midstream, LP, 370 17th Street, Suite 2500, Denver, Colorado 80202. Telephone 303–605–2166, fax 303–605–2226, and email: *kerice@dcpmidstream.com.*

Pursuant to Section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding, or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below, file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 5 copies of filings made with the Commission and must mail a copy to the applicant and to every other party in the proceeding. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

Motions to intervene, protests and comments may be filed electronically via the internet in lieu of paper; see, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site under the ''e-Filing'' link. The Commission strongly encourages electronic filings.

Comment Date: August 2, 2013.

Dated: July 12, 2013.

Kimberly D. Bose,

Secretary.

Duke Energy Florida, Inc.; Florida Power & Light Company; Tampa Electric Company; Orlando Utilities Commission; Notice of Compliance Filings

Take notice that on July 10, 2013, Duke Energy Florida, Inc., Florida Power & Light Company, Tampa Electric Company, and Orlando Utilities Commission, submitted filings to comply with the requirements of Order No. 1000 Interregional Compliance.[1]

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Flexible and Local Resources Needed for Reliability in the California Wholesale Electric Market; Notice of Staff Technical Conference

This notice establishes the agenda and topics for discussion at the technical conference directed by the Commission in an Order on California Independent System Operator Corporation's (CAISO) proposal to implement an interim flexible capacity and local reliability resource retention mechanism (FLRR).[1] The technical conference will be held on July 31, 2013 from 9:00 a.m. to 4:30 p.m. (Pacific Time) in the Byron Sher Auditorium at the California Environmental Protection Agency Headquarters Building, 1001 I Street, Sacramento, California, 95812. *Please note the changed venue for the conference and the truncation of the conference to a single day.* The technical conference will be led by FERC staff, with presentations from panelists. Commissioners may attend and participate in the conference.

The agenda and questions to be discussed during this conference are attached. The technical conference is intended to facilitate a structured dialogue on the reliability and risk-of-retirement concerns raised in the FLRR proceeding, including, how those concerns relate to the joint CAISO/CPUC Multi-Year Reliability Framework proposal.

The technical conference will not be transcribed. However, there will be a free audiocast of the conference. The audiocast will allow persons to listen to the conference, but not participate. Anyone with Internet access who wants to listen can do so by navigating to the Calendar of Events at *www.ferc.gov* and locating the technical conference in the Calendar. The FERC Web site's link to the technical conference will contain a link to the audiocast. The Capitol Connection provides technical support for the audiocast. If you have questions, visit *www.CapitolConnection.org* or call 703–992–3100.

FERC conferences are accessible under section 508 of the Rehabilitation Act of 1973. For accessibility accommodations please send an email to *accessibility@ferc.gov* or call toll free 1–866–208–3372 (voice) or 202–208–8659 (TTY), or send a fax to 202–208–2106 with the required accommodations.

For more information on this conference, please contact Colleen Farrell at *colleen.farrell@ferc.gov* or (202) 502–6751; or Katheryn Hoke at *katheryn.hoke@ferc.gov* or (202) 502–8404.

Dated: July 11, 2013.

Kimberly D. Bose,

Secretary.

Agenda for the Technical Conference on Flexible and Local Resources Needed for Reliability in the California Wholesale Electric Market July 31, 2013

The technical conference is intended to facilitate a structured dialogue on the reliability and risk-of-retirement concerns raised in the FLRR proceeding, including discussion of the possible development of a durable, market-based mechanism to provide incentives to insure reliability needs are met.

The CAISO and CPUC staff recently announced a joint Multi-Year Reliability Framework proposal (joint proposal) for revising the CPUC's resource adequacy program and CAISO's capacity procurement mechanism tariff provisions, that is related to this subject.[2] Thus, this technical conference will also examine whether and how the joint proposal addresses the reliability needs raised in the FLRR proceeding.

Following a presentation by CAISO and CPUC staff, the conference will be divided into two panels. The first panel will examine the reliability issues raised in the FLRR proceeding and will also consider implications of the joint proposal for a Multi-Year Reliability Framework. The second panel will review possible solutions to the

[1] *Cal. Indep. Sys. Operator Corp.,* 142 FERC ¶ 61,248 (2013).

[2] See *http://www.caiso.com/Documents/NewStakeholderInitiativeMulti-YearReliabilityFramework_ISO-CPUCJointWorkshopJul17_2013.htm.*

concerns that were raised in the FLRR proceeding as they pertain to flexible and local resources and whether the joint Multi-Year Reliability Framework offers a potential solution. This notice provides focus areas around which speakers should concentrate their comments. Each panelist should limit his presentation to 8 minutes. The panels will be followed by questions from Commissioners and CPUC and FERC staff, with an opportunity for audience members to participate.

Technical Conference Schedule

9:00 a.m.–9:15 a.m. Opening Remarks
Greeting and Opening Remarks
9:15 a.m.–10:15 a.m. Joint CAISO/CPUC presentation
The presentation is expected to last 30 minutes and will be followed by Q&A
10:15 a.m.–11:15 a.m. Panel discussion on the risk-of-retirement problem and its contribution to reliability
Each panelist should limit his presentation to 8 minutes. The panel will be followed by questions from Commissioners and CPUC and FERC staff.
Panel one will be comprised of:
—Todd Strauss representing Pacific Gas & Electric Company;
—Pedro Pizarro representing Edison Mission Energy;
—Gary Ackerman representing Western Power Trading Forum;
—Kevin Woodruff representing The Utility Reform Network;
—Carl Zichella representing the National Resources Defense Council; and
—Kevin Carden representing Astrape Consulting.

Questions for Panel One: With respect to the reliability concerns raised in the FLRR proceeding, staff requests that panelists include in the presentations discussion of some of the questions below.

➢ In the FLRR proceeding, CAISO identified reliability concerns resulting from the retirement of resources needed for reliable operations. Are the resources necessary to ensure reliability over a forward looking period entering the market? If not, why not? For instance, how do the current CAISO market and bilateral capacity market structures influence resources' decisions to enter the market or retire? Are additional compensation structures required to ensure that resources needed for reliability are available over a forward period? What factors, besides compensation, may be influencing retirement and entry decisions in CAISO?

➢ What sort of operational and reliability conditions, including those that could lead to NERC/WECC reliability standard violations, will CAISO face based on assessments of a forward-looking period including projections of resources that enter the market, resources that will retire, load projections, demand response, etc.?

➢ What are the appropriate planning and operating assumptions to use in determining the forward-looking system needs for flexible resources that are needed to ensure overall system reliability? How much flexible capacity will be needed to ensure that the resource mix in CAISO is able to ensure reliable operations?

➢ How would a resource qualify as a flexible resource and what is an appropriate range of performance characteristics? Should there be an ongoing certification process for flexible resources? What other resource characteristics are important to ensure reliability in CAISO?

➢ Are there barriers to extracting flexible capability out of the existing fleet of resources?

➢ What are the causes of a resource being at risk-of-retirement? How is the market informed that a resource is at risk-of-retirement?

➢ How should local capacity needs and potential reliability issues associated with deliverability be addressed? Does the need to retain resources for local reliability require a mechanism that is unique from a market-based option for flexible capacity retention?

➢ What are the appropriate procurement targets for system, flexible and local capacity in the two- and three-year forward periods? How should the technical assessment be updated from year-to-year to account for changing market conditions, changing system configuration and changes in demand over the forward period?

➢ Would the provision in the joint proposal to limit load serving entities' participation in the residual capacity auction impact the effectiveness of forward procurement for reliability purposes? Why or why not?

11:15 a.m.–12:15 p.m. Open Discussion Time
12:15 p.m.–1:15 p.m. Lunch
1:15 p.m.–2:30 p.m. Panel discussion exploring whether a multi-year resource adequacy framework with a CAISO backstop is a solution to risk of retirement
Each panelist should limit his presentation to 8 minutes. The panels will be followed by questions from Commissioners, CPUC and FERC staff.
Panel two will be comprised of:
- Marc Ulrich representing Southern California Edison Company;
—Mark Smith or Matthew Barmack representing Calpine;
—Tony Braun representing California Municipal Utilities Association;
—Joe Como representing the CPUC Division of Ratepayer Advocates;
—Steven Kelly representing the Independent Energy Producers Association;
—Mike Evans representing Shell Energy; and
—Michael Milligan representing National Renewable Energy Laboratory.

Questions for Panel Two: With respect to the concerns raised in the FLRR proceeding regarding a market-based means of addressing forward-looking system, local and flexible needs, including when resources are at risk of retirement but needed in future years for reliability, staff requests that panelists include in the presentations discussion of some of the questions below.

➢ What are the preferred market-based solutions that could be used to address the forward flexible and local reliability concerns raised in the FLRR proceeding?

➢ How would a forward procurement requirement, along with specific procurement targets for flexible and local resources, affect bilateral contract prices?

➢ Would the joint proposal's combination of multi-year ahead flexible capacity obligations procured through bi-lateral contracts, or via CAISO backstop procurement, provide sufficient revenues to resources?

➢ Will the joint proposal's limited forward procurement of flexible and local capacity pursuant to a three-year forward resource adequacy obligation backed by a market-based CAISO backstop procurement mechanism provide sufficient procurement tools and sufficient additional revenue to mitigate the risk of retirement and retain needed flexible and local resources?

➢ Will the joint proposal's voluntary backstop capacity market, along with market power mitigation measures, provide sufficient replacement for the capacity procurement mechanism when it sunsets in 2015? If a mechanism like the joint proposal were implemented, would CAISO still need an interim risk-of-retirement backstop mechanism and what would any such backstop mechanism look like?

➢ Is there a mechanism needed prior to the potential implementation of the joint proposal? For instance, is an interim mechanism necessary to procure resources at risk of retirement that are

needed for flexibility? If so, what kind of mechanism?

➢ With respect to the goal of retaining flexible and local resources for reliability purposes that may be at risk of retirement, what alternatives to the joint proposal should be considered?

2:30 p.m.–2:45 p.m. Break

2:45 p.m.–4:15 p.m. Open Discussion Time

This time will be reserved for follow-up discussion on any issues raised during the panel discussions, or to address miscellaneous concerns related to the Multi-Year Reliability Framework, including questions or comments from members of the audience.

4:15 p.m.–4:30 p.m. Closing Remarks

Proposed Settlement Agreement, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed settlement agreement; request for public comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended (''CAA'' or the ''Act''), notice is hereby given of a proposed settlement agreement to address a lawsuit filed by Communities for a Better Environment, California Communities Against Toxics, Desert Citizens Against Pollution, Natural Resources Defense Council, and Physicians for Social Responsibility–Los Angeles (collectively ''Petitioners'') in the United States Court of Appeals for the Ninth Circuit: *Communities for a Better Environment, et al.* v. *EPA,* No. 12–71340, (9th Cir.). On April 30, 2012, Petitioner filed a petition for review challenging EPA's final action to approve the state implementation plan (SIP) revisions submitted by California to provide for attainment of the 1997 8-hour ozone national ambient air quality standard in the Los Angeles-South Coast area (''South Coast''). The proposed settlement agreement establishes a deadline for EPA to take action on subsequently submitted SIP revisions for the South Coast.

DATES: Written comments on the proposed settlement agreement must be received by *August 19, 2013.*

ADDRESSES: Submit your comments, identified by Docket ID number EPA–HQ–OGC–2013–0484, online at *www.regulations.gov* (EPA's preferred method); by email to *oei.docket@epa.gov;* by mail to EPA Docket Center, Environmental Protection Agency, Mailcode: 2822T, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; or by hand delivery or courier to EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC, between 8:30 a.m. and 4:30 p.m., Monday through Friday, excluding legal holidays. Comments on a disk or CD–ROM should be formatted in Word or ASCII file, avoiding the use of special characters and any form of encryption, and may be mailed to the mailing address above.

FOR FURTHER INFORMATION CONTACT: Jan Tierney, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone: (202) 564–5598; fax number (202) 564–5603; email address: *tierney.jan@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Settlement Agreement

The proposed settlement agreement would resolve a lawsuit seeking to overturn EPA's final action to approve SIP revisions submitted by California to provide for attainment of the 1997 8-hour ozone national ambient air quality standard in the South Coast. 77 FR 12674 (March 1, 2012). The proposed settlement agreement requires that no later than August 13, 2014, EPA shall sign a notice or notices of the Agency's final action or actions under Section

110(k) of the CAA on certain SIP revisions submitted by California on February 13, 2013, including a new attainment demonstration plan for the 1-hour ozone standard in the South Coast and new demonstrations intended to comply with Section 182(d)(1)(A) of the CAA, 42 U.S.C. 7511a(d)(1)(A), for the 1-hour ozone and 1997 8-hour ozone standards. Thereafter, EPA shall send the notice(s) to the Office of the Federal Register for review and publication. After EPA fulfills its obligations under the agreement, the Petitioners shall dismiss this matter, but Petitioners reserve any rights they may have to challenge EPA final action or actions on the above described SIP revisions.[1] If EPA does not take action by the deadline, then Petitioners' sole remedy under the proposed agreement shall be the right to request that the Ninth Circuit lift the stay of proceedings and establish a schedule for briefing and oral argument.

For a period of thirty (30) days following the date of publication of this notice, the Agency will accept written comments relating to the proposed settlement agreement from persons who were not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed settlement agreement if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Act. Unless EPA or the Department of Justice determines that consent to this settlement agreement should be withdrawn, the terms of the agreement will be affirmed.

II. Additional Information About Commenting on the Proposed Settlement Agreement

A. How can I get a copy of the settlement agreement?

The official public docket for this action (identified by Docket ID No. EPA–HQ–OGC–2013–0484) contains a copy of the proposed settlement agreement. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

An electronic version of the public docket is available through *www.regulations.gov.* You may use *www.regulations.gov* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select ''search''.

It is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing online at *www.regulations.gov* without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA's policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the **ADDRESSES** section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment and with any disk or CD ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the *www.regulations.gov* Web site to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an ''anonymous access'' system, which means EPA will not know your identity, email address, or other contact information unless you provide it in the body of your comment. In contrast to EPA's electronic public docket, EPA's electronic mail (email) system is not an ''anonymous access'' system. If you send an email comment directly to the Docket without going through *www.regulations.gov,* your email address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

Dated: July 11, 2013.

Lorie J. Schmidt,

Associate General Counsel.

BILLING CODE 6560–50–P

[1] Four of the five Petitioners have also noticed an appeal from dismissal of *Physicians for Social Responsibility—Los Angeles* v. *EPA,* No. 2:11–cv–05885–GW–SS, in the United States District Court for the Central District of California, currently docketed in the Ninth Circuit as Case No. 12–56175. Under the proposed settlement agreement, the four petitioners who are appellants in that case shall dismiss *Physicians for Social Responsibility—Los Angeles* v. *EPA,* No. 12–56175, upon receipt of written notice from EPA that the proposed settlement agreement is final.

FEDERAL ELECTION COMMISSION

Sunshine Act Meeting

AGENCY: Federal Election Commission.

DATE AND TIME: Tuesday, July 23, 2013 at 10:00 a.m.

PLACE: 999 E Street NW., Washington, DC.

STATUS: This Meeting Will Be Closed to the Public.

ITEMS TO BE DISCUSSED: Compliance matters pursuant to 2 U.S.C. 437g.

Audits conducted pursuant to 2 U.S.C. 437g, § 438(b), and Title 26, U.S.C.

Matters concerning participation in civil actions or proceedings or arbitration.

Matters that relate solely to the Commission's internal personnel decisions, or internal rules and practices.

Information the premature disclosure of which would be likely to have a considerable adverse effect on the implementation of a proposed Commission action.

* * * * *

Person To Contact For Information: Judith Ingram, Press Officer, Telephone: (202) 694–1220.

Signed:

Shawn Woodhead Werth,

Secretary and Clerk of the Commission.

FEDERAL MARITIME COMMISSION

Ocean Transportation Intermediary License Applicants

The Commission gives notice that the following applicants have filed an application for an Ocean Transportation Intermediary (OTI) license as a Non-Vessel-Operating Common Carrier (NVO) and/or Ocean Freight Forwarder (OFF) pursuant to section 19 of the Shipping Act of 1984 (46 U.S.C. 40101). Notice is also given of the filing of applications to amend an existing OTI license or the Qualifying Individual (QI) for a licensee.

Interested persons may contact the Office of Ocean Transportation Intermediaries, Federal Maritime Commission, Washington, DC 20573, by telephone at (202) 523–5843 or by email at *OTI@fmc.gov.*

Aduanir Cargo & Courier Corp. (NVO & OFF), 5900 NW 79th Avenue, Doral, FL 33178, Officers: Anamar Del Castillo, Vice President (QI), Jesus Cachazo, President, Application Type: New NVO & OFF License.

AGRI Ocean Service, Inc. (NVO & OFF), 1952 McDowell Road, Suite 303, Naperville, IL 60563, Officers: Michael A. Mays, Vice President (QI), Hsiao C. Shyu, Shareholder, Application Type: New NVO & OFF License.

Allen Lund Company, LLC (NVO & OFF), 4529 Angeles Crest Highway, Suite 300, La Canada, CA 91011, Officers: Tanya J. Poston, Vice President (QI), Allen Lund, President, Application Type: QI Change.

Allround Forwarding Holding, Inc. (NVO & OFF), 134 West 26th Street, New York, NY 10001, Officers: Hatto H. Dachgruber, President (QI), John Wellock, Vice President, Application Type: Name Change to Allround Forwarding Co., Inc.

Alsea Global Logistics, LLC dba Alsea Global Logistics (NVO & OFF), 4836 SE Powell Blvd., Portland, OR 92706, Officers: Sandra K. Thoroughman, Operations Director (QI), Keith E. Ashcraft, Chief Executive Officer, Application Type: New NVO & OFF License.

Armada Services, LLC. (NVO & OFF), 519 S. Ellwood Avenue, 2nd Floor, Baltimore, MD 21224, Officer: Katrina N. Dill, Managing Member (QI), Application Type: New NVO & OFF License.

Atlant Consulting Inc. dba Avro Logistics (NVO & OFF), 3626 Geary Blvd., Suite 206, San Francisco, CA 94118, Officers: Tatyana Lizyura, Corporate Secretary, Konstantin Pletney-Veller, CEO, Application Type: New NVO & OFF License.

BeavEx Incorporated (NVO), 329 Air Freight Blvd., Nashville, TN 37217, Officers: David W. Hofer Jr., Vice President (QI), Mark Tuchmann, President, Application Type: New NVO License.

BFB North America Inc. dba Miami Ocean Carriers (NVO), 18503 Pines Blvd., Suite 206, Pembroke Pines, FL 33029, Officer: Cenovia Huanaquiri, President (QI), Application Type: New NVO License.

Blue Cargo Group, LLC (NVO & OFF), 10301 NW 108th Avenue, Suite 6, Miami, FL 33178, Officers: Paul Selvage, Member (QI), Steven Periman, Member/Manager, Application Type: Add Trade Name Blu Logistics and QI Change.

CCP International (Shipping) Inc. (OFF), 1717 Hyde Park Avenue, Hyde Park, MA 02136, Officers: Adeyemi J. Adegboyega, President (QI), Ademipo C. Adegboyega, Treasurer, Application Type: New OFF License.

Continental Connection LLC (NVO & OFF), 150 Sanctuary Ct., Columbus, OH 43235, Officer: David E. Day, Managing Member (QI), Application Type: New NVO & OFF License.

Eurybia Logistics, Inc. (NVO), 2560 Corporate Place, Suite D107, Monterey Park, CA 91754, Officer: Zhang Yi, President (QI), Application Type: New NVO License.

Global Relocation Inc (NVO), 250 Pehle Avenue, Suite #200, Saddle Brook, NJ 07663, Officers: Farah Alhomsi, Vice President (QI), Rami Zubidat, President, Application Type: New NVO License.

JAG Cargo Inc. (OFF), 7520 SW 107th Avenue, Apt. 107, Miami, FL 33173, Officers: Javier A. Garcia, President (QI), Pedro O. Garcia, Treasurer, Application Type: New OFF License.

Laser International Transportation Incorporated (NVO), 1940 Internationale Parkway, Suite 300, Woodridge, IL 60517, Officer: Joseph P. Specht Jr., President (QI), Application Type: New NVO License.

LH Global Inc. (NVO), 2737 Brook Avenue, Oceanside, NY 11572, Officers: Guilan He, Vice President (QI), Xiao Ying Liu, President, Application Type: New NVO License.

Miragrown Logistics Corporation (NVO), 2370 West Carson Street, Suite 130, Torrance, CA 90501, Officers: Katie Lee, Secretary (QI), Zhimin Wei, President, Application Type: New NVO License.

Morgan Systems, Inc. (NVO & OFF), 1500 Cedar Grove Road, Conley, GA 30288, Officers: David C. McCormack, Vice President (QI), David G. Morgan, Owner, Application Type: New NVO & OFF License.

Popi Trading, Inc. dba Liner American Services N.A. (OFF), 225 Broadway, Suite 2701, New York, NY 10007, Officers: Pablo Silva, President (QI), Ana Belen Perez, Secretary, Application Type: New OFF License.

Rodi International Corp. (NVO & OFF), 2801 NW 74th Avenue, Suite 200, Miami, FL 33122, Officers: Dorian F. Rodriguez, President (QI), Doris Del Castillo, Secretary, Application Type: New NVO & OFF License.

Safari Cargo, LLC (NVO & OFF), 7007 Gulfway Freeway, Suite 107, Houston, TX 77087, Officer: Maged L. Ghazi, Member (QI), Application Type: New NVO & OFF License.

Stoneland Global Logistics, Inc. (NVO & OFF), 19051 Kenswick Drive, Suite 170, Humble, TX 77338, Officers: Jorge A. Moreno, Vice President (QI), Robert Shannon, President, Application Type: New NVO & OFF License.

Straight Point Line Inc. (NVO & OFF), 72 Sharp Street, Suite C11, Hingham, MA 02043, Officer: Paul F. Kalita, President (QI), Application Type: Name Change to Outsource, Inc.

Topp Cargo & Logistics, LLC (NVO & OFF), 8000 NW 29th Street, Miami, FL 33122, Officers: Adrian Martinez, Operations Manager (QI), Jose G. Suarez, Sales Manager, Application Type: QI Change.

UBA Express Cargo, Corp. (NVO), 10350 West Flagler Street, Miami, FL 33174, Officer: Martha E. Rivas, President (QI), Application Type: New NVO License.

Ucans Global, Inc (NVO), 1420 Francisco Street, Torrance, CA 90501, Officer: Jaden O. Lee, President (QI), Application Type: New NVO License.

By the Commission.

Dated: July 15, 2013.

Karen V. Gregory,

Secretary.

FEDERAL MARITIME COMMISSION

Ocean Transportation Intermediary License Revocations and Terminations

The Commission gives notice that the following Ocean Transportation Intermediary licenses have been revoked or terminated for the reason shown pursuant to section 19 of the Shipping Act of 1984 (46 U.S.C. 40101) effective on the date shown.

License No.: 3388NF.
Name: OCI Forwarding Services, Inc. dba Metro Line.
Address: 1225 Greenbriar Drive, Suite E, Addison, IL 60101.
Date Revoked: May 30, 2013.
Reason: Failed to maintain a valid bond.

License No.: 3714F.
Name: A & E International, Inc.
Address: 16449 1–45 Feeder South. Centerville, TX 75833.
Date Revoked: June 1, 2013.
Reason: Voluntary Surrender of License.

License No.: 4097F.
Name: Ashby, Wendy Lyn dba Cargocare.
Address: 107 Woodcrest Drive, Chehalis, WA 98532.
Date Revoked: June 6, 2013.
Reason: Failed to maintain a valid bond.

License No.: 4313F.
Name: Lopez, Miguel Angel dba Marine Air Land International Services.
Address: 3478 Investment Blvd., Hayward, CA 94545.
Date Revoked: June 8, 2013.
Reason: Failed to maintain a valid bond.

License No.: 17123N.
Name: Express Freight International, Inc.
Address: 2027 Williams Street, San Leandro, CA 94577.
Date Revoked: May 24, 2013.
Reason: Failed to maintain a valid bond.

License No.: 017292N.
Name: Pudong Trans USA, Inc.
Address: 9660 Flair Drive, Suite 328, El Monte, CA 91731.
Date Revoked: May 26, 2013.
Reason: Failed to maintain a valid bond.

License No.: 019906F.
Name: Atlantic Air Express, LLC.
Address: 1893 Country Route 1, Westtown, NY 10998.
Date Revoked: June 18, 2013.
Reason: Voluntary Surrender of License.

License No.: 021156F.
Name: Aprile USA, Inc. dba Allied Seafreight Line.
Address: 1370 Broadway, Suite 1400, New York, NY 10018.
Date Revoked: June 1, 2013.
Reason: Failed to maintain a valid bond.

License No.: 021995F.
Name: Deakins Trans-Global Logistics, LLC.
Address: 6817 South Point Parkway, Suite 101, Jacksonville, FL 32216.
Date Revoked: June 8, 2013.
Reason: Failed to maintain a valid bond.

License No.: 022605N.
Name: AK Solutions Inc.
Address: 10034 Halston Drive, Sugarland, TX 77498.
Date Revoked: May 27, 2013.
Reason: Failed to maintain a valid bond.

License No.: 022714N.
Name: Seapassion Logistics Inc.
Address: 20819 Currier Road, Unit 400, City of Industry, CA 91789.
Date Revoked: June 3, 2013.
Reason: Failed to maintain a valid bond.

License No.: 023800F.
Name: Joseph P. Solomon dba Equitorial Import-Export.
Address: 20526 76th Avenue West, Suite A, Edmonds, WA 98026.
Date Revoked: June 11, 2013.
Reason: Failed to maintain a valid bond.

License No.: 023846NF.
Name: International Cargo Shipping LLC.
Address: 11354 Burbank Blvd., Suite C, North Hollywood, CA 91601.
Date Revoked: June 6, 2013.
Reason: Failed to maintain a valid bond.

James A. Nussbaumer,
Deputy Director, Bureau of Certification and Licensing.

BILLING CODE 6730–01–P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than August 5, 2013.

A. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690–1414:

1. *Veranda L. Dickens,* Chicago, Illinois; to acquire voting shares of Seaway Bancshares, Inc., and thereby indirectly acquire voting shares of Seaway Bank and Trust Company, both in Chicago, Illinois.

B. Federal Reserve Bank of St. Louis (Yvonne Sparks, Community Development Officer) P.O. Box 442, St. Louis, Missouri 63166–2034:

1. *Richard A. Torti, Sr., as executor of the estate of Layton P. Stuart,* both of Little Rock, Arkansas; to retain voting shares of OneFinancial Corporation, and thereby indirectly retain voting shares of One Bank & Trust, National Association, both in Little Rock, Arkansas.

Board of Governors of the Federal Reserve System, July 16, 2013.

Margaret McCloskey Shanks,
Deputy Secretary of the Board.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0074: Sequence 44]

Federal Acquisition Regulation; Submission for OMB Review; Contract Funding—Limitation of Costs/Funds

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for public comments regarding an extension of an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement concerning limitation of costs/funds. A notice was

published in the **Federal Register** at 77 FR 75163, on December 19, 2012. Two comments were received.

DATES: Submit comments on or before August 19, 2013.

ADDRESSES: Submit comments identified by Information Collection 9000–0074, Contract Funding—Limitation of Costs/Funds by any of the following methods:

- *Regulations.gov: http://www.regulations.gov*.

Submit comments via the Federal eRulemaking portal by searching the OMB control number. Select the link ''Submit a Comment'' that corresponds with ''Information Collection 9000–0074, Contract Funding—Limitation of Costs/Funds''. Follow the instructions provided at the ''Submit a Comment'' screen. Please include your name, company name (if any), and ''Information Collection 9000–0074, Contract Funding—Limitation of Costs/Funds'' on your attached document.

- *Fax:* 202–501–4067.
- *Mail:* General Services Administration, Regulatory Secretariat (MVCB), 1800 F Street NW., 2nd Notice, Washington, DC 20405–0001. ATTN: Hada Flowers/IC 9000–0074, Contract Funding—Limitation of Costs/Funds.

Instructions: Please submit comments only and cite Information Collection 9000–0074, Contract Funding—Limitation of Costs/Funds, in all correspondence related to this collection. All comments received will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided.

FOR FURTHER INFORMATION CONTACT: Mr. Edward N. Chambers, Procurement Analyst, Office of Governmentwide Acquisition Policy, GSA (202) 501–3221 or email *Edward.chambers@gsa.gov*.

SUPPLEMENTARY INFORMATION:

A. Purpose

Firms performing under Federal cost-reimbursement contracts are required to notify the contracting officer in writing whenever they have reason to believe—

(1) The costs the contractors expect to incur under the contracts in the next 60 days, when added to all costs previously incurred, will exceed 75 percent of the estimated cost of the contracts; or

(2) The total cost for the performance of the contracts will be greater or substantially less than estimated.

As a part of the notification, the contractors must provide a revised estimate of total cost.

B. Discussion and Analysis

One respondent submitted public comments on the extension of the previously approved information collection. The analysis of these public comments is summarized as follows:

Comment: The respondent commented that the extension of the information collection would violate the fundamental purposes of the Paperwork Reduction Act because of the burden it puts on the entity submitting the information and the agency collecting the information.

Response: In accordance with the Paperwork Reduction Act (PRA), agencies can request OMB approval of an existing information collection. The PRA requires that agencies use the **Federal Register** notice and comment process, to extend OMB's approval, at least every three years. This extension, to a previously approved information collection, pertains to FAR clauses 52.232–20 and 52.232–22. These clauses require contractors performing under Federal cost-reimbursement contracts to notify the contracting officer in writing whenever they have reason to believe—

(1) The costs the contractors expect to incur under the contracts in the next 60 days, when added to all costs previously incurred, will exceed 75 percent of the estimated cost of the contracts; or

(2) The total cost for the performance of the contracts will be greater or substantially less than estimated. As a part of the notification, the contractors must provide a revised estimate of total cost.

These notifications assist the Government in its effort to provide timely funding of cost reimbursement contracts. The lack of such notifications increases the risk that funding may lapse, resulting in contract work stoppages. This clause has existed substantially the same since the inception of the FAR.

Comment: The respondent commented that the agency did not accurately estimate the public burden, challenging that the agency's methodology for calculating it is insufficient and inadequate and does not reflect the total burden. First, the respondent questioned the basis for the estimated number of respondents of 3,598, stating that it appears to be understated. The respondent also questioned the basis for the estimate of 15.96999 responses per respondent, stating that the five decimal places imply a precise calculation underlying the estimate. Finally, the respondent stated that the average burden estimate of 0.5 hours per response is unrealistically low and unsubstantiated. For this reason, the respondent contends that the agency should reassess the estimated total burden hours and revise the estimate upwards to be more accurate, as was done in FAR Case 2007–006. The same respondent also provided that the burden of compliance with the information collection requirement outweighs any potential utility of the extension.

Response: Serious consideration is given, during the open comment period, to all comments received and adjustments are made to the paperwork burden estimate based on reasonable considerations provided by the public. This is evidenced, as the respondent notes, in FAR Case 2007–006 where an adjustment was made from the total preparation hours from three to 60. This change was made considering particularly the hours that would be required for review within the company, prior to release to the Government.

The burden is prepared taking into consideration the necessary criteria in OMB guidance for estimating the paperwork burden put on the entity submitting the information. For example, consideration is given to an entity reviewing instructions; using technology to collect, process, and disclose information; adjusting existing practices to comply with requirements; searching data sources; completing and reviewing the response; and transmitting or disclosing information. The estimated burden hours for a collection are based on an average between the hours that a simple disclosure by a very small business might require and the much higher numbers that might be required for a very complex disclosure by a major corporation. Also, the estimated burden hours should only include projected hours for those actions which a company would not undertake in the normal course of business. Careful consideration went into assessing the estimated burden hours for this collection, and although the respondent provided estimates of responses and burden hours, the estimates cannot be confirmed with any degree of certainty to totally rely on the information. However, it is determined that an upward adjustment is warranted at this time based upon consideration of the information provided in the public comment. The information collection requirement has been revised to reflect an overall increase in the total public burden hours.

The estimates of the number of respondents and the number of responses per respondent are based on data from the Federal Procurement Data System—Next Generation (FPDS–NG) for Fiscal Year (FY) 2011. For FY 2011 there were 3,598 unique vendors with 57,460 funding only actions under cost reimbursement contracts. These funding

actions are usually the result of the notification required by this information requirement. The number of responses per respondent (15.96999) was derived by dividing the number of actions by the number of unique vendors. The preciseness of the number of responses demonstrates the level of review and the serious consideration given to the data gathered for this information collection. However, in response to the public comment received, the number of responses per respondent has been rounded up to 16.

With regard to the estimate of 0.5 hours per response, we believe that the notification typically involves an observation of the contractors accounting and financial reporting system that available funds will fall below the 75 percent threshold within the next 60 days, followed by a very brief letter to the contracting officer referencing the applicable contract clause at FAR 52.232–20 or FAR 52.232–22. The contractor's responsibility to foresee the availability of funds and probable cost overruns carries with it a duty to maintain an accounting and financial reporting system capable of securing timely knowledge of all probable costs before they are incurred. This information collection does not require contractors to create or maintain any record or system that the contractor does not maintain in its ordinary course of business. Therefore, the estimated burden hour per response of 30 minutes for this collection of information is valid. However, the rounding of the annual number of responses per respondent from 15.96999 to 16, based upon consideration of the information provided by the respondent, resulted in a revision to the information collection requirement to reflect an overall increase in the total public burden hours.

C. Annual Reporting Burden

Respondents: 3,598.

Responses Per Respondent: 16.

Annual Responses: 57,568.

Hours Per Response: .500.

Total Burden Hours: 28,784.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat (MVCB), 1800 F Street NW., 2nd Floor, Washington, DC 20417, telephone (202) 501–4755. Please cite OMB Control No. 9000–0074, Contract Funding—Limitation of Costs/Funds, in all correspondence.

Dated: July 15, 2013.

Karlos Morgan,

Acting Director, Federal Acquisition Policy Division, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Docket 2012–0076; Sequence 51; OMB Control No. 9000–0108]

Federal Acquisition Regulation; Submission for OMB Review; Bankruptcy (FAR Subpart 42.9; 52.242–13)

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding the extension of a previously existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, Regulatory Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement concerning Bankruptcy. A notice was published in the **Federal Register** at 77 FR 73660, December 11, 2012. No comments were received.

DATES: Submit comments on or before August 19, 2013.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: General Services Administration, FAR Desk Officer, OMB, Room 10102, NEOB, Washington, DC 20503. Please cite OMB Control No. 9000–0108, Bankruptcy, in all correspondence.

FOR FURTHER INFORMATION CONTACT: Curtis E. Glover, Sr., Procurement Analyst, Contract Policy Division, GSA, (202) 501–1448 or email *curtis.glover@gsa.gov.*

A. Purpose

Under statute, contractors may enter into bankruptcy which may have a significant impact on the contractor's ability to perform its Government contract. The Government often does not receive adequate and timely notice of this event. The clause at 52.242–13 requires contractors to notify the contracting officer within 5 days after the contractor enters into bankruptcy.

B. Annual Reporting Burden

Respondents: 790.

Responses per Respondent: 1.

Annual Responses: 790.

Hours per Response: 1.25.

Total Burden Hours: 988.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat (MVCB), 1800 F Street NW., 2nd Floor, Washington, DC 20405–0001, telephone (202) 501–4755. BILLING CODE 6820–EP–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[Docket No. ATSDR–2013–0002]

Proposed Substances To Be Evaluated for Set 27 Toxicological Profiles

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Request for comments on the proposed substances to be evaluated for Set 27 toxicological profiles.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR) within the Department of Health and Human Services (HHS) is initiating the development of its 27th set of toxicological profiles (CERCLA Set 27). This notice announces the list of proposed substances that will be evaluated for Comprehensive Environmental Response Compensation and Liability Act(CERCLA) Set 27 toxicological profile development. ATSDR's Division of Toxicology and Human Health Sciences is soliciting public nominations from the list of proposed substances to be evaluated for toxicological profile development. ATSDR also will consider the nomination of any additional, non-CERCLA substances that may have

public health implications, on the basis of ATSDR's authority to prepare toxicological profiles for substances not found at sites on the National Priorities List. The agency will do so in order to ''...establish and maintain inventory of literature, research, and studies on the health effects of toxic substances'' under CERCLA Section 104(i)(1)(B), to respond to requests for consultation under section 104(i)(4), and to support the site-specific response actions conducted by ATSDR, as otherwise necessary.

DATES: Nominations from the Substance Priority List and/or additional substances must be submitted on or before August 19, 2013.

ADDRESSES: You may submit nominations, identified by Docket No. ATSDR–2013–0002, by any of the following methods:

**Internet:* Access the Federal eRulemaking portal at *http://www.regulations.gov.* Follow the instructions for submitting comments.

**Mail:* Division of Toxicology and Human Health Sciences, 1600 Clifton Rd. NE., MS F–57, Atlanta, Ga., 30333 *Instructions:* All submissions must include the agency name and docket number for this notice. All relevant comments will be posted without change. This means that no confidential business information or other confidential information should be submitted in response to this notice. Refer to the section *Submission of Nominations* (below) for the specific information required.

FOR FURTHER INFORMATION CONTACT: For further information, please contact Commander Jessilynn B. Taylor, Division of Toxicology and Human Health Sciences, 1600 Clifton Rd. NE., MS F–57, Atlanta, Ga., 30333, Email: *tpcandidatecomments@cdc.gov;* phone: 1–800–232–4636.

SUPPLEMENTARY INFORMATION: The Superfund Amendments and Reauthorization Act of 1986 (SARA) [42 U.S.C. 9601 *et seq.*] amended the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA or Superfund) [42 U.S.C. 9601 *et seq.*] by establishing certain requirements for ATSDR and the U.S. Environmental Protection Agency (EPA) with regard to hazardous substances most commonly found at facilities on the CERCLA National Priorities List (NPL). Among these statutory requirements is a mandate for the ATSDR Administrator to prepare toxicological profiles for each substance included on the Priority List of Hazardous Substances. This list identifies 275 hazardous substances that ATSDR and EPA have determined pose the most significant current potential threat to human health. The availability of the revised list of the 275 priority substances was announced in the **Federal Register** on November 3, 2011 (76 FR 68193). For prior versions of the list of substances, see **Federal Register** notices dated April 17, 1987 (52 FR 12866); October 20, 1988 (53 FR 41280); October 26, 1989 (54 FR 43619); October 17,1990 (55 FR 42067); October 17, 1991 (56 FR 52166); October 28, 1992 (57 FR 48801); February 28, 1994 (59 FR 9486); April 29, 1996 (61 FR 18744); November 17, 1997 (62 FR 61332); October 21, 1999 (64 FR 56792); October 25, 2001 (66 FR 54014), November 7, 2003 (68 FR 63098); December 7, 2005 (70 FR 70284); and March 6, 2008 (73 FR 12178).

Substances To Be Evaluated for Set 27 Toxicological Profiles

Each year, ATSDR develops a list of substances to be considered for toxicological profile development. The Set 27 nomination process includes consideration of all substances on ATSDR's Priority List of Hazardous Substances, also known as the Substance Priority List (SPL), as well as other substances nominated by the public. The 275 substances on the SPL will be considered for Set 27 Toxicological Profile development. This list may be found at the following Web site: *www.atsdr.cdc.gov/SPL* and in the docket at *www.regulations.gov*

Submission of Nominations for the Evaluation of Set 27 Proposed Substances: Today's notice invites voluntary public nominations for substances included on the SPL and for substances not listed on the SPL. All nominations should include the full name of the nominator, affiliation, email address. When nominating a non-SPL substance, please include the rationale for the nomination. Please note email addresses will not be posted on *www.regulations.gov.*

ATSDR will evaluate all data and information associated with nominated substances and will determine the final list of substances to be chosen for toxicological profile development. Substances will be chosen according to ATSDR's specific guidelines for selection. These guidelines can be found in the *Selection Criteria* announced in the **Federal Register** on May 7, 1993 (58FR27286–27287). A hard copy of the Selection Criteria is available upon request or may be accessed at: *http://www.atsdr.cdc.gov/toxprofiles/guidance/criteria_for_selectingtpsupport.pdf.*

Please ensure that your comments are submitted within the specified nomination period. Nominations received after the closing date will be marked as late and may be considered only if time and resources permit.

Dated: July 11, 2013.

Sascha Chaney,

Acting Director, Office of Policy, Planning and Evaluation, National Center for Environmental Health/Agency for Toxic Substances and Disease Registry.

[60Day-13–13ZZ]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call 404–639–7570 and send comments to LeRoy Richardson, 1600 Clifton Road, MS–D74, Atlanta, GA 30333 or send an email to *omb@cdc.gov*.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Evaluation of the SAMHSA PDMP Electronic Health Record (EHR) Integration and Interoperability Expansion Program—New—National Center for Injury Prevention and Control (NCIPC), Center for Disease Control and Prevention (CDC).

Background and Brief Description

In 2009, drug overdose deaths became the leading cause of injury death in the United States (U.S.), exceeding motor vehicle traffic crash deaths for the first time, a trend that continued in 2010. Prescription drugs, particularly opioid pain relievers, have been identified as the main driver of this increase. The number of overdose deaths per year involving opioid pain relievers increased more than four-fold from 1999 to 2010 (from 4,030 to 16,651), outnumbering overdose deaths involving all illicit drugs combined. Morbidity associated with opioid pain reliever abuse increased in parallel. The rate of emergency department visits associated with the misuse or abuse use of opioid pain relievers increased 153% from 2004 to 2011, while rates for illicit drugs remained largely stable.

Concurrent to this rise in overdose death rates, the sales of opioid pain relievers have increased four-fold since 1999. According to the National Survey of Drug Use and Health, the primary source of prescription drugs for non-medical use is from prescribed and dispensed prescriptions; more than 70% of those who reported non-medical use of pain relievers said they obtained the pain reliever they most recently used from a friend or relative. Moreover, multiple studies have found an association between increased opioid prescribing—in the amount prescribed per prescription, the total days' supply, and the number of prescriptions per patient—and increased morbidity and mortality in the U.S. over the last 10 to 15 years.

Prescription Drug Monitoring Programs (PDMPs) are now recognized as a key tool in federal, state, and local efforts to address prescription drug abuse and misuse. PDMPs are state databases to which pharmacies and other dispensers report dispensed outpatient controlled substance prescription information. Forty-nine states have passed legislation authorizing a PDMP, and 45 states currently have an operational program. In the vast majority of these programs, prescribers and pharmacists (herein referred to collectively as providers) can register to become an authorized user of the PDMP. Following authorization, users can then conduct online queries to obtain prescription histories for their patients, a process that may take up to several minutes. For many providers, accessing patient prescription histories offers critical input that can inform their clinical decision-making. This process has shown promise in preventing prescribing to patients who appear to be abusing prescription medications or obtaining controlled substances prescribed by multiple providers without knowledge of the other prescriptions (referred as doctor shopping) while enabling appropriate prescribing and dispensing for legitimate patients, especially for pain medication.

However, for many providers, even the few minutes required to log on to the PDMP and query a patient's prescription history present a barrier to regular use. Moreover, gaps in patients' prescription histories due to limited interstate sharing of PDMP data has contributed to relatively slow rates of provider registration with and use of PDMPs. PDMP reports show that it often takes four or more years following the implementation of online PDMP access for registration in the state to reach 50% of the prescribers who write controlled substance prescriptions, thus limiting the potential impact of these programs. Various strategies have been proposed to increase provider use of PDMPs. For example, several states have recently passed legislation mandating provider registration with and use of the PDMP under certain circumstances. Many states have also initiated efforts to enroll providers in educational training programs on the value of using PDMP data to counteract the prescription drug overdose epidemic. The project described below takes a different approach to increasing provider use of PDMPs.

In an effort to increase provider utilization of PDMPs and to effectively reduce prescription drug abuse and overdose, the Substance Abuse and Mental Health Services Administration (SAMHSA) funded projects in nine states beginning in fiscal year (FY) 2012 and lasting for a period of two years through its PDMP Electronic Health Records (EHRs) Integration and Interoperability Expansion (PEHRIIE) cooperative agreement program. The goals of this program are to:

(1) Increase provider utilization of their state's PDMP by improving real-time access to PDMPs via the integration of PDMP data and/or access thereof within health information technologies (HIT) such as health information exchanges (HIEs), EHR systems, and/or pharmacy dispensing software (PDS). Ultimately, when providers access a patient's EHR, s/he will have automatic access to that patient's up-to-date prescription history within the course of their normal clinical workflow, thereby obviating the time and effort otherwise needed to access the PDMP and obtain this information separately from the patient's medical record. Similarly, when a pharmacist calls up patient information via the PDS, the patient's prescription history from the PDMP will be automatically compiled, allowing for expedited access and review prior to dispensing.

(2) Increase provider utilization of PDMP data by increasing the comprehensiveness and quality of PDMP data by increasing the interoperability of PDMPs across state lines. When providers access a patient's prescription history from his or her state PDMP (either directly or via the systems described above), data from other state PDMPs with which the home state PDMP is interoperable will be automatically included. By providing a more complete prescription history, PDMP data is expected to have greater utility in clinical decision-making, thus offering an inducement for providers to access and utilize PDMP data more frequently.

Both of these goals are expected to contribute to improving prescribing and dispensing practices, resulting in decreased prescription drug abuse and misuse and related health consequences such as fatal and non-fatal overdoses as well as lead to improvements in care.

Under the cooperative agreements issued by SAMHSA, the CDC is responsible for conducting a comprehensive process and outcomes evaluation of the PEHRIIE program. The evaluation team consists of health scientists on the Prescription Drug Overdose team within the Division of Unintentional Injury Prevention, National Center for Injury Control and Prevention at CDC, and two subject matter experts at the PDMP Center of Excellence at Brandeis University. The primary goals of the qualitative evaluation component of this work are:

(1) To understand the processes, challenges, and successes in implementing and sustaining integration of PDMP data with Health Information Technology (HIT) systems and interoperability of PDMP systems across states; and

(2) To understand the experiences of clinical end users with the systems being upgraded under the PEHRIIE program and to capture their recommendations, if any, for how the goals of the PEHRIIE could have been better accomplished.

To achieve these evaluation goals, the CDC evaluation team will conduct qualitative interviews with those individuals involved in the planning and implementation of the PEHRIIE projects (i.e., key project staff and stakeholders) as well as with the clinical end users (i.e., prescribers and

pharmacists) of the PDMPs in the states where these projects are taking place.

This evaluation is consistent with CDC's strategic goals of improving surveillance, informing policy, and improving clinical practice. CDC believes that the most effective interventions in combating the prescription drug overdose epidemic include those designed to identify and address high-risk patients at a stage when their risky behaviors can be most effectively addressed. Strong yet accessible PDMPs that promote proactive patient interventions are a critical component of this high-risk focused strategy. By enabling providers to identify high-risk patients at the point of care, via improved access to and use of PDMPs and improved comprehensiveness of PDMP data, providers can intervene with patients and address their high-risk behaviors, including providing or redirecting patients to substance abuse treatment as necessary. Through this evaluation, CDC will better understand the impact of PDMP integration and interoperability in the funded states.

The total annual estimated burden hours for the planned qualitative information collection are 235 hours. Total burden time includes the time to conduct interviews with key project staff/stakeholders and clinical end users, and the time spent by recruiters at the PEHRIIE implementation sites to identify potential clinical end user interviewees.

It will take 79 hours of interviewee time to complete all of the key project staff/stakeholder interviews necessary for the planned evaluation of the PEHRIIE program. Interviews will be conducted with 91 key project staff members/stakeholders across the nine PEHRIIE-funded states (range: 6–16 interviews per state) as well as 14 key project staff/stakeholders representing five companies working with multiples states involved in the PEHRIIE program, for a total of 105 key project staff/stakeholders interviewees. Based on pilot testing with three individuals, each key project staff/stakeholder interview will take approximately 45 minutes to complete. Therefore, 105 key project staff/stakeholder interviews at 45 minutes each will require 79 hours of interviewee time.

It will take 117 hours of interviewee time to complete all of the clinical end user interviews necessary for the planned evaluation of the PEHRIIE program. Each interviewee will be interviewed once. End user interviews will be conducted at 39 implementation sites distributed across all nine PEHRIIE states (range: 3–8 sites per state). Interviews will be conducted with three clinical end users per implementation site for a total of 117 clinical end user interviews. Based on pilot testing with three individuals, each clinical end user interview will take one hour to complete. Therefore, 117 clinical end users at 1 hour each will require 117 hours of interviewee time.

It will take 39 hours of recruiter time to identify potential clinical end user interviewees, to collect the contact information from these clinical end users, and to disseminate this collected information to the CDC evaluation time. The CDC will work with one recruiter per implementation site to complete these tasks. Based on the time required to complete similar tasks during the planning of the clinical end user pilot interviews, each recruiter is expected to spend approximately one hour on these tasks. Therefore, 39 recruiters spending one hour each on this information collection will require 39 hours of recruiter time.

There are no costs to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hrs)	Total burden (in hrs)
Key Project Staff/Stakeholders	Key Project Staff/Stakeholders Interview Guide.	105	1	45/60	79
Clinical End Users	Clinical End Users Interview Guide	117	1	1	117
Clinical End User Recruiters	N/A	39	1	1	39
Total					235

Leroy A. Richardson,

Chief, Information Collection Review Office, Office of Scientific Integrity, Office of the Associate Director for Science, Office of the Director, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects

Title: Income Withholding Order/Notice for Support (IWO).

OMB No.: 0970–0154.

Description: Statutory requirements under subsections 466(a)(1), (a)(8) and 466(b)(6) of the Social Security Act require the use of the Income Withholding for Support (IWO) form in all child support cases. The form must be used by child support agencies, courts, tribes, private attorneys and other entities when ordering or sending notices to withhold. 42 U.S.C 666(a)(1) and (8); 42 U.S.C 666(b)(6).

The Income Withholding for Support (IWO) form previously approved by the Office of Management and Budget has been modified to address items identified by states and employers/income withholders. The title of the form is changed to Income Withholding Order/Notice for Support (IWO) to correspond to the first line of the form. The blank box for court use is removed and text shifted to make better use of available space. Language is inserted to explain that provisions of the Consumer Credit Protection Act (CCPA) apply only to employees and not to independent contractors. A header with case-identifying information is added on Page Two and a Social Security Number on Page Three to place case-identifying information on each page and allow future automated improvements for employers and states. Clarifications are added to the Instructions emphasizing that each IWO should represent the information for only one case, as defined in the Code of Federal Regulations.

Respondents: Not applicable.

ANNUAL BURDEN ESTIMATES

Reporting requirement	Number of respondents	Number of responses per respondent	Annual number of responses	Average burden hours per response	Total burden hours
Employers	1,283,965	7.44	9,552,699.60	2 minutes	318,423
Non-IV–D CPs	2,436,312	1.00	2,436,312.00	5 minutes	203,026
e IWO Employers	4,763	131.75	627,525.25	3 seconds	523
Total	3,721,508		12,052,319		521,449

Estimated Total Annual Burden Hours: 521,449

In compliance with the requirements of Section 506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. Email address: *infocollection@acf.hhs.gov*. All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Robert Sargis,

Reports Clearance Officer.

BILLING CODE 4184–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–0815]

Narcolepsy Public Meeting on Patient-Focused Drug Development

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public meeting; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is announcing a public meeting and an opportunity for public comment on Patient-Focused Drug Development for narcolepsy. Patient-Focused Drug Development is part of FDA's performance commitments in the fifth authorization of the Prescription Drug User Fee Act (PDUFA V). The public meeting is intended to allow FDA to obtain patients' perspectives on the impact of narcolepsy on daily life as well as the available therapies for narcolepsy.

DATES: The public meeting will be held on September 24, 2013, from 1 p.m. to 5 p.m. Registration to attend the meeting must be received by September 13, 2013. See the **SUPPLEMENTARY INFORMATION** section for information on how to register for the meeting. Submit electronic or written comments by November 25, 2013.

ADDRESSES: The meeting will be held at the FDA White Oak Campus, 10903 New Hampshire Ave., Building 31 Conference Center, Section A of the Great Room (Rm. 1503), Silver Spring, MD 20993. Entrance for the public meeting participants is through Building 1, where routine security check procedures will be performed. For more information on parking and security procedures, please refer to *http://www.fda.gov/AboutFDA/WorkingatFDA/BuildingsandFacilities/WhiteOakCampusInformation/ucm241740.htm*.

Submit electronic comments to *www.regulations.gov*. Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FDA will post the agenda approximately 5 days before the meeting at: *http://www.fda.gov/ForIndustry/UserFees/PrescriptionDrugUserFee/ucm359018.htm*.

FOR FURTHER INFORMATION CONTACT: Pujita Vaidya, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 1170, Silver Spring, MD 20993, 301–796–0684, FAX: 301–847–8443, email: *Pujita.Vaidya@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background on Patient-Focused Drug Development

FDA has selected narcolepsy to be the focus of a meeting under Patient-Focused Drug Development, an initiative that involves obtaining a better understanding of patients' perspectives on the severity of the disease and the available therapies for the condition. Patient-Focused Drug Development is being conducted to fulfill FDA's performance commitments made as part of the authorization of PDUFA under Title I of the Food and Drug Safety and Innovation Act (FDASIA) (Pub. L. 112–144). The full set of performance commitments is available on the FDA Web site at *http://www.fda.gov/downloads/forindustry/userfees/prescriptiondruguserfee/ucm270412.pdf*.

FDA has committed to obtain the patient perspective in 20 disease areas during the course of PDUFA V. For each disease area, the Agency will conduct a public meeting to discuss the disease and its impact on patients' daily lives, the types of treatment benefit that matter most to patients, and patients' perspectives on the adequacy of the available therapies. These meetings will include participation of FDA review divisions, the relevant patient community, and other interested stakeholders.

On April 11, 2013, FDA published a notice in the **Federal Register** (78 FR 22613) announcing the disease areas for meetings in fiscal years (FY) 2013–2015, the first 3 years of the 5-year PDUFA V timeframe. To develop the list of disease areas, the Agency used several criteria that were outlined in the April 11 notice. The Agency gathered public comment on these criteria and potential disease areas through a notice for public comment published in the **Federal Register** on September 24, 2012 (77 FR 55849), and through a public meeting

held on October 25, 2012. In selecting the disease areas, FDA carefully considered the public comments received and the perspectives of its review divisions. By the end of FY 2015, FDA will initiate another public process for determining the disease areas for FY 2016–2017. More information, including the list of disease areas and a general schedule of meetings, is posted on FDA's Web site at *http://www.fda.gov/ForIndustry/UserFees/PrescriptionDrugUserFee/ucm326192.htm*.

II. Public Meeting Information

A. Purpose and Scope of the Meeting

As part of Patient-Focused Drug Development, FDA will gather patient and patient stakeholder input on symptoms of narcolepsy that matter most to patients and on current approaches to treating narcolepsy. Narcolepsy is a chronic disorder of the central nervous system caused by the brain's inability to control sleep-wake cycles and is characterized by excessive daytime sleepiness, cataplexy, hallucination, and disturbed nocturnal sleep. Although there is no cure for narcolepsy, medications and lifestyle modifications can help patients manage their symptoms. FDA is interested in obtaining a better understanding of patients' perspectives on the severity of the disease and assessments of available therapies.

The questions that will be asked of patients and patient stakeholders at the meeting are listed in this section, organized by topic. For each topic, a brief patient panel discussion will begin the dialogue, followed by a facilitated discussion inviting comments from other patient and patient stakeholder participants. In addition to input generated through this public meeting, FDA is interested in receiving patient input addressing these questions through the public docket (see **ADDRESSES**).

Topic 1: Disease symptoms and daily impacts that matter most to patients:

1. Of all the symptoms that you experience because of your condition, which one to three symptoms have the most significant impact on your life? (Examples may include excessive daytime sleepiness, cataplexy, etc.)

2. Are there specific activities that are important to you but that you cannot do at all or as fully as you would like because of your condition? (Examples of activities may include sleeping through the night, work and school performance, etc.)

3. How have your symptoms changed over time?

3.1. Do your symptoms come and go? If so, do you know of anything that makes your symptoms better? Worse?

Topic 2: Patients' perspectives on current approaches to treating narcolepsy:

1. What are you currently doing to help treat your condition or its symptoms? (Examples may include FDA-approved medicines, over-the-counter products, and other therapies including non-drug therapies such as lifestyle modifications.)

1.1. What specific symptoms do your therapies address?

1.2. How has your treatment regimen changed over time, and why?

2. How well does your current treatment regimen treat the most significant symptoms of your disease?

2.1. How well do these therapies improve your ability to do specific activities that are important to you in your daily life?

2.2. How well have these therapies worked for you as your condition has changed over time?

3. What are the most significant downsides to your current therapies, and how do they affect your daily life? (Examples of downsides may include bothersome side effects, inconvenient dosing schedules, access issues, etc.)

4. Assuming there is no complete cure for your condition, what specific things would you look for in an ideal therapy for your condition?

B. Meeting Attendance and/or Participation

If you wish to attend this meeting, visit *http://patientfocused narcolepsy.eventbrite.com.* Please register by September 13, 2013. Those who are unable to attend the meeting in person can register to view a live webcast of the meeting. You will be asked to indicate in your registration whether you plan to attend in person or via the webcast. Your registration should also contain your complete contact information, including name, title, affiliation, address, email address, and phone number.

Seating will be limited, so early registration is recommended. Registration is free and will be on a first-come, first-served basis. However, FDA may limit the number of participants from each organization based on space limitations. Registrants will receive confirmation once they have been accepted. Onsite registration on the day of the meeting will be based on space availability. If you need special accommodations because of disability, please contact Pujita Vaidya (see **FOR FURTHER INFORMATION CONTACT**) at least 7 days before the meeting.

Patients who are interested in presenting comments as part of the initial panel discussions will be asked to indicate in their registration which topic(s) they wish to address. They will also be asked to send a brief summary of responses to the topic questions to *PatientFocused@fda.hhs.gov.* Panelists will be notified of their selection soon after the close of registration on September 13, 2013. FDA will try to accommodate all patients and patient stakeholders who wish to speak, either through the panel discussion or audience participation; however, the duration of comments may be limited by time constraints.

Interested members of the public, including those who attend the meeting in person or through the webcast, are invited to provide electronic or written responses to the questions pertaining to Topics 1 and 2 to the public docket (see **ADDRESSES**). Comments may be submitted until November 25, 2013.

Dated: July 15, 2013.

Leslie Kux,

Assistant Commissioner for Policy.

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–0845]

Bracco Diagnostics et al.; Withdrawal of Approval of 52 New Drug Applications and 77 Abbreviated New Drug Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is withdrawing approval of 52 new drug applications (NDAs) and 77 abbreviated new drug applications (ANDAs) from multiple applicants. The holders of the applications notified the Agency in writing that the drug products were no longer marketed and requested that the approval of the applications be withdrawn.

DATES: Effective August 19, 2013.

FOR FURTHER INFORMATION CONTACT: Florine P. Purdie, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6366, Silver Spring, MD 20993–0002, 301–796–3601.

SUPPLEMENTARY INFORMATION: The holders of the applications listed in

table 1 in this document have informed FDA that these drug products are no longer marketed and have requested that FDA withdraw approval of the applications under the process in § 314.150(c) (21 CFR 314.150(c)). The applicants have also, by their requests, waived their opportunity for a hearing. Withdrawal of approval of an application or abbreviated application under § 314.150(c) is without prejudice to refiling.

TABLE 1

Application No.	Drug	Applicant
NDA 011620	Cardiografin (diatrizoate meglumine USP, 85%) Injection	Bracco Diagnostics, 107 College Rd. East, Princeton, NJ 08540.

[1] This product included an oral pressurized metered-dose inhaler that contained chlorofluorocarbons (CFCs) as a propellant. CFCs may no longer be used as a propellant for any albuterol metered-dose inhalers (see 70 FR 17168, April 4, 2005).

Therefore, under section 505(e) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(e)) and under authority delegated to the Director, Center for Drug Evaluation and Research, by the Commissioner, approval of the applications listed in table 1 in this document, and all amendments and supplements thereto, is hereby withdrawn, effective August 19, 2013. Introduction or delivery for introduction into interstate commerce of products without approved new drug applications violates section 301(a) and (d) of the FD&C Act (21 U.S.C. 331(a) and (d)). Drug products that are listed in table 1 that are in inventory on the date that this notice becomes effective (see

DATES) may continue to be dispensed until the inventories have been depleted or the drug products have reached their expiration dates or otherwise become violative, whichever occurs first.

Dated: July 15, 2013.

Janet Woodcock,

Director, Center for Drug Evaluation and Research.

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-day Comment Request Evaluation of a Kidney Disease Education and Awareness Program in the Hispanic Community

SUMMARY: In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the National Kidney Disease Education Program, the National Institute of Diabetes and Digestive and Kidney Diseases, the National Institutes of Health (NIH), will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

Written comments and/or suggestions from the public and affected agencies are invited to address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

To Submit Comments and For Further Information: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact: Eileen Newman, Associate Director, National Kidney Disease Education Program, OCPL, NIDDK, NIH, Building 31, Room 9A06, 9000 Rockville Pike, Bethesda, MD 20892, or call non-toll-free number 301–435–8116 or Email your request, including your address to: *Eileen.newman@nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

Proposed Collection: Evaluation of a Kidney Disease Education Program with Promotores in the Hispanic Community, 0925–NEW, National Kidney Disease Education Program, National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Institutes of Health (NIH).

Need and Use of Information Collection: NKDEP is developing a kidney disease education program to raise awareness among the Hispanic community at risk for kidney disease. Since diabetes is the most common cause of kidney disease, the program is being developed for inclusion in existing diabetes programs being conducted by ''promotores de salud'' (Spanish/English-speaking community health workers). A pilot evaluation will assess: (a) Overall quality of the program from the client and promotor/a perspective, including strengths and weaknesses of the program and the training, and areas for program improvement; (b) effectiveness of the program on the clients (the community members being educated); and (c) effectiveness of materials and training, including promotores' ability to deliver education to the client and administer the client pre-test/post-test surveys. The pilot study will deliver strategic and actionable guidance for refining the educational and training materials for national dissemination. Based on outcomes from the pilot study, a national evaluation is planned that will use the client pre-test/post-test surveys to assess: (a) Knowledge gains about kidney disease, (b) awareness of NKDEP resources and importance of kidney health, (c) reported behavior change outcomes and (d) reported health status.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 101 (see table below).

TABLE A.12.A—ESTIMATE ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Response burden (hours)	Total burden hours
Pilot study collection:					
Promotores	Promotores training pre-test, post-test, and qualitative in-depth interview post client session (Attachment 1 and 2).	12	1	5/60	1
Promotores	Administer client pre-test, post-test, and second post-tests for experimental and control groups (Attachment 3).	20	17	15/60	85
Client Group	Client pre-test, post-test, second post-test for experimental and control groups (Attachment 3).	85	1	10/60	14
Client Group (partial)	Client qualitative in-depth interview post-client session (Attachment 4).	4	1	10/60	1
Total		121			101

Dated: July 10, 2013.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Submission for OMB review; 30-day Comment Request: The Agricultural Health Study: A Prospective Cohort Study of Cancer and Other Disease Among Men and Women in Agriculture (NCI)

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH), has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below. This proposed information collection was previously published in the **Federal Register** on April 23, 2013, Vol. 78, page 23942 and allowed 60-days for public comment. One public comment was received on April 23, 2013, that questioned spending taxpayer money for this research. An email response was sent on April 24, 2013, stating, ''We received your comment. We will take your comments into consideration''. The purpose of this notice is to allow an additional 30 days for public comment. The National Cancer Institute (NCI), National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments To OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, Attention: NIH Desk Officer.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30-days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments or request more information on the proposed project contact: Jane Hoppin, Sc.D., Epidemiology Branch, National Institute of Environmental Health Sciences, NIH, 111 T.W. Alexander Drive, PO Box 12233, MD A3–05, Research Triangle Park, NC 27709, or call non-toll-free number 919–541–7622, or email your request, including your address to: *hoppin1@niehs.nih.gov*. Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: The Agricultural Health Study: A Prospective Cohort Study of Cancer and Other Disease Among Men and Women in Agriculture, 0925–0406—REVISION—National Institute of Environmental Health Sciences (NIEHS), National Institutes of Health (NIH).

Need and Use of Information Collection: The purpose of this information collection is to request initiation of a new dust specimen component as part of the ongoing Study of Biomarkers of Exposures and Effects in Agriculture (BEEA) as well as continue and complete phase IV (2013–2015) of the Agricultural Health Study (AHS) and continue buccal cell collection. Phase IV will continue to update the occupational and environmental exposure information as well as medical history information for licensed pesticide applicators and their spouses enrolled in the AHS. The new BEEA dust component will include a brief paper-and-pen questionnaire mailed to the participant in advance of the home visit; at the home visit, the study phlebotomist will to collect and review the questionnaire, and collect the participant's disposable vacuum bag (or empty the dust from vacuums without disposable bags). The dust component will use similar procedures to ones that have been employed on other NCI studies to obtain information about the dust specimen and to collect and ship the dust specimen. The primary objectives of the study are to determine the health effects resulting from occupational and environmental exposures in the agricultural environment. Secondary objectives include evaluating biological markers that may be associated with agricultural exposures and risk of certain types of cancer. Phase IV questionnaire data are collected by using self-administered computer assisted web survey (CAWI); self-administered paper-and-pen (Paper/pen); or an interviewer administered computer assisted telephone interview (CATI) and in-person interview (CAPI) systems for telephone screeners and home visit interviews, respectively. Some respondents are also asked to participate in the collection of biospecimens and environmental samples, including blood, urine, buccal cells (loose cells from the respondent's mouth), and vacuum dust. The findings will provide valuable information concerning the potential link between agricultural exposures and cancer and other chronic diseases among Agricultural Health Study cohort members, and this information may be generalized to the entire agricultural community.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 10,679.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Type of respondent	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total annual burden hours
Reminder, Missing, and Damaged Scripts for Buccal Cell.	Private and Commercial Applicators and Spouses.	100	1	5/60	8

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 209 and 37 CFR Part 404 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

FOR FURTHER INFORMATION CONTACT: Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852–3804; telephone: 301–496–7057; fax: 301–402–0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Use of Cysteamine to Treat Metastatic Cancer

Description of Technology: Cysteamine is an aminothiol and anti-oxidant that has potential for the treatment of radiation sickness, neurological disorders and cancer. Cysteamine has FDA approval for use in humans, and produces few side-effects as a natural degradation product of an essential amino acid. It is mostly used for treatment of cystinosis. The inventors on this technology have demonstrated that cysteamine also suppresses the activity of matrix metalloproteinases (MMPs). Because MMPs have been implicated in tumor invasion and metastasis, cysteamine has potential as an effective therapeutic for metastatic cancer. Administration of cysteamine was able to reduce invasion and metastasis in mouse xenograft tumor models and prolong survival of the mice without significant adverse side effects. This suggests that cysteamine could represent a novel therapeutic agent for treatment of metastatic cancer.

Potential Commercial Applications: Therapeutic for metastatic cancer as monotherapy or combined with other drugs.

Competitive Advantages:

- Cysteamine does not produce adverse side-effects when administered to humans.
- Cysteamine has already been approved for use in humans, providing a clearer path to clinical approval.

Development Stage:

- Pre-clinical.
- In vitro data available.
- In vivo data available (animal).

Inventors: Raj K. Puri and Bharat Joshi (CBER/FDA).

Publication: Fujisawa T, et al. Cysteamine suppresses invasion, metastasis and prolongs survival by inhibiting matrix metalloproteinases in a mouse model of human pancreatic cancer. PLoS One. 2012;7(4):e34437. [PMID 22532830]

Intellectual Property: HHS Reference No. E–219–2013/0—

- US Provisional Application No. 61/814,010.
- Canadian Application No. 2813514.
- Australian Application No. 2013205350.
- Korean Application No. 10–2013–43713.

Licensing Contact: David A. Lambertson, Ph.D.; 301–435–4632; *lambertsond@mail.nih.gov*.

Encircling Suture Delivery System

Description of Technology: The invention provides a novel delivery system for delivering an encircling suture which includes two separate hollow limbs held together at an articulation by the suture to be delivered. The suture can extend through the hollow limbs, which slide along the suture. The distal ends of the limbs can be compressed into a desired delivery shape that allows the limbs to be advanced through the lumen of a delivery catheter (e.g., a transcutaneous, transvascular or intraluminal catheter) into any body cavity. As the distal portions of the limbs move out of the delivery catheter, the limbs cooperatively assume a loop shape complementary to the shape of the target around the encircling suture to leave only the suture in the desired delivery position while maintaining desired suture tension and position. The delivery device can be placed around a variety of anatomical structures (e.g., heart, arterial appendage, cecal appendix, gall bladder, neoplasm, uterus, hemorrhoid, uvula, aneurysm, transected blood vessel, folded or looped lumen, intraocular crystalline lens or implated intraocular lens or haptic, urinary bladder, kidney, prostate, intestine, or liver, etc.).

Potential Commercial Applications:

- Surgery.
- Suturing.
- Catheterization.
- Cardiac valve repair.

Competitive Advantages:

- Formable suturing.
- Circumferential suturing.
- Flexible.
- Easy to use.

Development Stage: Prototype.

Inventors: Toby Rogers, Robert Lederman, Merdim Sonmez, Dominique Franson, Ozgur Kocaturk (all of NHLBI).

Intellectual Property: HHS Reference No. E–115–2013/0—US Provisional Patent Application 61/834,357 filed June 12, 2013.

Peptide Inhibitors of Polo-like Kinase 1 (PLK1) Useful as Anti-cancer Therapeutics

Description of Technology: PLK1 is being studied as a target for cancer drugs. Many colon and lung cancers are caused by KRAS mutations. These cancers are dependent on PLK1. Inhibition of PLK1 allows for selective killing of cancer cells without harm to normal cells. The peptide derivatives available for licensing have achieved both good efficacy and enhanced bioavailability.

Potential Commercial Applications: Development of selective cancer therapeutics.

Competitive Advantages: Enhanced bioavailability and higher binding efficacy over existing peptide PLK1 ligands.

Development Stage: Early-stage.

Inventors: Terrence R. Burke, Fa Liu, Wen-Jian Qian, Jung-Eun Park, Kyung S. Lee (all of NCI).

Polymeric Silicone Hydrogel Vessel Mimetics for Cell Culturing

Description of Technology: The invention pertains to high oxygen diffusivity silicone hydrogel support structures that mimic tissue vasculature (e.g., capillary bed). Photolithographic methods are used to construct mimetic silicone hydrogel pillars that have, for example, a 20:1 height to diameter ratio. Advantageously, these mimetic silicone hydrogels diffuse oxygen from the bottom chamber to the cells cultured on the surface at near physiological rates (60 times that of water). Uses of these mimetics include 2–D screening for chemotherapeutic compounds and growth of tissue for grafting.

Potential Commercial Applications:

- Tissue engineering.
- Simulation of physiological growth conditions.

Competitive Advantages: High oxygen diffusivity.

Development Stage:

- Prototype.
- Pilot.
- In vitro data available.

Inventors: Chandan Das (NCI), Ashley Jaeger (CIT), Thomas Pohida (CIT), Randall Pursley (CIT), Philip McQueen (CIT), Nicole Morgan (NIBIB), Michael Gottesman (NCI).

Intellectual Property:

- HHS Reference No. E–070–2013/1—US Provisional Patent Application 61/773,064 filed March 5, 2013.

Licensing Contact: Michael Shmilovich; 301–435–5019; *shmilovm@mail.nih.gov*.

Co-Transcriptional Assembly of Modified RNA Nanoparticles

Description of Technology: A method is provided for generating RNA nanoparticles having modified nucleotides and/or having increased nuclease resistance where the RNA nanoparticles are formed co-transcriptionally by T7 RNA polymerase in the presence of manganese ions.

Potential Commercial Applications: Inexpensive and efficient method of producing chemically modified RNA nanoparticles for diagnostic or therapeutic applications.

Competitive Advantages:

- Overcomes the cost and size limitations of solid-phase RNA synthesis.
- Allows complexity of RNA nanoparticles production.
- Increases retention time of RNA nanoparticles.

Development Stage:

- Early-stage.
- In vitro data available.

Inventors: Bruce A. Shapiro (NCI), Kirill Afonin (NCI), Maria Kireeva (NCI), Mikhail Kashlev (NCI), Luc Jaeger (Univ California, Santa Barbara), Wade Grabow (Univ California, Santa Barbara).

Notice of Kidney Interagency Coordinating Committee Meeting

SUMMARY: The Kidney Interagency Coordinating Committee (KICC) will hold a meeting on September 27, 2013, about interagency collaboration to improve outcomes in Chronic Kidney Disease (CKD). The meeting is open to the public.

DATES: The meeting will be held on September 27, 2013, 9 a.m. to 12 p.m. Individuals wanting to present oral comments must notify the contact person at least 10 days before the meeting date.

ADDRESSES: The meeting will be held at the Natcher Conference Center (Building 45), on the NIH Campus at 8600 Rockville Pike, Bethesda, MD 20894.

FOR FURTHER INFORMATION CONTACT: For further information concerning this meeting, contact Dr. Andrew S. Narva, Executive Secretary of the Kidney Interagency Coordinating Committee, National Institute of Diabetes and Digestive and Kidney Diseases, 31 Center Drive, Building 31A, Room 9A26, MSC 2560, Bethesda, MD 20892–2560, telephone: 301–594–8864; FAX: 301–480–0243; email: *nkdep@info.niddk.nih.gov.*

SUPPLEMENTARY INFORMATION: The KICC, chaired by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), comprises members of the Department of Health and Human Services and other federal agencies that support kidney-related activities, facilitates cooperation, communication, and collaboration on kidney disease among government entities. KICC meetings, held twice a year, provide an opportunity for Committee members to learn about and discuss current and future kidney programs in KICC member organizations and to identify opportunities for collaboration. The September 27, 2013 KICC meeting will focus on interagency collaboration to improve outcomes in CKD.

Any member of the public interested in presenting oral comments to the Committee should notify the contact person listed on this notice at least 10 days in advance of the meeting. Interested individuals and representatives or organizations should submit a letter of intent, a brief description of the organization represented, and a written copy of their oral presentation in advance of the meeting. Only one representative of an organization will be allowed to present; oral comments and presentations will be limited to a maximum of 5 minutes. Printed and electronic copies are requested for the record. In addition, any interested person may file written comments with the Committee by forwarding their statement to the contact person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person. Because of time constraints for the meeting, oral comments will be allowed on a first-come, first-serve basis.

Members of the public who would like to receive email notification about future KICC meetings should send a request to *nkdep@info.niddk.nih.gov.*

Dated: July 8, 2013.

Camille Hoover,

Executive Officer, National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health.

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflict: Immune Mechanism.

Date: July 30, 2013.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Scott Jakes, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4198, MSC 7812, Bethesda, MD 20892, 301–495–1506, *jakesse@mail.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA–OD–13–005: Restoration of New Investigator Pilot Projects Adversely Affected by Hurricane Sandy.

Date: August 14, 2013.

Time: 1:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: Weihua Luo, MD, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5114, MSC 7854, Bethesda, MD 20892, (301) 435–1170, *luow@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; Vascular Hematology.

Date: August 14, 2013.

Time: 2:00 p.m. to 3:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: Bukhtiar H Shah, DVM, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4120, MSC 7802, Bethesda, MD 20892, 301–806–7314, *shahb@csr.nih.gov.*

Prospective Grant of Exclusive License: Live Attenuated Dengue Tetravalent Vaccine Containing a Common 30 Nucleotide Deletion in the 3'-UTR of Dengue Types 1, 2, 3, and 4

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209 and 37 CFR Part 404, that the National Institutes of Health (NIH), Department of Health and Human Services (HHS), is contemplating the grant of a an exclusive license to practice the following invention as embodied in the following patent applications: (1) E–120–2001/0, Whitehead et al., ''Development of Mutations Useful for Attenuating Dengue Viruses and Chimeric Dengue Viruses'', European Patent Application Number 02739358.6 (now European Patent Number 1402075, validated in Austria, Belgium, Switzerland/Liechtenstein, Germany, Denmark, Spain, Finland, France, the United Kingdom, Ireland, Italy, the Netherlands, Sweden and Turkey), filed May 22, 2002, United States Patent Application Number 10/719,547 (now U.S. Patent Number 7,226,602), filed November 21, 2003, Canadian Patent Application Number 2448329 (now Canadian Patent Number 2448329), filed May 22, 2002, Australian Patent Application Number 20022312011 (now Australian Patent Number 20022312011), filed May 22, 2002, Australian Patent Application Number 2008203275 (now Australian Patent Number 2008203275), filed May 22, 2002, Australian Patent Application Number 2012200637, filed May 22, 2002, United States Patent Application Number 11/446,050, filed June 2, 2006, now U.S. Patent Number 7,560,118, issued July 14, 2009, United States Patent Application Number 12/396,376 (now United States Patent Number 8,039,003), filed March 2, 2009, United States Patent Application Number 13/240,849, filed September 22, 2011, European Patent Application Number 10181776.5, filed May 22, 2002, European Patent Application Number 10181786.4, filed May 22, 2002, and European Patent Application Number 10181804.5, filed May 22, 2002 (2) E–089–2002/0,1, Whitehead et al., ''Dengue Tetravalent Vaccine Containing a Common 30 Nucleotide Deletion in The 3'-UTR of Dengue Types 1,2,3, And 4, or Antigenic Chimeric Dengue Viruses 1,2,3, And 4'', United States Patent Application Number 10/970,640 (now United States Patent Number 7,517,531), filed October 21, 2004, Canadian Patent Application Number 2483653, filed April 25, 2003, European Patent Application Number 03724319.3 (now European Patent Number 1554301, validated in Austria, Belgium, Bulgaria, Switzerland/Liechtenstein, Estonia, Finland, France, the United Kingdom, Ireland, Iceland, Italy, Lithuania, Malta, the Netherlands, Poland, Portugal, Romania, Sweden, Slovenia, Slovakia, Turkey, Cyprus, Croatia, Czech Republic, Denmark, Germany, Greece, Hungary, Latvia, Luxembourg, and Monaco), filed April 25, 2003, Japanese Patent Application Number 2004–50077, filed April 25, 2003, Australian Patent Application 2003231185 (now Australian Patent Number 2003231185), filed April 25, 2003, United States Patent Application Number 12/398,043 (now United States Patent Number 8,075,903), filed March 4, 2009, United States Patent Application Number 13/305,639, filed November 28, 2011, European Patent Application Number 10177735.7, filed April 25, 2003, and European Patent Application Number 10177740.7, filed April 25, 2003, and (3) E–139–2006/0, Whitehead et al., ''Development of Dengue Vaccine Components'', Australian Patent Application 2007285929, filed August 15, 2007, Canadian Patent Application Number 2661296, filed August 15, 2007, Chinese Patent Application Number 200780031489.4, filed August 15, 2007, European Patent Application Number 07840969.5, filed August 15, 2007, United States Patent Application Number 12/376,756 (now U.S. Patent Number 8,337,860), filed February 6, 2009, and United States Patent Application Number 13/692,557, filed December 3, 2012 to Merck Sharp & Dohme Corp., having a place of business in Whitehouse Station, New Jersey, U.S.A. The patent rights in this invention have been assigned to the United States of America.

DATES: Only written comments and/or application for a license which are received by the NIH Office of Technology Transfer on or before August 19, 2013 will be considered.

ADDRESSES: Requests for a copy of the patent application, inquiries, comments and other materials relating to the contemplated license should be directed to: Peter Soukas, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852–3804; Email: *ps193c@nih.gov;* Telephone: (301) 435–4646; Facsimile: (301) 402–0220.

SUPPLEMENTARY INFORMATION: The global prevalence of dengue has grown dramatically in recent decades. The disease is now endemic in more than 100 countries in Africa, North and South America, the Eastern Mediterranean, Southeast Asia and the Western Pacific. Southeast Asia and the Western Pacific are most seriously affected. Before 1970 only nine countries had experienced Dengue Hemorrhagic Fever (DHF) epidemics, a number that had increased more than four-fold by 1995. WHO currently estimates there may be 50 million cases of dengue infection worldwide every year.

The methods and compositions of this invention provide a means for prevention of dengue infection and dengue hemorrhagic fever (DHF) by immunization with attenuated, immunogenic viral vaccines against dengue. The vaccine is further described in Blaney JE et al., ''Mutations which enhance the replication of dengue virus type 4 and an antigenic chimeric dengue virus type ¾ vaccine candidate in Vero cells.'' *Vaccine.* 2003 Oct 1;21(27–30):4317–27 and Whitehead SS et al., ''A live, attenuated dengue virus type 1 vaccine candidate with a 30-nucleotide deletion in the 3' untranslated region is highly attenuated and immunogenic in monkeys.'' *J. Virol.* 2003 Jan;77(2):1653–7.

The prospective exclusive license will be royalty bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR Part 404. The prospective exclusive license may be granted unless, within thirty (30) days from the date of this published Notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.

The field of use may be limited to live attenuated vaccines against dengue infections in humans.

Properly filed competing applications for a license filed in response to this notice will be treated as objections to the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: July 15, 2013.

Richard U. Rodriguez,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Fiscal Year (FY) 2013 Funding Opportunity

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice of intent to award a Single Source Grant to the current grantee of the Suicide Prevention Resource Center program.

SUMMARY: This notice is to inform the public that the Substance Abuse and Mental Health Services Administration (SAMHSA) intends to award a programmatic supplement of approximately $583,330 (total costs) for up to one year to the current grantee of the Suicide Prevention Resource Center program. The current grantee is Education Development Center, Inc., Waltham, Massachusetts. This is not a formal request for applications. Assistance will be provided only to the Education Development Center, Inc. based on receipt of a satisfactory application that is approved by an independent review group.

Funding Opportunity Title: SM–13–008.

Catalog of Federal Domestic Assistance (CFDA) Number: 93.243.

Authority: Section 520A and 520C of the Public Health Service Act, as amended.

Justification: The purpose of this 1-year supplement is to support implementation of the National Strategy for Suicide Prevention (NSSP) and to support the infrastructure of the National Action Alliance (Action Alliance) for Suicide Prevention, with the overall goal of reducing suicides and suicidal behaviors in the country.

Funds will be used to support implementation of the Action Alliance high priority area, to transform health care systems to significantly reduce suicide and suicide attempts.

This will also build on the momentum of the 2011 report released by the Action Alliance's Clinical Care and Intervention Task Force, *Suicide Care in Systems Framework,* including the informal ''zero suicide'' learning collaborative, which currently involves six states and health care systems.

Funds will also be used to directly support the infrastructure of the Action Alliance such as funding staff support for key Alliance initiatives, including the Action Alliance Executive Committee and task forces, and for direct meeting expenses of the Executive Committee and select task forces.

SAMHSA funds only one Suicide Prevention Resource Center, SAMHSA's primary vehicle for providing technical assistance to the field. Therefore, this program supplement will be awarded to the grantee that manages the SPRC, specifically to the Education Development Center, Inc., Waltham, Massachusetts. There are no other sources with the available resources and expertise to successfully complete the tasks of this proposal within the one-year grant period.

Contact: Cathy Friedman, Substance Abuse and Mental Health Services Administration, 1 Choke Cherry Road, Room 8–1097, Rockville, MD 20857; Telephone: (240) 276–2316; Email: *cathy.friedman@samhsa.hhs.gov.*

Cathy J. Friedman,

Public Health Analyst, SAMHSA.

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Fiscal Year (FY) 2013 Funding Opportunity

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice of intent to award a Single Source Grant to Link2Health Solutions, Inc.

SUMMARY: This notice is to inform the public that the Substance Abuse and Mental Health Services Administration (SAMHSA) intends to award approximately $200,000 (total costs) for up to one year to Link2Health Solutions, Inc. the current grantee for the National Suicide Prevention Lifeline. This is not a formal request for applications. Assistance will be provided only to Link2Health Solutions, Inc based on the receipt of a satisfactory application that is approved by an independent review group.

Funding Opportunity Title: SM–13–012.

Catalog Of Federal Domestic Assistance (CFDA) Number: 93.243.

Authority: Section 520A of the Public Health Service Act, as amended.

Justification: Only an application from Link2Health Solutions will be considered for funding under this announcement. It is considered most cost-effective and efficient to supplement the existing grantee for the National Suicide Prevention Lifeline and to build on the existing capacity and infrastructure.

Link2Health Solutions is in the unique position to carry out the activities of this grant announcement because it is the current recipient of SAMHSA's cooperative agreement to manage the National Suicide Prevention Lifeline. The purpose of this program is to manage, enhance, and strengthen the National Suicide Prevention Lifeline (referred to as the Lifeline). Supplemental funding is being provided for the National Suicide Prevention Lifeline as a result of increased need for services through non-traditional telephonic means (e.g. chat and text-based intervention services). Priorities and awareness raising activities will also be directed towards ensuring that the prevention needs of diverse populations will be addressed.

Contact: Cathy Friedman, Substance Abuse and Mental Health Services Administration, 1 Choke Cherry Road, Room 8–1097, Rockville, MD 20857; Telephone: (240) 276–2316; Email: *cathy.friedman@samhsa.hhs.gov.*

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[Docket No. USCBP–2013–0027]

Advisory Committee on Commercial Operations of Customs and Border Protection (COAC)

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security (DHS).

ACTION: Committee Management; Notice of Federal Advisory Committee Meeting.

SUMMARY: The Advisory Committee on Commercial Operations of Customs and Border Protection (COAC) will meet on August 7, 2013, in Washington, DC. The meeting will be open to the public.

DATES: COAC will meet on Wednesday, August 7, from 1:00 p.m. to 5:00 p.m. e.s.t. Please note that the meeting may

close early if the committee has completed its business.

Pre-Registration: Meeting participants may attend either in person or via webinar after pre-registering using a method indicated below:

—For members of the public who plan to attend the meeting in person, please register either online at *https://apps.cbp.gov/te_reg/index.asp?w=7;* by email to *tradeevents@dhs.gov;* or by fax to 202–325–4290 by 5:00 p.m. EST on August 6, 2013.

—For members of the public who plan to participate via webinar, please register online at *https://apps.cbp.gov/te_reg/index.asp?w=8* by 5:00 p.m. EST on August 6, 2013.

Feel free to share this information with other interested members of the organization or association.

Members of the public who are pre-registered and later require cancellation, please do so in advance of the meeting by accessing one (1) of the following links: *https://apps.cbp.gov/te_reg/cancel.asp?w=7* to cancel an in person registration, or *https://apps.cbp.gov/te_reg/cancel.asp?w=8* to cancel a webinar registration.

ADDRESSES: The meeting will be held at the U.S. International Trade Commission (USITC) in Main Hearing Room 101, 500 E Street SW., Washington, DC 20436. All visitors to the USITC Building must show a state-issued ID or Passport to proceed through the security checkpoint for admittance to the building.

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact Ms. Wanda Tate, Office of Trade Relations, U.S. Customs and Border Protection at 202–344–1661 as soon as possible.

To facilitate public participation, we are inviting public comment on the issues to be considered by the committee prior to the formulation of recommendations as listed in the ''Agenda'' section below.

Comments must be submitted in writing no later than July 31, 2013, and must be identified by Docket No. USCBP–2013–0027, and may be submitted by *one* of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: Tradeevents@dhs.gov.* Include the docket number in the subject line of the message.
- *Fax:* 202–325–4290.
- *Mail:* Ms. Wanda Tate, Office of Trade Relations, U.S. Customs and Border Protection, 1300 Pennsylvania Avenue NW., Room 3.5A, Washington, DC 20229.

Instructions: All submissions received must include the words ''Department of Homeland Security'' and the docket number for this action. Comments received will be posted without alteration at *http://www.regulations.gov,* including any personal information provided. Do not submit personal information to this docket.

Docket: For access to the docket to read background documents or comments received by the COAC, go to *http://www.regulations.gov.*

There will be three public comment periods held during the meeting on August 7, 2013. Speakers are requested to limit their comments to two (2) minutes or less to facilitate greater participation. Contact the individual listed below to register as a speaker. Please note that the public comment period for speakers may end before the time indicated on the schedule that is posted on the CBP Web page, *http://www.cbp.gov/xp/cgov/trade/trade_outreach/coac/coac_13_meetings/,* at the time of the meeting.

FOR FURTHER INFORMATION CONTACT: Ms. Wanda Tate, Office of Trade Relations, U.S. Customs and Border Protection, 1300 Pennsylvania Avenue NW., Room 3.5A, Washington, DC 20229; telephone 202–344–1440; facsimile 202–325–4290.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the *Federal Advisory Committee Act,* 5 U.S.C. App. (Pub. L. 92–463). The COAC provides advice to the Secretary of Homeland Security, the Secretary of the Treasury, and the Commissioner of U.S. Customs and Border Protection (CBP) on matters pertaining to the commercial operations of CBP and related functions within DHS and the Department of the Treasury.

Agenda

The COAC will hear from the following project leaders and subcommittees on the topics listed below and then will review, deliberate, provide observations, and formulate recommendations on how to proceed on those topics:

1. COAC Survey Team: Review and Discuss Preliminary Results of the COAC 2013 Annual Trade Efficiency Survey and discuss feedback on past COAC recommendations.

2. The Export Subcommittee: Review and discuss subcommittee recommendations and the analysis of the 2013 COAC Export Survey Results.

3. The Trade Enforcement and Revenue Collection Subcommittee: Review and discuss the work completed to date on the Regulatory Audit Working Group's findings on the planned enhancements for the Focused Assessment process and the Intellectual Property Rights Working Group's effort to further evaluate the use of the Global Shipment Identification Number (GSIN) as a possible tool for use in Distribution Chain Management in Intellectual Property Rights Compliance.

4. The One U.S. Government at the Border Subcommittee: Review and discuss recommendations from the Food and Drug Administration (FDA) Working Group, review and discuss an update on the progress of the Environmental Protection Agency (EPA) Working Group, and review and discuss a case study regarding the Partner Government Agency—Message Set (PGA–MS).

5. The Trusted Trader Subcommittee: Review and discuss the work completed by the Industry Standards Working Group (ISWG) and the Trusted Trader Measures Working Group.

6. The Global Supply Chain Subcommittee: Review and discuss recommendations regarding the Air Cargo Advance Screening (ACAS) pilot and address the next steps regarding land border issues in the area of Beyond the Border and 21st Century Initiatives.

7. The Trade Modernization Subcommittee: Review and discuss recommendations addressing the Automated Commercial Environment (ACE) Development and Deployment Schedule and recommendations of the Role of the Broker Work Group.

Dated: July 16, 2013.

Maria Luisa Boyce,

Senior Advisor for Private Sector Engagement, Office of Trade Relations.

[FR Doc. 2013–17364 Filed 7–18–13; 8:45 am]

BILLING CODE 9111–14–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5681–N–29]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh

Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to Theresa Ritta, Office of Enterprise Support Programs, Program Support Center, HHS, room 12–07, 5600 Fishers Lane, Rockville, MD 20857; (301) 443–2265. (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (i.e., acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: *Air Force:* Mr. Robert Moore, Air Force Real Property Agency, 2261 Hughes Avenue, Suite 156, Lackland AFB, TX, 78236–9852, (210)–395–9512; *Army:* Ms. Veronica Rines, Office of the Assistant Chief of Staff for Installation Management, Department of Army, Room 5A128, 600 Army Pentagon, Washington, DC 20310, (571)–256–814; *GSA:* Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040 Washington, DC 20405, (202) 501–0084; (These are not toll-free numbers).

Dated: July 11, 2013.

Mark Johnston,

Deputy Assistant Secretary for Special Needs.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLAZP02000.L51010000.ER0000. LVRWA12A2350.XXX; AZA–34177]

Notice of Availability of the Draft Environmental Impact Statement for the Sonoran Valley Parkway, Maricopa County, AZ

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), the Bureau of Land Management (BLM) has prepared a Draft Environmental Impact Statement (EIS) for the proposed Sonoran Valley Parkway Project (Parkway) and by this notice is announcing the opening of the comment period.

DATES: To ensure that comments will be considered, the BLM must receive written comments on the Draft EIS for the Parkway within 45 days following the date the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**. The BLM will announce future meetings and any other public involvement activities at least 15 days in advance through public notices, media releases, and/or mailings.

ADDRESSES: You may submit comments related to the proposed Parkway by any of the following methods:

- *Web site: http://www.blm.gov/az/st/en/prog/lands_realty/svpp-eis.html.*
- *Email: BLM_AZ_SVPP@blm.gov.*
- *Fax:* 623–580–5500.
- *Mail:* BLM Phoenix District Office, Lower Sonoran Field Office, Attention: Kathleen Depukat, Project Manager/Sonoran Valley Parkway, 21605 North 7th Avenue, Phoenix, AZ 85027–2929.

Copies of the Draft EIS for the proposed Parkway are available in the Phoenix District Office at the above address; the BLM Arizona State Office, One North Central Avenue, Suite 800, Phoenix, AZ 85004; and public library branches in Goodyear, Maricopa, and Avondale, Arizona, as noted in the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Kathleen Depukat, BLM Phoenix District Project Manager; telephone 623–580–5681; address 21605 North 7th Avenue, Phoenix, AZ 85027–2929; email *kdepukat@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The City of Goodyear submitted an application for a permanent 250-foot wide right-of-way (ROW) to the BLM for the construction and operation of a two to six-lane, approximately 15- to 18-mile-long Parkway. The proposed Parkway would connect residents of the annexed lands of Goodyear's Sonoran Valley Planning Area to the Goodyear, Arizona city center, Maricopa County, Arizona. The total length of the proposed Parkway depends on the Alternative and/or Sub-alternative selected and authorized by the BLM. The Parkway is proposed to be built in three phases of two lanes each. The timeframe for the phased construction will be determined based on current and future growth in the area. The first phase of the proposed Parkway will be built as soon as funding can be obtained by the City of Goodyear.

The majority of the proposed Parkway would be located on the BLM lands administered by the Lower Sonoran Field Office; the remainder would occur on private and Arizona State Land Department lands. The BLM-managed lands within the proposed Parkway area are managed under the Lower Sonoran Resource Management Plan. The proposed Parkway would commence at the intersection of Rainbow Valley Road and Riggs Road and run in a southeasterly direction, within the eastern and northern portion of the existing El Paso Natural Gas designated multi-use utility corridor, to State Route (SR) 238 at a point just west of the community of Mobile, Arizona.

The BLM's purpose and need for this action is to respond to Goodyear's application under Title V of the Federal Land Policy and Management Act of 1976 (FLPMA) (43 USC 1761 *et seq.*), for a ROW grant to construct, operate, and maintain a proposed two- to six-lane Parkway in compliance with FLPMA, the BLM ROW regulations, and other applicable Federal laws. The BLM will decide whether to approve, approve with modification, or deny the issuance of a ROW grant to Goodyear for the proposed Parkway.

The BLM published a Notice of Intent (NOI) to prepare an EIS on April 2, 2008, in the Federal Register (73 FR 17995). Publication of the NOI began a 30-day scoping period, which ended on May 1, 2008. The BLM provided a Web site with project information that also described the various methods of providing public comment on the project, including an email address for the BLM to receive scoping comments electronically. Notifications for public scoping meetings were posted on the BLM's Web site. Additionally, notices were announced in the **Federal Register** on April 2, 2008, and published in a legal ad in the City of Goodyear's *InFocus* Newsletter in May 2008; postcards were mailed to the BLM stakeholder list on May 7–9, 2009.

Public Scoping Meetings were held on May 28, 2009, at the Goodyear City Hall and on May 29, 2008, at the Global Water Conference Center in Maricopa and the Mobile Elementary School in Mobile, Arizona. Attendees were documented using a voluntary sign-in sheet showing 7 attendees at the City of Goodyear, 9 attendees at the Global Water Conference Center, and 16 attendees at the Mobile Elementary School. A contractor documented the questions and public comments made at the three scoping meetings. Attendees included residents from Phoenix, Maricopa, Mobile, and Goodyear, Federal and State agency representatives, tribes, and a public citizens' group.

Seventeen comment letters or emails were received within the scoping period. The issues addressed in the Draft EIS that shaped the Parkway's scope and proposed alternatives include air resources, cultural and heritage resources, paleontological resources, soil resources, vegetation resources, visual resources, water resources, wildland fire management, wildlife and special status species, lands and realty, livestock grazing, recreation management, travel management, special designations, noise, hazardous materials and public safety, and social and economic conditions.

In addition to the Proposed Action (Alternative A) and No Action Alternative, the Draft EIS for the Parkway considers two proposed Action Alternatives and two proposed Action Sub-alternative routes that were

analyzed in detail in the Draft EIS. The Sub-alternatives were developed to avoid a historic homestead site near the southern terminus of the proposed alignment in Mobile at SR 238. The Alternative A is within an existing one-mile-wide multi-use utility corridor that borders the Sonoran Desert National Monument. The entire Alternative A is within Class IV for Visual Resource Management. The project area is within known habitat for the Sonoran Desert tortoise and the Tucson shovel-nosed snake. There are also two designated wildlife movement corridors. The first corridor is the Sierra Estrella-Sonoran Desert National Monument linkage for bobcat, desert tortoise, Gila monster, javelina, and mule deer as designated in the Arizona Wildlife Linkages Assessment. The second corridor is the BLM-designated wildlife corridor adopted from the Arizona Game and Fish Department Bighorn Sheep Management Plan and present within the proposed Parkway area for all alternatives. All Sub-alternatives for the southern terminus will cross the congressionally designated Juan Bautista de Anza National Historic Trail, the Butterfield Overland Stage Trail, and the Mormon Battalion Trail which are located within the Lower Gila Terraces and Historic Trails Area of Critical Environmental Concern. However, the locations where the proposed Parkway Sub-alternatives would cross the three trails are located on private land not managed by the BLM. The EIS does include suggested mitigation measures that would address the impacts to the Juan Bautista de Anza National Historic Trail, the Butterfield Overland State Trail, and the Mormon Battalion Trail on private land. An interdisciplinary approach was used to develop the Draft EIS in order to consider the variety of resource issues and concerns identified. A modified Proposed Action, Alternative A, including Sub-alternative G is the BLM's preferred alternative. The BLM will utilize and coordinate the NEPA comment period to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470), as provided for in 36 CFR 800.2(d)(3). Native American tribal consultations are being conducted in accordance with policy, and tribal concerns, including impacts on Indian trust assets, will be given due consideration. Federal, State, and local agencies, along with other stakeholders that may be interested or affected by the BLM's decision on this project, are invited to participate in the public comment process. Please note that public comments and information submitted, including names, street addresses, and email addresses of persons who submit comments, may be available for public review and disclosure at the above address during regular business hours (8 a.m. to 4 p.m.), Monday through Friday, except holidays.

Copies of the Draft EIS for the proposed Parkway are available in the BLM Arizona State Office, One North Central Avenue, Suite 800, Phoenix, AZ 85004; the Phoenix District Office at the above address; the Goodyear Branch Library, 250 North Litchfield Road, Suite 185, Goodyear, AZ 85338; the Maricopa Public Library, 41600 W. Smith-Enke Road, Building #10, Maricopa, AZ 85138; the Old Town Branch Library, 328 West Western Avenue, Avondale, AZ 85323; and the Avondale City Library, 495 East Western Avenue, Avondale, AZ 85323.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 40 CFR 1506.10.

Dorothea J. Boothe,

Acting, Lower Sonoran Field Manager.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[L51010000.FX0000.LVRWA11A2990. LLAZP02000.XXX; AZA35079]

Notice of Availability of the Final Environmental Impact Statement for the Proposed Sun Valley to Morgan Transmission Line Project (Formerly Called TS–5 to TS–9) and the Proposed Bradshaw-Harquahala Resource Management Plan Amendment, AZ

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended (FLPMA), the Bureau of Land Management (BLM) has prepared a Final Environmental Impact Statement (EIS) for the proposed Sun Valley to Morgan 500/230-kilovolt (kV) Transmission Line Project (Project) and Proposed Bradshaw-Harquahala Resource Management Plan (RMP) Amendment for the BLM Hassayampa Field Office, and by this notice is announcing its availability.

DATES: BLM planning regulations state that any person who meets the conditions as described in the regulations may protest the BLM's Proposed RMP Amendment/Final EIS. A person who meets the conditions must file the protest within 30 days of the date that the Environmental Protection Agency publishes its notice in the **Federal Register**.

ADDRESSES: Copies of the Final EIS and Proposed RMP Amendment have been sent to affected Federal, State, and local government agencies and to other stakeholders. Copies of the Final EIS/Proposed RMP Amendment are available for public inspection at local libraries and the BLM Hassayampa Field Office.

Interested persons may also review the Final EIS/Proposed RMP Amendment on the Internet at *http://www.blm.gov/az/st/en/prog/energy/aps-sunvalley.html.* All protests must be in writing and mailed to one of the following addresses:

Regular Mail: BLM Director (210), Attention: Brenda Hudgens-Williams, P.O. Box 71383, Washington, DC 20024.

Overnight Mail: BLM Director (210), Attention: Brenda Hudgens-Williams, 20 M Street SE., Room 2134 LM, Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Joe Incardine, BLM National Project Manager, telephone 801–539–4118; address BLM Phoenix District Office, Hassayampa Field Office, 21605 North 7th Avenue, Phoenix, AZ 85027–2929; email *jincardi@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Arizona Public Service Company (APS) submitted a right-of-way (ROW) application to construct, operate, and maintain a 500/230-kV overhead transmission line from the Sun Valley Substation to the Morgan Substation in Maricopa County. The APS was reacting

to a decision in 2009 by the Arizona Corporation Commission, the line-siting authority in the State, to certificate a route that includes the BLM-managed lands.

The proposed Project would be located on a combination of BLM-managed lands, Arizona State Trust lands, and private lands in northern Maricopa County, northwest of Phoenix, Arizona. The proposed Project is an overhead transmission line, approximately 38 miles long, on monopole structures. The BLM-managed lands within the Project area are managed under the existing Bradshaw-Harquahala RMP.

Environmental and social concerns and issues were identified through both the initial public scoping and Draft EIS/Draft RMP Amendment comment periods. The issues addressed in the EIS that shaped the Project's scope and alternatives include:

- Land Use Plan conformance;
- Need and reliability;
- Project design features, mitigation measures, and alternatives;
- Air and climate;
- Biological resources;
- Cultural resources;
- Health and safety;
- Recreation;
- Socioeconomic and environmental justice;
- Scenic/Visual; and
- Transportation and traffic.

In addition to the Proposed Action and No Action Alternative, three action alternative routes and one sub-alternative route (as proposed by the Arizona State Land Department) were analyzed in detail in the EIS. As proposed, the Project would require an RMP Amendment because the current RMP requires high-voltage transmission lines crossing BLM-managed lands to be within designated utility corridors, and a utility corridor for the proposed ROW was not established in the current RMP. However, the Proposed Action is within a transportation corridor which is designated for the expansion of State Route 74. In addition, the Visual Resource Management (VRM) class designation would need to be amended from Class III to Class IV for those BLM-managed lands where views would be dominated by the transmission line and thus would not meet the objectives of the current VRM designation. The VRM class would also be changed for those BLM-managed lands south of State Route (SR) 74 surrounding the proposed transmission line ROW (i.e., the existing transportation corridor north of SR 74 and the key-shaped piece south of SR 74).

An interdisciplinary approach was used to develop the Final EIS in order to consider the variety of resource issues and concerns identified. An amendment to the Bradshaw-Harquahala RMP would be based upon the following planning criteria:

- The amendment would be completed in compliance with FLPMA, NEPA, and all other relevant Federal laws, executive orders, and management policies of the BLM;
- Where existing planning decisions are still valid, those decisions would remain unchanged and be incorporated into the new amendment; and
- The amendment would recognize valid existing rights.

The BLM has identified the Proposed Action route (with slight modifications as needed to reduce potential impacts) crossing BLM-managed lands as the Agency Preferred Alternative route for the proposed transmission line, including best management practices (BMPs). The BMPs would consist of minor route deviations for micro-siting of structures or segments of the line at the time of route engineering to reduce impacts to visual and other sensitive resources.

Under the Agency Preferred Alternative, the BLM would amend the RMP to:

- Designate a 200-foot-wide utility corridor (2,362 acres) on BLM-managed lands north of SR 74, and eliminate Decision LR–30, which states that there would be no new utility corridors designated in the Castle Hot Springs Management Unit;
- Designate a multiuse utility corridor on 1,013 acres of BLM-managed lands south of SR 74 (key shaped area) to address potential future BLM management considerations; and
- Change the existing VRM class designations of 2,362 acres north of SR 74 and 1,013 acres south of SR 74 from VRM Class III to VRM Class IV to allow for the newly established utility corridors.

If the BLM approves the RMP Amendment, the BLM would also approve a ROW on BLM-managed lands.

The BLM has utilized the NEPA comment period to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470) as provided for in 36 CFR 800.2(d)(3). Native American tribal consultations will continue to be conducted in accordance with policy, and tribal concerns, including impacts on Indian trust assets, will be given due consideration.

Comments on the Draft EIS/Draft RMP Amendment received from the public and internal BLM review were considered, and document revisions were incorporated as appropriate into the Final EIS/Proposed RMP Amendment. Public comments resulted in the addition of clarifying text, but did not result in significant changes to the proposed Project, the Proposed RMP Amendment, or the impact analysis between the Draft and Final EIS.

Instructions for filing a protest with the BLM Director regarding the Final EIS/Proposed RMP Amendment may be found in the ''Dear Reader'' Letter of the APS Sun Valley to Morgan Transmission Line Project Final EIS and Proposed RMP Amendment and at 43 CFR 1610.5–2. Emailed protests will not be accepted as valid protests unless the protesting party also provides the original letter by either regular or overnight mail postmarked by the close of the protest period. Under these conditions, the BLM will consider the emailed protest as an advance copy and it will receive full consideration. If you wish to provide the BLM with such advance notification, please direct email protests to the attention of the BLM protest coordinator Brenda Hudgens-Williams at *bhudgens@blm.gov.*

All protests must be in writing and mailed to the appropriate address, as set forth in the **ADDRESSES** section above.

Before including your phone number, email address, or other personal identifying information in your protest, you should be aware that your entire protest—including your personal identifying information—may be made publicly available at any time. While you can ask us in your protest to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 40 CFR 1506.10, 43 CFR 1610.2, 43 CFR 1610.5.

Raymond Suazo,

State Director.

BILLING CODE 4310–32–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLUT980300–L11200000–PH0000–24–1A]

Utah Resource Advisory Council Meeting/Conference Call

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Meeting/Conference Call

SUMMARY: In accordance with the Federal Land Policy and Management

Act and the Federal Advisory Committee Act, the Bureau of Land Management's (BLM) Utah Resource Advisory Council (RAC) will host a meeting/conference call.

DATES: The Utah RAC will host a meeting/conference call on Wednesday, August 21, 2013, from 8:30 a.m.–12:30 p.m., MST.

ADDRESSES: Those attending in person must meet at the BLM, Utah State Office, 440 West 200 South, Salt Lake City, Utah, in the Monument Conference Room on the fifth floor.

FOR FURTHER INFORMATION CONTACT: If you wish to listen to the teleconference, orally present material during the teleconference, or submit written material for the RAC to consider during the teleconference, please notify Sherry Foot, Special Programs Coordinator, Bureau of Land Management, Utah State Office, 440 West 200 South, Suite 500, Salt Lake City, Utah 84101; phone 801–539–4195; or, *sfoot@blm.gov* by Friday, August 16, 2013.

SUPPLEMENTARY INFORMATION: The Utah RAC formed a subgroup to review BLM-Utah's draft three-year National Conservation Lands Strategy. In June 2013, the RAC subgroup provided the BLM-Utah State Director with recommended changes to the draft strategy and this meeting will be held to discuss the changes. A public comment period will take place immediately following the presentation. The meeting is open to the public; however, transportation, lodging, and meals are the responsibility of the participating individuals. The conference call will be recorded for purposes of minute-taking.

Authority: 43 CFR 1784.4–1.

Jenna Whitlock,

Associate State Director.

National Park Service

[NPS–IMR–GLAC–12985; PPIMGLAC00, PANFHAT44.YP0000]

Going-to-the-Sun Road Corridor Management Plan, Environmental Impact Statement, Glacier National Park, Montana

AGENCY: National Park Service, Interior.

ACTION: Notice of intent.

SUMMARY: Pursuant to the National Environmental Policy Act of 1969, the National Park Service is preparing an Environmental Impact Statement for the Going-to-the-Sun Road Corridor Management Plan for Glacier National Park, Montana. This effort will result in an integrated visitor and transportation management plan for the Going-to-the Sun Road (GTSR) corridor.

DATES: The National Park Service will accept comments from the public through August 19, 2013.

ADDRESSES: Information will be available for public review and comment online at *http://parkplanning.nps.gov/glac,* and at the Park's Information Desk at Headquarters in West Glacier Montana at (406) 888–7800.

FOR FURTHER INFORMATION CONTACT: Mary Riddle, Chief of Planning and Compliance, Glacier National Park, P.O. Box 128 West Glacier, Montana 59936; or via telephone at (406) 888–7898.

SUPPLEMENTARY INFORMATION: A range of alternatives including no action will be developed that address long term financial sustainability of the park's shuttle system, management of visitor use, and congestion and protection of natural and cultural resources in the GTSR corridor. The Plan will also explore management approaches that can be adapted to changing conditions, identify triggers or standards and indicators and develop monitoring system to assure protection of resources and continue to provide a quality visitor experience.

A scoping brochure and other materials describing the issues and overall purpose of the project will be prepared and distributed to the public including Tribes, federal, state local agencies and specific interest groups. Information may be obtained from the internet site: *http://parkplanning.nps.gov/glac,* and from the Park's Information Desk at Glacier National Park, Headquarters, P.O. Box 128, West Glacier, Montana 59936; or via telephone at (406) 888–7800.

If you wish to comment on the scoping brochure or on any other issues associated with the plan, you may submit your comments by any one of several methods. You may mail comments to Glacier National Park Attn: GTSR Corridor Plan P.O. Box 128 West Glacier, Montana 59936. You may also comment via the Internet at *http://parkplanning.nps.gov/glac.* Finally, you may hand-deliver comments to Glacier National Park Headquarters, West Glacier Montana. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: June 6, 2013.

Laura E. Joss,

Deputy Regional Director, Chief of Staff, Intermountain Region.

BILLING CODE 4312–CB–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 731–TA–1202–03 (Final)]

Xanthan Gum From Austria and China

Determinations

On the basis of the record [1] developed in the subject investigations, the United States International Trade Commission (Commission) determines, pursuant to section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the Act), that an industry in the United States is not materially injured or threatened with material injury by reason of imports from Austria of xanthan gum provided for in subheading 3913.90.20 of the Harmonized Tariff Schedule of the United States, that have been found by the Department of Commerce (Commerce) to be sold in the United States at less than fair value.

The Commission also determines, pursuant to section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the Act), that an industry in the United States is threatened with material injury by reason of imports from China of xanthan gum provided for in subheading 3913.90.20 of the Harmonized Tariff Schedule of the United States, that have been found by Commerce to be sold in the United States at less than fair value.[2]

Background

The Commission instituted these investigations effective June 5, 2012, following receipt of a petition filed with the Commission and Commerce by CP Kelco U.S., Atlanta, Georgia. The final phase of the investigations was scheduled by the Commission following notification of preliminary determinations by Commerce that

[1] The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

[2] Commissioner Dean A. Pinkert and Commissioner Meredith M. Broadbent determine that an industry in the United States is materially injured by reason of imports from China of xanthan gum.

imports of xanthan gum from Austria and China were being sold at LTFV within the meaning of section 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the scheduling of the final phase of the Commission's investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of February 27, 2013 (78 FR 13379). The hearing was held in Washington, DC, on May 23, 2013, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission transmitted its determinations in these investigations to the Secretary of Commerce on July 12, 2013. The views of the Commission are contained in USITC Publication 4411 (July 2013), entitled *Xanthan Gum From Austria and China: Investigation Nos. 1202–03 (Final).*

Issued: July 16, 2013.

By order of the Commission.

Lisa R. Barton,

Acting Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (BJA) Docket No. 1627]

Meeting of the Public Safety Officer Medal of Valor Review Board

AGENCY: Office of Justice Programs (OJP), Bureau of Justice Assistance (BJA). DOJ.

ACTION: Notice of meeting.

SUMMARY: This is an announcement of a meeting of the Public Safety Officer Medal of Valor Review Board to review and vote on recommendations for the 2012–2013 Medal of Valor nominations, consider issues relevant to the nomination review process, discuss pending ceremonies and upcoming activities and other relevant Board issues related thereto. The meeting date and time is listed below.

DATES: September 19, 2013, 9:00 a.m. to 1:00 p.m. ET.

ADDRESSES: This meeting will take place at 810 7th Street NW., Washington, DC 20531.

FOR FURTHER INFORMATION CONTACT: Gregory Joy, Policy Advisor, Bureau of Justice Assistance, Office of Justice Programs, 810 7th Street NW., Washington, DC 20531, by telephone at (202) 514–1369, toll free (866) 859–2687, or by email at *gregory.joy@usdoj.gov.*

SUPPLEMENTARY INFORMATION: The Public Safety Officer Medal of Valor Review Board carries out those advisory functions specified in 42 U.S.C. 15202. Pursuant to 42 U.S.C. 15201, the President of the United States is authorized to award the Public Safety Officer Medal of Valor, the highest national award for valor by a public safety officer.

The primary purpose of this meeting is to review and vote on recommendations for the 2012–2013 Medal of Valor nominations.

This meeting is open to the public at the offices of the Bureau of Justice Assistance. For security purposes, members of the public who wish to participate must register at least seven (7) days in advance of the meeting/conference call by contacting Mr. Joy. All interested participants will be required to meet at the Bureau of Justice Assistance, Office of Justice Programs, 810 7th Street NW., Washington, DC and will be required to sign in at the front desk. Note: Photo identification will be required for admission. Additional identification documents may be required.

Access to the meeting will not be allowed without prior registration. Anyone requiring special accommodations should contact Mr. Joy at least seven (7) days in advance of the meeting. Please submit any comments or written statements for consideration by the Review Board in writing at least seven (7) days in advance of the meeting date.

Gregory Joy,

Policy Advisor/Designated Federal Officer, Bureau of Justice Assistance.

BILLING CODE 4410–18–P

DEPARTMENT OF LABOR

Bureau of Labor Statistics

Proposed Collection, Comment Request

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The Bureau of Labor Statistics (BLS) is soliciting comments concerning the proposed extension of the ''American Time Use Survey.'' A copy of the proposed information collection request (ICR) can be obtained by contacting the individual listed below in the **ADDRESSES** section of this notice.

DATES: Written comments must be submitted to the office listed in the Addresses section of this notice on or before September 17, 2013.

ADDRESSES: Send comments to Amelia Vogel, BLS Clearance Officer, Division of Management Systems, Bureau of Labor Statistics, Room 4080, 2 Massachusetts Avenue NE., Washington, DC 20212. Written comments also may be transmitted by fax to 202–691–5111 (this is not a toll free number).

FOR FURTHER INFORMATION CONTACT: Amelia Vogel, BLS Clearance Officer, at 202–691–7628 (this is not a toll free number). (See Addresses section.)

SUPPLEMENTARY INFORMATION:

I. Background

The ATUS is the Nation's first federally administered, continuous survey on time use in the United States. It measures, for example, time spent with children, working, sleeping, or doing leisure activities. In the United States, several existing Federal surveys collect income and wage data for individuals and families, and analysts often use such measures of material prosperity as proxies for quality of life. Time-use data substantially augment these quality-of-life measures. The data also can be used in conjunction with wage data to evaluate the contribution of non-market work to national economies. This enables comparisons of production between nations that have different mixes of market and non-market activities.

The ATUS develops nationally representative estimates of how people spend their time. Respondents also report who was with them during activities, where they were, how long each activity lasted, and if they were paid. All of this information has numerous practical applications for sociologists, economists, educators,

government policymakers, businesspersons, health researchers, and others, potentially answering the following questions:

- Do the ways people use their time vary across demographic and labor force characteristics, such as age, sex, race, ethnicity, employment status, earnings, and education?
- How much time do parents spend in the company of their children, either actively providing care or being with them while socializing, relaxing, or doing other things?
- How are earnings related to leisure time—do those with higher earnings spend more or less time relaxing and socializing?
- Where do people work—at a workplace, in their homes, or someplace else?

The ATUS data are collected on an ongoing, monthly basis, allowing analysts to identify changes in how people spend their time.

II. Current Action

Office of Management and Budget clearance is being sought for the American Time Use Survey.

This survey collects information on how individuals in the United States use their time. Collection is done on a continuous basis with the sample drawn monthly. The survey sample is drawn from households completing their 8th month of interviews for the Current Population Survey (CPS). Households are selected to ensure a nationally-representative demographic sample, and one individual from each household is selected to take part in one Computer Assisted Telephone Interview. Interviewers ask respondents to report all of their activities for one pre-assigned 24-hour day, the day prior to the interview. A short series of summary questions and CPS updates follows the core time diary collection. After each full year of collection, annual national estimates of time use for an average day, weekday, and weekend day are available.

Because the ATUS sample is a subset of households completing interviews for the CPS, the same demographic information collected from that survey is available for ATUS respondents. Comparisons of activity patterns across characteristics such as sex, race, age, disability status, and education of the respondent, as well as the presence of children and the number of adults living in the respondent's household, are possible.

III. Desired Focus of Comments

The Bureau of Labor Statistics is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

Type of Review: Extension without change of a currently approved collection.

Agency: Bureau of Labor Statistics.

Title: American Time Use Survey.

OMB Number: 1220–0175.

Affected Public: Individuals or households.

Total Respondents: 13,200.

Frequency: Once.

Total Responses: 13,200.

Average Time per Response: 16 minutes.

Estimated Total Burden Hours: 3,520 hours.

Total Burden Cost (capital/startup): $0.

Total Burden Cost (operating/maintenance): $0.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they also will become a matter of public record.

Signed at Washington, DC, this 12th day of July 2013.

Kimberley D. Hill,

Chief, Division of Management Systems, Bureau of Labor Statistics.

[FR Doc. 2013–17351 Filed 7–18–13; 8:45 am]

BILLING CODE 4510–24–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, With Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA is submitting the following information collection to the Office of Management and Budget (OMB) for reinstatement under the Paperwork Reduction Act of 1995 (Pub. L. 104–13; 44 U.S.C. Chapter 35). Notice of this information collection is published to obtain comments from the public. Under the Home Mortgage Disclosure Act (HMDA), financial institutions that meet the reporting criteria must compile and make available data about their housing-related lending activity. The data is made available to the public for the purposes of: (i) Helping to determine whether financial institutions are serving the housing needs of their communities; (ii) assisting public officials in distributing public-sector investment so as to attract private investment to areas where it is needed; and (iii) assisting in identifying possible discriminatory lending patterns and enforcing anti-discrimination statutes. The information collection will assist NCUA to ensure credit unions are in compliance with fair lending laws and regulations.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA contact and OMB reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: ATTN: Desk Officer for the National Credit Union Administration, Office of Management and Budget, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION: Proposal for the following collection of information:

I. Abstract and Request for Comments

NCUA is reinstating the information collection previously approved under OMB control number 3133–0166. Under HMDA, depository institutions that have a home office or branch office located within a metropolitan statistical area must compile and make available to the public the number and total dollar amount of mortgage loans originated (or for which the institution received completed applications) or purchased during each year. 12 U.S.C. 2801 et seq. The Consumer Financial Protection Bureau implements HMDA under Regulation C, 12 CFR Part 1003. Regulation C requires financial institutions and mortgage lending institutions to report data about home purchase loans and refinancings that originated or purchased, or for which applications were received, and to disclose the data to the public.

Under this information collection, credit unions meeting the criteria described in HMDA and Regulation C must compile, report, and make available data about home purchase loans and refinancings they originate, purchase, or for which they receive applications. The data is made available to the public to help to determine whether credit unions, along with other financial institutions and other mortgage lenders, are serving the housing needs of their members and to assist public officials in distributing public-sector investment so as to attract private investment to areas where it is needed. Additionally, federal regulators use the data to identify possible discriminatory lending patterns and enforce antidiscrimination statutes.

Specifically, NCUA uses HMDA data to examine credit union compliance with the Equal Credit Opportunity Act and the Fair Housing Act. NCUA also uses the data to report credit union lending practices to Congress and the public. The Federal Financial Institutions Examination Council compiles the data and makes it available to the public annually to carry out the purposes of HMDA.

NCUA is requesting reinstatement of OMB control number 3133–0166, with changes in the estimated burden due to an increase in the number of reporting credit unions and the cost of the technology used to submit the information. Since the initial approval of the information collection, the number of credit unions involved in mortgage lending has increased slightly from 1,996 credit unions to 2,015 credit unions. The estimated cost of the information collection has been adjusted to reflect the cost of programmatic modifications associated with increased number of respondents and the use of technology. The increase in the number of respondents caused a corresponding increase in the estimated burden hours associated with the collection, even though NCUA estimates the time per reportable loan application necessary to submit the information collection will not change.

NCUA requests that you send your comments on this collection to the location listed in the **ADDRESSES** section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: HMDA Requirements under 12 U.S.C. 2801–2810 and Regulation C, 12 CFR Part 1003.

OMB Number: 3133–0166.

Form Number: None.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: The collection of this data is required under the Home Mortgage Disclosure Act. The data collection is intended to provide the public with loan data that can be used (1) To help determine whether financial institutions are serving the housing needs of their communities; (2) to assist public officials in distributing public-sector investments so as to attract private investment to areas where it is needed; and (3) to assist in identifying possible discriminatory lending patterns and enforcing anti-discrimination statutes.

Respondents: Credit unions.

Estimated No. of Respondents/Record keepers: 2,015.

Estimated Burden Hours per Response: 47.25 hours.

Frequency of Response: Record-keeping, Third party disclosure and Reporting Annually.

Estimated Total Annual Burden Hours: 95,210 hours.

Estimated Total Annual Cost: $1,428,150.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

[FR Doc. 2013–17346 Filed 7–18–13; 8:45 am]

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, With Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35). This information collection is published to obtain comments from the public. Part 749 of the NCUA Regulations directs each credit union to have a vital records preservation program that includes procedures for maintaining duplicate vital records at a location far enough from the credit union's offices to avoid the simultaneous loss of both sets of records in the event of a disaster. Part 749 requires a written vital records preservation program that includes a schedule for the storage and destruction of records and emergency contact information for employees, officials, regulatory offices, and vendors used to support vital records.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted

comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and request for comments

NCUA is reinstating and amending the collection for 3133–0032. Credit union records preservation programs enable NCUA to ensure that federally-insured credit unions (FICUs) can reconstruct their vital records in the event that records are destroyed by a catastrophe and facilitates restoration of vital member services. The program does not have to be submitted to the NCUA but must be available for review by examination staff. The frequency of collection will be unique to each credit union based on its operations, storage schedule, and storage methods, but occurs on a flow basis at least quarterly. NCUA has modified the cost basis for this data collection to focus on the recordkeeping labor cost of maintaining a records preservation program rather than the technology cost to store records offsite. NCUA believes that electronically backing up and storing credit union records offsite has become a usual and customary business practice. Therefore, credit union labor costs are the appropriate recordkeeping burden associated with maintaining a records preservation program under Part 749. This is the primary reason why the total annual burden has decreased, along with a decline in the number of FICUs from 8,420 to 6,753 and newly chartered FICUs from 15 to 5.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Records Preservation under 12 CFR Part 749.

OMB Number: 3133–0032.

Form Number: None.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: Part 749 of NCUA Regulations directs each credit union to develop and maintain a records preservation program and maintain a log for records stored and destroyed.

Respondents: All credit unions.

Estimated No. of Respondents/Recordkeepers: 6,758. This total consists of 6,753 existing FICUs as of 3/31/2013, and an anticipated 5 newly chartered FICUs in 2013.

Estimated Burden Hours Per Response: 2 hours for existing FICUs and 8 hours for newly chartered FICUs.

Frequency of Response: Quarterly.

Estimated Total Annual Burden Hours: 13,546

Estimated Total Annual Cost: $427,512

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). This information collection is published to obtain comments from the public. NCUA is renewing the requirements for Federally Insured Credit Unions to maintain an information security program and an incident response plan that complies with Title V of the Gramm-Leach-Bliley Act, 15 U.S.C. 6801 et seq. The program and response plan are required by Part 748 of the NCUA Rules and Regulations. Appendix B contains guidance on creating an effective incident response plan in the event of unauthorized access to member information and the requirements of the notices distributed to the affected members.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov*.

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is amending/reinstating the collection for 3133–0033. NCUA is renewing the requirements for Federally Insured Credit Unions to maintain an information security program and an incident response plan that complies with Title V of the Gramm-Leach-Bliley Act, 15 U.S.C. 6801 et seq. Section 748.0 of NCUA's regulations, 12 CFR 748.0, directs federally insured credit unions to adopt a security program that includes ensuring the security and confidentiality of member records, protecting against the anticipated threats or hazards to the security or integrity of such records, and protecting against unauthorized access to or use of such records that could result in substantial harm or serious inconvenience to a member. The security program also contains a requirement to respond to incidents of unauthorized access to or use of member information that could result in substantial harm or serious inconvenience to a member. Proper incident response includes a notification requirement to the affected member. NCUA examiners review the programs to determine whether the credit union's procedures comply with the information security and incident response requirements. There is a decrease of 39,776 hours from the last submission (2007). The decrease is a result of an adjustment to the number of credit unions from 8,695 to 6,753. This decline is from credit union mergers and liquidations.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section.

Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: 12 CFR Part 748, Security Program and Appendix B.

OMB Number: 3133–0033.

Form Number: None.

Type of Review: Third party disclosure, and reporting, on occasion.

Description: 12 CFR Part 748 requires federally insured credit unions to develop a written security program to safeguard sensitive member information. This information collection requires that such programs be designed to respond to incidents of unauthorized access or use, in order to prevent substantial harm or serious inconvenience to members.

Respondents: Federally insured credit unions.

Estimated No. of Respondents/Record keepers: 6,753.

Estimated Burden Hours per Response: 20 hours.

Frequency of Response: On occasion.

Estimated Total Annual Burden Hours: 138,300 hours.

Estimated Total Annual Cost: None.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

[FR Doc. 2013–17353 Filed 7–18–13; 8:45 am]

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35). This information collection is published to obtain comments from the public. Section 701.32 of the NCUA Rules and Regulations (12 CFR 701) limits nonmember and public unit deposits in federally insured credit unions to 20 percent of their shares or $3.0 million, whichever is greater.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating the collection for 3133–0114. The collection of information requirement is that those credit unions seeking an exemption from the nonmember deposit limit must adopt a specific written plan and submit their lending and investment policies, a copy of their latest financial statement, and an explanation of the request to the NCUA Regional Director. NCUA uses this information to determine whether a particular credit union will be granted an exemption to the limit on nonmember and public unit deposits. This collection of information is necessary to protect the National Credit Union Share Insurance Fund (''Fund''). There is no change to the burden hours from previous submissions.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Payment on Shares by Public Units and Nonmembers.

OMB Number: 3133–0114.

Form Number: None.

Type of Review: Reinstatement, without change, of a previously approved collection.

Description: 5 CFR 701.32 limits nonmember and public unit deposits in federally insured credit unions to 20 percent of their shares or $3.0 million, whichever is greater. The collection of information requirement is for those credit unions seeking an exemption from the above limit.

Respondents: Credit Unions seeking an exemption from the limits on share deposits by public unit and nonmember accounts set by 5 CFR 701.32.

Estimated No. of Respondents/Recordkeepers: 20.

Estimated Burden Hours per Response: 2 hours.

Frequency of Response: Other. As exemption is requested.

Estimated Total Annual Burden Hours: 40.

Estimated Total Annual Cost: $1,240.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995

(Pub. L. 104–13, 44 U.S.C. Chapter 35). This information collection relates to 12 CFR part 713 which requires a federal credit union (FCU) to monitor its eligibility to qualify for a higher fidelity coverage deductible and to notify the NCUA if its financial condition changes resulting in the loss of that eligibility for the higher deductible. This information collection notice is published to obtain comments from the public. This requirement enables NCUA to monitor the FCU's financial condition for safety and soundness purposes and helps to assure that FCUs are properly and adequately protected against potential losses due to insider abuse such as fraud and embezzlement.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating a previously approved collection of information for 3133–0170. The regulation calls for an FCU that ceases to meet eligibility requirements for the higher deductible to obtain a policy with the required coverage and to notify the appropriate NCUA regional office of its changed status. The notice must also confirm that the FCU has obtained the required coverage. The information will be used by the regional office in its efforts to monitor credit unions for safe and sound operations and is critically important in helping to avert or minimize losses to the National Credit Union Share Insurance Fund (NCUSIF). The NCUSIF provides federally guaranteed account insurance for all federally insured credit unions. Adequate insurance coverage can avert a credit union from failing due to insolvency; alternatively, where insolvency and failure do occur, the NCUA, in its capacity as receiver for the failed FCU, can recoup some of its losses through a claim under an insurance policy.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: 12 CFR part 713, Fidelity Bond and Insurance Coverage for Federal Credit Unions.

OMB Number: 3133–0170.

Form Number: None.

Type of Review: Reinstatement, without change, of a previously approved collection.

Description: The regulation in 12 CFR part 713, details the requirements for FCU compliance regarding fidelity bond and insurance coverage. The regulation includes instructions for those FCUs that no longer qualify for a higher deductible.

Respondents: Federal credit unions.

Estimated No. of Respondents/Recordkeepers: 5.

Estimated Burden Hours per Response: 1 hour.

Frequency of Response: On occasion.

Estimated Total Annual Burden Hours: 5 hours.

Estimated Total Annual Cost: None.

By the National Credit Union Administration Board, on July 15, 2013.

Mary Rupp,

Secretary of the Board.

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, With Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). The information collection relates to requests for non-public records and for testimony by NCUA employees in legal proceedings. This information collection notice is published to obtain comments from the public.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating a previously approved collection of information for 3133–0146. 12 CFR Part 792, Subpart C requires anyone requesting NCUA non-public records for use in legal proceedings, or similarly the testimony of NCUA personnel, to provide NCUA with information regarding the requester's grounds for the request. This process is also known as a ''Touhy Request''. The information collected will help the NCUA decide whether to release non-public records or permit employees to testify in legal proceedings.

NCUA regulations also require an entity or person in possession of NCUA records to notify the NCUA upon receipt of a subpoena for those records. The NCUA requires this notice to protect its records and, when necessary, intervene in litigation or file an objection to the disclosure of its confidential information in the appropriate court or tribunal.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Production of Non-public Records and Testimony of Employees in Legal Proceedings (Touhy Request).

OMB Number: 3133–0146.

Form Number: None.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: The regulation in 12 CFR Part 792, Subpart C details the requirements for obtaining the production of nonpublic NCUA records for use in legal proceedings and testimony of NCUA personnel.

Respondents: Respondents will most likely be persons involved in legal proceedings.

Estimated No. of Respondents/ Recordkeepers: 20

Estimated Burden Hours per Response: 2 hours.

Frequency of Response: Reporting, on occasion.

Estimated Total Annual Burden Hours: 40.

Estimated Total Annual Cost: None.

By the National Credit Union Administration Board on July 15, 2013.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating the collection for 3133–0108. Section 748.2 of NCUA's regulations, 12 CFR 748.2, directs credit unions to adopt a written program and to maintain procedures that ensure the credit union's continued compliance with the Bank Secrecy Act (BSA) (31 U.S.C. 5311–5330) and Department of Treasury's reporting and recordkeeping regulations (31 CFR part 1000). NCUA examiners review the programs to determine whether the credit union's procedures comply with the Bank Secrecy Act requirements. The requirement that credit unions establish written BSA compliance procedures is a one-time event, but revisions to those procedures must occur as deemed necessary.

NCUA examiners review the written procedures during examinations in order to ensure the implementation of adequate systems for complying with the BSA and its implementing regulations.

The NCUA requests that you send your comments on this collection to the location listed in the **ADDRESSES** section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Proposal for the following collection of information:

OMB Number: 3133–0108.

Form Number: None.

Type of Review: Reinstatement of a previously approved collection.

Title: Monitoring Bank Secrecy Act Compliance.

Description: The collection is needed to allow NCUA to determine whether credit unions have established a program reasonably designed to assure and monitor their compliance with currency recordkeeping and reporting requirements established by Federal statute and Department of Treasury Regulations.

Respondents: Federally Insured Credit Unions.

Estimated No. of Respondents/ Recordkeepers: 6,753.

Estimated Burden Hours per Response: 16 hours.

Frequency of Response: Annually.

Estimated Total Annual Burden Hours: 108,048.

Estimated Total Annual Cost: 0.

By the National Credit Union Administration Board on July 15, 2013.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating the collection of information for 3133–0139. NCUA has authorized federal credit unions to advance money to members to cover account deficits without having a credit application on file if the credit union has a written overdraft policy. 12 CFR 701.21(c)(3). NCUA believes a written policy is necessary to ensure safety and soundness in the credit union industry and to protect the interests of credit union members where a federal credit union provides overdraft protection to a member without having his or her credit application on file. NCUA has also authorized federally insured credit unions to offer lending-related incentive pay to employees, provided they establish written policies regarding such plans. 12 CFR 701.21(c)(8). NCUA believes those written policies are necessary to ensure a plan is fully considered before being adopted and for the examination process. NCUA examiners use the information in these policies to review for safety and soundness. This submission represents an adjustment to the recordkeeping hour and cost burden since the last submission. Based on information in March 2013 call reports, we estimate approximately 1,725 federal credit unions are required to have written overdraft policies and approximately 575 federally insured credit unions are required to have written policies for lending-related employee incentive pay plans.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Organization and Operations of Federal Credit Unions (12 CFR part 701), (*previously titled* Overdraft and Lending-Related Employee Incentive Pay Plan Policies).

OMB Number: 3133–0139.

Form Number: None.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: Federal credit unions wishing to advance money to members to cover account deficits without having a credit application on file must establish a written overdraft policy. Federally insured credit unions wishing to pay lending-related incentives to employees must establish written policies.

Respondents: Certain Federal and federally insured credit unions.

Estimated No. of Respondents/ Recordkeepers: 2,300.

Estimated Burden Hours per Response: 3 hours for overdraft policy and 2 hours for lending-related employee incentive pay plan policies.

Frequency of Response: On occasion.

Estimated Total Annual Burden Hours: 6,325 hours.

Estimated Total Annual Cost: $158,125.

By the National Credit Union Administration Board, on July 15, 2013.

Mary Rupp,

Secretary of the Board.

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities; Submission to OMB for Reinstatement, With Change, of a Previously Approved Collection

ACTION: Notice and request for comments.

SUMMARY: The NCUA, as part of their continuing effort to reduce paperwork and respondent burden, invite the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). NCUA is soliciting comments concerning the Suspicious Activity Report (SAR). As Bank Secrecy Act (BSA) administrator, the Financial Crimes Enforcement Network (FinCEN) transitioned from a system originally designed for collecting industry specific paper forms to a modernized information technology environment centered on electronic reporting. Based on financial institution type, depository institutions, broker-dealers in securities, futures commission merchants and introducing brokers in commodities, insurance companies, mutual funds, money services businesses, and casinos currently filed reports on four separate forms. FinCEN's objective is to have one electronically-filed dynamic and interactive BSA–SAR that will be used by all filing institutions to report suspicious activity as of April 1, 2013.

There are no proposed changes to the regulatory reporting criteria for information collection. Federally

insured credit unions will continue to follow the regulation, interagency guidance, and filing instructions to determine when a report should be filed and what information should be included on the report.

The interactive BSA–SAR includes several new data fields and introduces data fields from the SARs of other industries. On March 29, 2012, FinCEN released guidance [1] titled, ''Filing FinCEN's new Currency Transaction Report and Suspicious Activity Report''. This guidance clarified expectations and notes that FinCEN is making available additional and more specific data elements (i.e., characterizations of suspicious activity and types of financial services) as a more efficient way to bring information about suspicious activity to the attention of FinCEN and law enforcement. The guidance clarified the addition of new and expanded data elements; however, the guidance does not create an expectation that financial institutions will revise internal programs, or develop new programs, to capture information that reflects the expanded lists.

Additional information about the paperwork burden associated with these requirements, including statutory and regulatory history, a description of the reporting requirements, and how the estimated total annual burden was calculated, is discussed below.

Background and Justification

Since 1996, the federal banking agencies [2] and FinCEN have required certain types of financial institutions to report known or suspected violations of law and suspicious transactions. To fulfill these requirements, supervised banking organizations file Suspicious Activity Reports.[3] Law enforcement agencies use the information submitted on the reporting form to initiate investigations and Federal Reserve staff use the information in the examination and oversight of supervised institutions.

The NCUA's suspicious activity reporting rules apply to all federally insured credit unions. The NCUA is only responsible for the paperwork burden imposed on these institutions. Other federal banking agencies account for the paperwork burden for the institutions they supervise. The annual burden per respondent varies depending on the nature of the activity being reported.

The suspicious activity report filing requirement became effective on April 1, 1996. Prior to the effective date, the NCUA, the other federal banking agencies, and FinCEN each issued new and nearly identical rules mandating the use of the interagency SAR–DI for the reporting of suspicious activities. In separate actions, FinCEN also enacted regulations requiring other types of financial institutions, such as brokers or dealers in securities and futures; money services businesses (money transmitters; issuers and sellers of money orders and travelers' checks; check cashers, and dealers in foreign exchange); casinos and card clubs; and insurance companies to file reports on suspicious activities.

In January 2003, check boxes were added to Part III of the SAR–DI to note terrorist financing and identity theft as suspicious activities and the safe harbor language in the instructions was updated to reflect changes made by the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act of 2001. In 2006, the SAR–DI form was revised to support a new joint filing initiative aimed at reducing the total number of duplicate reports filed for a single suspicious transaction. On May 1, 2007, FinCEN published a **Federal Register** notice (72 FR 23891) [4] announcing the delayed implementation of these revisions, which ultimately were never implemented.

On July 15, 2011, FinCEN received final approval of the BSA–SAR [5] from the Office of Management and Budget which concluded FinCEN's October 15, 2010, request for comment.

Description of Information Collection

Federally insured credit unions follow the SAR instructions to determine when a SAR should be filed and what information should be included on the SAR.

Proposed Revisions

The BSA–SAR would integrate four institution specific SARs into one universal data collection. The previous five parts of the SAR–DI remain with changes to their titles and placement in order of completion.

The proposed BSA–SAR is described below by form Part. Fields from other industry SARs that may be new to depository institutions as well as specific data fields that are new to all types of industry filers have been identified. In the description provided below, questions for which an answer must be provided (referred to as ''critical fields'') are identified with the * symbol in front of the data element number.

Type of Filing

Field 1 is the Type of Filing and it would require the filer to designate the category that best describes the filing from the choices of:

* 1. Check all that apply—a. Initial report; b. Correct/amend prior report; c. Continuing activity report; d. Joint report; e. Prior report document control/file number if 1b or 1c are checked

On the current SAR–DI there is only one choice in data field 1 for those reports that corrected a prior report.

Part I: Subject Information

Part I is titled Subject Information and would require the filer to provide information for *each* subject involved in the suspicious activity. Subject Information is titled *Suspect* Information on the current SAR–DI. As with the existing SAR–DI, multiple subjects may be included in Part I.

Each of the critical fields (*) in this Part have a new check box that may be used if the information is unknown. If that box is checked, the filer would not need to enter any information in that field.

In Part I, with the exception of the unknown check box, these data fields would remain the same with no additions or changes from the SAR–DI:

* 3. Individual's last name or entity's legal name—a. (check if) unknown
* 4. First name—a. (check if) unknown
5. Middle initial (middle name for electronic filers)
7. Occupation or type of business
* 8. Address—a. (check if) unknown
* 9. City—a. (check if) unknown
* 10. State—a. (check if) unknown
* 11. ZIP/Postal Code—a. (check if)
* 12. Country Code—a. (check if) unknown
* 13. TIN—a. (check if) unknown
* 16. Date of birth mm/dd/yyyy—a. (check if) unknown

Listed below are the remaining data fields in Part I that would be considered new data fields or data fields that would be modified.

2. Check—a. If entity; b. If all critical (*) subject information is unavailable (If 2b is checked this Part may be left blank)
5a. Gender—b. (Check if) Male; c. (Check if) Female; d. (Check if) Unknown

[1] *http://www.fincen.gov/statutes_regs/guidance/pdf/FIN-2012-G002.pdf.*

[2] The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the National Credit Union Administration.

[3] In 1996, the NCUA, together with the other federal banking agencies issued nearly identical regulations to implement the SAR process for banking organizations.

[5] *http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201104-1506-002.*

6. Alternate name, e.g. AKA for an Individual or DBA for an Entity
7a. NAICS Code (North American Industry Classification system code that corresponds to 7)
14. TIN type (* if 13 is completed)—a. EIN; b. SSN–ITIN; c. Foreign
* 15. Form of identification for subject—a. (check if) unknown (or not obtained); b. (check if) Driver's license/state ID; c. (check if) Passport; d. (check if) Alien registration; e. Number; f. Issuing state; g. Issuing country; z. (check if) Other
17. Phone number type—a. (check if) Home; b. (check if) Work; c. (check if) Mobile; d. (check if) Fax
18. Phone number—a. Extension (if any)
19. Email address (if available)
19a. Web site (URL) address (if available)
20. Corroborative statement to filer?—a. (check if) Yes; b. (check if) No (This was Admission/Confession on the SAR–DI)
21. Relationship of the subject to the filing institution (check all that apply)—a. Institution TIN; b. Accountant; c. Agent; d. Appraiser; e. Attorney; f. Borrower; g. Customer; h. Director; i. Employee; j. No relationship to institution; k. Officer; l. Owner or Controlling Shareholder; z. Other
22. If item 21h, 21i, 21j, or 21k is checked, indicate status of relationship—a. (check if) Relationship continues; b. (check if) Terminated; c. (check if) Suspended/barred; d. (check if) Resigned
23. Action date if 22 b, c, or d is checked
* 24. Financial Institution EIN and account number(s) affected that are related to subject, if any—a. (check if) No known account involved; b. (check if) Non-US Financial Institution; c. TIN; d. account number; e. (check if) closed;
25. Subject's role in suspicious activity (if applicable); a. (check if) Purchaser/Sender; b. (check if) Payee/Receiver; c. (check if) Both a & b

Part II—Suspicious Activity Information

Part II, Suspicious Activity Information, would require the filer to describe the suspicious activity that occurred.

Part II items would cover all filer institution types so all filers would see field options that may not pertain to their report (such as casino activities). Filers would only be required to complete those items that apply to their institution and pertain to the report being filed.

In Part II, with the exception of the unknown check box, these data fields would remain the same as the current SAR–DI:

* 27. Date or date range of suspicious activity for this report—a. From: mm/dd/yyyy; b. To: mm/dd/yyyy

The remaining data fields in this Part, specifically the characterizations of suspicious activity, would be modified and expanded when compared to the current SAR–DI. There are now ten general categories and each category would be further broken down to specific types of suspicious activity.

* 26. Amount involved in this report—a. (check if) Amount unknown; b. (check if) No amount involved.
28. Cumulative amount only if box 1c (continuing activity report) is checked
29. Structuring—a. Alters transaction to avoid BSA recordkeeping requirement; b. Alters transactions to avoid CTR requirement; c. Customer cancels transaction to avoid BSA reporting and recordkeeping requirements; d. Multiple transactions below BSA recordkeeping threshold; e. Multiple transactions below CTR threshold; f. Suspicious inquiry by customer regarding BSA reporting or recordkeeping requirements; z. Other (specify type of suspicious activity in space provided)
30. Terrorist Financing—a. Known or suspected terrorist/terrorist organization; z. Other (specify type of suspicious activity in space provided)
31. Fraud (Type)—a. ACH; b. Business loan; c. Check; d. Consumer loan; e. Credit/Debit card; f. Healthcare; g. Mail; h. Mass-marketing; i. Pyramid scheme; j. Wire; z. Other (specify type of suspicious activity in space provided)
32. Casinos—a. Inquiry about end of business day; b. Minimal gaming with large transactions; c. Suspicious intra-casino funds transfers; d. Suspicious use of counter checks or markers; z. Other (specify type of suspicious activity in space provided)
33. Money laundering—a. Exchanges small bills for large bills or vice versa; b. Suspicion concerning the physical condition of funds; c. Suspicion concerning the source of funds; d. Suspicious designation of beneficiaries, assignees or joint owners; e. Suspicious EFT/wire transfers; f. Suspicious exchange of currencies; g. Suspicious receipt of government payments/benefits; h. Suspicious use of multiple accounts; i. Suspicious use of noncash monetary instruments; j. Suspicious use of third-party transactors (straw-man); k. Trade Based Money Laundering/Black Market Peso Exchange; l. Transaction out of pattern for customer(s); z. Other (specify type of suspicious activity in space provided)
34. Identification/Documentation—a. Changes spelling or arrangement of name; b. Multiple individuals with same or similar identities; c. Provided questionable or false documentation; d. Refused or avoided request for documentation; e. Single individual with multiple identities; z. Other
35. Other suspicious activities—a. Account takeover; b. Bribery or gratuity; c. Counterfeit instruments; d. Elder financial exploitation; e. Embezzlement/theft/disappearance of funds; f. Forgeries; g. Identity theft; h. Little or no concern for product performance penalties, fees, or tax consequences; i. Misuse of ''free look''/cooling off/right of rescission; j. Misuse of position or self-dealing; k. Suspected public/private corruption (domestic); l. Suspected public/private corruption (foreign); m. suspicious use of informal value transfer system; n. Suspicious use of multiple transaction locations; o. Transaction with no apparent economic, business, or lawful purpose; p. Two or more individuals working together; q. Unauthorized electronic intrusion; r. Unlicensed or unregistered MSB; z. Other (specify type of suspicious activity in space provided)
36. Insurance—a. Excessive insurance; b. Excessive or unusual cash borrowing against policy/annuity; c. Proceeds sent to or received unrelated third party; d. Suspicious life settlement sales insurance (e.g. STOLI's, Viaticals); e. Suspicious termination of policy or contract; f. Unclear or no insurable interest; z. Other (specify type of suspicious activity in space provided)
37. Securities/Futures/Options—a. Insider trading; b. Market manipulation/wash trading; c. Misappropriation; d. Unauthorized pooling; z. Other (specify type of suspicious activity in space provided)
38. Mortgage fraud—a. Appraisal fraud; b. Foreclosure fraud; c. Loan modification fraud; d. Reverse mortgage fraud; z. Other
39. Were any of the following instrument/product type(s)

involved in the suspicious activity? Check all that apply: a. Bonds/Notes; b. Commercial mortgage; c. Commercial paper; d. Credit card; e. Debit card; f. Forex transactions; g. Futures/Options on futures; h. Hedge fund; i. Home equity loan; j. Home equity line of credit; k. Insurance/Annuity products; l. Mutual fund; m. Options on securities; n. Penny stocks/Microcap securities; o. Prepaid access; p. Residential mortgage; q. Security futures products; r. Stocks; s. Swap, hybrid or other derivative; z. Other (specify type in space provided)

40. Were any of the following instrument type(s)/payment mechanism(s) involved in the suspicious activity? Check all that apply—a. Bank/Cashier's check; b. Foreign currency; c. Funds transfer; d. Gaming instruments; e. Government payment; f. Money orders; g. Personal/Business check; h. Travelers check; i. U.S. Currency; z. Other (specify type in space provided)
41. Commodity type (if applicable)
42. Product/Instrument description (if needed)
43. Market where traded (list of codes will be provided—dropdown menu for electronic filers)
44. IP Address (if available) (multiple entries allowed for electronic filers)
45. CUSIP number (multiple entries allowed for electronic filers)
46. CUSIP number (multiple entries allowed for electronic filers)

Part III—Information About Financial Institution Where Activity Occurred

Part III information would be about the financial institution(s) where the suspicious activity occurred. A separate Part III record would be completed on each financial institution involved in the suspicious activity. The data fields in Part III would be modified and expanded when compared to the current SAR–DI.

* 47. Type of financial institution (check only one)—a. Casino/Card club; b. Depository institution; c. Insurance company; d. MSB; e. Securities/Futures; z. Other (specify type of institution in space provided)
* 48. Primary Federal Regulator—A = Commodities Futures Trading Commission (CFTC); B = Federal Reserve Board (FRB); C = Federal Deposit Insurance Corporation (FDIC); D = Internal Revenue Service (IRS); E = National Credit Union Administration (NCUA); F = Office of the Comptroller of the Currency (OCC); G = Securities and Exchange Commission (SEC); Z = Not Applicable
49. If item 47a is check indicate type (Check only one)—a. State licensed casino; b. Tribal authorized casino; c. Card club; d. Other (specify)
50. If item 47e is checked, indicate type of Securities and Futures institution or individual where activity occurred—check box(es) for functions that apply to this report—a. Clearing broker-securities; b. Futures Commission Merchant; c. Holding company; d. Introducing broker-commodities; e. Introducing broker-securities; f. Investment Advisor; g. Investment company; h. Retail foreign exchange dealer; i. Subsidiary of financial/bank holding company; z. Other *(specify type of institution or individual in space provided)*
51. Financial institution identification number (Check one box to indicate type)—a. (check if) CRD number; b. (check if) IARD number; c. (check if) NFA number; d. (check if) RSSD number; e. (check if) SEC number; f. Identification number
52. Financial institution's role in transaction (if applicable)—a. (check if) Selling location; b. (check if) Paying location; (check if) Both a & b
* 53. Legal name of financial institution—a. (check if) unknown
54. Alternate name, e.g., AKA—individual or trade name, DBA—entity
* 55. TIN—a. (check if) unknown
56. TIN type (* if 55 is completed)—a. EIN; b. SSN–ITIN; c. Foreign
* 57. Address—a. (check if) unknown
* 58. City—a. (check if) unknown
59. State
* 60 ZIP/Postal Code—a. (check if) unknown
* 61. Country
62. Internal control/file number
63. Loss to financial institution (if applicable)
64. Branch's role in transaction (if applicable)—a. (check if) Selling location; b. (check if) Paying location; c. (check if) Both a & b
* 65. Address of branch or office where activity occurred—a. (if no branch activity involved, check box a)
66. RSSD number (of the branch)
67. City
68. State
69. ZIP/Postal Code
70. Country (2 letter code—list provided)

Part IV—Filing Institution Contact Information

Part IV information would be about the lead financial institution or holding company that is filing the BSA–SAR. There would be only one Part IV record for each filing. Part IV would take fields previously contained in Part I, Part III, and Part IV on the SAR–DI as well as added new fields.

* 78. Primary Federal Regulator—A = Commodities Futures Trading Commission (CFTC); B = Federal Reserve Board (FRB); C = Federal Deposit Insurance Corporation (FDIC); D = Internal Revenue Service (IRS); E = National Credit Union Administration (NCUA); F = Office of the Comptroller of the Currency (OCC); G = Securities and Exchange Commission (SEC); Z = Not Applicable
* 79. Filer name (Holding company, lead financial institution)
* 80. TIN
* 81. TIN type—a. EIN; b. SSN/ITIN; c. Foreign
* 82. Type of financial institution (check only one)—a. Casino/Card club; b. Depository institution; c. Insurance company; d. MSB; e. Securities/Futures; z. Other (specify type of institution in space provided)
83. Type of Securities and Futures institution or individual filing this report-check box(es) for function that apply to this report—a. Clearing broker—securities; b. CPO/CTA; c. Futures Commission Merchant; d. Holding company; e. Introducing broker—commodities; f. Introducing broker—securities; g. Investment Adviser; h. Investment company; i. Retail foreign exchange dealer; j. SRO Futures; k. SRO Securities; l. Subsidiary of financial/bank holding company; z. Other (specify type of institution or individual in space provided)
84. Filing institution identification number (Check one box to indicate type)—a. (check if) CRD number; b. (check if) IARD number; c. (check if) NFA number; d. (check if) RSSD number; e. (check if) SEC number; f. Identification number
* 85. Address
* 86. City
87. State
* 88. ZIP/Postal Code
* 89. Country
90. Alternate name, e.g., AKA—individual or trade name, DBA—entity
91. Internal control/file number
92. LE contact agency
93. LE contact name
94. LE contact phone number—a. Extension (if any)
95. LE contact date
* 96. Designated contact office
* 97. Designated contact office phone number including area code—a. Extension (if any)

* 98. Date filed

Part V—Suspicious Activity Information Explanation/Description

Part V would require the filer to provide a chronological and complete narrative account of the activity, including what is unusual, irregular, or suspicious about the activity. In the BSA–SAR this part would be a text file that is limited to 17,000 characters (approximately six pages). Institutions may, but are not required to, attach a MS Excel-compatible file (no larger than 1 MB) providing details in tabular form of transactions subject to the suspicious activity discussed in the text file.

Consultation Outside the Agency

As set forth above, the SAR was originally developed in 1996 by an interagency group that consisted of the federal banking agencies, the U.S. Departments of Justice and Treasury, and several law enforcement agencies. The general framework of the BSA–SAR report and revisions to the BSA–SAR data elements have been discussed on an interagency basis.

Estimate of Respondent Burden

The burden per institution varies depending on the nature of the activity being reported. Because of these changes to the BSA–SAR, the estimated average burden would increase to 2 hours per response. Between January 1, 2012, and December 31, 2012, federally insured credit unions filed 67,537 [6] SARs. Based on this data the annual reporting burden for the federally insured credit unions is estimated to be 135,074 hours with the proposed revisions.

DATES: Written comments should be received on or before September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov*.

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the collection, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

Title: Suspicious Activity Report by Depository Institutions (SAR).

OMB Control Numbers: 3133–0094.

Form Numbers: 2362.

Abstract: In 1985, the Banking Supervisory Agencies issued procedures to be used by banks and certain other financial institutions operating in the United States to report known or suspected criminal activities to the appropriate law enforcement and Banking Supervisory Agencies. Beginning in 1994, the Banking Supervisory Agencies and FinCEN redesigned the reporting process resulting in the Suspicious Activity Report, which became effective in April 1996. The report is authorized by 12 CFR 748.1 (NCUA). The regulation was issued under the authority contained in 1789(a) (NCUA).

Current Action: NCUA proposes to renew, with revision, the previously approved form.

Type of Review: Reinstatement of a previously approved collection.

Affected Public: Business, for-profit institutions, and non-profit institutions.

Estimated Number of Respondents: 6,753.

Estimated Total Annual Responses: 67,537.

Estimated Total Annual Burden: at an estimated 2 hours per form, Total Annual Burden is 135,074 hours.

Records required to be retained under the Bank Secrecy Act and these regulations issued by the Banking Supervisory Agencies must be retained for five years. Generally, information collected pursuant to the Bank Secrecy Act is confidential, but may be shared as provided by law with regulatory and law enforcement authorities.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology, and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). This information collection is published to obtain comments from the public. The information collection applies to credit unions that engage in member business lending and requires written loan policies that address the various aspects of the member business loan program. Credit unions desiring a waiver from appraisal requirements, aggregate construction and development loan, loan-to-value ratios, personal liability and guarantee requirements, unsecured lending limits to one borrower, aggregate unsecured lending limits, or outstanding loans to one borrower limits of Part 723 must submit certain information to NCUA for consideration. Finally, a credit union seeking regulatory approval to purchase certain business loans in addition to those, which are statutorily limited, must submit certain information to NCUA for consideration.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov*.

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the

National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Request for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is amending/reinstating the collection for 3133–0101. Part 723 of NCUA's regulations implements provisions in the Federal Credit Union Act (Act) for business loans and addresses NCUA's safety and soundness concerns regarding this activity. Part 723 requires that credit unions that engage in business lending maintain written loan policies that address various aspects of the activity, including identification of the types of business loans the credit union will make, qualifications of loan officers, documentation requirements for creditworthiness of borrowers, collateral requirements, loan procedures, interest rates and maturities, and so forth. 12 CFR 723.6. Business lending is recognized as inherently riskier than consumer lending and requires particular expertise. Before promulgation of the member business loan regulation in the 1980s, business loans caused significant losses to the credit unions and the National Credit Union Share Insurance Fund (NCUSIF). Requiring federally-insured credit unions to develop specific business loan policies and procedures protects the safety and soundness of credit unions and the NCUSIF.

Part 723 also permits credit unions to apply for a waiver from certain regulatory requirements. 12 CFR 723.10-.11. Specifically, the rule permits waivers from the following requirements or limitations: appraisal requirements, aggregate construction and development loan limits, minimum borrower equity requirements for construction and development loans, loan-to-value ratios, personal liability and guarantee requirements, unsecured lending limits to one borrower, aggregate unsecured lending limits, and outstanding loans to one borrower limits. NCUA needs certain information from a credit union to consider the waiver request and evaluate the risks and impact of the waiver on the credit union and potential effect on the NCUSIF.

Finally, Part 723 permits a credit union to obtain regulatory approval so that it may purchase certain business purpose loans in addition to those which are statutorily limited. 12 CFR 723.16(b)(2). NCUA needs certain information from a credit union to evaluate its request so that NCUA may assess safety and soundness considerations and potential effect on the NCUSIF.

NCUA examiners review the credit union policies during regulatory examinations. These reviews allow examiners to determine the appropriateness and risks of the programs they address for both the credit union and the NCUSIF. Written policies enable examiners to determine that the credit union is, in fact, following its own business planning in engaging member business lending. As part of the examination process, this review helps prevent losses to credit unions and the NCUSIF.

For waiver requests, the information in the requests permits NCUA staff to make a reasonable determination of the appropriateness of the requests. For loan approval requests, the information in the requests permits NCUA staff to determine the appropriateness and risks of the loan purchases the credit union proposes for both the credit union and the NCUSIF.

An increase in the reporting burden from the prior submission occurred due to an adjustment to the estimated responses based upon current credit union activity. While the number of respondents decreased, the estimated waiver activity increased resulting in an overall increase in annual response hours.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

OMB Number: 3133–0101.

Form Number: N/A.

Type of Review: Reinstatement, without change.

Title: 12 CFR Parts 723.5—Develop written loan policies—and 723.11—Provide waiver requests.

Description: The general purpose of the requirements imposed by the rule is to ensure that loans are made, documented, and accounted for properly and for the ultimate protection of the National Credit Union Share Insurance Fund. Respondents are federally insured credit unions who make business loans as defined in the regulation.

Respondents: Federally Insured Credit Unions.

Estimated No. of Respondents/Recordkeepers: 1,116.

Estimated Burden Hours per Response: 4–17 hours.

Frequency of Response: Recordkeeping, reporting and on occasion.

Estimated Total Annual Burden Hours: 9,492 hours.

Estimated Total Annual Cost: $0.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, With Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). This information collection is published to obtain comments from the public. The collection requires each Federal Credit Union (FCU) to establish reasonable policies and procedures for implementing the guidelines to identify possible risks to account holders or customers or to the safety and soundness of the institution or creditor (Red Flag Regulations). Each FCU is also required to develop an Identity Theft Prevention Program, provide staff training, and report to the board of directors, a committee thereof, or senior

management at least annually. In addition, credit and debit card issuers are generally required to assess the validity of change of address requests.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444. E&I Contact: Program Officer Judy Graham *eimail@ncua.gov,* 703–518–6360.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating and amending/the collection for 3133–0175. This collection of information is required by sections 114 and 315 of the FACT Act. The NCUA is renewing its collection and removing the burden attributable to the portion of the regulations transferred to the Bureau of Consumer Financial Protection (CFPB) pursuant to title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1955, July 21, 2010 (Dodd-Frank Act), and republished as CFPB regulations (76 FR 79308 (December 21, 2011)). The transferred regulations, which relate to address discrepancies, were found at 12 CFR part 717, and are now contained in 12 CFR 1022.82. The burden estimates for this portion of the collection have been revised to remove the burden attributable to NCUA-regulated credit unions with over $10 billion in total assets, now carried by CFPB pursuant to section 1025 of the Dodd-Frank Act. The NCUA retains enforcement authority under 12 CFR 1022.82 for its institutions with total assets of $10 billion or less.

As required by section 114 of the FACT Act, appendix J to 12 CFR part 717 contains guidelines for financial institutions and creditors to use in identifying patterns, practices, and specific forms of activity that indicate the possible existence of identity theft. In addition, 12 CFR 717.90 requires each financial institution or creditor to establish reasonable policies and procedures to address the risk of identity theft that incorporate the guidelines. Pursuant to section 717.91, credit card and debit card issuers must implement reasonable policies and procedures to assess the validity of a request for a change of address under certain circumstances.

Section 717.90 requires each NCUA regulated FCUs that offers or maintains one or more covered accounts to develop and implement a written Identity Theft Prevention Program (Program). In developing the Program, financial institutions and creditors are required to consider the guidelines in appendix J and include those that are appropriate. The initial Program must be approved by the board of directors or an appropriate committee thereof. The board, an appropriate committee thereof, or a designated employee at the level of senior management must be involved in the oversight of the Program. In addition, staff members must be trained to carry out the Program. Pursuant to section 717.91, each credit and debit card issuer is required to establish and implement policies and procedures to assess the validity of a change of address request under certain circumstances. Before issuing an additional or replacement card, the card issuer must notify the cardholder or use another means to assess the validity of the change of address.

As required by section 315 of the FACT Act, section 1022.82 requires users of consumer reports to have reasonable policies and procedures that must be followed when a user receives a notice of address discrepancy from a credit reporting agency (CRA).

Section 1022.82 requires each user of consumer reports to develop and implement reasonable policies and procedures designed to enable the user to form a reasonable belief that a consumer report relates to the consumer about whom it requested the report when it receives a notice of address discrepancy from a CRA. A user of consumer reports also must develop and implement reasonable policies and procedures for furnishing an address for the consumer that the user has reasonably confirmed to be accurate to the CRA from which it receives a notice of address discrepancy when the user can: (1) Form a reasonable belief that the consumer report relates to the consumer about whom the user has requested the report; (2) establish a continuing relationship with the consumer and; (3) establish that it regularly and in the ordinary course of business furnishes information to the CRA from which it received the notice of address discrepancy.

Burden estimate: The hourly burden increased despite a decline in respondents due to an increase in the estimated processing times. NCUA estimates 4,206 respondents with assets of $10 million or less. Each FCU requires 111 hours annually for a total of 466,866 hours annually.

NCUA estimates of the 4,206 annual respondents annually, 2 are new FCUs requiring a one-time additional 250 hours for program development. New FCUs incur an additional 500 hours annually.

NCUA's estimated total annual burden is 467,366 hours. Based upon the 111 hours for the annual program and additional 250 hours for new FCU program development.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden hours of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Identity Theft Red Flags and Address Discrepancies under the FACT Act of 2003 (FACTA), 12 CFR Part 717.

OMB Number: 3133–0175.

Form Number: None.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: The NCUA and other agencies published a rule to implement sections 114 and 315 of the FACTA by proposing guidelines for identifying patterns, practices and specific forms of activity indicative of possible identity theft. 71 FR 63718 (Nov. 9, 2007). The Agencies also issued regulations that would require financial institutions and creditors to establish policies and procedures to implement the guidelines, including assessing the validity of

address change requests. Pursuant to title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1955, July 21, 2010 (Dodd-Frank Act), the Bureau of Consumer Financial Protection (CFPB) reissued its portion of the regulation as CFPB regulations (76 FR 79308 (December 21, 2011)).

Respondents: Federal Credit Unions.

Estimated No. of Respondents/Record keepers: 4,206.

Estimated Burden Hours per Response: 111 hours.

Frequency of Response: Initial and Annual.

Estimated Total Annual Burden Hours: 467,366

Estimated Total Annual Cost: N/A.

By the National Credit Union Administration Board on July 15, 2013.

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35). This information collection is published to obtain comments from the public. Part 741, Section 741.11 of the NCUA Rules and Regulations contains a provision that any insured credit union must apply for and receive approval from the regional director before establishing a credit union branch outside the United States unless the foreign branch is located on a United States military institution or embassy outside the United States.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is amending/reinstating the collection for 3133–0167. The collection of information requirement is that any insured credit union must apply for and receive approval from the NCUA Regional Director before establishing a credit union branch outside the United States unless the foreign branch is located on a United States military institution or embassy outside the United States. The application must include (1) a business plan, (2) written approval by the state supervisory agency if the applicant is a state-chartered credit union, and (3) documentation evidencing written permission from the host country to establish the branch that explicitly recognizes NCUA's authority to examine and take any enforcement actions, including conservatorship and liquidation actions. There is no change to the burden hours from previous submissions.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35). This information collection is published to obtain comments from the public and is required under Section 205 of the Federal Credit Union Act (FCU Act) to allow federally-insured credit unions (FICUs) to purchase assets or assume liabilities of privately-insured credit unions, other financial institutions, or their successor in interest.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: *OCIOPRA@ncua.gov.*

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating the collection for 3133–0169. FICUs will apply to the NCUA for approval to purchase assets or assume liabilities of privately-insured credit unions or other financial institutions. NCUA will use the information in the application to determine the safety and soundness of the transaction and risk to the National Credit Union Share Insurance Fund (NCUSIF).

NCUA anticipates a FICU's application for approval to purchase assets or assume liabilities of a privately-insured credit union or other financial institution would consist of a cover letter and any transaction documents already prepared by the FICU in conjunction with the anticipated purchase or assumption. NCUA believes this would take one hour or less to prepare and transmit the cover letter and attach any additional documents; therefore, there is no increase or decrease in the burden for this data collection. The term ''transaction documents'' include contracts, agreements, letters, offers, or similar documents already created between two parties as evidence of a transaction or negotiation. NCUA does not require FICUs to prepare these documents and believes they are created in the regular course of business. Therefore, NCUA has used one burden hour per credit union per filing required from an FICU to prepare a letter requesting NCUA's approval of the transaction and describing the transaction.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Purchase of Assets and Assumptions of Liabilities.

OMB Number: 3133–0169.

Form Number: None.

Type of Review: Reinstatement without change.

Description: This information collection is required under Section 205 of the Federal Credit Union Act (FCU Act) to allow federally-insured credit unions (FICUs) to purchase assets or assume liabilities of privately-insured credit unions, other financial institutions, or their successor in interest.

Respondents: FICUs will apply to the NCUA for approval to purchase assets or assume liabilities of privately-insured credit unions or other financial institutions.

Estimated No. of Respondents/Recordkeepers: 5.

Estimated Burden Hours per Response: 1 hour.

Frequency of Response: Reporting and on occasion.

Estimated Total Annual Burden Hours: 5 hours.

Estimated Total Annual Cost: None.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating a previously approved collection of information for 12 CFR part 708b, Mergers of Federally-Insured Credit Unions; Voluntary Termination or Conversion of Insured Status. The Federal Credit Union Act (Act) authorizes the NCUA Board to prescribe rules regarding mergers of federally-insured credit unions and changes in insured status and requires written approval of the Board before one or more federally-insured credit union(s) merge or before a federally-insured credit union terminates federal

share insurance or converts to nonfederal share insurance. 12 U.S.C. 1752(7), 1766(a), 1785(b), 1785(c), and 1789(a). Part 708b of NCUA's rules sets forth the procedural and disclosure requirements for mergers of federally-insured credit unions, federal share insurance terminations, and conversions from federal share insurance to nonfederal (private) insurance. The rule is designed to ensure NCUA has sufficient information to determine whether to approve a proposed merger, share insurance termination, or share insurance conversion. It further ensures that members of credit unions have sufficient and accurate information to exercise their vote properly concerning a proposed merger, insurance termination, or insurance conversion. The rule also protects the property interests of members who may lose their federal share insurance due to a merger, share insurance termination, or share insurance conversion. 12 CFR part 708b.

The categories of burden for credit unions complying with part 708b may include the following:

Mergers

Each year, there are approximately 240 mergers involving federally-insured credit unions (both natural person and corporate credit unions). NCUA estimates it will take two merging credit unions approximately 35 hours between them to:

a. Prepare the required merger documents (§ 708b.103);

b. Collect and submit the required information to NCUA (§ 708b.104);

c. Provide the required insurance disclosures in other communications that the credit union plans to send to its members if the merger involves a share insurance conversion (§ 708b.206);

d. Notify members of the merger and send them the ballot (§§ 708b.106, 708b.303(a), 708b.303(b));

e. Notify NCUA of the results of the merger vote (§§ 708b.107, 708b.303(c));

f. Notify NCUA of the merger's completion (§ 708b.108); and

g. Notify members of the results of the merger and the possible effect on their insurance coverage (§ 708b.101(e)).

The 240 respondents (the two merging credit unions together treated as one respondent) times 35 hours per respondent equals 8,400 total annual burden hours associated with this collection of information.

Share Insurance Termination

Typically, no credit unions each year engage in share insurance terminations. If one or more credit unions were to engage in a voluntary termination of insurance in the future, NCUA estimates there will be minimal burden in the form of collections of information on those credit unions. NCUA estimates it will take each credit union approximately 12 hours to:

a. Prepare the required termination documents and submit the required information to NCUA (§ 708b.201);

b. Notify the members and send them the ballot (§ 708b.202);

c. Provide the required insurance disclosures in other communications that the credit union plans to send to its members (§ 708b.206);

d. Notify NCUA of the results of the termination vote (§ 708b.201(d)(2)); and

e. Provide members notice of termination of insurance (§ 708b.202(c)).

Zero respondents times 12 hours per respondent equals zero total annual burden hours associated with this collection of information.

Share Insurance Conversions

Approximately two credit unions each year engage in private share insurance conversions outside of the merger context. NCUA estimates there will be minimal burden in the form of collections of information, since NCUA provides forms and form language in the regulation. NCUA estimates that it will take each credit union approximately 12 hours to:

a. Prepare the required conversion documents and submit the required information to NCUA (§§ 708b.203, 708b.301(a));

b. Notify members of the conversion and send them the ballot (§§ 708b.204, 708b.301(b) and (c));

c. Provide the required insurance disclosures in other communications that the credit union plans to send to its members (§ 708b.206);

d. Notify NCUA of the results of the conversion vote (§ 708b.301(d)); and

e. Provide members notice of conversion of insurance (§ 708b.204(c)).

Two respondents times 12 hours per respondent equals 24 total annual burden hours associated with this collection of information.

The NCUA requests that you send your comments on this collection for part 708b to the locations listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

OMB Number: 3133—0024.

Form Number: None.

Title: Mergers of Federally-Insured Credit Unions; Voluntary Termination or Conversion of Insured Status, 12 CFR part 708b.

Type of Review: Reinstatement, with change, of a previously approved collection.

Description: Part 708b of NCUA's rules sets forth the procedural and disclosure requirements for mergers of federally-insured credit unions, federal share insurance terminations, and conversions from federal share insurance to nonfederal (private) insurance. Submission of this information is designed to ensure NCUA has sufficient information whether to approve a proposed merger, share insurance termination, or share insurance conversion. It further ensures that members of credit unions have sufficient and accurate information to exercise their vote properly concerning a proposed merger, insurance termination, or insurance conversion. The rule also protects the property interests of members who may lose their federal share insurance due to a merger, share insurance termination, or share insurance conversion.

Respondents: Federally-insured credit unions.

Estimated No. of Respondents: 242.

Frequency of Response: Once; On occasion.

Estimated Time per Response: Ranges from 12 to 35 hours.

Estimated Total Annual Burden Hours: 8,424 hours.

Estimated Total Annual Cost: $336,960.

By the National Credit Union Administration Board on July 15, 2013.

Mary Rupp,

Secretary of the Board.

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Submission to OMB for Reinstatement, Without Change, of a Previously Approved Collection; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comment.

SUMMARY: The NCUA intends to submit the following information collection to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). This information collection is published to obtain comments from the public. Section 741.2 of the NCUA Rules and Regulations (12 CFR part 741) places a maximum borrowing limit on federally insured credit unions. State chartered federally insured credit unions must seek a waiver of the borrowing limit from the NCUA Regional Director prior to exceeding this limitation.

DATES: Comments will be accepted until September 17, 2013.

ADDRESSES: Interested parties are invited to submit written comments to the NCUA Contact and the OMB Reviewer listed below:

NCUA Contact: Tracy Crews, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428, Fax No. 703–837–2861, Email: OCIOPRA@ncua.gov.

OMB Contact: Office of Management and Budget, ATTN: Desk Officer for the National Credit Union Administration, Office of Information and Regulatory Affairs, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information, a copy of the information collection request, or a copy of submitted comments should be directed to Tracy Crews at the National Credit Union Administration, 1775 Duke Street, Alexandria, VA 22314–3428, or at (703) 518–6444.

SUPPLEMENTARY INFORMATION:

I. Abstract and Request for Comments

NCUA is reinstating the collection for 3133–0168. The collection of information requirement is for those state chartered federal insured credit unions seeking a waiver from the borrowing limit. These credit unions must submit a detailed safety and soundness analysis, a proposed aggregate amount, a letter from the state regulator approving the request and an explanation of the need for the waiver to the NCUA Regional Director. This collection of information is necessary to protect the National Credit Union Share Insurance Fund (''Fund''). The NCUA Board has determined that borrowing in excess of 50 percent of paid-in and unimpaired capital and surplus may cause an undue risk to the Fund and a loss of confidence in the credit union system. The NCUA must be made aware of and be able to monitor those credit unions seeking a waiver from the requirement. There is no change in burden hours from previous submission.

The NCUA requests that you send your comments on this collection to the location listed in the addresses section. Your comments should address: (a) The necessity of the information collection for the proper performance of NCUA, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents such as through the use of automated collection techniques or other forms of information technology. It is NCUA's policy to make all comments available to the public for review.

II. Data

Title: Maximum Borrowing Authority, 12 CFR 741.2.

OMB Number: 3133–0168.

Form Number: None.

Type of Review: Reinstatement, without change, of a previously approved collection.

Description: 5 CFR 741.2 places a maximum borrowing limitation on federally insured credit unions of 50 percent of paid-in and unimpaired capital and surplus. The collection of information requirement is for those federally insured state-chartered credit unions seeking a waiver from the maximum borrowing limitation of 50 percent of paid-in and unimpaired capital and surplus. These credit unions must submit a detailed safety and soundness analysis, a proposed aggregate amount, a letter from the state regulator approving the request and an explanation of the need for the waiver to the NCUA Regional Director.

Respondents: Credit unions.

OVERSEAS PRIVATE INVESTMENT CORPORATION

Sunshine Act Meeting

TIME AND DATE: 2:00 p.m., Wednesday, September 11, 2013.

PLACE: Offices of the Corporation, Twelfth Floor Board Room, 1100 New York Avenue NW., Washington, DC.

STATUS: Hearing open to the public at 2:00 p.m.

PURPOSE: Public Hearing in conjunction with each meeting of OPIC's Board of Directors, to afford an opportunity for any person to present views regarding the activities of the Corporation.

PROCEDURES: Individuals wishing to address the hearing orally must provide advance notice to OPIC's Corporate Secretary no later than 5 p.m. Friday, September 6, 2013. The notice must include the individual's name, title, organization, address, and telephone number, and a concise summary of the subject matter to be presented.

Oral presentations may not exceed ten (10) minutes. The time for individual

presentations may be reduced proportionately, if necessary, to afford all participants who have submitted a timely request an opportunity to be heard.

Participants wishing to submit a written statement for the record must submit a copy of such statement to OPIC's Corporate Secretary no later than 5 p.m. Friday, September 6, 2013. Such statement must be typewritten, double-spaced, and may not exceed twenty-five (25) pages.

Upon receipt of the required notice, OPIC will prepare an agenda, which will be available at the hearing, that identifies speakers, the subject on which each participant will speak, and the time allotted for each presentation.

A written summary of the hearing will be compiled, and such summary will be made available, upon written request to OPIC's Corporate Secretary, at the cost of reproduction.

Written summaries of the projects to be presented at the September 19, 2013 Board meeting will be posted on OPIC's Web site on or about Thursday, August 29, 2013.

CONTACT PERSON FOR INFORMATION: Information on the hearing may be obtained from Connie M. Downs at (202) 336–8438, via facsimile at (202) 408–0297, or via email at *Connie.Downs@opic.gov*.

Dated: July 17, 2013.

Connie M. Downs,

OPIC Corporate Secretary.

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2013–55 and CP2013–73; Order No. 1777]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the addition of Priority Mail Contract 61 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* July 22, 2013.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.,* the Postal Service filed a request and associated supporting information to add Priority Mail Contract 61 to the competitive product list.[1] It asserts that Priority Mail Contract 61 is a competitive product ''not of general applicability'' within the meaning of 39 U.S.C. 3632(b)(3). Request at 1. The Request has been assigned Docket No. MC2013–55.

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. *Id.* Attachment B. The instant contract has been assigned Docket No. CP2013–73.

Request. To support its Request, the Postal Service filed six attachments as follows:

- Attachment A—a redacted copy of Governors' Decision No. 11–6, authorizing the new product;
- Attachment B—a redacted copy of the contract;
- Attachment C—proposed changes to the Mail Classification Schedule competitive product list with the addition underlined;
- Attachment D—a Statement of Supporting Justification as required by 39 CFR 3020.32;
- Attachment E—a certification of compliance with 39 U.S.C. 3633(a); and
- Attachment F—an application for non-public treatment of materials to maintain redacted portions of the contract and related financial information under seal.

In the Statement of Supporting Justification, Dennis R. Nicoski, Manager, Field Sales Strategy and Contracts, asserts that the contract will cover its attributable costs and increase contribution toward the requisite 5.5 percent of the Postal Service's total institutional costs. *Id.* Attachment D at 1. Mr. Nicoski contends that there will be no issue of market dominant products subsidizing competitive products as a result of this contract. *Id.*

Related contract. The Postal Service included a redacted version of the related contract with the Request. *Id.* Attachment B. The contract is scheduled to become effective one business day after the Commission issues all necessary regulatory approval. *Id.* at 2. The contract will expire three years from the effective date unless, among other things, either party terminates the agreement upon 90 days' written notice to the other party. *Id.* at 3. The contract also allows two 90-day extensions of the agreement if the preparation of a successor agreement is active and the Commission is notified.[2] The Postal Service represents that the contract is consistent with 39 U.S.C. 3633(a).[3]

The Postal Service filed much of the supporting materials, including the related contract, under seal. *Id.* Attachment F. It maintains that the redacted portions of the Governors' Decision, contract, customer-identifying information, and related financial information should remain confidential. *Id.* at 3. This information includes the price structure, underlying costs and assumptions, pricing formulas, information relevant to the customer's mailing profile, and cost coverage projections. *Id.* The Postal Service asks the Commission to protect customer-identifying information from public disclosure indefinitely. *Id.* at 7.

II. Notice of Filings

The Commission establishes Docket Nos. MC2013–55 and CP2013–73 to consider the Request pertaining to the proposed Priority Mail Contract 61 product and the related contract, respectively.

Interested persons may submit comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart

[1] Request of the United States Postal Service to Add Priority Mail Contract 61 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data, July 12, 2013 (Request).

[2] *Id.* In Docket Nos. MC2013–54 and CP2013–70, the Postal Service clarified that identical language in Priority Mail Contract 60 ''contemplates the Postal Service filing any notices of extension with the Commission at least one week prior to the 3-year expiration date or the extended expiration date.'' *See* Docket Nos. MC2013–54 and CP2013–70, Order No. 1773, Order Adding Priority Mail Contract 60 to the Competitive Product List, July 8, 2013; *see also* Docket Nos. MC2013–54 and CP2013–70, Response of the United States Postal Service to Chairman's Information Request No. 1, July 1, 2013, at question 2.

[3] Although the Notice appears to state that the certification only pertains to paragraphs (1) and (3) of 39 U.S.C. 3633(a), the certification itself contains an assertion that the ''prices are in compliance with 39 U.S.C. 3633 (a)(1), (2), and (3).'' Request at 2 and Attachment E.

B. Comments are due no later than July 22, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Curtis E. Kidd to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2013–55 and CP2013–73 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Curtis E. Kidd is appointed to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in these proceedings.

3. Comments by interested persons in these proceedings are due no later than July 22, 2013.

4. The Secretary shall arrange for publication of this Order in the **Federal Register**.

By the Commission.

Shoshana M. Grove,

Secretary.

BILLING CODE 7710–FW–P

POSTAL REGULATORY COMMISSION

[Docket No. CP2013–15; Order No. 1779]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the amendment to Priority Mail Contract 48 negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* July 23, 2013.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

On July 12, 2013, the Postal Service filed notice that it has agreed to an amendment to Priority Mail Contract 48.[1] The Notice includes a redacted version of the amendment to Priority Mail Contract 48 (Amendment) and the certified statement and supporting financial information required by 39 CFR 3015.5(c) relating to the change in prices.

The Amendment changes the prices that apply to packages sent under Priority Mail Contract 48 as well as the parameters for packages considered ''Contract Packages'' under the contract. Notice, Attachment A at 1. It is scheduled to take effect one business day after the Commission completes its review of the Amendment. *Id.*

The Postal Service's Notice contained the Amendment as Attachment A, the certified statement as Attachment B, and sought to incorporate by reference the original application for non-public treatment in this docket. Notice at 1.

In the certified statement required by 39 CFR 3015.5, Steven R. Phelps, Manager, Regulatory Reporting and Cost Analysis, Finance Department, states that the amended prices and terms are consistent with Governors Decision No. 11–6 and 39 U.S.C. 3633(a) *Id.,* Attachment B. He concludes that the contract is expected to cover its attributable costs and will not result in the subsidization of competitive products by market dominant products. *Id.*

II. Notice of Filing

Interested persons may submit comments on whether the changes presented in the Postal Service's Notice and Supplement are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020 subpart B. Comments are due no later than July 23, 2013. The public portions of these filings can be accessed via the Commission's Web site (*www.prc.gov*). Information on how to obtain access to non-public material appears at 39 CFR 3007.40.

James F. Callow will continue to serve as the Public Representative in this proceeding.

III. Ordering Paragraphs

It is ordered:

1. The Commission reopens Docket No. CP2013–15 for consideration of matters raised by the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, James F. Callow will continue to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments are due no later than July 23, 2013.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Shoshana M. Grove,

Secretary.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.,* the Postal Service filed a request and associated supporting information to add Priority Mail Contract 62 to the competitive product list.[1] It asserts that Priority Mail

[1] Request of the United States Postal Service to Add Priority Mail Contract 62 to Competitive

Contract 62 is a competitive product ''not of general applicability'' within the meaning of 39 U.S.C. 3632(b)(3). Request at 1. The Request has been assigned Docket No. MC2013–56.

The Postal Service contemporaneously filed a redacted contract related to the proposed new product. *Id.* Attachment B. The instant contract has been assigned Docket No. CP2013–74.

Request. To support its Request, the Postal Service filed six attachments as follows:

- Attachment A—a redacted copy of Governors' Decision No. 11–6, authorizing the new product;
- Attachment B—a redacted copy of the contract;
- Attachment C—proposed changes to the Mail Classification Schedule competitive product list with the addition underlined;
- Attachment D—a Statement of Supporting Justification as required by 39 CFR 3020.32;
- Attachment E—a certification of compliance with 39 U.S.C. 3633(a); and
- Attachment F—an application for non-public treatment of materials to maintain redacted portions of the contract and related financial information under seal.

In the Statement of Supporting Justification, Dennis R. Nicoski, Manager, Field Sales Strategy and Contracts, asserts that the contract will cover its attributable costs and increase contribution toward the requisite 5.5 percent of the Postal Service's total institutional costs. *Id.* Attachment D at 1. Mr. Nicoski contends that there will be no issue of market dominant products subsidizing competitive products as a result of this contract. *Id.*

Related contract. The Postal Service included a redacted version of the related contract with the Request. *Id.* Attachment B. The contract is scheduled to become effective one business day after the Commission issues all necessary regulatory approval. *Id.* at 2. The contract will expire three years from the effective date unless, among other things, either party terminates the agreement upon 30 days' written notice to the other party. *Id.* at 3. The contract also allows two 90-day extensions of the agreement if the preparation of a successor agreement is active and the Commission is notified.[2] The Postal Service represents that the contract is consistent with 39 U.S.C. 3633(a).[3]

The Postal Service filed much of the supporting materials, including the related contract, under seal. *Id.* Attachment F. It maintains that the redacted portions of the Governors' Decision, contract, customer-identifying information, and related financial information should remain confidential. *Id.* at 3. This information includes the price structure, underlying costs and assumptions, pricing formulas, information relevant to the customer's mailing profile, and cost coverage projections. *Id.* The Postal Service asks the Commission to protect customer-identifying information from public disclosure indefinitely. *Id.* at 7.

II. Notice of Filings

The Commission establishes Docket Nos. MC2013–56 and CP2013–74 to consider the Request pertaining to the proposed Priority Mail Contract 62 product and the related contract, respectively.

Interested persons may submit comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than July 22, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Lyudmila Y. Bzhilyanskaya to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2013–56 and CP2013–74 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Lyudmila Y. Bzhilyanskaya is appointed to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in these proceedings.

3. Comments by interested persons in these proceedings are due no later than July 22, 2013.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

POSTAL SERVICE

Privacy Act of 1974; System of Records

AGENCY: Postal Service™.

ACTION: Notice of modification to existing systems of records.

SUMMARY: The United States Postal Service® is proposing to modify four General Privacy Act Systems of Records. These updates are being made to account for additional methods that the Postal Service uses to contact applicants, employees, and former employees. Additionally, changes are being made to one record system to include assessments of postal employees and to expand the locations where information from such assessments may be stored. Lastly, changes are being made to another record system pertaining to personnel research to include former Postal Service employees as a category of individuals covered by that system and to modify one of the purposes of the system.

DATES: These revisions will become effective without further notice on August 19, 2013 unless comments received on or before that date result in a contrary determination.

ADDRESSES: Comments may be mailed or delivered to the Records Office, United States Postal Service, 475 L'Enfant Plaza SW., Room 9431, Washington, DC 20260–1101. Copies of all written comments will be available at this address for public inspection and photocopying between 8 a.m. and 4 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Matthew J. Connolly, Chief Privacy Officer (A), Privacy and Records Office, 202–268–8582.

SUPPLEMENTARY INFORMATION: This notice is in accordance with the Privacy Act requirement that agencies publish their amended systems of records in the **Federal Register** when there is a revision, change, or addition. The Postal Service™ has reviewed these systems of

records and has determined that these four General Privacy Act Systems of Records should be revised to modify system location, categories of individuals covered by the system, categories of records in the system, purpose(s), retreivability, notification procedure, and record source categories.

I. Background

The U.S. Postal Service has, as a necessary practice since the inception of its online application process, collected the personal email addresses of applicants and potential applicants as a means of communication. The proposed changes are intended to account for such collection.

Additionally, over the next few years, a substantial portion of the current Postal Service leadership will be eligible to retire. Moreover, a significant organizational transition is changing the competencies and skills that are needed by up-and-coming leadership. Therefore, it is critically important that the Postal Service be ready to assess the capabilities of existing and potential leaders by providing tailored assessments that adequately measure characteristics that are linked directly to the leadership competency models, thereby allowing the Postal Service to identify, develop, and hire top talent into leadership positions. The proposed changes are intended to facilitate such assessments and the storage of information generated from such assessments.

Lastly, the proposed changes are intended to provide Human Resources with the option of contacting former employees, via their personal email addresses, for the purpose of obtaining feedback that will enable the Postal Service to continuously improve its processes.

II. Rationale for Changes to USPS Privacy Act Systems of Records

The systems of records 100.000 General Personal Records and 100.100 Recruiting, Examining, and Placement Records are being modified to account for the collection of personal email addresses from applicants and potential applicants who then become employees.

Additionally, the system of records 100.300 Employee Development and Training Records is being updated to facilitate the assessment services of contractors as part of its continued effort to develop and hire talent into leadership positions.

Lastly, the Postal Service is also proposing additional changes to system of records 100.600 Personnel Research to facilitate assessments by Human Resources of the impact of selection decisions on applicants within specific demographic categories, including, among other categories, veteran status. Among other things, these changes will enable the Postal Service to obtain feedback from applicants, potential applicants, employees, and former employees via their personal email addresses so that the Postal Service may continuously improve its processes. A minor change is also being made to clarify that Employee Identification Numbers, which are used to identify postal employees in other records systems, will be a category of records in this system.

III. Description of Changes to Systems of Records

The Postal Service is modifying four systems of records listed below. Pursuant to 5 U.S.C. 552a (e)(11), interested persons are invited to submit written data, views, or arguments on this proposal. A report of the proposed modifications has been sent to Congress and to the Office of Management and Budget for their evaluation. The Postal Service does not expect this amended notice to have any adverse effect on individual privacy rights. The affected systems are as follows:

USPS 100.000

System Name: General Personnel Records

USPS 100.100

System Name: Recruiting, Examining, and Placement Records

USPS 100.300

System Name: Employee Development and Training Records

USPS 100.600

System Name: Personnel Research Records

Accordingly, for the reasons stated, the Postal Service proposes changes in the existing system of records as follows:

USPS 100.000

SYSTEM NAME:

General Personnel Records.

CATEGORIES OF RECORDS IN THE SYSTEM:

* * * * *

[CHANGE TO READ]

1. *Employee, former employee, and family member information:* Name(s), Social Security Number(s), Employee Identification Number, date(s) of birth, place(s) of birth, marital status, postal assignment information, work contact information, home address(es) and phone number(s), personal email address, finance number(s), duty location, and pay location.

* * * * *

USPS 100.100

SYSTEM NAME:

Recruiting, Examining, and Placement Records.

CATEGORIES OF RECORDS IN THE SYSTEM:

* * * * *

[CHANGE TO READ]

1. Applicant, potential applicants with candidate profiles, and employee information: Name(s), Social Security Number(s), Candidate Identification Number, Employee Identification Number, date(s) of birth, postal assignment or vacancy/job posting history information, work contact information, home address(es) and phone number(s), personal email address, finance number(s), duty location, and pay location.

* * * * *

USPS 100.300

SYSTEM NAME:

Employee Development and Training Records.

SYSTEM LOCATION:

[CHANGE TO READ]

Management training centers, Integrated Business Solutions Services Centers, other USPS facilities where career development and training records are stored, and contractor sites.

CATEGORIES OF RECORDS IN THE SYSTEM:

* * * * *

[CHANGE TO READ]

2. Employee development and training information: Records related to career development, work history, assessments, skills bank participation, USPS- and non-USPS-sponsored training, examinations, evaluations of training, and USPS lodging when a discrepancy report is filed against the student about unauthorized activities while occupying the room.

* * * * *

USPS 100.600

SYSTEM NAME:

Personnel Research Records.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

[CHANGE TO READ]

Potential applicants for USPS employment, applicants for USPS employment, USPS employee applicants for reassignment and/or promotion, employees whose work records or solicited responses are used in research projects, and former USPS employees.

CATEGORIES OF RECORDS IN THE SYSTEM:

[CHANGE TO READ]

1. Applicant, potential applicant with candidate profile, and employee information: Name, Social Security Number, Candidate Identification Number, Employee Identification Number (EIN), or respondent identification code, place of birth, postal assignment or vacancy/posting information, work contact information, home address and phone number(s), personal email address, finance number(s), duty location, and pay location.

2. Personnel research information: Records related to race, ethnicity, sex, tenure, age, veteran status, and disability status (only if volunteered by the individual); research project identifiers; and other information pertinent to personnel research.

* * * * *

PURPOSE(S):

* * * * *

[CHANGE TO READ]

2. To assess the impact of selection decisions on applicants in race, ethnicity, sex, tenure, age, veteran status, and disability categories.

* * * * *

RETRIEVABILITY:

By individual name, Social Security Number, Candidate Identification Number, Employee Identification Number, personal email address, respondent identification code, research project identifiers, postal assignment or vacancy/posting information, duty or pay location, or location where data were collected.

* * * * *

NOTIFICATION PROCEDURE:

Individuals wanting to know if information about them is maintained in this system of records must address inquiries to the Vice President, Employee Resource Management, 475 L'Enfant Plaza SW., Washington, DC 20260. In cases of studies involving information not collected through an examination, individuals must address inquiries to the system manager. Inquiries must contain full name; Candidate Identification Number, Employee Identification Number, or respondent identification code, and subject or purpose of research/survey; and date and location of their participation.

* * * * *

RECORD SOURCE CATEGORIES:

USPS employees, former employees, applicants, and potential applicants with candidate profiles who provide information to personnel research programs and other systems of records.

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Investor Education and Advocacy, Washington, DC 20549–2013.

Extension:

Rule 602. SEC File No. 270–404, OMB Control No. 3235–0461.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the existing collection of information provided for in Rule 602 of Regulation NMS (17 CFR 240.602), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Rule 602 of Regulation NMS, Dissemination of Quotations in NMS securities, contains two related collections. The first collection of information is found in Rule 602(a).[1] This third-party disclosure requirement obligates each national securities exchange and national securities association to make available to quotation vendors for dissemination to the public the best bid, best offer, and aggregate quotation size for each ''subject security,'' as defined under the Rule. The second collection of information is found in Rule 602(b).[2] This disclosure requirement obligates any exchange member and over-the-counter (''OTC'') market maker that is a ''responsible broker or dealer,'' as defined under the Rule, to communicate to an exchange or association its best bids, best offers, and quotation sizes for subject securities.[3]

[1] 17 CFR 242.602(a).

[2] 17 CFR 242.602(b).

[3] Under Rule 602(b)(5), electronic communications networks (''ECNs'') have the

Continued

It is anticipated that 17 respondents, consisting of 16 national securities exchanges and one national securities association, will collectively respond approximately 839,944,682,631 times per year pursuant to Rule 602(a) at 18.22 microseconds per response, resulting in a total annual burden of approximately 4,250 hours.

It is anticipated that approximately 150 respondents, consisting of OTC market makers, will collectively respond approximately 28,200,000 times per year pursuant to Rule 602(b) at 3 seconds per response, resulting in a total annual burden of approximately 23,500 hours.

Thus, the aggregate third-party disclosure burden under Rule 602 is 27,750 hours annually which is comprised of 4,250 hours relating to Rule 602(a) and 23,500 hours relating to Rule 602(b).

Written comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (b) the accuracy of the Commission's estimate of the burden of the proposed collections of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of collections of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number. Please direct your written comments to: Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or by sending an email to: *PRA_Mailbox@sec.gov*.

option of reporting to an exchange or association for public dissemination, on behalf of customers that are OTC market makers or exchange market makers, the best-priced orders and the full size for such orders entered by market makers on the ECN, to satisfy such market makers' reporting obligation under Rule 602(b). Since this reporting requirement is an alternative method of meeting the market makers' reporting obligation, and because it is directed to nine or fewer persons (ECNs), this collection of information is not subject to OMB review under the Paperwork Reduction Act (''PRA'').

Dated: July 15, 2013.

Extension:

Form N–CSR. SEC File No. 270–512, OMB Control No. 3235–0570

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the ''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Form N–CSR (17 CFR 249.331 and 274.128) is a combined reporting form used by registered management investment companies (''funds'') to file certified shareholder reports under the Investment Company Act of 1940 (15 U.S.C. 80a–1 et seq.) (''Investment Company Act'') and the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq.) (''Exchange Act''). Specifically, Form N–CSR is to be used for reports under section 30(b)(2) of the Investment Company Act (15 U.S.C. 80a–29(b)(2)) and section 13(a) or 15(d) of the Exchange Act (15 U.S.C. 78m(a) and 78o(d)), filed pursuant to rule 30b2–1(a) under the Investment Company Act (17 CFR 270.30b2–1(a)). Reports on Form N CSR are to be filed with the Securities and Exchange Commission (''Commission'') no later than 10 days after the transmission to stockholders of any report that is required to be transmitted to stockholders under rule 30e–1 under the Investment Company Act (17 CFR 270.30e–1).

Form N–CSR is filed semi-annually, and the Commission estimates that there are 3,288 respondents. The Commission also estimates that the average number of portfolios referenced in each filing is 3.75. The Commission further estimates that the hour burden for preparing and filing a report on Form N–CSR is 7.21 hours per portfolio. Given that filings on Form N–CSR are filed semi-annually, filings on Form N–CSR require 14.42 hours per portfolio each year. The total annual hour burden for Form N–CSR, therefore, is estimated to be 177,799 hours. The estimated total annual cost burden to respondents for outside professionals associated with the collection of data relating to Form N–CSR is $3,189,771.

The collection of information under Form N–CSR is mandatory. Responses to the collection of information will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid control number.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, C/O Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549; or send an email to: *PRA_Mailbox@sec.gov.*

Dated: July 15, 2013.

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Filings and Information Services, Washington, DC 20549.

Extension:

Rule 17a–3(a)(16). SEC File No. 270–452, OMB Control No. 3235–0508.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. Sec. 3501 *et seq.*) (''PRA''), the Securities and Exchange Commission (''Commission'') is

soliciting comments on the collection of information provided for in Rule 17a–3(a)(16) (17 CFR 240.17a–3(a)(16)) under the Securities Exchange Act of 1934 (15 U.S.C. 78q *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Rule 17a–3(a)(16) identifies the records required to be made by broker-dealers that operate internal broker-dealer systems. Those records are to be used in monitoring compliance with the Commission's financial responsibility program and antifraud and antimanipulative rules, as well as other rules and regulations of the Commission and the self-regulatory organizations. It is estimated that approximately 105 active broker-dealer respondents registered with the Commission incur an average aggregate burden of 2,835 hours per year (105 respondents multiplied by 27 burden hours per respondent equals 2,835 total burden hours) to comply with this rule.[1]

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or send an email to: *PRA_Mailbox@sec.gov.*

Dated: July 15, 2013.

Kevin M. O'Neill,

Deputy Secretary.

[FR Doc. 2013–17314 Filed 7–18–13; 8:45 am]

BILLING CODE 8011–01–P

[1] The average cost per hour is $269. Therefore the total internal cost of compliance for the respondents is $762,615.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 30599; 812–14110]

Grosvenor Alternative Funds Master Trust, et al.; Notice of Application

July 15, 2013.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application under section 6(c) of the Investment Company Act of 1940 (''Act'') for an exemption from section 15(a) of the Act and rule 18f–2 under the Act, as well as from certain disclosure requirements.

SUMMARY: *Summary of Application:* Applicants request an order that would permit them to enter into and materially amend subadvisory agreements without shareholder approval and would grant relief from certain disclosure requirements.

Applicants: Grosvenor Alternative Funds Master Trust (''Master Trust''), Grosvenor Alternative Funds (''GAF Trust''), and Grosvenor Capital Management, L.P. (the ''Initial Adviser'') (collectively, ''Applicants'').

DATES:

Filing Dates: The application was filed on January 8, 2013, and amended on May 10, 2013.

Hearing or Notification of Hearing: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on August 9, 2013 and should be accompanied by proof of service on the applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: Girish Kashyap, Grosvenor Capital Management, L.P., 900 North Michigan Avenue, Suite 1100, Chicago, IL 60611.

FOR FURTHER INFORMATION CONTACT: Courtney S. Thornton, Senior Counsel, at (202) 551–6812, or David P. Bartels, Branch Chief, at (202) 551–6821 (Division of Investment Management, Exemptive Applications Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Applicants' Representations

1. The Master Trust [1] and the GAF Trust (collectively with the Master Trust, ''Trusts'') will be registered under the Act as open-end management investment companies organized as Delaware statutory trusts.[2] Each Trust will offer one or more series (each a ''Fund'' and collectively the ''Funds''), each of which has or will have its own distinct investment objectives, policies and restrictions.[3] The Initial Adviser, an Illinois limited partnership, is registered as an investment adviser under the Investment Advisers Act of 1940 (''Advisers Act''). The Initial Adviser will serve as investment adviser to each Fund pursuant to an investment advisory agreement (''Advisory Agreement'') with the respective Fund.[4]

[1] Applicants state that each series of the Master Trust is a master fund (''Master Fund'') in a master-feed structure pursuant to section 12(d)(1)(E) of the Act. Certain Funds (as defined below), as well as any future Fund and any other investment company or series thereof that is advised by the Initial Adviser (as defined below), may invest substantially all their assets in the Master Fund (each a ''Feeder Fund''). No Feeder Fund will engage any subadviser other than through approving the applicable Master Fund's subadviser, if any.

[2] Applicants also request relief with respect to any future Fund as well as any other existing or future registered open-end management investment company or series thereof that: (a) is advised by the Initial Adviser or any entity controlling, controlled by, or under common control with the Initial Adviser or its successors (collectively, the ''Adviser''); (b) uses the manager of managers structure (''Manager of Managers Structure'') described in the application; and (c) complies with the terms and conditions of the application (together with any Funds that currently use the Manager of Mangers Structure, each a ''Subadvised Fund'' and collectively, the ''Subadvised Funds''). The only existing registered open-end management investment companies that currently intend to rely on the requested order are named as applicants. For purposes of the requested order, ''successor'' is limited to an entity or entities that result from a reorganization into another jurisdiction or a change in the type of business organization. If the name of any Subadvised Fund contains the name of a Subadviser (as defined below), the name of the Adviser will precede the name of the Subadviser.

[3] The initial and current Fund of the Master Trust is Grosvenor Alternative Strategies Master Fund. The initial and current Fund of the GAF Trust is Grosvenor Alternative Strategies Fund.

[4] Applicants state that, under a master-feeder operating structure, the initial Fund in the GAF Trust is a Feeder Fund that pursues its investment objective by investing all of its investable assets in a corresponding series of the Master Trust having identical investment objectives to those of the

Continued

Each Advisory Agreement will be approved by the relevant Trust's board of trustees (the ''Board''), including a majority of the trustees who are not ''interested persons,'' as defined in section 2(a)(19) of the Act, of the Trust or the Adviser (''Independent Trustees'') and by the shareholders of the relevant Fund in the manner required by sections 15(a) and 15(c) of the Act and rule 18f–2 under the Act.

2. Under the terms of the Advisory Agreements, the Adviser, subject to the oversight of the Board, will furnish a continuous investment program for each Fund. The Adviser periodically reviews investment policies and strategies of each Fund and, based on the need of a particular Fund, may recommend changes to the investment policies and strategies of the Fund for consideration by its Board. For its services to each Fund, the Adviser will receive an investment advisory fee from that Fund as specified in the applicable Advisory Agreement based on the average daily net asset value of that Fund. The terms of the Advisory Agreements also permit the Adviser, subject to the approval of the relevant Board, including a majority of the Independent Trustees and the shareholders of the applicable Subadvised Funds (if required by applicable law), to delegate portfolio management responsibilities of all or a portion of the assets of the Subadvised Fund to one or more subadvisers (''Subadvisers''). The Adviser intends to enter into subadvisory agreements (''Subadvisory Agreements'') with various Subadvisers to provide investment advisory services to various Subadvised Funds. Each Subadviser will be an investment adviser as defined in section 2(a)(20) of the Act and registered with the Commission as an ''investment adviser'' under the Advisers Act. The Adviser will evaluate, allocate assets to and oversee the Subadvisers, and will make recommendations about their hiring, termination and replacement to the Board, at all times subject to the authority of the Board. The Adviser will compensate each Subadviser out of the fee paid to the Adviser under the relevant Advisory Agreement, or the Subadvised Fund will be responsible for paying subadvisory fees directly to the Subadviser.[5]

3. The Subadvised Funds will inform shareholders of the hiring of a new Subadviser pursuant to the following procedures (''Modified Notice and Access Procedures''): (a) within 90 days after a new Subadviser is hired for any Subadvised Fund, that Subadvised Fund will send its shareholders[6] either a Multi-Manager Notice or a Multi-Manager Notice and Multi-Manager Information Statement;[7] and (b) the Subadvised Fund will make the Multi-Manager Information Statement available on the Web site identified in the Multi-Manager Notice no later than when the Multi-Manager Notice (or Multi-Manager Notice and Multi-Manager Information Statement) is first sent to shareholders, and will maintain it on that Web site for at least 90 days.

4. Applicants request an order to permit the Adviser, subject to Board approval, to select Subadvisers to manage all or a portion of the assets of a Subadvised Fund pursuant to a Subadvisory Agreement and to materially amend Subadvisory Agreements without obtaining shareholder approval. The requested relief will not extend to any Subadviser that is an affiliated person, as defined in section 2(a)(3) of the Act, of a Feeder Fund or a Subadvised Fund or the Adviser, other than by reason of serving as a Subadviser to a Subadvised Funds (''Affiliated Subadviser'').

5. Applicants also request an order exempting the Subadvised Funds from certain disclosure provisions described below that may require the Applicants to disclose fees paid by the Adviser or a Subadvised Fund to each Subadviser. Applicants seek an order to permit each Subadvised Fund to disclose (as a dollar amount and a percentage of each Subadvised Fund's net assets) only: (a) the aggregate fees paid to the Adviser and any Affiliated Subadvisers; and (b) the aggregate fees paid to Subadvisers other than Affiliated Subadvisers (collectively, the ''Aggregate Fee Disclosure'').[8] A Subadvised Fund that employs an Affiliated Subadviser will provide separate disclosure of any fees paid to the Affiliated Subadviser.

Applicants' Legal Analysis

1. Section 15(a) of the Act provides, in relevant part, that it is unlawful for any person to act as an investment adviser to a registered investment company except pursuant to a written contract that has been approved by the vote of a majority of the company's outstanding voting securities. Rule 18f–2 under the Act provides that each series or class of stock in a series investment company affected by a matter must approve that matter if the Act requires shareholder approval.

2. Form N–1A is the registration statement used by open-end investment companies. Item 19(a)(3) of Form N–1A requires disclosure of the method and amount of the investment adviser's compensation.

3. Rule 20a–1 under the Act requires proxies solicited with respect to an investment company to comply with Schedule 14A under the Exchange Act. Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8) and 22(c)(9) of Schedule 14A, taken together, require a proxy statement for a shareholder meeting at which the advisory contract will be voted upon to include the ''rate of compensation of the investment adviser,'' the ''aggregate amount of the investment adviser's fees,'' a description of the ''terms of the contract to be acted upon,'' and, if a change in the advisory fee is proposed, the existing and proposed fees and the difference between the two fees.

4. Regulation S–X sets forth the requirements for financial statements required to be included as part of a registered investment company's registration statement and shareholder

Fund. All investment management for the Feeder Funds takes place at the Master Fund level and no investment management takes place at the Feeder Fund level. Investment management for any future Funds that do not operate under a master-feeder structure will occur at the Fund level.

[5] Under the requested order, for Subadvised Funds that pay fees to a Subadviser directly from Fund assets, any change to a Subadvisory Agreement or Investment Advisory Agreement that would not result in an increase in the total management and advisory fees payable by the Subadvised Fund would not need to be submitted to affected shareholders for approval. For instance, the management and advisory fees payable by a Subadvised Fund to a Subadviser could be increased without shareholder approval if there were a corresponding decrease in the management and advisory fees payable by the Subadvised Fund to the Adviser.

[6] If the Subadvised Fund is a Master Fund, for purposes of the Modified Notice and Access Procedures, ''shareholders'' include both the shareholders of the applicable Master Fund and the shareholders of its Feeder Funds.

[7] A ''Multi-Manager Notice'' will be modeled on a Notice of Internet Availability as defined in rule 14a-16 under the Securities Exchange Act of 1934 (''Exchange Act''), and specifically will, among other things: (a) Summarize the relevant information regarding the new Subadviser; (b) inform shareholders that the Multi-Manager Information Statement is available on a Web site; (c) provide the Web site address; (d) state the time period during which the Multi-Manager Information Statement will remain available on that Web site; (e) provide instructions for accessing and printing the Multi-Manager Information Statement; and (f) instruct the shareholder that a paper or email copy of the Multi-Manager Information Statement may be obtained, without charge, by contacting the Subadvised Fund. A ''Multi-Manager Information Statement'' will meet the requirements of Regulation 14C, Schedule 14C and Item 22 of Schedule 14A under the Exchange Act for an information statement, except as modified by the requested order to permit Aggregate Fee Disclosure (as defined below). Multi-Manager Information Statements will be filed electronically with the Commission via the EDGAR system.

[8] For any Subadvised Fund that is a Master Fund, applicants request that this relief also permit any Feeder Fund invested in that Master Fund to disclose Aggregate Fee Disclosure.

reports filed with the Commission. Sections 6–07(2)(a), (b) and (c) of Regulation S–X require a registered investment company to include in its financial statement information about the investment advisory fees.

5. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or from any rule thereunder, if such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicants state that the requested relief meets this standard for the reasons discussed below.

6. Applicants assert that the shareholders expect the Adviser, subject to the review and approval of the Board, to select the Subadvisers who are best suited to achieve the Subadvised Fund's investment objective. Applicants assert that, from the perspective of the shareholder, the role of the Subadviser is substantially equivalent to the role of the individual portfolio managers employed by an investment adviser to a traditional investment company. Applicants state that requiring shareholder approval of each Subadvisory Agreement would impose unnecessary delays and expenses on the Subadvised Funds, and enable the Subadvised Fund to act more quickly when the Board and the Adviser believe that a change would benefit a Subadvised Fund and its shareholders. Applicants note that the Investment Advisory Agreements and any Subadvisory Agreement with an Affiliated Subadviser (if any) will continue to be subject to the shareholder approval requirements of section 15(a) of the Act and rule 18f–2 under the Act.

7. Applicants assert that the requested disclosure relief would benefit shareholders of the Subadvised Funds because it would improve the Adviser's ability to negotiate the fees paid to Subadvisers. Applicants state that the Adviser may be able to negotiate rates that are below a Subadviser's ''posted'' amounts, if the Adviser is not required to disclose the Subadvisers' fees to the public. Applicants submit that the requested relief will encourage Subadvisers to negotiate lower subadvisory fees with the Adviser if the lower fees are not required to be made public.

Applicants' Conditions

Applicants agree that any order granting the requested relief will be subject to the following conditions:

1. Before a Subadvised Fund may rely on the requested order, the operation of the Subadvised Fund in the manner described in the application will be approved by a majority of the Subadvised Fund's outstanding voting securities as defined in the Act, which in the case of a Master Fund will include voting instructions provided by shareholders of the Feeder Funds investing in such Master Fund or other voting arrangements that comply with section 12(d)(1)(E)(iii)(aa) of the Act, or, in the case of a Subadvised Fund whose public shareholders purchase shares on the basis of a prospectus containing the disclosure contemplated by condition 2 below, by the initial shareholder before such Subadvised Fund's shares are offered to the public.

2. The prospectus for each Subadvised Fund, and in the case of a Master Fund relying on the requested relief, the prospectus for each Feeder Fund investing in such Master Fund, will disclose the existence, substance, and effect of any order granted pursuant to the application. In addition, each Subadvised Fund (and any such Feeder Fund) will hold itself out to the public as employing a Manager of Managers Structure. The prospectus will prominently disclose that the Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee the Subadvisers and recommend their hiring, termination, and replacement.

3. Subadvised Funds will inform shareholders, and if the Subadvised Fund is a Master Fund, shareholders of any Feeder Funds, of the hiring of a new Subadviser within 90 days after the hiring of the new Subadviser pursuant to the Modified Notice and Access Procedures.

4. The Adviser will not enter into a Subadvisory Agreement with any Affiliated Subadviser without that agreement, including the compensation to be paid thereunder, being approved by the shareholders of the applicable Subadvised Fund, which in the case of a Master Fund will include voting instructions provided by shareholders of the Feeder Fund investing in such Master Fund or other voting arrangements that comply with Section 12(d)(1)(E)(iii)(aa) of the Act.

5. At all times, at least a majority of the Board will be Independent Trustees, and the nomination of new or additional Independent Trustees will be placed within the discretion of the then-existing Independent Trustees.

6. Independent legal counsel, as defined in rule 0–1(a)(6) under the Act, will be engaged to represent the Independent Trustees. The selection of such counsel will be within the discretion of the then-existing Independent Trustees.

7. Whenever a Subadviser change is proposed for a Subadvised Fund with an Affiliated Subadviser, the Board, including a majority of the Independent Trustees, will make a separate finding, reflected in the Board minutes, that the change is in the best interests of the Subadvised Fund and its shareholders, and if the Subadvised Series is a Master Fund, the best interests of any applicable Feeder Funds and their respective shareholders, and does not involve a conflict of interest from which the Adviser or the Affiliated Subadviser derives an inappropriate advantage.

8. Whenever a Subadviser is hired or terminated, the Adviser will provide the Board with information showing the expected impact on the profitability of the Adviser.

9. The Adviser will provide general management services to each Subadvised Fund, including overall supervisory responsibility for the general management and investment of the Subadvised Fund's assets and, subject to review and approval of the Board, will: (a) Set the Subadvised Fund's overall investment strategies; (b) evaluate, select and recommend Subadvisers to manage all or a portion of the Subadvised Fund's assets; (c) allocate and, when appropriate, reallocate the Subadvised Fund's assets among Subadvisers; (d) monitor and evaluate the Subadvisers' performance; and (e) implement procedures reasonably designed to ensure that Subadvisers comply with the Subadvised Fund's investment objective, policies and restrictions.

10. No Trustee or officer of a Subadvised Fund or of a Feeder Fund that invests in a Subadvised Fund that is a Master Fund, or director or officer of the Adviser, will own directly or indirectly (other than through a pooled investment vehicle that is not controlled by such person) any interest in a Subadviser except for (a) ownership of interests in the Adviser or any entity that controls, is controlled by or is under common control with the Adviser; or (b) ownership of less than 1% of the outstanding securities of any class of equity or debt of any publicly traded company that is either a Subadviser or an entity that controls, is controlled by or is under common control with a Subadviser.

11. Each Subadvised Fund and any Feeder Fund that invests in a Subadvised Fund will disclose in its registration statement the Aggregate Fee Disclosure.

12. In the event the Commission adopts a rule under the Act providing

substantially similar relief to that in the order requested in the application, the requested order will expire on the effective date of that rule.

13. The Adviser will provide the Board, no less frequently than quarterly, with information about the profitability of the Adviser on a per Subadvised Fund basis. The information will reflect the impact on profitability of the hiring or termination of any Subadviser during the applicable quarter.

14. For Subadvised Funds that pay fees to a Subadviser directly from Fund assets, any changes to a Subadvisory Agreement that would result in an increase in the total management and advisory fees payable by a Subadvised Fund will be required to be approved by the shareholders of the Subadvised Fund.

For the Commission, by the Division of Investment Management, under delegated authority.

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release Nos. 33–9418; 34–69988, File No. 265–28]

Dodd-Frank Investor Advisory Committee

AGENCY: Securities and Exchange Commission.

ACTION: Notice of Meeting of Securities and Exchange Commission Dodd-Frank Investor Advisory Committee.

SUMMARY: The Securities and Exchange Commission Investor Advisory Committee, established pursuant to Section 911 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, is providing notice that it will hold a public meeting on Thursday, July 25, 2013, in Multi-Purpose Room LL–006 at the Commission's headquarters, 100 F Street NE., Washington, DC 20549. The meeting will begin at 10:00 a.m. (EDT) and end at 4:00 p.m. and will be open to the public, except during portions of the meeting reserved for meetings of the Committee's subcommittees. The meeting will be webcast on the Commission's Web site at *www.sec.gov*. Persons needing special accommodations to take part because of a disability should notify the contact person listed below. The public is invited to submit written statements to the Committee. The agenda for the meeting includes approval of minutes, Investor as Owner Subcommittee recommendation regarding data tagging, Investor as Owner Subcommittee recommendation regarding the use of universal proxy ballots, and subcommittee reports.

DATES: Written statements should be received on or before July 25, 2013.

ADDRESSES: Written statements may be submitted by any of the following methods:

Electronic Statements

■ Use the Commission's Internet submission form (*http://www.sec.gov/rules/other.shtml*); or

■ Send an email message to *rules-comments@sec.gov.* Please include File No. 265–28 on the subject line; or

Paper Statements

■ Send paper statements in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. 265–28. This file number should be included on the subject line if email is used. To help us process and review your statement more efficiently, please use only one method.

Statements also will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Room 1580, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. All statements received will be posted without change; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–69987; File No. SR–CBOE–2013–026]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing of Amendment No. 2 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, Relating to Complex Orders

July 15, 2013.

I. Introduction

On March 28, 2013, Chicago Board Options Exchange, Incorporated (the ''Exchange'' or ''CBOE'') filed with the Securities and Exchange Commission (the ''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act'') [1] and Rule 19b-4 thereunder,[2] a proposed rule change to amend its rules governing the trading of complex orders on the Exchange to adopt a new order type called ''leg orders.'' On April 11, 2013, the Exchange filed Amendment No. 1 to the proposal. The proposed rule change, as modified by Amendment No. 1, was published for comment in the **Federal Register** on April 17, 2013.[3] The Commission received no comment letters regarding the proposed rule change, as modified by Amendment No. 1. On June 26, 2013, the Exchange filed Amendment No. 2 to the proposal.[4] The Commission is publishing this notice to solicit comments on Amendment No. 2 from interested persons and is approving the proposed rule change, as modified by Amendment Nos. 1 and 2, on an accelerated basis.

II. Description

A. Leg Orders

CBOE proposes to adopt CBOE Rule 6.53C(c)(iv) relating to the generation and execution of leg orders. A leg order would be a limit order on the CBOE electronic book (''EBook'') that represents one leg of a non-contingent complex order resting on the complex order book (''COB'') if the ratio of that leg to the other legs of the complex order is equal to or can be reduced to one (*e.g.,* 1:1, 1:2, or 1:3).[5] A leg order

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 69364 (April 11, 2013), 78 FR 22326.

[4] *See infra* Section II.B for a description of Amendment No. 2.

[5] *See* proposed CBOE Rule 6.53(x). *See also* Notice, 78 FR 22928, n. 4 for an explanation of conforming ratios as applied to the generation of leg orders.

would be a firm order that may be included in the Exchange's displayed best bid or offer (''Exchange BBO'') on the EBook.[6] According to CBOE, leg orders are designed to increase opportunities for complex orders resting on the COB to leg into the CBOE individual options market and execute.[7]

1. Generation of Leg Orders

CBOE proposes that leg orders may be automatically generated on behalf of complex orders so that they are represented in the individual leg markets.[8] CBOE proposes that a leg order would be automatically generated for a leg of a complex order resting on the top of the COB: (1) If the price of the complex order is inside the ''derived net market,'' which is based on the derived net price of the best-priced orders or quotes (other than leg orders) in the EBook; and (2) at a price at which the net price execution of the complex order can be achieved if the other leg(s) of the complex order executes against the best-priced orders or quotes (other than leg orders).[9] To determine whether leg orders may be generated or displayed in accordance with proposed CBOE Rule 6.53C(c)(iv)(1)(A)–(C), CBOE would evaluate the COB when a complex order enters the COB, when the Exchange BBO changes, and at a regular time interval to be determined by the Exchange (which would not exceed one second).[10]

CBOE states that the derived net market and the price of leg orders would be based on the best-priced non-leg orders in the other leg series, as those are the orders against which a complex order may execute.[11] CBOE proposes that the size of a leg order would be the lesser of (1) the size of the complex order, and (2) the maximum size available in the EBook for the other leg(s) of the complex order (divided by the leg ratio, if applicable).[12]

CBOE proposes that it may, on an objective basis, limit the number of leg orders generated.[13] According to CBOE, leg orders may be made available on a class-by-class basis and may not be available for all of its systems.[14] CBOE believes that this would help the Exchange manage the number of leg orders generated to ensure that leg orders do not negatively impact the Exchange's system capacity and performance.[15] CBOE represents that it would not limit the generation of leg orders on the basis of the entering participant or the participant category of the order (*i.e.,* professional, professional customer, or public customer).[16]

Finally, CBOE proposes not to generate a leg order if the price of the leg order would lock or cross the national best bid or offer (''NBBO'').[17] CBOE also proposes to not generate leg orders for stock-option orders.[18]

2. Display and Nondisplay of Leg Orders; Aggregation of Size

CBOE's proposed rule change specifies when a leg order would be displayed and when it would be nondisplayed. A leg order would only be displayed on the EBook if the price of the leg order matches or improves the Exchange BBO pursuant to proposed CBOE Rule 6.53C(c)(iv)(1)(B).[19] A leg order would not be displayed on the Ebook if the price of the leg order does not match or improve the Exchange BBO.[20] If multiple resting complex orders in *different* strategies generate leg orders for the same price on the same side of an options series and both leg orders are eligible for display (*i.e.,* both leg orders match or improve the Exchange BBO), then the leg order with the largest size would be displayed and the other leg orders would not be displayed.[21] If such leg orders are for the same size, then the first leg order generated would be displayed and the other leg order(s) would not be displayed.[22] If multiple resting complex orders in the *same* strategy generate leg orders for the same price on the same side of an options series, then the sizes of the leg orders would be aggregated and treated as a single order until execution.[23] If such an aggregated order matched or improved the Exchange BBO, the aggregated order would be displayed.[24]

CBOE represents that nondisplayed leg orders, including leg orders that were displayed but subsequently become nondisplayed, would remain in the EBook and would be eligible for execution under proposed CBOE Rule 6.53C(c)(iv)(2), but would not be visible in the EBook depth, which, according to CBOE, contains resting orders and quotes not at the BBO.[25]

3. Priority and Execution of Leg Orders; Cancellation and Removal

CBOE represents that the generation of a leg order would not affect the existing priority, or execution opportunities, currently provided to market participants in the regular market in any way.[26] In this regard, CBOE proposes that leg orders (including nondisplayed leg orders) would execute only after all other executable orders and quotes (including any nondisplayed size) at the same price are executed in full and that a leg order may not execute against another leg order.[27] Leg orders at the same price would execute pursuant to the priority and execution rules for complex orders on the COB, except that displayed leg orders would have execution priority over nondisplayed leg orders.[28]

CBOE proposes that when a leg order executes against an incoming order or quote, the other leg(s) of the complex order represented by the leg order would automatically execute against the best-priced resting orders or quotes (other than leg orders) so that the complex order would be executed in full or in a permissible ratio).[29] Prior to the execution of the complex order, any leg orders on the opposite side of the legs of the executing complex order would be canceled.[30] Upon execution of the complex order, any leg orders that represent other legs of the executing complex order would be canceled.[31] According to CBOE, after the complex order executes, new leg orders may be generated to ''replace'' any leg orders representing other complex orders resting on the COB that were canceled as a result of the execution of the complex order, assuming such resting complex orders meet the requirements for the generation of leg orders under

[30] *See id.*

[31] *See* proposed CBOE Rule 6.53C(c)(iv)(2).

CBOE Rule 6.53C(c)(iv)(1).[32] In such an instance, CBOE states that the newly generated leg order(s) would have the same priority as the leg order(s) it replaced with respect to any other leg orders at the same price representing complex orders in the same strategy because the priority of the new leg order(s) (which would be aggregated) would be based on the priority of the complex orders they represent (which would remain unchanged regardless of cancellations of leg orders).[33] If execution of the complex order is partial, CBOE would be able to generate and display leg orders for the remaining size of the complex order assuming the conditions of Rule 6.53C(c)(iv)(1) are satisfied.[34]

CBOE proposes that a leg order would also be canceled if: (1) Execution at the price of the leg order would no longer achieve the net price of the complex order when the other leg(s) executes against the best-priced orders or quotes (other than leg orders); (2) the complex order executes in full or in part against another complex order; or (3) the complex order from which the leg order was generated is canceled or modified.[35] CBOE proposes that a leg order would be removed from display in the EBook if the price of the leg order is no longer at the Exchange BBO or if a complex order in a different strategy generates a larger-sized leg order at the same price.[36] Any leg order that is removed from display in the EBook would be nondisplayed, but would still be eligible for execution.[37]

4. Leg Orders and CBOE Auctions

CBOE proposes to amend certain provisions of CBOE Rule 6.53C, Interpretation and Policies, to provide for how leg orders would interact with the various auction functions available on the Exchange. First, CBOE proposes to amend CBOE Rule 6.53C, Interpretation and Policy .04(b) to provide that if a leg order has been generated for a complex order resting in the COB, the complex order would not be eligible for the automated complex order request for responses (''RFR'') auction process (''COA'').[38] CBOE believes that this provision is appropriate because leg orders would more effectively create opportunities for the execution of complex orders resting in the COB than having those complex orders participate in a COA after the complex order has reached the COB.[39]

Second, CBOE proposes to add CBOE Rule 6.53C, Interpretation and Policy .07 to determine whether CBOE would generate a leg order if a simple order auction [40] is occurring in a leg series at the time that a leg order in that series would otherwise be generated pursuant to CBOE Rule 6.53C(c)(iv). CBOE proposes that:

- If the leg order would be on the same side of the market as the auctioned order with a price worse than the initial auction price of the auctioned order, then the leg order would be generated and the auction would continue.[41]
- If the leg order would be on the same side of the market as the auctioned order with a price equal to or better than the initial auction price of the auctioned order, then no leg order would be generated and the auction would continue. A leg order may later be generated after execution of the auctioned order.[42]
- If the leg order would be on the opposite side of the market as the auctioned order with a price that locks or crosses the initial auction price of the auctioned order, then no leg order would be generated and the auction would continue. A leg order may later be generated after execution of the auctioned order.[43]
- If the leg order would be on the opposite side of the market as the auctioned order with a price that does not lock or cross the initial auction price of the auctioned order, then the leg order would be generated and the auction would continue.[44]

CBOE notes that a leg order would not participate in an auction if a leg order would (a) be displayed in an options series at the time an auction order enters the system and (b) be at the same price as the starting price of the auction order and on the opposite side of the auction order.[45] According to CBOE, the auction order would instead trade with other resting interest at that price and/or any contra order that stopped the auctioned order, while the leg order could continue to be displayed during the auction.[46] According to the Exchange, this result occurs because leg orders only trade after all other executable orders and quotes are executed first.[47]

CBOE believes the proposal would ensure that leg orders would not interact with simple order auctions in order to avoid the system complexities that would result from combining the execution of complex orders with the already complex auction processes.[48] The Exchange believes that market participants would continue to have the same opportunities for execution and potential price improvement through simple order auctions as they would if there were no leg orders present.[49]

B. Amendment No. 2 to the Proposed Rule Change

In Amendment No. 2, the Exchange proposes to make two changes to proposed CBOE Rule 6.53C(c)(iv). First, Amendment No. 2 adds a provision to proposed CBOE Rule 6.53C(c)(iv) to provide that leg orders will only be generated in the minimum increment of the leg series, and the price of a leg order will be rounded down (bid) or up (offer) to the nearest minimum increment if it would otherwise be priced in a smaller increment than the minimum.[50] CBOE represents in Amendment No. 2 that leg orders rounded pursuant to this provision will be ranked, displayed, and eligible to execute with incoming orders at the rounded price. According to Amendment No. 2, a leg order rounded to the nearest increment will function in the same manner as a non-rounded leg order at the rounded increment. Second, Amendment No. 2 eliminates proposed CBOE Rule 6.53C(c)(iv)(2)(C), which governed the interaction of leg orders with all-or-none orders. The Exchange originally proposed that an all-or-none order [51] would only execute against a leg order if it was at least the same size as the all-or-none order and there were no non-leg orders at the Exchange BBO.[52]

[32] *See* Notice, 78 FR 22930, n. 17.

[33] *See id.*

[34] *See* proposed CBOE Rule 6.53C(c)(iv)(2)(B); Notice 78 FR 22931, Example F, for an illustration of a partial execution of a complex order through its leg orders.

[35] CBOE may also cancel a leg order that might trade ahead of a non-leg order against an all-or-none order. *See* proposed CBOE Rule 6.53C(c)(iv)(2)(C).

[36] *See* proposed CBOE Rule 6.53C(c)(iv)(3)(A); Notice 78 FR 22932, Example H for an illustration of cancellation and removal of leg orders generated from complex orders in different strategies.

[37] *See* proposed CBOE Rule 6.53C(c)(iv)(3)(A); Notice 78 FR 22931–22932, Examples G and H, for illustrations of how leg orders are canceled and removed.

[38] *See* proposed CBOE Rule 6.53C, Interpretation and Policy .04.

[39] *See* Notice, 78 FR 22932.

[40] CBOE's simple order auctions include the Hybrid Agency Liaison (''HAL'') auction described in CBOE Rule 6.14A and Automated Improvement Mechanism (''AIM'') auction described in CBOE Rule 6.74A.

[41] *See* proposed CBOE Rule 6.53C, Interpretation and Policy .07(a).

[42] *See* proposed CBOE Rule 6.53C, Interpretation and Policy .07(b).

[43] *See* proposed CBOE Rule 6.53C, Interpretation and Policy .07(c).

[44] *See* proposed CBOE Rule 6.53C, Interpretation and Policy .07(d).

[45] *See* Notice, 78 FR 22933.

[46] *See id.*

[47] *See id.*

[48] *See* Notice, 78 FR 22932.

[49] *See* Notice, 78 FR 22933.

[50] *See* proposed CBOE Rule 6.53C(iv)(1)(A).

[51] *See* CBOE Rule 6.53(i) defining an all-or-none order as: ''a market or limit order which is to be executed in its entirety or not at all.''

[52] *See* proposed CBOE Rule 6.53C(c)(iv)(2)(C).

Under proposed CBOE Rule 6.53C(c)(iv)(2)(C), as originally proposed, if a leg order and a non-leg order(s) were at the Exchange BBO, then the all-or-none order would have either (a) executed against the non-leg order(s) if it was at least the same size as the all-or-none order or (b) the leg order would have been cancelled and the all-or-none order would have been handled pursuant to CBOE's existing rules governing all-or-none orders.[53] Pursuant to CBOE Rule 6.53C(c)(iv)(2)(C), no new leg orders in the applicable options series would have been generated until the all-or-none order was executed or cancelled.[54] As amended, proposed CBOE Rule 6.53(c)(iv)(2)(C) will be eliminated in its entirety and, as a result, a marketable all-or-none order could execute against a leg-order and a non-leg order displayed at the Exchange BBO if such orders were together sufficient to fill the marketable all-or-none order.

C. CBOE Trading System Capacity

CBOE represents that it maintains a rigorous capacity planning program that monitors system performance and projected capacity demands and that, as a general matter, considers the potential system capacity impact of all new initiatives.[55] CBOE represents that it has analyzed the potential impact on system capacity that may result from the proposed rule change and has concluded that the Exchange has sufficient system capacity to handle the generation of leg orders without degrading the performance of its systems or reducing the number of complex order instruments it currently supports.[56] The Exchange represented that it would closely monitor the generation of leg orders and its effect on CBOE's systems, and would carefully manage and curtail the number of leg orders being generated, to ensure that they do not negatively impact system capacity and performance.[57]

III. Discussion

After careful review, the Commission finds that the proposed rule change, as modified by Amendment Nos. 1 and 2, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[58] In particular, the Commission finds that the proposed rule change, as amended, is consistent with Section 6(b)(5) of the Act,[59] which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Commission believes that leg orders could facilitate the execution of complex orders resting on CBOE's COB by increasing the opportunities for eligible complex orders to execute against interest in the leg market on CBOE's EBook, thereby benefitting investors seeking to execute complex orders. In addition, the Commission believes that leg orders could benefit participants in the leg market by providing additional liquidity, and potentially more favorable executions, for leg market interest. The Commission notes that it previously approved proposals by other options exchanges to implement leg orders.[60]

Leg orders will be firm orders that represent one leg of a non-contingent complex order resting on the COB if the ratio of that leg to the other legs of the complex order is equal to or can be reduced to one.[61] The Commission notes that, on CBOE, leg orders will only be generated in the minimum increment of the leg series, and the price of the leg order will be rounded down (bid) or up (offer) to the nearest minimum increment if it would otherwise be priced in a smaller increment than the minimum.[62] As noted above, the Exchange represents that a leg order rounded to the nearest increment will be ranked, displayed, and eligible to execute with incoming orders at the rounded price and that rounded leg orders will function in the same manner as non-rounded leg orders.[63] Under CBOE's proposal, leg orders will not be generated if the price of the leg order would lock or cross the NBBO.[64]

The Commission notes that a leg order will be executed only after all other executable orders and quotes (including any nondisplayed size of any non-leg orders) at the same price are executed in full and that a leg order may not execute against another leg order.[65] Accordingly, CBOE represents that the generation of a leg order would not affect the existing priority, or execution opportunities, currently provided to market participants in the regular market in any way.[66]

The Commission notes that the proposal provides for when a leg order will be displayed and when it would be nondisplayed. The Exchange represents that nondisplayed leg orders will function in the same manner as displayed leg orders except that displayed leg orders will have priority over nondisplayed leg orders.[67]

As noted above, CBOE represents that it will carefully manage and curtail the number of leg orders being generated so that they do not negatively impact system capacity and performance.[68] CBOE represents, further, that it will curtail the number of leg orders on an objective basis, such as by limiting the number of leg orders generated in a particular class, and that it will not limit the generation of leg orders on the basis of the entering participant or the participant category of the order (*i.e.,* professional, professional customer, or public customer).[69]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 2 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–CBOE–2013–026 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission,

100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–CBOE–2013–026. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549–1090 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CBOE–2013–026, and should be submitted on or before August 9, 2013.

V. Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 2

The Commission finds good cause for approving the proposed rule change, as amended by Amendment No. 2, prior to the 30th day after the date of publication of notice in the **Federal Register**. Amendment No. 2 revises the proposal, to, among other things, eliminate proposed CBOE Rule 6.53C(c)(iv)(2)(C) in its entirety because the provision would be inconsistent with Section 11A of the Act[70] and Rule 602(a) of Regulation NMS (''Quote Rule'').[71] For this reason, the Commission finds good cause for approving the proposed rule change, as amended, on an accelerated basis, pursuant to Section 19(b)(2) of the Act.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[72] that the proposed rule change (SR–CBOE–2013–26), as amended, be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[73]

Kevin M. O'Neill,

Deputy Secretary.

DEPARTMENT OF STATE

[Public Notice 8384]

Privacy Act; System of Records: Human Resources Records, State–31

SUMMARY: Notice is hereby given that the Department of State proposes to amend an existing system of records, Human Resources Records, State–31, pursuant to the provisions of the Privacy Act of 1974, as amended (5 U.S.C. 552a) and Office of Management and Budget Circular No. A–130, Appendix I.

DATES: This system of records will be effective on August 28, 2013, unless we receive comments that will result in a contrary determination.

ADDRESSES: Any persons interested in commenting on the amended system of records may do so by writing to the Director; Office of Information Programs and Services, A/GIS/IPS, Department of State, SA–2, 515 22nd Street NW., Washington, DC 20522–8001.

FOR FURTHER INFORMATION CONTACT: Director; Office of Information Programs and Services, A/GIS/IPS, Department of State, SA–2, 515 22nd Street NW., Washington, DC 20522–8001.

SUPPLEMENTARY INFORMATION: The Department of State proposes that the current system will retain the name ''Human Resources Records'' (previously published as 65 FR 69359). The information collected and maintained in this system is in keeping with the Department's mission to document all processes associated with individual employment histories and career progression; to ensure that all employees and potential employees have equal opportunities; and to make personnel management determinations about employees throughout their Federal careers. The proposed system will include administration updates and modifications to the following sections: Categories of individuals, Categories of records, Routine uses, and Safeguards.

The Department's report was filed with the Office of Management and Budget. The amended system description, ''Human Resources Records, State–31,'' will read as set forth below.

Joyce A. Barr,

Assistant Secretary for Administration, U.S. Department of State.

STATE–31

SYSTEM NAME:

Human Resources Records.

SECURITY CLASSIFICATION:

Classified and unclassified.

SYSTEM LOCATION:

Department of State, 2201 C Street NW., Washington, DC 20520; State Annex 01, 2401 E Street NW., Washington, DC 20037; State Annex 03, 2121 Virginia Avenue NW., Washington, DC 20037; State Annex 44, 301 4th Street SW., Washington, DC 20547; overseas at U.S. embassies, U.S. consulates general, and U.S. consulates; U.S. missions; and the National Personnel Records Center, 111 Winnebago Street, St. Louis, MO 63118.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All applicants for employment with the Department of State (including unsuccessful applicants); all current and former Civil Service (CS) and Foreign Service (FS) employees of the Department of State including members of the Senior Executive Service (SES), Presidential Appointees, employees under full-time, part-time, intermittent, temporary, and limited appointments; anyone serving in an advisory capacity (compensated and uncompensated); other agency employees on detail to the Department of State; former Foreign Service Reserve Officers; student applicants for internships, Presidential Management Fellows, Foreign Affairs Fellowship Program Fellows, student interns and other student summer hires, Stay-in-School student employees, and Cooperative Education Program participants; and prospective alien spouses and cohabitants of Department of State employees.

CATEGORIES OF RECORDS IN THE SYSTEM:

Categories of records may include identifying information, such as, but not limited to, name, date of birth, home address, mailing and email addresses, numeric identifier (such as employee identification number, SGID, or Social Security number) and telephone numbers. Types of files include

documents relating to class action lawsuits, annuitants under the Foreign Service Retirement and Disability System and the Foreign Service Pension System as well as Civil Service annuitants, prospective alien spouses and cohabitants of Department employees, employees who apply for their spouses or children to be expeditiously naturalized, employees detailed or seconded to international organizations, Foreign Service personnel separated for cause; official personnel files; documents relating to merit promotions, recruitment and employment, employee relations, career development and counseling, performance, conduct, suitability, and discipline, Foreign Service promotion and Permanent Change of Station (PCS) travel. These records may contain any documents not otherwise stated relating to employment, to include, but not limited to, hiring, employment and separation from the Department.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

22 U.S.C. 2581 (General Authority of Secretary of State); 22 U.S.C. 2651a (Organization of the Department of State); 22 U.S.C. 3901 et seq. (Foreign Service Act of 1980); 22 U.S.C. 3921 (Management of the Foreign Service); 22 U.S.C. 4041 (Administration of the Foreign Service Retirement and Disability System); 5 U.S.C. 301–302 (Management of Executive Departments); Executive Order 9397, as amended (Numbering System for Federal Accounts Relating to Individual Persons); Executive Order 9830 (Amending the Civil Service Rules and Providing for Federal Personnel Administration); and Executive Order 12107 (Relating to the Civil Service Commission and Labor-Management in the Federal Service) and successor authorities.

PURPOSE:

The information collected and maintained in this system is in keeping with the Department's mission to document all processes associated with individual employment histories and career progression; to ensure that all employees and potential employees have equal opportunities; and to make personnel management determinations about employees throughout their Federal careers.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

The information in Human Resources Records may be shared:

A. With consulting services that provide information about available aids, devices and methods of accommodating employees with disabilities;

B. With the Office of Personnel Management for its government-wide personnel management functions such as pay, benefits, and retirement deductions or other relevant personnel processes;

C. With other Federal agencies, state governments, foreign governments and international organizations where employees are being considered for detail, assignment or secondment;

D. With academic institutions to which Department employees may be assigned for long-term training;

E. With any member of an agency's Performance Review Board or other panel when the member is not an official of the employing agency. Information would then be used for approving or recommending selection of candidates for Executive development or Senior Executive Service (SES) candidate programs, issuing a performance rating of record, issuing performance awards, nominating for meritorious and distinguished executive ranks, removal, reduction in grade, and other personnel actions based on performance;

F. With attorneys, union representatives or other persons designated by employees in writing to represent them in complaints, grievance, appeal, or litigation cases;

G. With requestors in determining a former spouse's entitlement to benefits and other inquiries related to retirement benefits;

H. With the President of the United States, the Executive Office of the President and legislative and appropriations committees of the U.S. Congress charged with consideration of legislation and appropriations for the Foreign Service, or representatives duly authorized by such committees;

I. With labor organization officials when such information is relevant to personnel policies affecting employment conditions and necessary for exclusive representation by the labor organization;

J. With officials of foreign governments and other U.S. government agencies for clearance before a Federal employee is assigned to that country as well as for the procurement of necessary services for American personnel assigned overseas, such as permits of free entry and identity cards;

K. With the Department of Labor, Department of Veterans Affairs, Social Security Administration, Department of Defense, or any other Federal agencies that have special civilian employee retirement and disability programs; or to a national, state, county, municipal, or other publicly recognized income administration agency (e.g. State unemployment compensation agencies), when necessary to adjudicate a claim under the retirement, insurance, unemployment or health benefits programs of the Department or an agency cited above, or to an agency to conduct an analytical study or audit of benefits being paid under such programs;

L. With the Office of Federal Employees Group Life Insurance, information necessary to verify election, declination, or waiver of regular and/or optional life insurance coverage, or eligibility for payment of a claim for life insurance;

M. With health insurance carriers contracting with the Federal government to provide a health benefits plan under the Federal Employees Health Benefits Program, information necessary to identify enrollment in a plan, to verify eligibility for payment of a claim for health benefits, or to carry out the coordination or audit of benefit provisions of such contracts;

N. With any person who is responsible for the care of an individual to whom a record pertains who is mentally incompetent or under other legal disability. Information in the individual's record may be disclosed to said person to the extent necessary to assure payment of benefits to which the individual is entitled;

O. With public and private organizations, including news media, which grant or publicize employee recognition to consider and select employees for incentive awards and other honors and to publicize awards and honors granted;

P. With the Department of Justice in connection with proceedings before a court, adjudicative body, or other administrative body when any of the following is a party to litigation or has an interest in such litigation and the Department of State determines that the use of such records is arguably relevant and necessary to the litigation of (1) the Department of State or any component thereof, (2) any employee of the Department of State in his or her official capacity, (3) any employee of the Department of State in his or her individual capacity where the Department of Justice or the Department of State has agreed to represent the employee, or (4) the United States, when the Department of State determines that litigation is likely to affect the Department of State or any of its components;

Q. To implement court decisions and/or terms of settlement agreements reached by the parties;

R. To prepare reports to the courts in compliance with monitoring requirements;

S. In response to an order from a court or an administrative body directing the production of personnel records (including, but not limited to the Equal Employment Opportunity Commission, the Foreign Service Grievance Board and the Merit Systems Protection Board);

T. With other Government agencies and private organizations, institutions or individuals to verify employment, to process security clearances and to request record or credit checks;

U. To provide an official of another Federal agency information needed in the performance of official duties in support of the functions for which the records were collected and maintained;

V. To disclose information to Equal Employment Opportunity (EEO) counselors and EEO investigators in connection with EEO complaints and to the Equal Employment Opportunity Commission when requested in connection with investigations of alleged or possible discrimination practices in the Federal sector, examination of Federal affirmative employment programs, compliance by Federal agencies with the Uniform Guidelines on Employee Selection Procedures, or other functions vested in the Commission;

W. With the Department of Labor's Office of Workers' Compensation programs relating to benefits under the Federal Employees Compensation Act; and

X. To disclose information to the news media and the public when a matter involving the Department of State has become public knowledge; the Under Secretary for Management determines that in response to the matter in the public domain, disclosure is necessary to provide an accurate factual record on the matter; and the Under Secretary for Management determines that there is a legitimate public interest in the information disclosed.

The Department of State periodically publishes in the **Federal Register** its Prefatory Statement of Routine Uses which applies to all of its Privacy Act systems of records. These standard routine uses apply to Human Resources Records, State–31.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

None.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Electronic media and hard copy.

RETRIEVABILITY:

By an individual name and numeric identifier.

SAFEGUARDS:

All users are given cyber security awareness training which covers the procedures for handling Sensitive but Unclassified information, including personally identifiable information (PII). Annual refresher training is mandatory. In addition, all Foreign Service and Civil Service employees and those Locally Engaged Staff who handle PII are required to take the Foreign Service Institute distance learning course, PA 459, instructing employees on privacy and security requirements, including the rules of behavior for handling PII and the potential consequences if it is handled improperly. Before being granted access to Human Resources Records, a user must first be granted access to the Department of State computer system.

Remote access to the Department of State network from non-Department owned systems is authorized only to unclassified systems and only through a Department approved access program. Remote access to the network is configured with the Office of Management and Budget Memorandum M–07–16 security requirements which include, but are not limited to, two-factor authentication and time out function.

All Department of State employees and contractors with authorized access have undergone a thorough background security investigation. Access to the Department of State, its annexes and posts abroad is controlled by security guards and admission is limited to those individuals possessing a valid identification card or individuals under proper escort. All paper records containing personal information are maintained in secured file cabinets in restricted areas, access to which is limited to authorized personnel only. Access to computerized files is password-protected and under the direct supervision of the system manager. The system manager has the capability of printing audit trails of access from the computer media, thereby permitting regular and ad hoc monitoring of computer usage. When it is determined that a user no longer needs access, the user account is disabled.

RETENTION AND DISPOSAL:

These records will be maintained until they become inactive, at which time they will be retired or destroyed in accordance with published records schedules of the Department of State and as approved by the National Archives and Records Administration. More specified information may be obtained by writing to the Director, Office of Information Programs and Services, A/GIS/IPS, SA–2, Department of State, 515 22nd Street NW., Washington, DC 20522–8100.

SYSTEM MANAGER(S) AND ADDRESS:

The Director General of the Foreign Service and Director of Human Resources, Department of State; 2201 C Street NW., Washington, DC 20520.

NOTIFICATION PROCEDURE:

Individuals who have reason to believe that the Bureau of Human Resources might have records pertaining to themselves should write to the Director; Office of Information Programs and Services, A/GIS/IPS; SA–2, Department of State; 515 22nd Street NW., Washington, DC 20522–8100. The individual must specify that he or she wishes the Human Resources Records to be checked. At a minimum, the individuals must include: name; date and place of birth; approximate dates of employment with the Department of State or when in process for a potential appointment; current mailing address and zip code; signature; and other information helpful in identifying the record.

RECORD ACCESS PROCEDURES:

Individuals who wish to gain access to or amend records pertaining to themselves should write to the Director; Office of Information Programs and Services (address above).

CONTESTING RECORD PROCEDURES:

(See above.)

RECORD SOURCE CATEGORIES:

These records contain information obtained directly from the individual who is the subject of these records, previous employers, supervisors, Foreign Service inspectors, any/all offices within the Bureau of Human Resources (counselors, placement officers, and personnel technicians), other bureaus (administrative/executive officers, personnel and payroll offices, security, medical, and legal), reports of the Board of Examiners of the Foreign Service, Foreign Service Employee Evaluation Reports and Selection Board findings, the Foreign Service Institute, colleges, universities, Armed Forces academic institutions, contractors

responsible for administration of the Foreign Service written examination, and other authorized agencies administering pre-employment tests, Office of Personnel Management and other Federal agencies, prospective alien spouses of Foreign Service employees; grievance staff and appeals boards, affidavits and testimony of witnesses.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

Pursuant to 5 U.S.C. 552a (k)(1), subject to the provisions of section 552(b)(1), records are exempted from 5 U.S.C. 552a (c)(3), (d), (e)(1), (e)(4)(G), (H) and (I), and (f) to protect material required to be kept Secret. Pursuant to 5 U.S.C. 552a (k)(4), records contained within this system that are maintained solely for statistical purposes are also exempted from 5 U.S.C. 552a (c)(3), (d), (e)(1), (e)(4)(G), (H) and (I), and (f). Pursuant to 5 U.S.C. 552a (k)(5) and (k)(7), certain records contained within this system contain confidential source information and are exempted from 5 U.S.C. 552a (c)(3), (d), (e)(1), (e)(4)(G), (H) and (I), and (f). Pursuant to 5 U.S.C. 552a (k)(6), records that contain testing or examination material the release of which may compromise testing or examination procedures are also exempted from 5 U.S.C. 552a (c)(3), (d), (e)(1), (e)(4)(G), (H) and (I), and (f). See Department of State Rules published in 22 CFR 171.

BILLING CODE 4710–26–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary of Transportation

Transportation Infrastructure Financing and Innovation Act (TIFIA) Program; Agency Information Collection Activities and Request for Comments

AGENCY: Office of the Secretary of Transportation (OST).

SUMMARY: The Department of Transportation (DOT) invites public comments on a request to the Office of Management and Budget (OMB) to approve an Emergency Information Collection Request in accordance with the requirements of the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 USC 3501 *et seq*). This request is being submitted to OMB via an Emergency Information Collection Request.

On July 6, 2012, the President of the United States signed the Moving Ahead for Progress in the 21st Century Act of 2012 (MAP–21). MAP–21 authorized $750 million in FY 2013 and $1 billion in FY 2014 for the Transportation Infrastructure Financing and Innovation Act (TIFIA) program to pay the subsidy cost of supporting Federal credit. The TIFIA program will provide Federal credit assistance in the form of direct loans, loan guarantees, and standby lines of credit to eligible surface transportation projects. This information collection relates to the collection of information from entities interested in TIFIA credit assistance and assists the DOT in evaluating projects and project sponsors for program eligibility and creditworthiness.

DATES: Written comments should be submitted by August 5, 2013.

ADDRESSES: Comments are invited on: (a) The need for the proposed collection of information for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques. You may submit comments identified by Docket No. DOT–OST–2013–0138 through one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail or Hand Delivery:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays.

FOR FURTHER INFORMATION CONTACT: The TIFIA program manager via email at *TIFIACredit@dot.gov.*

SUPPLEMENTARY INFORMATION:

Title: Transportation Infrastructure Financing and Innovation Act program or TIFIA program.

OMB Control Number: 2105–New.

Affected Public: State and local governments, transit agencies, railroad companies, special authorities, special districts, and private entities.

Estimated Total Annual Number of Responses: 50 letters of interest and 50 applications.

Estimated Total Annual Burden Hours: 6,000 hours. Based on the number and type of interested stakeholders that have contacted the Department about this program, OST estimates that it will receive 50 applications and letters of interest and that it will generally not take applicants more than 100 person-hours to assemble individual applications and 20 person-hours to assemble individual letters of interest. Therefore, the total annual hour burden of this collection of applications is 6,000 hours.

Frequency of Collection: The Department expects that this information collection will occur on a rolling basis as interested entities seek TIFIA credit assistance.

Background: This is an existing information collection without an OMB Control Number. DOT has published a notice in the **Federal Register** (also available at: *http://www.fhwa.dot.gov/ipd/pdfs/tifia/fy2013_tifia_nofa_073112.pdf*) to give project sponsors an opportunity to submit Letters of Interest and applications for the newly authorized funding as soon as possible. However, in addition to authorizing more funding for TIFIA credit assistance, MAP–21 made some significant changes to the TIFIA program's structure, including the terms and conditions pursuant to which DOT can provide TIFIA credit assistance. DOT is required to solicit letters of interest and applications for TIFIA credit assistance from interested applicants. DOT has developed forms that provide a way for interested applicants to submit information required by DOT in order for DOT to evaluate that interested applicant's application for TIFIA credit assistance. The forms for the letter of interest and application are available for review at *http://www.fhwa.dot.gov/ipd/tifia/guidance_applications/tifia_applications.htm.* The DOT will use the collected information to evaluate and select recipients for credit assistance as authorized under MAP–21. Applicants may be asked to provide additional supporting evidence or to quantify details during the review and negotiation process on a case-by-case basis, but completion of the letter of interest and application.

MAP–21 establishes a multi-step application process for TIFIA credit assistance. This process begins with the submission of a Letter of Interest and determination of eligibility. Only after a project sponsor has submitted a Letter of Interest and met all statutory eligibility requirements will the project sponsor be invited to submit an application.

The Letter of Interest must (i) describe the project and the location, purpose, and cost of the project, (ii) outline the proposed financial plan, including the requested credit assistance and the proposed obligor, (iii) provide a status of environmental review, and (iv) provide information regarding satisfaction of other eligibility requirements of the TIFIA credit program. Letters of Interest will be submitted using the form on the TIFIA Web site: *http://www.fhwa.dot.gov/ipd/tifia/guidance_applications/index.htm.* DOT has revised the form for the Letter of Interest to reflect changes made to the TIFIA program by MAP–21. The Letter of Interest form requires project sponsors to provide information demonstrating satisfaction (or expected satisfaction if permitted by the statute) of each of the eligibility requirements included in MAP–21. DOT estimates that the letter of interest would require approximately 20 hours in each instance to complete.

If a project sponsor is invited to submit an application, DOT estimates that each application will require approximately 100 hours to complete. The information that DOT seeks through the application includes: Contact information for the applicant entity; project information including name, location, description, rural project description (if applicable), purpose (quantitative/qualitative details), cost and TIFIA credit assistance request, project management and compliance monitoring plan, maintenance and operations plan, satisfaction of eligibility requirements including creditworthiness (rate covenant, coverage requirements, investment grade rating(s)), fostering partnerships that attract public and private investment, how TIFIA assistance would enable the project to proceed at an earlier date or with reduced lifecycle costs, how TIFIA assistance would reduce the contribution of federal grant assistance, environmental review (NEPA), permits and approvals, transportation planning and programming process approvals (STIP and TIP), construction contracting process readiness, project schedule, a financial plan including estimated capital project cost, amount and type of credit assistance requested, amount of TIFIA assistance requested, a summary table: Detailing sources and uses of funds, cash flow pro forma, a supplementary narrative detailing other borrowed funds and revenue sources (including pledged repayment source), proposed terms for the requested TIFIA credit instrument, reasons for selecting the proposed type(s) of credit instrument, flexibility in financial plan to support a reduced percentage-share of TIFIA credit assistance, risks and mitigation strategies, details on the applicant's organizational structure, including background information and legal authority, organization and management, identity of the entity that will serve as applicant (public-sector agency or private-sector firm), whether the applicant the same entity as the borrower (detail project team members), prior experience, financial condition, and litigation and/or conflicts.

Issued in Washington, DC on July 16, 2013.

Patricia Lawton,

Departmental PRA Clearance Officer, Office of the Secretary.

[FR Doc. 2013–17406 Filed 7–18–13; 8:45 am]

BILLING CODE 4910–9X–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

Use of Wireless Mobile Data Devices as Transponders for the Commercial Motor Vehicle Information Systems and Networks (CVISN) Electronic Screening Systems

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice; announcement of policy.

SUMMARY: FMCSA announces that Commercial Mobile Radio Services (CMRS) network devices can be used as transponders for the purposes of CVISN electronic screening truck inspection and weigh station bypass systems. CMRS network devices such as smartphones, tablets, fleet management systems, global positioning system (GPS) navigational units, and onboard telematics devices (referred to collectively as ''wireless mobile data devices'') have the capability of transmitting and receiving the same information between the driver and the inspection site as the dedicated short-range communication (DSRC)-enabled transponders operating at the 915 MHz frequency currently used to fulfill the CVISN electronic screening requirement for core compliance. This policy does not affect the applicability or enforcement of FMCSA's regulations prohibiting texting and the use of hand-held wireless mobile phones by commercial motor vehicle (CMV) drivers.

FOR FURTHER INFORMATION CONTACT: For information concerning this notice or this activity, contact Mr. Jose M. Rodriguez, CVISN Technical Program Manager, Technology Division of FMCSA, (202) 366–3517, *jose.rodriguez@dot.gov.*

SUPPLEMENTARY INFORMATION:

Background

The purpose of the CVISN program is to advance technological capability and promote the deployment of Intelligent Transportation System applications for commercial vehicle operations, including commercial vehicle, commercial driver, and carrier specific information systems and networks. CVISN is divided into core and expanded deployment. Before a State is eligible for expanded deployment funding, it must complete core deployment. In order to complete core deployment, States must install an electronic system to screen transponder-equipped commercial vehicles at a minimum of one fixed or mobile inspection site in the State and replicate this screening at other sites. The objective of electronic screening is to identify enrolled vehicles; to screen vehicles based on safety history, weight, and credential status (e.g., registration, fuel tax payment, operating authority); and to allow enrolled vehicles that meet the State's criteria to bypass inspection sites. By allowing compliant vehicles to bypass weigh stations and inspection sites without stopping, FMCSA and its State partners are able to increase the effectiveness of enforcement efforts by targeting high risk motor carriers. Currently, weigh stations and inspection sites electronically screen DSRC-enabled transponder-equipped CMVs to determine if an inspection is necessary or if the driver should bypass the weigh station or inspection site.

In the past, States have installed only DSRC electronic screening transponder systems to satisfy the CVISN core electronic screening requirement because that was the prevalent technology at the time the CVISN program was authorized. States or private companies providing the DSRC screening services were required to install DSRC infrastructure to participate in the information sharing between roadside activities and the vehicles required to be in compliance with Core CVISN deployment. States may continue to deploy DSRC electronic screening transponder systems operating at the 915 MHz frequency to fulfill the CVISN electronic screening requirement for core compliance.

Use of CMRS To Comply With CVISN

Since the CVISN program began, there has been a significant expansion of CMRS networks in North America.

States may now use available CMRS networks to screen trucks equipped with wireless mobile data devices used as transponders. CMRS network devices such as smartphones, tablets, fleet management systems, GPS navigational units, and onboard telematics devices are capable of transmitting and receiving multiple forms of wireless mobile data and thus, are considered transponders for the purposes of the CVISN program.

CMRS transponders use commercially available mobile radio transmission frequencies to access cellular data networks and exchange carrier and vehicle credentials utilizing web-based technologies. Triggered via GPS signaling, CMRS transponders communicate through the internet to electronic screening systems that issue traditional red light/green light responses for in-cab displays mounted on the dashboard. Because CMRS transponders are hardware neutral, drivers can install a variety of cellular-enabled GPS-connected devices (such as smartphones, tablets, fleet management systems, GPS navigational units, and onboard telematics devices) in vehicles.

This policy announcement does not affect the applicability or enforcement of FMCSA's regulations under 49 CFR part 392 prohibiting texting and the use of hand-held wireless mobile phones by commercial motor vehicle (CMV) drivers.

Benefits

Use of wireless mobile data devices as transponders with CMRS provides benefits to FMCSA and key stakeholders including State CMV enforcement agencies, industry, and participating motor carriers:

1. All of the remaining 11 States that have not yet achieved CVISN core deployment status because they have not met the CVISN electronic screening requirement will have another option to achieve CVISN core deployment status. This makes States eligible for the expanded CVISN funding deployment milestone and improves data sharing among States and FMCSA.

2. The electronic screening system enables State enforcement agencies to identify CMV drivers and check their safety status at highway speeds and enables FMCSA and State partners to more efficiently utilize resources to target high risk carriers.

3. The capability to check the safety status of drivers and vehicles at highway speeds will decrease congestion and vehicle emissions at inspection sites. Motor carriers will avoid fuel costs associated with idling at weigh stations and inspection sites.

4. State agencies can add additional electronic screening sites, both fixed and mobile, with no infrastructure-related costs. CMRS-enabled systems give States significant flexibility in activating and de-activating geofences (the virtual perimeter for the real-world geographic area in which truck station bypass systems electronically screen CMVs).

5. For participating motor carriers, available CMRS-based electronic screening systems are technology-platform neutral and could be operated, on wireless mobile data devices, as well as onboard fleet management systems. The use of the system is consistent with FMCSA's prohibition against the use of hand-held mobile phones and texting and complements existing DSRC-based screening systems.

Issued on: July 8, 2013.

Anne S. Ferro,

Administrator.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2013–0124, Notice No. 13–7]

Paperless Hazard Communications Pilot Program

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: PHMSA invites volunteers for a pilot program to evaluate the effectiveness of paperless hazard communications systems and comments on an information collection activity associated with the pilot program. ''Moving Ahead for Progress in the 21st Century Act'' (MAP–21) authorizes PHMSA to conduct a pilot program to evaluate the feasibility and effectiveness of using paperless hazard communications systems. In accordance with MAP–21, in conducting the pilot projects, PHMSA may not waive the current shipping paper requirements. In addition, MAP–21 indicates that PHMSA must consult with organizations representing fire and other emergency responders, law enforcement, and regulated entities. Upon completion of the pilot projects, PHMSA must evaluate the feasibility and effectiveness of paperless hazard communications systems and make a recommendation to Congress regarding regulatory changes that would permanently authorize the use of paperless hazard communications systems. The report is due to Congress by October 1, 2014. The intent of this notice is to: (1) Describe the current regulatory requirements for shipping papers; (2) describe authority granted under MAP–21; (3) explain the goal, scope, and intent of the pilot program; (4) seek volunteers to participate in the pilot projects and describe criteria for selecting pilot participants from the volunteers; and (5) seek comment on the request for information to be collected in conducting the pilot projects and in consulting with organizations representing fire and other emergency responders, law enforcement, and regulated entities. Information gathered will enable PHMSA to generate a report to Congress detailing: (1) The performance of each paperless hazard communications system tested during the pilot projects; (2) PHMSA's assessment of the safety and security impacts on stakeholders; (3) the associated costs and benefits; and (4) PHMSA's regulatory recommendation(s).

DATES: Interested persons are invited to submit comments on or before September 17, 2013.

ADDRESSES: You may submit comments, and statements of interest to volunteer, identified by the docket number (PHMSA–2013–0124) by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *FAX:* 1–202–493–2251.
- *Mail:* Docket Management System, U.S. Department of Transportation, Docket Operations, Routing Symbol M–30, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Docket Operations, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, from 9:00 a.m. to 5:00 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the agency name and docket number for this notice at the beginning of the comment. To avoid duplication, please use only one of these four methods. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you provide.

Docket: For access to the dockets to read background documents or comments received, go to *http://www.regulations.gov* or DOT's Docket Operations Office (see **ADDRESSES**).

Privacy Act: Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the document (or signing the document, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477) or you may visit *http://www.gpo.gov/fdsys/pkg/FR-2000-04-11/pdf/00-8505.pdf*

FOR FURTHER INFORMATION CONTACT: James O. Simmons, U.S. Department of Transportation, Engineering and Research Division (PHH–23), Pipeline and Hazardous Materials Safety Administration, 1200 New Jersey Avenue SE., East Building, 2nd Floor, Washington, DC 20590–0001, Telephone (202) 366–4545. Requests for a copy of the information collection should be directed to T. Glenn Foster, U.S. Department of Transportation, Standards and Rulemaking Division (PHH–12), Pipeline and Hazardous Materials Safety Administration, 1200 New Jersey Avenue SE., East Building, 2nd Floor, Washington, DC 20590–0001, Telephone (202) 366–8553.

SUPPLEMENTARY INFORMATION: Section 1320.8 (d), Title 5, Code of Federal Regulations (CFR) requires that PHMSA provide interested members of the public and affected agencies an opportunity to comment on information collection and recordkeeping requests. This notice identifies an information collection activity PHMSA is undertaking to evaluate the effectiveness of a paperless hazard communications pilot program authorized under Title III, Section 33005, of the Hazardous Materials Transportation Safety Improvement Act of 2012 (H.R. 4348), also referenced as the ''Moving Ahead for Progress in the 21st Century Act'' (H.R. 4348, ''MAP–21''). This notice also seeks volunteers (shippers, carriers, law enforcement, and emergency response personnel) who are interested in participating in the pilot projects. The pilot projects and the information collection activity identified in this notice have been designed to ensure full collaboration with modal administrations, law enforcement personnel, fire services and emergency response providers, and regulated entities (shippers and carriers who transport hazardous materials by air, highway, rail, and water) to test the feasibility and then evaluate both the feasibility and effectiveness of using paperless hazardous materials (e-HM) communications systems (e-systems). The following sections describe the: (1) Current regulatory requirements for shipping papers; (2) authority granted under MAP–21; (3) goal, scope, and intent of the pilot program and request for volunteers to participate in the pilots; (4) criteria used for selecting pilot participants; and (5) request for information to be collected in conducting the pilot projects and in consulting with organizations representing fire and other emergency responders, law enforcement, and regulated entities.

1. History of and Current Regulatory Requirements for Shipping Papers

The Hazardous Materials Regulations (HMR; 49 CFR Parts 171–180) require a person who offers hazardous materials for transportation in commerce to describe the hazardous materials on a shipping paper in the manner required in 49 CFR Part 172, Subpart C. The shipping paper requirements identify key hazard communication information (e.g., UN number, proper shipping name, hazard class, packing group, type and quantity of packaging, and emergency response telephone number). Unless an exception from the shipping paper requirements is provided in the regulations, a paper copy of the shipping paper must accompany a hazardous material during transportation. A shipping paper includes ''a shipping order, bill of lading, manifest or other shipping document serving a similar purpose and containing the information required by §§ 172.202, 172.203, and 172.204'' (49 CFR 171.8, definition of ''shipping paper''). A hazardous waste manifest ''may be used as the shipping paper'' if it contains all the information required by Part 172, Subpart C (49 CFR 172.205(h)).

In 1994, Congress amended the Federal hazardous materials transportation law (Federal hazmat law) to require that, after a hazardous material ''is no longer in transportation,'' all offerors and carriers of a hazardous material must retain the shipping paper ''or *electronic image* thereof for a period of 1 year to be accessible through their respective principal places of business'' (49 U.S.C. 5110(e), added by Pub. L. 103–311, Title I, § 115, 108 Stat. 1678 (Aug. 26, 1994)). That section also requires that the offeror and carrier ''shall, upon request, make the shipping paper available to a Federal, State, or local government agency at reasonable times and locations.''

On September 12, 2001, the Research and Special Programs Administration (the predecessor to PHMSA) issued a notice of proposed rulemaking (NPRM) to amend the HMR to conform with § 5110(e) (66 FR 47443). The 2001 NPRM indicated an *electronic image* includes an image transmitted by a facsimile (FAX) machine, an image on the screen of a computer, or an image generated by an optical imaging machine. To facilitate compliance with, and enforcement of, the hazardous materials shipping paper requirement, in 2002 PHMSA further amended the HMR regarding the retention and information requirements associated with shipping papers. Amendments included extending the retention period to 375 days; requiring the copy to include the date that the shipment is accepted for transportation by the initial carrier; and requiring that the shipping paper copy or its *electronic image* be accessible at or through the principal place of business of each person required to prepare or maintain it during transportation. Consideration for allowing the use of electronic communication while hazardous materials are actually in transportation is the next step in the evolution of hazard communication.

The implementation of e-systems has already begun and will evolve if industry determines that investing in technology is economically beneficial for its businesses. Spurred by competitive demands, just-in-time delivery requirements, and the globalization of supply chains, many transportation and logistics industries have embraced modern innovations to communicate. However, the HMR requires the use of a paper copy of the shipping document. The rationale behind a paper-based system is to convey the necessary information in a consistent manner that is widely understood and accepted by all regulated entities, law enforcement, and emergency responders.

2. Authority Granted Under MAP–21

Section 33005 of MAP–21 provided PHMSA the authority to conduct paperless hazard communications pilot projects. PHMSA will conduct the pilot projects to evaluate the feasibility of using e-systems to convey the same information that is contained on a paper copy of a shipping document. MAP–21, Section 33005 states that PHMSA: (1) Cannot waive the current statutory shipping paper requirements, and (2) must consult with organizations representing fire and other emergency responders, law enforcement, and regulated entities. In addition, at least one pilot project must take place in a rural area.

Upon completion of the pilot projects, PHMSA must prepare a report that provides: (1) A detailed description of the pilot projects; (2) an evaluation of each pilot project to include an evaluation of the performance of the e-systems; (3) an assessment of the safety and security impacts of using e-systems to include the impact on the public, emergency responders, law enforcement, and on conducting inspections and investigations; (4) an analysis of the associated benefits and costs of using e-systems for each mode of transportation; and (5) a recommendation whether e-systems should be permanently incorporated into the Federal hazmat regulations. The Secretary shall submit the report to the Committee on Commerce, Science, and Transportation of the U.S. Senate and to the Committee on Transportation and Infrastructure of the U.S. House of Representatives by October 2014, two years after the enactment of the Hazardous Materials Transportation Safety Improvement Act of 2012.

3. Goal, Scope, and Intent of the Pilot Program and Request for Volunteers To Participate in the Pilot Projects

Beginning in 2007, PHMSA initiated actions to implement paperless hazard communications. PHMSA has conducted activities including: (1) Building a cooperative effort between transportation entities and regulatory agencies; (2) publishing a notice on the use of electronic data sharing; (3) conducting stakeholder public meetings to receive feedback on the use of electronic data sharing to communicate hazardous material shipping information; (4) collaborating with the Transportation Research Board on a study on the use of electronic hazardous materials shipping papers; (5) hosting workshops for stakeholders to communicate outreach findings of paperless hazardous communications; and (6) publishing e-HM information papers, which highlight the collective hazardous material transportation community's priorities, gaps, and concerns for implementing paperless hazard communications.

PHMSA strongly believes, through its prior efforts and activities, paperless hazard communication is possible and that this pilot program will demonstrate the capabilities of e-systems. PHMSA has developed a strategy for conducting the pilot projects that will enable PHMSA to evaluate paperless hazard communication systems capabilities from a real-world perspective.

The goal of the paperless hazard communications pilot program is to determine if e-systems are a feasible and effective means of providing hazard communication. In addition, if they are feasible and effective, PHMSA will use the information it gathers to assess the level of safety and security, as well as the associated benefits and costs, of e-systems as compared to the current hazardous materials shipping paper requirements. It is PHMSA's intent that any pilot project (test) conducted under the authority granted by MAP–21 will study the performance, safety and security impacts, and the associated benefits and costs of using e-systems for hazardous materials shipments, without disrupting the normal flow of commerce. During the pilot projects, emergency response providers and law enforcement officials will continue to perform their duties and respective roles according to existing emergency and inspection requirements, procedures, and policies. The emergency responders and law enforcement officials may continue to rely on the written shipping paper, even if companies are operating under a pilot project.

MAP–21 indicates that PHMSA must consider both the feasibility and the effectiveness of paperless hazard communications. Under this pilot program, PHMSA will be collaborating with regulated entities, law enforcement personnel, emergency response providers, and modal administrations to evaluate the feasibility and effectiveness of allowing e-HM communication for hazardous materials shipments. The pilot projects will focus on the use of e-systems:

- While shipping hazardous materials from point of origin to final destination using different transportation conveyances (i.e., trucks, railcars, maritime vessels, and airplanes), and
- During inspections and emergency response simulations.

PHMSA is seeking shippers, carriers, law enforcement personnel, and emergency responders that may be interested in volunteering to participate in the pilot projects. In response to a web posted announcement entitled, ''Defining the HM ACCESS Pilot Test,'' 64 entities expressed interest in participating. Some of these entities may satisfy the pilot project and MAP–21 qualification criteria and possess the capability and capacity to aid in testing a variety of scenarios. PHMSA strongly encourages the 64 entities that previously expressed interest in participating in the pilot projects to respond to this notice and provide the information identified within this notice. To ensure that we have the broadest range of participation in the pilot projects, PHMSA encourages other interested entities who have not previously expressed an interest in participating to volunteer. PHMSA will evaluate all volunteers (the previous 64 and those who respond to this notice) according to the criteria and qualifications identified in the following section and will select participants that satisfy the pilot test qualification requirements, meet the criteria specified in MAP–21, and are best able to aid in testing a variety of scenarios. Shippers, carriers, law enforcement, and emergency responders interested in participating in the pilot projects should provide statements of interest to the addresses identified in this notice. The statement of interest should include information describing the organization, point(s) of contact (name, title, address, phone, and email), self-identification of stakeholder type (shipper, carrier, law enforcement, or emergency responder), location, and capabilities. It should be noted, however, that responding to this notice does not guarantee selection for participation in the pilot projects.

4. Criteria Used for Selecting Pilot Project Participants

PHMSA intends that any pilot conducted under the authority granted by MAP–21 will study the performance, safety and security impacts, and associated benefits and costs of using e-systems for hazardous materials shipments, without disrupting the normal flow of commerce. Further, hardcopy shipping documents will still be required to accompany each shipment during the pilot projects, in accordance with the HMR.

PHMSA will conduct pilot tests in three, and potentially four, regions of the U.S.: The Northeast, Southeast, Northwest, and Southwest, with at least one pilot test conducted in a rural area within one or more of the regions, as prescribed by MAP–21. PHMSA will focus the pilot tests in geographical regions possessing high concentrations of hazardous materials registrants and presenting historically high numbers of hazardous material incidents resulting in deaths and injuries.

Law Enforcement and Emergency Response Volunteers

Desired law enforcement and emergency responder pilot test participants are those that operate within the regions of the pilot tests and are willing to assist in the collection of information during the tests, as described later in this document.

Shipper and Carrier Volunteers

Desired shipper and carrier pilot test participants are those who offer hazardous materials for transportation

and/or transport hazardous materials by a variety of modes and interact with other intermodal carriers for hazardous materials transfers. It is not PHMSA's intention to test vendors of electronic communication technologies or products. To volunteer and be selected as a volunteer, interested shipper and carrier participants will need to ship and/or transport hazardous materials within areas of high concentrations of hazardous materials registrants and hazardous materials incidents. In addition to the regions and modal criteria, potential participants must, at a minimum, satisfy the following requirements:

- Possess e-system(s) capable of managing and communicating the hazardous materials shipping paper information at their own expense,
- Possess their own equipment and personnel and/or contractor resources necessary to transport hazardous materials shipments,
- Be willing to allow, and participate in, inspections and emergency response simulations during the pilot tests,
- Be willing to provide feedback on experiences regarding e-HM communication during the pilot tests, including providing actual e-HM communications data from the pilot tests,
- Be willing to provide information on the basic function and capabilities of their e-system(s),
- Be willing to provide information on administrative, business, training, equipment, and operational-related benefits and costs associated with implementing e-system(s),
- Transport hazardous materials within the targeted test regions of the U.S., and
- Be in good standing with all levels of government and demonstrate compliance with all applicable regulations governing the safe and secure transportation of hazardous materials.

As part of PHMSA's participant evaluation and selection process, each shipper and carrier submitting a statement of interest will need to answer a list of on-line participant questions to verify its qualifications and capabilities. These questions will help PHMSA select those shipper and carrier participants that are best positioned to aid in testing a variety of test scenarios and criteria as specified in MAP–21. PHMSA anticipates the burden on shipper and carrier volunteers will be low and will involve the use of on-line questions (no more than 35 questions) with answers to most questions designed to be ''yes,'' ''no,'' or multiple choice.

Shipper and Carrier Participant Questions

PHMSA will publish a 30-day Notice in response to comments received to this 60-day Notice; the 30-day Notice will provide the shipper and carrier questions for those shippers and carriers who express an interest in volunteering in the pilot tests. PHMSA will use these questions to collect the following types of information from each shipper and carrier volunteer:

- Organization's name and general information.
- Hazardous material transport role (shipper, carrier, or both).
- Geographic area of business.
- Understanding of and ability to satisfy pilot test requirements and data needs.
- Technology of e-system(s).
- Capability of e-system(s) (scalability, accessibility, etc.).
- Equipment and process for transmitting data.
- Format of electronic data exchange.
- Class(es) of HM being shipped.
- Type of shipments(s) (less than truck load, bulk, etc.).
- Shipment route information (origin, destination, etc.).
- Mode(s) of transport associated with shipment(s).

PHMSA does not anticipate that completing the participant questions will impose a significant burden on shipper and carrier respondents. PHMSA estimates no more than 80 regulated entities (including those that have already replied to the web announcement and the additional volunteers that may reply to this Notice) will be asked to answer a list of shipper and carrier participant questions. PHMSA estimates it will take each respondent approximately 30 minutes to answer the list of participant questions. The resulting estimated total burden is 40 hours (80 respondents × 0.5 hour per respondent = 40 hours) for the shipper and carrier participant question data collection.

5. Request for Information (Following Selection of Pilot Test Participants)

PHMSA is seeking to collect: (1) Information and data as part of the pilot tests to support evaluation; and (2) data and information outside of the pilot tests for analyzing potential impacts (safety, security, benefits, and costs) of using e-systems.

PHMSA understands that this information collection effort may impose a burden on respondents. The information obtained will:

- Assist the agency in improving safety, hazard communication products, and/or hazard communication materials, and in potentially reducing current burden hours for completing shipping papers;
- Be provided strictly on a voluntary basis; and
- Be collected primarily utilizing on-line questions with answers to most questions designed to be ''yes,'' ''no,'' or multiple choice.

Volunteer modal inspectors and emergency responders will be responsible for conducting inspection and emergency response simulations and the majority of the data collection during the pilot tests. This approach limits the information burden on regulated entities, while minimizing information bias. Modal inspectors (typically law enforcement) will test the feasibility and effectiveness of e-systems by performing simulated modal inspections of regulated entities (shippers and carriers) participating in the pilot tests utilizing e-HM shipping papers. The inspectors will conduct each simulation following their established inspection protocols using their own existing equipment and resources. The only difference during the simulations will be that the shipping paper information will be communicated electronically. Following each inspection simulation, the participating inspector will answer a list of on-line questions related to the simulation and submit to PHMSA a copy of the e-HM shipping paper received. Emergency responders will follow a similar process to test the feasibility and effectiveness of e-systems during a simulated incident response involving HM shipments using electronic shipping papers. PHMSA will use the answers to the on-line questions and the e-HM shipping papers provided by the inspectors and emergency responders to evaluate the feasibility and effectiveness of the e-system involved.

PHMSA plans to administer the questions on-line q, with a maximum of 50 questions, and with answers to most questions designed to be ''yes,'' ''no,'' or multiple choice. The following sections summarize the types of information that will be requested as part of the pilot program.

Shipper and Carrier Information

Shippers and carriers will not be required to answer the list of on-line inspection and emergency response simulation questions described in the next section as part the pilot project. However, PHMSA does anticipate that the information provided by inspectors and emergency responders in conducting the simulations may

necessitate follow-up discussions with the shippers and/or carriers involved. Limited information may need to be collected from shippers and carriers as a result of these follow-up discussions, potentially including copies of e-HM shipping papers.

PHMSA does not anticipate that follow-up discussions with shippers and carriers and the associated information collection will impose a significant burden on respondents. PHMSA anticipates a total of 30 shippers and carriers (assuming 10 respondents for each of three test regions) and a burden of no more than four hours per shipper and carrier for the entirety of the test period. The resulting estimated total burden is 120 hours (30 respondents × 4.0 hour per respondent = 120 hours) for follow-up discussions and associated information collection with shippers and carriers.

Inspection Simulation Questions

For each hazardous materials inspection simulation, inspectors (law enforcement and/or Federal and state modal inspectors) involved in the simulation will answer a list of online inspection simulation questions and provide an electronic copy of the hazardous materials shipping paper they received during the simulation. Analysis of the e-HM shipping papers for required hazard communication information will enable PHMSA to verify the integrity of the data transfer. PHMSA will provide the list of inspection simulation questions with the 30-day Notice PHMSA will publish in response to comments received to this 60-day Notice. The inspection simulation questions will be designed to collect the following types of information:

- Organization's name and general information.
- Mode of transport inspected during simulation.
- Information about the organization's e-system(s).
- Activity triggering data transfer.
- Process and equipment used for data receipt and transmission.
- Hazardous materials data received from carrier or shipper.
- Hazardous materials data transmitted (to home office, other entity, etc.).
- Electronic data exchange format used.
- Actual time for data receipt (and transmission, if applicable).
- Human involvement.
- ''Readability'' of data.
- Electronic connectivity.
- Impacts to stakeholders (regulated entities, law enforcement, emergency responders, and the public).
- Impediments to using e-systems.
- Actual and potential benefits realized by stakeholders (regulated entities, law enforcement, emergency responders, and the public).

PHMSA does not anticipate that answering the list of inspection simulation questions will impose a significant burden on inspectors. PHMSA anticipates no more than 240 inspection simulations will be conducted (encompassing all pilot tests, all participants, and each test region throughout the entirety of the test period), resulting in a total of 240 respondents. PHMSA estimates it will take each inspector approximately 60 minutes to answer the list of inspection simulation questions and to submit a copy of the e-HM shipping paper to PHMSA. The resulting estimated total burden is 240 hours (240 respondents × 1.0 hour per respondent = 240 hours) for the inspection simulation question data collection.

Emergency Response Simulation Questions

For each hazardous materials emergency response simulation, emergency response providers and/or investigators involved in the simulation will answer a list of online emergency response simulation questions and provide an electronic copy of the hazardous materials shipping paper as received during the simulation. Analysis of the e-HM shipping papers for required hazard communication information will enable PHMSA to verify the integrity of the data transfer. PHMSA will provide the list of emergency response simulation questions with the 30-day Notice PHMSA will publish in response to comments received to this 60-day Notice. The emergency response simulation questions will be designed to collect the following types of information:

- Organization's name and general information.
- Mode of transport involved in the emergency response simulation.
- Information about the emergency response organization's e-system(s).
- Activity triggering data transfer.
- Process and equipment used for data receipt and transmission.
- Hazardous materials data received from carrier or shipper.
- Hazardous materials data transmitted (to first responders, etc.).
- Electronic data exchange format used.
- Actual time for data receipt (and transmission, if applicable).
- Human involvement.
- ''Readability'' of data.
- Electronic connectivity.
- Impacts to stakeholders (regulated entities, law enforcement, emergency responders, and the public).
- Impediments to using e-systems.
- Actual and potential benefits realized by stakeholders (regulated entities, law enforcement, emergency responders, and the public).

PHMSA does not anticipate that answering the list of emergency response simulation questions will impose a significant burden on investigators and emergency responders. PHMSA anticipates no more than 12 emergency response simulations will be conducted, resulting in a total of no more than 24 respondents (12 emergency response providers and 12 investigators). PHMSA estimates it will take each respondent approximately 60 minutes to answer the list of emergency response simulation questions and to submit a copy of the electronic shipping paper to PHMSA. The resulting estimated total burden is 24 hours (24 respondents × 1.0 hour per respondent = 24 hours) for the emergency response simulation question data collection.

Impact Analysis Questions

PHMSA is seeking to collect information and data from shippers, carriers, law enforcement, and emergency responders to aid in the assessment of potential impacts associated with using e-systems for each mode of transportation, as required under MAP–21. Potential impacts to be assessed include benefits, costs, safety, and security impacts on the public, emergency responders, and law enforcement. Similar to the pilot test simulation questions, PHMSA is planning to develop a list of impact analysis questions to be administered on-line, with a maximum of 75 questions, with answers to most questions designed to be ''yes,'' ''no,'' or multiple choice. PHMSA anticipates the list of impact analysis questions will not be limited to pilot test participants but will be available to all hazardous materials stakeholders to voluntarily answer. PHMSA will post the list of online impact analysis questions to the HM–ACCESS public Web site and distribute to industry via the HM–ACCESS email serve list. PHMSA will provide the list of impact analysis questions with the 30-day Notice PHMSA will publish in response to comments received to this 60-day Notice. The following list summarizes the types of information PHMSA plans to request as part of the impact analysis questions:

- Costs for required technology, including up-front capital costs for

equipment and ongoing costs for operations and maintenance (including telecommunications, any third-party service providers, maintenance of equipment, etc.).

- Costs for training personnel.
- Costs for conducting outreach/education to customers on the new approach.
- Changes in administrative costs and time requirements for:
- Generating e-HM shipping papers (vs. current hardcopy approach), including data entry.
- Filing, storing, and retrieving hardcopy shipping papers.
- Coordinating between shipper and carrier and between different carriers/modes in the supply chain (e.g., any changes in the paperwork that is created when a shipment goes from rail to truck).
- Impacts on operations (e.g. transport times, vehicle utilization, employee productivity, etc.).
- Any associated changes to other business processes (e.g., switching from paper to electronic invoices) and their costs/impacts.
- Changes in error rates for shipping papers.
- Information on the administrative, business, training, equipment, and operational-related costs and benefits associated with implementing e-system(s).
- Insurance and risk management issues/cost impacts.
- Any associated information that must be included to communicate hazard information.
- Limitation of e-system capability to communicate information and identifying the redundancy if failure exists.
- Information concerning the release of commercially-sensitive information.
- Unintentional release of information from unauthorized access.

PHMSA does not anticipate that answering the list of impact analysis questions will impose a significant burden on respondents (shippers, carriers, law enforcement, and emergency responders). PHMSA estimates no more than 200 respondents will complete the impact analysis questions, and that it will take each respondent approximately 90 minutes to answer the questions. The resulting estimated total burden is 300 hours (200 respondents × 1.5 hours per respondent = 300 hours) for the impact analysis question data collection.

The information previously described is intended to ensure that evaluation and feasibility reports focus on results and include quantitative data on the recommendation and possible implementation of e-systems into the Federal hazardous materials transportation safety program. This information and data will enable PHMSA to more accurately assess the safety and security impacts of using e-systems and to analyze the associated benefits and cost of using the e-systems.

6. Total Information Collection Burden

The total information collection burden for the Paperless Hazard Communication Pilot Program is as follows:

Participant Questions:	80 respondents × 0.5 hr.	=	40 hours
Shipper and Carrier Information:	30 respondents × 4.0 hr.	=	120 hours
Inspection Questions:	240 respondents × 1.0 hr.	=	240 hours
Emergency Response Questions:	24 respondents × 1.0 hr.	=	24 hours
Impact Analysis Questions:	200 respondents × 1.5 hr.	=	300 hours
Total Information Collection Burden:	**574 respondents**	....	**724 hours**

Title: Paperless Hazard Communications Pilot Program.

Type of Request: Request for Comments to Information Collection Burden for Paperless Hazard Communications Pilot Program.

Abstract: PHMSA is submitting an information collection to OMB in support of a paperless hazard communications pilot program under Title III, Section 33005 of the Hazardous Materials Transportation Safety Improvement Act of 2012 (MAP–21).

Affected Public: Carriers, Shippers, Emergency Response Providers, and Law Enforcement Personnel

Estimated Number of Respondents: 574.

Estimated Number of Responses: 574.

Estimated Annual Burden Hours: 724.

Estimated Annual Burden Costs: $24,300.

Frequency of collection: Single occasion.

Issued in Washington, DC, on July 16, 2013.

Magdy El-Sibaie,

Associate Administrator for Hazardous Materials Safety.

BILLING CODE 4910–60–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

Special Permit Applications

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice of actions on Special Permit Applications.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations (49 CFR Part 107, Subpart B), notice is hereby given of the actions on special permits applications in (June to June 2013). The mode of transportation involved are identified by a number in the ''Nature of Application'' portion of the table below as follows: 1—Motor vehicle, 2—Rail freight, 3—Cargo vessel, 4—Cargo aircraft only, 5—Passenger-carrying aircraft. Application numbers prefixed by the letters EE represent applications for Emergency Special Permits. It should be noted that some of the sections cited were those in effect at the time certain special permits were issued.

Issued in Washington, DC, on July 15, 2013.

Donald Burger,

Chief, General Approvals and Permits.

S.P. No.	Applicant	Regulation(s)	Nature of special permit thereof
MODIFICATION SPECIAL PERMIT GRANTED			
4576–M	Structural Composites Industries (SCI) Pomona, CA.	49 CFR 173.302a and 173.304a.	To modify the special permit to authorize additional Division 2.1 and 2.2 materials and add Division 2.3 materials.

S.P. No.	Applicant	Regulation(s)	Nature of special permit thereof
10915–M	Luxfer Gas Cylinders Riverside, CA.	49 CFR 173.302a, 173.304a and 180.205.	To modify the special permit to authorize a new maximum allowable working pressure and maximum allowable strength stiffness.
13581–M	Bengal Products Inc. Baton Rouge, LA.	49 CFR 173.306(a)(3)	To modify the special permit to reflect current statutes and regulations pertaining to consumer commodities.
15389–M	AMETEK Ameron LLC d/b/a MASS Systems Baldwin Park, CA.	49 CFR 173.301(a)(1), 173.301(a)(1), 173.302a(a)(1), and 173.304a(a)(1).	To modify the special permit to authorize new pressure test requirements.
13112–M	Carleton Technologies Inc. (Former Grantee: Conax Florida Corporation dba Cobham Life Support) Orchard Park, NY.	49 CFR 173.302a	To modify the special permit to change a drawing number; replace the fully assembled pressure vessel with a representative pyrotechnic primer; increase the required temperature per minute for gas relief; require a nominal operating pressure; reduce the testing frequency; and remove the flattening test.
14856–M	BKC Industries, Inc. Creedmoor, NC.	49 CFR 180.209(a) and (b)	To modify the special permit to authorize neck thread requirements that are consistant with CGA Pamphlet C–23.
14828–M	Croman Corporation White City, OR.	49 CFR 172.101 Column (9B), 172.204(c)(3), 173.27(b)(2) and (3), 175.30 and 175.75.	To modify the special permit to authorize the addition of Division 1.2 explosives.
8228–M	U.S. Department of Justice, Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) Washington, DC.	49 CFR 172.101(c), 172.203(k), 172.102, and 173.56(b).	To modify the special permit to authorize an alternative packaging.
15028–M	Roeder Cartage Company, Inc. Lima, OH.	49 CFR 180.407(c), (e), and (f).	To modify the special permit to authorize a DOT specification 407 trailer.
		NEW SPECIAL PERMIT GRANTED	
15792–N	American Spraytech North Branch, NJ.	49 CFR 173.306(a)(3)(v)	To authorize the transportation in commerce of certain aerosols containing a Division 2.2 compressed gas in non-refillable aerosol containers which are not subject to the hot water bath test. (mode 1)
15799–N	Consumer Products Safety Commission (CPSC) Bethesda, MD.	49 CFR 173.21(i)	To authorize the one way transportation in commerce of lighters without LA approvals. (modes 1, 4)
15778–N	Northwest Helicopters, LLC Olympia, WA.	49 CFR § 172.101 Column (9B), § 172.204(c)(3), § 173.27(b)(2), § 175.30(a)(1), §§ 172.200, 172.300, 172.400, 173.302(f)(3) and § 175.75.	To authorize the transportation in commerce of certain hazardous materials by Part 133 Rotorcraft External Load Operations, attached to or suspended from an aircraft, in remote areas of the US without meeting certain hazard communication and stowage requirements. (mode 4)
15851–N	Conair Corporation East Windsor, NJ.	49 CFR 171.2(k)	To authorize the transportation in commerce of certain used DOT 3AL cylinders that contain CO2, but not necessarily in an amount qualifying as hazardous material. (modes 1, 2, 3, 4, 5)
15836–N	Galyean LP Henderson, TX	49 CFR 173.202, 173.203, 173.241, 173.242 and 173.243.	To authorize the transportation in commerce of certain Class 3 and Class 8 materials in alternative packaging for transportation by motor vehicle. (mode 1)
15838–N	Primo Water Corporation Winston-Salem, NC.	49 CFR 171.2(k)	To authorize the transportation in commerce of certain used cylinders that contain CO2, but not necessarily in an amount qualifying as hazardous material. (modes 1, 2, 3, 4)
15860–N	Apple Inc. Cupertino, CA	49 CFR 173.185(a)	To authorize the transportation in commerce of damaged or defective lithium ion batteries that do not meet the requirements of § 173.185(a) (modes 1, 3)
15827–N	Advanced Chemical Transport Sunnyvale, CA.	49 CFR 173.185(a)	To authorize the manufacture, marking, sale an use of certain packagings for spent lithium ion batteries that have not been tested in accordance with the UN Manual of Test Criteria. (modes 1, 3)
15877–N	ConocoPhillips Alaska, Inc. Anchorage, AK.	49 CFR 172.101(9B)	To authorize the transportation in commerce of certain flammable or corresive liquids which exceed that quantity limitations when transported by cargo aircraft. (mode 4)
15878–N	ConAgra Foods Naperville, IL	49 CFR 172.304(a)(3)	To authorize the transportation in commerce of certain packages whose limited quantity marking is partially overprinted by a display instruction. (mode 1)
15871–N	Shell Chemical LP Deer Park, TX.	49 CFR 171.2(g)	To authorize the transportation in commerce of certain 111A100W3 railcars containing Phenol with steam jacketed vent valves that were converted at a non-registered fabrication shop. (mode 2)
15879–N	Kalitta Air, LLC Ypsilanti, MI ...	49 CFR 172.101 Column (9B), 172.204(c)(3), 173.27, and 175.30(a)(1).	To authorize the one-time transportation in commerce of certain explosives that are forbidden for transportation by cargo only aircraft. (mode 4)

S.P. No.	Applicant	Regulation(s)	Nature of special permit thereof
15846–N	LDJ Manufacturing, Inc. Pella, IA.	49 CFR 178.346–4(b)	To authorize the manufacture, marking, sale and use of non-DOT specification cargo tanks similar to DOT 406 except that external self-closing stop-valves are authorized. (mode 1)
DENIED			
14520–M	Request by Axiall Corporation Monroeville, PA June 06, 2013.		
15745–N	Request by Praxair Distribution, Inc. Danbury, CT June 10, 2013. To authorize the transportation in commerce of certain foreign manufactured cylinders qualified under an alternative test method and which are not equipped with pressure relief devices.		

[FR Doc. 2013–17278 Filed 7–18–13; 8:45 am]

BILLING CODE 4909–60–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

Office of Hazardous Materials Safety; Notice of Application for Special Permits

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of Applications for Special Permits.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations (49 CFR Part 107, subpart B), notice is hereby given that the Office of Hazardous Materials Safety has received the application described herein. Each mode of transportation for which a particular special permit is requested is indicated by a number in the ''Nature of Application'' portion of the table below as follows: 1—Motor vehicle, 2—Rail freight, 3—Cargo vessel, 4—Cargo aircraft only, 5—Passenger-carrying aircraft.

DATES: Comments must be received on or before August 19, 2013.

Address Comments To: Record Center, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, Washington, DC 20590.

Comments should refer to the application number and be submitted in triplicate. If confirmation of receipt of comments is desired, include a self-addressed stamped postcard showing the special permit number.

FOR FURTHER INFORMATION CONTACT: Copies of the applications are available for inspection in the Records Center, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington DC or at *http://regulations.gov.*

This notice of receipt of applications for special permit is published in accordance with Part 107 of the Federal hazardous materials transportation law (49 U.S.C. 5117(b); 49 CFR 1.53(b)).

Issued in Washington, DC, on July 15, 2013.

Donald Burger,

Chief, General Approvals and Permits.

Application No.	Docket No.	Applicant	Regulation(s) affected	Nature of special permits thereof
NEW SPECIAL PERMITS				
15865–N	.....	HeliStream Inc. Costa Mesa, CA.	49 CFR 49 CFR Table § 172.101, Column(9B), § 172.204(c)(3), § 173.27(b)(2) § 175.30(a)(1) § 172.200, 172.300, and 172.400.	To authorize the transportation in commerce of certain hazardous materials by 14 CFR Part 133 Rotorcraft External Load Operations transporting hazardous materials attached to or suspended from an aircraft, in remote areas of the US only, without being subject to hazard communication requirements, quantity limitations and certain loading and stowage requirements. (mode 4)
15880–N	.....	Viking Packing Specialist Catoosa, OK.	49 CFR 173.60	Authorizes the transportation in commerce of not more than 5 grams of Division 1.4C materials in a special shipping container. (modes 1, 4, 5)
15881–N	.....	Chart Industries, Inc. Ball Ground, GA.	49 CFR 180.211(c)(2)(i)	To authorize the repair of certain DOT 4L cylinders without requiring pressure testing. (mode 1)
15882–N	.....	Ryan Air Anchorage, AK ..	49 CFR 172.101 Table Column (9B), 173.27 and 173.243.	To authorize the transportation in commerce of certain Class 3 fuels in non-DOT specification bulk packaging by cargo aircraft. (mode 4)

Pipeline and Hazardous Materials Safety Administration

List of Applications Delayed

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of applications delayed more than 180 days.

SUMMARY: In accordance with the requirements of 49 U.S.C. 5117(c), PHMSA is publishing the following list of special permit applications that have been in process for 180 days or more. The reason(s) for delay and the expected completion date for action on each application is provided in association with each identified application.

FOR FURTHER INFORMATION CONTACT: Ryan Paquet, Director, Office of Hazardous Materials Special Permits

and Approvals, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington, DC 20590–0001, (202) 366–4535.

Key to ''Reason for Delay''

1. Awaiting additional information from applicant
2. Extensive public comment under review
3. Application is technically complex and is of significant impact or precedent-setting and requires extensive analysis
4. Staff review delayed by other priority issues or volume of special permit applications

Meaning of Application Number Suffixes

N—New application
M—Modification request
R—Renewal Request
P—Party To Exemption Request

Issued in Washington, DC, on July 15, 2013.

Pipeline and Hazardous Materials Safety Administration

Office of Hazardous Materials Safety; Notice of Applications for Modification of Special Permit

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of applications for modification of special permits.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations (49 CFR Part 107, Subpart B), notice is hereby given that the Office of Hazardous Materials Safety has received the applications described herein. This notice is abbreviated to expedite docketing and public notice. Because the sections affected, modes of transportation, and the nature of application have been shown in earlier **Federal Register** publications, they are not repeated here. Requests for modification of special permits (e.g. to provide for additional hazardous materials, packaging design changes, additional mode of transportation, etc.) are described in footnotes to the application number. Application numbers with the suffix ''M'' denote a modification request. These applications have been separated from the new application for special permits to facilitate processing.

DATES: Comments must be received on or before August 5, 2013.

Address Comments To: Record Center, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, Washington, DC 20590.

Comments should refer to the application number and be submitted in triplicate. If confirmation of receipt of comments is desired, include a self-addressed stamped postcard showing the special permit number.

FOR FURTHER INFORMATION CONTACT: Copies of the applications are available for inspection in the Records Center, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington DC or at *http://regulations.gov.*

This notice of receipt of applications for modification of special permit is published in accordance with Part 107 of the Federal hazardous materials transportation law (49 U.S.C. 5117(b); 49 CFR 1.53(b)).

Issued in Washington DC, on July 15, 2013.

BILLING CODE 4909–60–P

DEPARTMENT OF TRANSPORTATION

Research & Innovative Technology Administration

[Docket ID Number RITA 2008–0002]

Agency Information Collection; Activity Under OMB Review; Report of Passengers Denied Confirmed Space—BTS Form 251

AGENCY: Research & Innovative Technology Administration (RITA), Bureau of Transportation Statistics (BTS), DOT.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Bureau of Transportation Statistics invites the general public, industry and other governmental parties to comment on the continuing need for and usefulness of BTS collecting reports on the number of passengers holding confirmed reservations that voluntarily or involuntarily give up their seats when the airline oversells the flight. Comments are requested concerning whether (a) the collection is still needed by the Department of Transportation, (b) BTS accurately estimated the reporting burden; (c) there are other ways to enhance the quality, utility and clarity of the information collected; and (d) there are ways to minimize reporting burden, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted by September 17, 2013.

FOR FURTHER INFORMATION CONTACT: Cecelia Robinson, Office of Airline Information, RTS–42, Room E34–410, RITA, BTS, 1200 New Jersey Avenue SE., Washington, DC 20590–0001, Telephone Number (202) 366–4405, Fax Number (202) 366–3383 or EMAIL *cecelia.robinson@dot.gov*.

COMMENTS: Comments should identify the associated OMB approval #2138–0018 and Docket ID Number RITA 2008–0002. Persons wishing the Department to acknowledge receipt of their comments must submit with those comments a self-addressed stamped postcard on which the following statement is made: Comments on OMB # 2138–0018, Docket—RITA 2008–0002. The postcard will be date/time stamped and returned.

SUPPLEMENTARY INFORMATION:

OMB Approval No.: 2138–0018.

Title: Report of Passengers Denied Confirmed Space.

Form No.: BTS Form 251.

Type of Review: Reinstatement of an expired approved collection.

Respondents: Large certificated air carriers.

Number of Respondents: 16.

Number of Responses: 64.

Total Annual Burden: 640 hours.

Needs and Uses: BTS Form 251 is a one-page report submitted four times per year, on the number of passengers denied seats either voluntarily or involuntarily, whether these bumped passengers were provided alternate transportation and/or compensation, and the amount of the payment. U.S. air carriers that account for at least 1 percent of domestic scheduled-service passenger revenues must report oversales on all operations with 30 seats or larger aircraft that depart a U.S. airport.

Carriers do not report data from inbound international flights to the United States because the protections of 14 CFR part 250 *Oversales* do not apply to these flights. The report allows the Department to monitor the effectiveness of its oversales rule and take enforcement action when necessary. The involuntarily denied-boarding rate has decreased from 4.38 per 10,000 passengers in 1980 to 0.71 for the quarter ended December 2011. Without Form 251, determining the effectiveness of the Department's oversales rule would be impossible. The publishing of the carriers' individual denied boarding rates has diminished the need for more intrusive regulation. The rate of denied boarding can be examined as a continuing fitness factor. This rate provides an insight into a carrier's customer service practices. A rapid sustained increase in the rate of denied boarding may indicate operational difficulties. Because the rate of denied boarding is released quarterly, travelers and travel agents can select carriers with lower incidences of bumping passengers. This information is available in the *Air Travel Consumer Report* at: *http://airconsumer.ost.dot.gov/reports/index.htm*. The *Air Travel Consumer Report* is also sent to newspapers, magazines, and trade journals. The public availability of this information deters carriers from setting unreasonable overbooking rates—a market-based mechanism that is more efficient than direct regulation of those rates.

The Confidential Information Protection and Statistical Efficiency Act of 2002 (44 U.S.C. 3501 note) requires a statistical agency to clearly identify information it collects for non-statistical purposes. BTS hereby notifies the respondents and the public that BTS uses the information it collects under this OMB approval for non-statistical purposes including, but not limited to, publication of both Respondent's identity and its data, submission of the information to agencies outside BTS for review, analysis, and possible use in regulatory and other administrative matters.

Issued in Washington, DC, on July 12, 2013.

Patricia Hu,

Director, Bureau of Transportation Statistics, Research and Innovative Technology Administration.

BILLING CODE 4910–HY–P

DEPARTMENT OF TRANSPORTATION

Research and Innovative Technology Administration

Intelligent Transportation Systems Program Advisory Committee; Notice of Meeting

AGENCY: ITS Joint Program Office, Research and Innovative Technology Administration, U.S. Department of Transportation.

ACTION: Notice.

The Intelligent Transportation Systems (ITS) Program Advisory Committee (ITS PAC) will hold a meeting on August 7, 2013, from 8:00 a.m. to 4:00 p.m. (EST), and on August 8, 2013, from 8:00 a.m. to 4:00 p.m. (EST) in Salon F of the Crystal City Marriott at Reagan National Airport, 1999 Jefferson Davis Highway, Arlington, VA 22202.

The ITS PAC, established under Section 5305 of Public Law 109–59, Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users, August 10, 2005, and re-established under Section 53003 of Public Law 112–141, Moving Ahead for Progress in the 21st Century, July 6, 2012, was created to advise the Secretary of Transportation on all matters relating to the study, development, and implementation of intelligent transportation systems. Through its sponsor, the ITS Joint Program Office (JPO), the ITS PAC makes recommendations to the Secretary regarding ITS Program needs, objectives, plans, approaches, content, and progress.

The following is a summary of the tentative meeting agenda. August 7: (1) ITS JPO Program Update, (2) Review of Draft NHTSA Letter, (3) Discussion of Report on Deployment Incentives, (4) ITS Strategic Plan Update, and (5) Committee Discussion of ITS Strategic Plan Review. August 8: (1) Subcommittee Meetings to Finalize Recommendations to the Secretary of Transportation (Secretary), (2) Subcommittee Reports on Recommendations to the Secretary, and (3) Discussion of Final Recommendations to the Secretary.

The meeting will be open to the public, but limited space will be available on a first-come, first-served basis. Members of the public who wish to present oral statements at the meeting must request approval from Mr. Stephen Glasscock, the Committee Designated Federal Official, at (202) 366–9126, no later than July 31, 2013.

Questions about the agenda or written comments may be submitted by U.S. Mail to: U.S. Department of Transportation, Research and Innovative Technology Administration, ITS Joint Program Office, Attention: Stephen Glasscock, 1200 New Jersey Avenue SE., HOIT, Washington, DC 20590 or faxed to (202) 493–2027. The ITS Joint Program Office requests that written comments be submitted not later than July 31, 2013.

Notice of this meeting is provided in accordance with the Federal Advisory Committee Act and the General Services Administration regulations (41 CFR Part 102–3) covering management of Federal advisory committees.

Issued in Washington, DC, on the 15th day of July 2013.

John Augustine,

Managing Director, ITS Joint Program Office.

BILLING CODE 4910–HY–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. AB 290 (Sub-No. 343X)]

Central of Georgia Railroad Company—Abandonment Exemption—in Newton County, Ga.

Central of Georgia Railroad Company (CGA) [1] has filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments* to abandon approximately 14.90 miles of rail line between milepost E 65.80 (at the point of the line's crossing of Route 229 in Newborn) and milepost E 80.70 (near the intersection of Washington Street SW., and Turner Lake Road SW., in Covington), in Newton County, Ga. The line traverses United States Postal Service Zip Codes 30014, 30055, and 30056.

CGA has certified that: (1) No local traffic has moved over the line for at least two years; (2) no overhead traffic has moved over the line for at least two years, and if there were any overhead traffic, it could be rerouted over other lines; (3) no formal complaint filed by a user of rail service on the line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the line either is pending with the Surface Transportation Board (Board) or with any U.S. District Court or has been decided in favor of complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(c) (environmental report), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on August 20, 2013, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2),[3] and trail use/rail banking requests under 49 CFR 1152.29 must be filed by July 29, 2013. Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by August 8, 2013, with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001.

A copy of any petition filed with the Board should be sent to CGA's representative: Robert A. Wimbish, Baker & Miller PLLC, 2401 Pennsylvania Ave. NW., Suite 300, Washington, DC 20037.

If the verified notice contains false or misleading information, the exemption is void *ab initio.*

CGA has filed a combined environmental and historic report that addresses the effects, if any, of the abandonment on the environment and historic resources. OEA will issue an environmental assessment (EA) by July 26, 2013. Interested persons may obtain a copy of the EA by writing to OEA (Room 1100, Surface Transportation Board, Washington, DC 20423–0001) or by calling OEA at (202) 245–0305. Assistance for the hearing impaired is available through the Federal Information Relay Service at (800) 877–8339. Comments on environmental and historic preservation matters must be

[1] CGA is a wholly owned subsidiary of Norfolk Southern Railway Company.

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C. 2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[3] Each OFA must be accompanied by the filing fee, which is currently set at $1,600. *See* 49 CFR 1002.2(f)(25).

filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), CGA shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the line. If consummation has not been effected by CGA's filing of a notice of consummation by July 19, 2014, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available on our Web site at ''*www.stb.dot.gov.*''

Decided: July 12, 2013.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Derrick A. Gardner,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 35750]

Ramsey County Regional Railroad Authority—Acquisition Exemption—Right to Restore Rail Service Over a Railbanked Right-of-Way in Ramsey County, Minn.

Ramsey County Regional Railroad Authority (RCRRA), a noncarrier political subdivision of the State of Minnesota, has filed a verified notice of exemption under 49 CFR 1150.31 to acquire from the City of Maplewood, Minn. (the City), the right to restore rail service over a rail banked right-of-way, a distance of .67 miles, extending between milepost 7.19, approximately 100 feet north of Interstate Highway I–694 in White Bear Township, and milepost 6.52, approximately 50 feet north of Beam Avenue in the City (the line), in Ramsey County, Minn.

In a related prior transaction, BNSF Railway Company (BNSF) filed a verified notice of exemption to abandon the line,[1] and the Board issued a Notice of Interim Trail Use or Abandonment (NITU) under section 8(d) of the National Trails System Act, 16 U.S.C. 1247(d), and 49 CFR 1152.29 to permit the City to negotiate with BNSF to acquire the line for use as a trail (rail banking/interim trail use).[2] On October 28, 2005, the parties filed, in the abandonment docket, a notice that a rail banking/interim trail use agreement had been reached.[3] By quitclaim deed dated September 26, 2005, BNSF conveyed the line to the City along with BNSF's right to restore service over the right-of-way. The City obtained Board authority to acquire the right to restore rail service in 2010.[4] The City stated that it or an operator contracted by the City would operate over the line if service were restored.

The City and RCRRA now seek to convey the right to restore rail service over the right-of-way from the City to RCRRA.[5] The parties state that an agreement between RCRRA and the City has been reached for RCRRA's acquisition of the City's right to restore rail service over the right-of-way. RCRRA or an operator contracted by RCRRA would operate the rail line if rail service were to be restored.

The transaction is expected to be consummated on or after August 2, 2013 (30 days after the exemption was filed).

RCRRA certifies that its projected annual revenues from the acquisition involved in this proceeding do not exceed $5 million or exceed those that would qualify it as a Class III carrier.

If the notice contains false or misleading information, the exemption is void *ab initio.* Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed no later than July 26, 2013 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35750, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Thomas F. McFarland, Thomas F. McFarland, P.C., 208 South LaSalle Street, Suite 1890, Chicago, IL 60604–1112.

Board decisions and notices are available on our Web site at *www.stb.dot.gov.*

Decided: July 12, 2013.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Derrick A. Gardner,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

July 16, 2013.

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before August 19, 2013 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimate, or any other aspect of the information collection, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.GOV* and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8140, Washington, DC 20220, or email at *PRA@treasury.gov.*

FOR FURTHER INFORMATION CONTACT: Copies of the submission(s) may be obtained by calling (202) 927–5331, email at *PRA@treasury.gov,* or the entire information collection request maybe found at *www.reginfo.gov.*

Internal Revenue Service (IRS)

OMB Number: 1545–0007.

Type of Review: Extension without change of a currently approved collection.

Title: Forest Activities Schedule.

Form: T.

Abstract: Form T is filed by individuals and corporations to report income and deductions from the operation of a timber business. The IRS uses Form T to determine if the correct amount of income and deductions are reported.

Affected Public: Private Sector; Businesses or other for-profits.

[1] *BNSF Railway—Aban. Exemption—in Ramsey Cnty., Minn.,* AB 6 (Sub.-No. 429X) (STB served Aug. 10, 2005).

[2] *BNSF Railway—Aban. Exemption—in Ramsey Cnty., Minn.,* AB 6 (Sub.-No. 429X) (STB served Sept. 8, 2005).

[3] *See* Notice of Interim Trail Use Agreement, *BNSF Railway—Aban. Exemption—in Ramsey Cnty., Minn.,* AB 6 (Sub.-No. 429X) (filed Oct. 28, 2005).

[4] *City of Maplewood, Minn.—Aquis. Exemption—Right to Restore Rail Serv. Over a Railbanked Right-of-Way in Ramsey Cnty., Minn.,* FD 35450 (STB served Dec. 23, 2010).

[5] RCRRA and the City have also filed a petition to substitute trail user, pursuant to which RCRRA seeks to become the trail sponsor of the line. *BNSF Railway—Aban. Exemption—in Ramsey Cnty., Minn.,* AB 6 (Sub.-No. 429X) (filed July 3, 2013).

Estimated Annual Burden Hours: 446,208.

OMB Number: 1545–0159.

Type of Review: Revision of a currently approved collection.

Title: Annual Return To Report Transactions With Foreign Trusts and Receipts of Certain Foreign Gifts.

Form: 3520.

Abstract: Form 3520 is filed by U.S. persons who create a foreign trust, transfer property to a foreign trust, receive a distribution from a foreign trust, or receive a large gift from a foreign source. IRS uses the form to identify the U.S. persons who may have transactions that may trigger a taxable event in the future.

Affected Public: Private Sector: Businesses and other for-profits.

Estimated Annual Burden Hours: 71,742.

OMB Number: 1545–0213.

Type of Review: Extension without change of a currently approved collection.

Title: Annual Certification of Racial Nondiscrimination for a Private School Exempt from Federal Income Tax.

Form: 5578.

Abstract: Form 5578 is used by private schools that do not file Schedule A (Form 990) to certify that they have a racially nondiscriminatory policy toward students as outlined in Revenue Procedure 75–50. The Internal Revenue Service uses the information to help ensure that the school is maintaining a nondiscriminatory policy in keeping with its exempt status.

Affected Public: Private Sector: Not-for-profit institutions.

Estimated Annual Burden Hours: 3,730.

OMB Number: 1545–0742.

Type of Review: Extension without change of a currently approved collection.

Title: TD 8019—Public Inspection of Exempt Organization Return.

Abstract: Section 6104(b) authorizes the Service to make available to the public the returns required to be filed by exempt organizations. The information requested in § 301.6104(b)–1(b)(4) is necessary in order for the Service not to disclose confidential business information furnished by businesses which contribute to exempt black lung trusts.

Affected Public: Private Sector: Businesses and other for-profits.

Estimated Annual Burden Hours: 22.

OMB Number: 1545–0768.

Type of Review: Extension without change of a currently approved collection.

Title: TD 7898—Employers Qualified Educational Assistance Programs.

Abstract: Respondents include employers who maintain education assistance programs for their employees. Information verifies that programs are qualified and that employees may exclude educational assistance from their gross incomes.

Affected Public: Private Sector: Businesses or other for-profits.

Estimated Annual Burden Hours: 615.

OMB Number: 1545–0949.

Type of Review: Extension without change of a currently approved collection.

Title: Application for Special Enrollment Examination.

Form: 2587.

Abstract: This information relates to the determination of the eligibility of individuals seeking enrollment status to practice before the Internal Revenue Service.

Affected Public: Individuals or Households.

Estimated Annual Burden Hours: 11,000.

OMB Number: 1545–1093.

Type of Review: Extension without change of a currently approved collection.

Title: TD 8416—Final Minimum Tax-Tax Benefit Rule.

Abstract: Section 58(h) of the Internal Revenue Code provides that the Secretary shall provide for adjusting tax preference items where such items provided no tax benefit for any taxable year. This regulation provides guidance for situations where tax preference items provided no tax benefit because of available credits and describes how to claim a credit or refund of minimum tax paid on such preferences.

Affected Public: Private Sector: Businesses or other for-profits.

Estimated Annual Burden Hours: 40.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Transfer Agent Registration and Amendment Form

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; and Federal Deposit Insurance Corporation (FDIC) .

ACTION: Notice and Request for Comment.

SUMMARY: The Office of the Comptroller of the Currency (OCC) and Federal Deposit Insurance Corporation (FDIC) are announcing that a proposed collection of information renewal is being submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (PRA).

DATES: Comments must be submitted on or before August 19, 2013.

ADDRESSES:

OCC: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0124, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *regs.comments@occ.treas.gov*. You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not enclose any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

FDIC: You may submit comments, which should refer to ''Transfer Agent Registration and Amendment Form, 3064–0026'' by any of the following methods:

- *http://www.FDIC.gov/regulations/laws/federal/notices.html.*
- *Email: comments@FDIC.gov*. Include ''Transfer Agent Registration and Amendment Form, 3064–0026'' in the subject line of the message.
- *Mail:* Gary A. Kuiper (202 898–3877, Attn: Comments, Federal Deposit Insurance Corporation, 550 17th Street NW., NYA–5046, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand delivered to the guard station at the rear of the 550 17th Street Building

(located on F Street) on business days between 7 a.m. and 5 p.m.

Additionally, please send a copy of your comments by mail to: OCC Desk Officer, 1557–0124 or 3064–0026, U.S. Office of Management and Budget, 725 17th Street NW., #10235, Washington, DC 20503, or by email to: *oira_submission@omb.eop.gov*.

Public Inspection: All comments received will be posted without change to *http://www.fdic.gov/regulations/laws/federal/notices.html* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: For further information about the information collection discussed in this notice, please contact any of the agency clearance officers whose names appear below.

OCC: Johnny Vilela or Mary H. Gottlieb, OCC Clearance Officers, (202) 649–5490, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219.

FDIC: Gary A. Kuiper, (202) 898–3877, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street NW., NYA–5046, Washington, DC 20429.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, the OCC and FDIC are submitting the following proposed collection of information to OMB for review and clearance.

Report Title: Transfer Agent Registration and Amendment Form.

Form Number: TA–1.

Frequency of Response: On occasion.

Affected Public: Business or other for-profit.

Estimated Time per Response: 1.25 hours: registration, 10 minutes: amendment.

OCC

OMB Number: 1557–0124.

Estimated Number of Respondents: 2 registrations, 15 amendments.

Estimated Total Annual Burden: 6 hours.

FDIC

OMB Number: 3064–0026.

Estimated Number of Respondents: 2 registrations, 13 amendments.

Estimated Total Annual Burden: 5 hours.

Abstract

The Securities Exchange Act of 1934 (Act) requires any person acting as a transfer agent to register as such and to amend registration information when it changes. Section 17A(c) of the Act requires all transfer agents for securities registered under section 12 of the Act to register ''by filing with the appropriate regulatory agency . . . an application for registration in such form and containing such information and documents . . . as such appropriate regulatory agency may prescribe as necessary or appropriate in furtherance of the purposes of this section.'' In general, an entity performing transfer agent functions for a security is required to register if the security is registered on a national securities exchange and if the issuer has total assets of $10 million or more and a class of equity security held of record by 500 or more persons.

General Description of Reports

This information collection is mandatory pursuant to Sections 17A(c), 17(a)(3), and 23(a) of the Act, as amended (15 U.S.C. 78q–1(c), 78q(a)(3), and 78w(a)) (FDIC). Sections 12, 13, 14(a), 14(c), 14(d), 14(f), and 16 of the Act, as amended (15 U.S.C. 781, 78m, 78n(a), 78n(c), 78n(d), 78n(f), and 78p (OCC). Additionally, § 341.3 of the FDIC's Rules and Regulations implement the provisions of the Act. The registrations are public filings and, therefore, are not confidential.

On May 3, 2013, the OCC and FDIC published in the **Federal Register** (78 FR 26113), a 60-day notice requesting public comment on the proposed collection of information. They received no comments.

Request for Comment

The Agencies invite comment on:

(a) Whether the collections of information are necessary for the proper performance of the Agencies' functions, including whether the information has practical utility;

(b) The accuracy of the Agencies' estimates of the burden of the information collections, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(d) Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be shared among the Agencies. All comments will become a matter of public record.

Dated: July 15, 2013.

Michele Meyer,

Assistant Director, Legislative and Regulatory Activities Division.

Dated at Washington, DC, this 11th day of July, 2013.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

BILLING CODE 4810–33–P ; 6714–01–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities; Information Collection Renewal; Comment Request

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on the renewal of an information collection, as required by the Paperwork Reduction Act of 1995 (PRA). An agency may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is soliciting comment concerning renewal of an information collection titled, ''Guidance on Sound Incentive Compensation Practices.''

DATES: Written comments should be submitted by September 17, 2013.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0245, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *regs.comments@occ.treas.gov*. You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not

enclose any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

FOR FURTHER INFORMATION CONTACT: You can request additional information or a copy of the collection from Johnny Vilela or Mary H. Gottlieb, OCC Clearance Officers, (202) 649–5490, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC is requesting renewal, without change of the following collection:

Title: Guidance on Sound Incentive Compensation Policies.

OMB Number: 1557–0245.

Abstract: Under the guidance, national banks and Federal savings associations are required to: (i) Have policies and procedures that identify and describe the role(s) of the personnel and units authorized to be involved in incentive compensation arrangements, identify the source of significant risk-related inputs, establish appropriate controls governing these inputs to help ensure their integrity, and identify the individual(s) and unit(s) whose approval is necessary for the establishment or modification of incentive compensation arrangements; (ii) create and maintain sufficient documentation to permit an audit of the organization's processes for incentive compensation arrangements; (iii) have any material exceptions or adjustments to the incentive compensation arrangements established for senior executives approved and documented by its board of directors; and (iv) have its board of directors receive and review, on an annual or more frequent basis, an assessment by management of the effectiveness of the design and operation of the organization's incentive compensation system in providing risk-taking incentives that are consistent with the organization's safety and soundness.

Type of Review: Regular.

Affected Public: Businesses or other for-profit.

Estimated Number of Respondents: 1,033 large banks; 1,991 small banks.

Estimated Burden per Respondent: 520 hours for large banks; 52 hours for small banks.

Frequency of Response: Annually.

Total Annual Burden: 640,692 hours. All comments will be considered in formulating the subsequent submission and become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCCs estimate of the information collection burden;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: July 15, 2013.

Michele Meyer,

Assistant Director, Legislative and Regulatory Activities Division.

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Designation and Identification of Two (2) Individuals and Two (2) Entities Pursuant to Executive Orders 13572 of April 29, 2011, ''Blocking Property of Certain Persons With Respect to Human Rights Abuses in Syria'' and 13582 of August 17, 2011, ''Blocking Property of the Government of Syria and Prohibiting Certain Transactions With Respect to Syria''

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control (''OFAC'') is publishing the names of two (2) individuals and two (2) entities whose property and interests in property are blocked pursuant to Executive Orders 13572 of April 29, 2011, ''Blocking Property of Certain Persons with Respect to Human Rights Abuses in Syria'' and 13582 of August 17, 2011 ''Blocking Property of the Government of Syria and Prohibiting Certain Transactions with Respect to Syria.''

DATES: The actions by the Director of OFAC with respect to the two (2) individuals and two (2) entities identified in this notice, pursuant to Executive Orders 13572 and 13582, are effective as of December 11, 2012.

FOR FURTHER INFORMATION CONTACT: Assistant Director, Sanctions, Compliance & Evaluation, Office of Foreign Assets Control, Department of the Treasury, 1500 Pennsylvania Avenue NW., (Treasury Annex), Washington, DC 20220, Tel.: 202/622–2490.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (*www.treas.gov/ofac*) or via facsimile through a 24-hour fax-on-demand service, Tel.: 202/622–0077.

Background

On December 11, 2012, the Director of OFAC, in consultation with the Department of State, designated pursuant to one or more of the criteria set forth in subsection 1(b) of Executive Order 13572, one (1) individual and one (1) entity.

The listings on OFAC's list of Specially Designated Nationals and Blocked Persons for the individual and entity, whose property and interests in property are blocked pursuant to Executive Order 13572, appear as follows:

Individual

1. JABER, Ayman (a.k.a. JABER, Aiman; a.k.a. JABER, Ayman Mehriz; a.k.a. JABER, Ayman Mohriz; a.k.a. JABIR, Ayman; a.k.a. JABIR, Ayman Muhriz); DOB 17 Jan 1967; Passport 003308607 (Syria) (individual) [SYRIA];

Entity

1. SHABIHA (a.k.a. AL–SHABBIHAH; a.k.a. SHABBIHA; a.k.a. SHABBIHAH; a.k.a. SHABEEHA), Syria [SYRIA].

On December 11, 2012, the Director of OFAC, in consultation with the Department of State, designated pursuant to one or more of the criteria set forth in subsection 1(b) of Executive Order 13582, two (2) individuals.

The listings on OFAC's list of Specially Designated Nationals and Blocked Persons for the individuals, whose property and interests in property are blocked pursuant to Executive Order 13582, appear as follows:

Individuals

1. JABER, Mohammad (a.k.a. JA FAR, Abu; a.k.a. JABIR, Mohammad; a.k.a. JABIR, Muhammad; a.k.a. JABIR, Muhammad Mahruz; a.k.a. JABIR, Muhammad Muhraz; a.k.a. JABIR, Muhammad Muhriz; a.k.a. JA'FAR, Abu); DOB 23 Jan 1957; POB Latakia, Syria; Passport N004871560 (Syria) (individual) [SYRIA].

2. JABER, Ayman (a.k.a. JABER, Aiman; a.k.a. JABER, Ayman Mehriz; a.k.a. JABER, Ayman Mohriz; a.k.a. JABIR, Ayman; a.k.a. JABIR, Ayman

Muhriz); DOB 17 Jan 1967; Passport 003308607 (Syria) (individual) [SYRIA]

On December 11, 2012, the Director of OFAC identified two (2) entities as falling within the definition of the Government of Syria set forth in section 8(d) of Executive Order 13582. On July 13, 2013, the Director of OFAC supplemented the identification information for JAYSH AL–SHA'BI.

The listings on OFAC's list of Specially Designated Nationals and Blocked Persons for the entities, whose property and interests in property are blocked, are as follows.

Entities

1. JAYSH AL–SHA'BI (a.k.a. AL–SHA'BI COMMITTEES; a.k.a. JAYSH AL–SHAAB; a.k.a. JISH SHAABI; a.k.a. SHA'BI COMMITTEES; a.k.a. SHA'BI FORCE; a.k.a. SYRIAN NATIONAL DEFENSE FORCE; a.k.a. SYRIAN NATIONAL DEFENSE FORCES; a.k.a. ''ARMY OF THE PEOPLE''; a.k.a. ''PEOPLE'S ARMY''; a.k.a. ''POPULAR COMMITTEES''; a.k.a. ''POPULAR FORCES''; a.k.a. ''SHA'BI''; a.k.a. ''THE POPULAR ARMY'') [SYRIA].

2. SHABIHA (a.k.a. AL–SHABBIHAH; a.k.a. SHABBIHA; a.k.a. SHABBIHAH; a.k.a. SHABEEHA), Syria [SYRIA].

Dated: July 11, 2013.

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Publication of Iran General License D

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice, publication of general license.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (''OFAC'') is publishing General License D issued under the Iranian transactions sanctions program on May 30, 2013. General License D authorizes the exportation and reexportation to persons in Iran of certain services, software, and hardware incident to the exchange of personal communications, subject to certain limitations.

DATES: *Effective Date:* May 30, 2013.

FOR FURTHER INFORMATION CONTACT: Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490, Assistant Director for Licensing, tel.: 202–622–2480, Assistant Director for Policy, tel.: 202–622–2746, Assistant Director for Regulatory Affairs, tel.: 202–622–4855, Office of Foreign Assets Control, or Chief Counsel (Foreign Assets Control), tel.: 202–622–2410, Office of the General Counsel, Department of the Treasury, Washington, DC 20220 (not toll free numbers).

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (*www.treasury.gov/ofac*). Certain general information pertaining to OFAC's sanctions programs also is available via facsimile through a 24-hour fax-on-demand service, tel.: 202/622–0077.

Background

On May 30, 2013, OFAC issued General License D under the Iranian transactions sanctions program. At the time of its issuance on May 30, 2013, OFAC made General License D available on the OFAC Web site (*www.treasury.gov/ofac*). With this notice, OFAC is publishing General License D in the **Federal Register.**

GENERAL LICENSE D

General License With Respect to the Exportation and Reexportation of Certain Services, Software, and Hardware Incident to the Exchange of Personal Communications

(a) Effective May 30, 2013, to the extent that such transactions are not exempt from the prohibitions of the Iranian Transactions and Sanctions Regulations, 31 CFR part 560 (''ITSR''), and subject to the restrictions set forth in paragraph (b), the following transactions are authorized:

(1) The exportation or reexportation, directly or indirectly, from the United States or by U.S. persons, wherever located, to persons in Iran of fee-based services incident to the exchange of personal communications over the Internet, such as instant messaging, chat and email, social networking, sharing of photos and movies, web browsing, and blogging.

(2) The exportation or reexportation, directly or indirectly, from the United States or by U.S. persons, wherever located, to persons in Iran of fee-based software subject to the Export Administration Regulations, 15 CFR parts 730 through 774 (the ''EAR''), that is necessary to enable the services described in paragraph (a)(1), provided that such software is designated as EAR99 under the EAR, or is classified by the U.S. Department of Commerce on the Commerce Control List, 15 CFR part 774, supplement No. 1 (''CCL'') under export control classification number (''ECCN'') 5D992.c.

NOTE TO PARAGRAPHS (a)(1) AND (a)(2): *See* 31 CFR § 560.540 for provisions relating to the exportation to persons in Iran of publicly available, no-cost services incident to the exchange of personal communications over the Internet and publicly available, no-cost software necessary to enable such services.

(3) To the extent not authorized by paragraph (a)(2), the exportation or reexportation, directly or indirectly, from the United States or by U.S. persons, wherever located, to persons in Iran of certain software and hardware that are subject to the EAR and incident to personal communications, as well as related services, as specified in the Annex to this general license.

(4) The exportation or reexportation, directly or indirectly, from the United States or by U.S. persons, wherever located, to persons in Iran of consumer-grade Internet connectivity services and the provision, sale, or leasing of capacity on telecommunications transmission facilities (such as satellite or terrestrial network connectivity) incident to personal communications.

Note to Paragraph (a): The authorization set forth in paragraph (a) of this general license extends to entities owned or controlled by a United States person and established or maintained outside the United States subject to the conditions set forth in 31 CFR § 560.556. Nothing in this general license relieves the exporter from compliance with the export license application requirements of another Federal agency.

(b) This general license does not authorize:

(1) The exportation or reexportation, directly or indirectly, of the services, software, or hardware specified in paragraph (a) of this general license with knowledge or reason to know that such services, software, or hardware are intended for the Government of Iran.

(2) The exportation or reexportation, directly or indirectly, of the services, software, and hardware specified in paragraph (a) of this general license to any person whose property and interests in property are blocked pursuant to any part of 31 CFR chapter V.

(3) The exportation or reexportation, directly or indirectly, of commercial-grade Internet connectivity services or telecommunications transmission facilities (such as dedicated satellite links or dedicated lines that include quality of service guarantees).

(4) The exportation or reexportation, directly or indirectly, of web-hosting services that are for purposes other than personal communications (e.g., web-hosting services for commercial

endeavors) or of domain name registration services.

(c) Effective May 30, 2013, transfers of funds from Iran or for or on behalf of a person in Iran in furtherance of an underlying transaction authorized by paragraph (a) of this general license may be processed by U.S. depository institutions and U.S. registered brokers or dealers in securities so long as they are consistent with 31 CFR § 560.516.[1]

(d) Specific licenses may be issued on a case-by-case basis for the exportation and reexportation of services, software, and hardware incident to personal communications not specified in paragraph (a) or the Annex to this general license.

Issued: May 30, 2013.

ANNEX—SERVICES, SOFTWARE, AND HARDWARE INCIDENT TO PERSONAL COMMUNICATIONS AUTHORIZED FOR EXPORTATION AND REEXPORTATION TO IRAN BY PARAGRAPH (a) OF ITSR GENERAL LICENSE D

1.) ...	Mobile phones (including but not limited to smartphones), Personal Digital Assistants (PDAs), Subscriber Identity Module (SIM) cards designated EAR99 or classified on the CCL under ECCN 5A992.c; drivers and connectivity software for such hardware designated EAR99 or classified under ECCN 5D992.c; and services necessary for the operation of such hardware and software.
2.) ...	Satellite phones and Broadband Global Area Network (BGAN) hardware designated EAR99 or classified under ECCN 5A992.c; demand drivers and connectivity software for such hardware designated EAR99 or classified under ECCN 5D992.c; and services necessary for the operation of such hardware and software.
3.) ...	Modems, network interface cards, radio equipment (including antennaes), routers, switches, and WiFi access points, designed for 50 or fewer concurrent users, designated EAR99 or classified under ECCNs 5A992.c, 5A991.b.2, or 5A991.b.4; drivers, communications, and connectivity software for such hardware designated EAR99 or classified under ECCN 5D992.c; and services necessary for the operation of such hardware and software.
4.) ...	Residential consumer satellite receive-only terminals, receiver equipment (including but not limited to antennaes, receivers, set-top boxes and video decoders) designated EAR99 or classified under ECCNs 5A992.c, 5A991.b.2 or 5A991.b.4; drivers, communications, and connectivity software for such hardware designated EAR99 or classified under ECCN 5D992.c; and services necessary for the operation of such hardware and software.
5.) ...	Laptops, tablets, and personal computing devices, disk drives, data storage devices, computer peripherals, keyboards, and mice designated EAR99 or classified on the CCL under ECCNs 5A992.c, 5A991.b.2, 5A991.b.4 or 4A994.b; computer operating systems, and software required for effective consumer use of such hardware, including software updates and patches, designated EAR99 or classified under ECCN 5D992.c; and services necessary for the operation of such hardware and software.
6.) ...	Anti-virus and anti-malware software designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.
7.) ...	Anti-tracking software designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.
8.) ...	Mobile operating systems, online app stores, and related software designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.
9.) ...	Anti-censorship tools and related software designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.
10.)	Virtual Private Networks, proxy tools, and fee-based personal communications tools including voice, text, video, voice-over-IP telephony, video chat, and successor technologies, and communications and connectivity software required for effective consumer use designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.
11.)	Secure Sockets Layers (SSLs) designated EAR99 or classified under ECCN 5D992.c, and services necessary for the operation of such software.

Dated: July 10, 2013.

Medicare Program; Revisions to Payment Policies under the Physician Fee Schedule, Clinical Laboratory Fee Schedule & Other Revisions to Part B for CY 2014

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses changes to the physician fee schedule and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute.

DATES: *Comment date:* To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 6, 2013.

ADDRESSES: In commenting, please refer to file code CMS–1600–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov*. Follow the instructions for ''submitting a comment.''

2. *By regular mail.* You may mail written comments to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1600–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1600–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without Federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

FOR FURTHER INFORMATION CONTACT:

Chava Sheffield, (410) 786–2298, for issues related to practice expense methodology and impacts.

Ryan Howe, (410) 786–3355, for issues related to direct practice expense inputs and telehealth services.

Joanna Baldwin, (410) 786–7205, for issues related to misvalued services.

Ken Marsalek, (410) 786–4502, for issues related to the multiple procedure payment reduction.

Heidi Oumarou, (410) 786–7942, for issues related to the revision of Medicare Economic Index (MEI).

Roberta Epps, (410) 786–4503, for issues related to chiropractors billing for evaluation and management services.

Craig Dobyski, (410) 786–4584, for issues related to geographic practice cost indices.

Simone Dennis, (410) 786–8409, for issues related to therapy caps.

Darlene Fleischmann, (410) 786–2357, for issues related to ''incident to'' services.

Corinne Axelrod, (410) 786–5620, for issues related to ''incident to'' services in Rural Health Center s or Federally Qualified Health Centers.

Anne Tayloe-Hauswald, (410) 786–4546, for issues related to ambulance fee schedule and clinical lab fee schedule.

Sandra Adams, (410) 786–2982, for issues related to Medicare shared savings program.

Rashaan Byers, (410) 786–2305, for issues related to physician compare.

Christine Estella, (410) 786–0485, for issues related to the physician quality reporting system and EHR incentive program.

Ronke Fabayo, (410) 786–4460 or Jay Blake, (410) 786–9371, for issues related to individual liability for payments made to providers and suppliers and handling of incorrect payments.

Rosemarie Hakim, (410) 786–3934, for issues related to coverage of items and services furnished in FDA-approved investigational device exemption clinical trials.

Jamie Hermansen, (410) 786–2064 or Jyme Schafer, (410) 786–4643, for issues related to ultrasound screening for abdominal aortic aneurysms.

Pauline Lapin, (410)786–6883, for issues related to the chiropractic services demonstration budget neutrality issue.

Andrew Morgan, (410) 786–2543, for issues related to e-prescribing under Medicare Part D.

Michael Wrobleswki, (410) 786–4465, for issues related to value-based modifier and improvements to physician feedback.

Elliot Isaac, (410) 786–4735, for malpractice RVUs and for any physician payment issue not identified above.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov*. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary and Background

A. Executive Summary

1. Purpose

This major proposed rule would revise payment polices under the Medicare Physician Fee Schedule (PFS) and make other policy changes related to Medicare Part B payment. These changes would be applicable to services furnished in CY 2014.

2. Summary of the Major Provisions

The Social Security Act (Act) requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The Act requires that RVUs be established for three categories of resources: work, practice expense (PE); and malpractice (MP) expense; and that we establish by regulation each year payment amounts for all physicians' services, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas. In this major proposed rule, we propose RVUs for CY 2014 for the PFS and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. In addition, this proposed rule includes discussions and proposals regarding:

- Misvalued PFS Codes.
- Telehealth Services.
- Applying Therapy Caps to Outpatient Therapy Services Furnished by CAHs.
- Requiring the Compliance with State law as a Condition of Payment for Services Furnished Incident to Physician and Other Practitioner Services.
- Revising the MEI based on MEI TAP Recommendations.

• Updating the Ambulance Fee Schedule regulations.
• Updating the—
++ Physician Compare Web site.
++ Physician Quality Reporting System.
++ Electronic Health Record (EHR) Incentive Program.
++ Medicare Shared Savings Program.
• Budget Neutrality for the Chiropractic Services Demonstration.
• Physician Value-Based Payment Modifier and the Physician Feedback Reporting Program.

3. Summary of Costs and Benefits

The Act requires that annual adjustments to PFS RVUs not cause annual estimated expenditures to differ by more than $20 million from what they would have been had the adjustments not been made. If adjustments to RVUs would cause expenditures to change by more than $20 million, we must make adjustments to preserve budget neutrality. These adjustments can affect the distribution of Medicare expenditures across specialties. In addition, several proposed changes would affect the specialty distribution of Medicare expenditures. For most specialties the projected impacts are a small percentage change in Medicare payments under the PFS. For a few specialties a larger impact is projected. Diagnostic Testing Facilities, Independent Laboratory, Pathology, Radiation Oncology, and Radiation Therapy Centers are projected to have a change of 5 percent or more.

B. Background

Since January 1, 1992, Medicare has paid for physicians' services under section 1848 of the Act, ''Payment for Physicians' Services.'' The system relies on national relative values that are established for work, PE, and MP, which are then adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the RVUs into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101–239, enacted on December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90 (Pub. L. 101–508, enacted on November 5, 1990). The final rule published on November 25, 1991 (56 FR 59502) set forth the first fee schedule used for payment for physicians' services.

We note that throughout this proposed rule, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners who are permitted to bill Medicare under the PFS for services furnished to Medicare beneficiaries.

1. Development of the Relative Values

a. Work RVUs

The physician work RVUs established for the implementation of the fee schedule in January 1992 were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original physician work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

We establish work RVUs for new and revised codes based, in part, on our review of recommendations received from the American Medical Association/Specialty Society Relative Value Update Committee (AMA RUC).

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians' service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising PEs. Originally, this new method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33, enacted on August 5, 1997) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians' service in a final rule, published November 2, 1998 (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: the Clinical Practice Expert Panel (CPEP) data and the AMA's Socioeconomic Monitoring System (SMS) data. (These data sources are described in greater detail in the CY 2012 final rule with comment period (76 FR 73033).)

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician's office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some costs are borne by the facility. Medicare's payment to the facility (such as the OPPS payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those facility resources is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113, enacted on November 29, 1999) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year

transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on malpractice insurance premium data collected from commercial and physician-owned insurers from all the states, the District of Columbia, and Puerto Rico.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review all RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed Five-Year Reviews of Work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

While refinements to the direct PE inputs initially relied heavily on input from the AMA RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

With regard to MP RVUs, we completed Five-Year Reviews of MP that were effective in CY 2005 and CY 2010.

In addition to the Five-Year Reviews, beginning for CY 2009, CMS and the AMA RUC have identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, which requires the agency to periodically identify, review and adjust values for potentially misvalued codes with an emphasis on seven specific categories (see section II.B.2. of this proposed rule).

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VI.C.1. of this proposed rule, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs would cause expenditures for the year to change by more than $20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than $20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each physicians' service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of physician work, PE, and MP in an area compared to the national average costs for each component. (See section II.E.2 of this proposed rule for more information about GPCIs.)

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS's Office of the Actuary (OACT). The CF for a given year is calculated using (a) the productivity-adjusted increase in the Medicare Economic Index (MEI) and (b) the Update Adjustment Factor (UAF), which is calculated by taking into account the Medicare Sustainable Growth Rate (SGR), an annual growth rate intended to control growth in aggregate Medicare expenditures for physicians' services, and the allowed and actual expenditures for physicians' services. A more detailed discussion of the calculation of the CF, the SGR, and the MEI appears in the PFS final rule with comment period for each calendar year (the most recent begins on 77 FR 69131).

The formula for calculating the Medicare fee schedule payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia conversion factor, in a manner to assure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate conversion factor for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

4. Most Recent Changes to the Fee Schedule

The CY 2013 PFS final rule with comment period (77 FR 68892) implemented changes to the PFS and other Medicare Part B payment policies. It also finalized many of the CY 2012 interim RVUs and established interim RVUs for new and revised codes for CY 2013 to ensure that our payment system is updated to reflect changes in medical practice, coding changes, and the relative values of services. It also implemented certain statutory provisions including provisions of the Affordable Care Act (Pub. L. 111–148) and the Middle Class Tax Relief and Jobs Creation Act (MCTRJCA) (Pub. L. 112–96), including claims-based data reporting requirements for therapy services.

In the CY 2013 PFS final rule with comment period, we announced the following for CY 2013: The total PFS update of -26.5 percent; the initial estimate for the sustainable growth rate (SGR) of -19.7 percent; and the CY 2013 CF of $25.0008. These figures were calculated based on the statutory provisions in effect on November 1, 2012, when the CY 2013 PFS final rule with comment period was issued.

On January 2, 2013, the American Taxpayer Relief Act (ATRA) of 2012 (Pub. L. 112–240) was signed into law. Section 601(a) of the ATRA specified a zero percent update to the PFS CF for CY 2013. As a result, the CY 2013 PFS conversion factor was revised to $34.0320. In addition, the ATRA extended and added several provisions affecting Medicare services furnished in CY 2013, including:

- Section 602—extending the 1.0 floor on the work geographic practice cost index through CY 2013;
- Section 603—extending the exceptions process for outpatient therapy caps through CY 2013, extending the application of the cap and manual medical review threshold to services furnished in the hospital outpatient department (OPD) through CY 2013, and requiring the counting of a proxy amount for therapy services

furnished in a Critical Access Hospital (CAH) toward the cap and threshold during CY 2013.

In addition to the changes effective for CY 2013, section 635 of ATRA revised the equipment utilization rate assumption for advanced imaging services furnished on or after January 1, 2014.

On March 5, 2013, we submitted to the Medicare Payment Advisory Committee (MedPAC) an estimate of the SGR and CF applicable to Medicare payments for physicians' services for CY 2014, as required by section 1848(d)(1)(E) of the Act. The actual values used to compute physician payments for CY 2014 will be based on later data and are scheduled to be published by November 1, 2013 as part of the CY 2014 PFS final rule with comment period.

II. Provisions of the Proposed Rule for PFS

A. Resource-Based Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice expenses, as specified in section 1848(c)(1)(B) of the Act. Section 121 of the Social Security Amendments of 1994 (Pub. L. 103–432), enacted on October 31, 1994, amended section 1848(c)(2)(C)(ii) of the Act to require us to develop a methodology for a resource-based system for determining PE RVUs for each physician's service. We develop PE RVUs by looking at the direct and indirect physician practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. In addition, we note that section 1848(c)(2)(B)(ii)(II) of the Act provides that adjustments in RVUs for a year may not cause total PFS payments to differ by more than $20 million from what they would have otherwise been if the adjustments were not made. Therefore, if revisions to the RVUs cause expenditures to change by more than $20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than $20 million. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, equipment, and supplies) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are based on our review of recommendations received from the AMA RUC. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units Under the PFS and Proposed Changes to the Practice Expense Methodology proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the practice expense per hour (PE/HR) by specialty that was obtained from the AMA's Socioeconomic Monitoring Surveys (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and nonphysician practitioners (NPPs) paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period (75 percent old/25 percent new for CY 2010, 50 percent old/50 percent new for CY 2011, 25 percent old/75 percent new for CY 2012, and 100 percent new for CY 2013) from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete in CY 2013. Therefore, the CY 2014 PE RVUs are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the MEI to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

We do not use the PPIS data for sleep medicine since there is not a full year of Medicare utilization data for that specialty given the specialty code was only available beginning in October 1, 2012. We anticipate using the PPIS data to create PE/HR for sleep medicine for CY 2015 when we will have a full year of data to make the calculations.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS

for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We continue previous crosswalks for specialties that did not participate in the PPIS. However, beginning in CY 2010 we changed the PE/HR crosswalk for portable x-ray suppliers from radiology to IDTF, a more appropriate crosswalk because these specialties are more similar to each other with respect to physician time.

For registered dietician services, the resource-based PE RVUs have been calculated in accordance with the final policy that crosswalks the specialty to the ''All Physicians'' PE/HR data, as adopted in the CY 2010 PFS final rule with comment period (74 FR 61752) and discussed in more detail in the CY 2011 PFS final rule with comment period (75 FR 73183).

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, equipment, and supplies) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

Section II.A.2.b. of this proposed rule describes the current data sources for specialty-specific indirect costs used in our PE calculations. We allocated the indirect costs to the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the physician work RVUs. We also incorporated the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is described as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. In other words, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represented 25 percent of total costs for the specialties that furnished the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example the initial indirect allocator would equal 6.00, resulting in a total PE RVUs of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).
- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had work RVUs of 4.00 and the clinical labor portion of the direct PE RVUs was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- Next, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

d. Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a hospital or facility setting, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. Because in calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service in a facility, the facility PE RVUs are generally lower than the nonfacility PE RVUs. Medicare makes a separate payment to the facility for its costs of furnishing a service.

e. Services With Technical Components (TCs) and Professional Components (PCs)

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a ''global'' service. When services have PC and TC components that can be billed separately, the payment for the global service equals the sum of the payment for the TC and PC. This is a result of using a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global under the bottom-up methodology.)

f. PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746).

(1) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(2) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service. Apply a scaling adjustment to the direct inputs.

Step 2: Calculate the current aggregate pool of direct PE costs. This is the product of the current aggregate PE (aggregate direct and indirect) RVUs, the CF, and the average direct PE percentage from the survey data.

Step 3: Calculate the aggregate pool of direct costs. This is the sum of the product of the direct costs for each service from Step 1 and the utilization data for that service. For CY 2014, we adjusted the direct cost pool to match the new PE share of the MEI, as discussed in section II.D. of this rule.

Step 4: Using the results of Step 2 and Step 3 calculate a direct PE scaling adjustment so that the aggregate direct cost pool does not exceed the current aggregate direct cost pool and apply it to the direct costs from Step 1 for each service.

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs, as long as the same CF is used in Step 2 and Step 5. Different CFs will result in different direct PE scaling factors, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling factors offset one another.

(3) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical PE RVUs; and the work RVUs. For most services the indirect allocator is: Indirect percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical PE RVUs.

Note: For global services, the indirect allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs will be allocated using the work RVUs, and for the TC service, indirect PEs will be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.

For presentation purposes in the examples in Table 5, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the current aggregate pool of PE RVUs by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service. For CY 2014, we adjusted the indirect cost pool to match the new PE share of the MEI, as discussed in section II.D. of this rule.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the physician time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (**Note:** For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(4) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 6 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment and the MEI revision adjustment.

The final PE BN adjustment is calculated by comparing the results of Step 18 to the current pool of PE RVUs (prior to the MEI revision adjustment and the OPPS/ASC cap redistribution). This final BN adjustment is required to redistribute RVUs from step 18 to all PE RVUs in the PFS, and because certain specialties are excluded from the PE RVU calculation for ratesetting purposes, but all specialties are included for purposes of calculating the final BN adjustment. (See ''Specialties excluded from ratesetting calculation'' later in this section.) As discussed in section II.D. of this proposed rule, we are revising the Medicare Economic Index (MEI) for CY 2014.

Step 19: Consistent with the proposed policy addressed in section II.A.4. of this proposed rule, apply the OPPS/ASC cap to codes subject to the cap and redistribute the RVU reduction to the PE RVUs for all other services.

(5) Setup File Information

- *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain nonphysician practitioners paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthestist.
57	Individual certified prosthetist-orthotist.
58	Individuals not included in 55, 56, or 57.
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (e.g., drug and department stores).
88	Unknown supplier/provider specialty.
89	Certified clinical nurse specialist.
95	Competitive Acquisition Program (CAP) Vendor.
96	Optician.
97	Physician assistant.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
1	Supplier of oxygen and/or oxygen related equipment.
2	Pedorthic personnel.
3	Medical supply company with pedorthic personnel.

• *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services, but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the physician time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES

Modifier	Description	Volume adjustment	Time adjustment
80, 81, 82	Assistant at Surgery	16%	Intraoperative portion.
AS	Assistant at Surgery—Physician Assistant	14% (85% * 16%)	Intraoperative portion.
50 or LT and RT	Bilateral Surgery	150%	150% of physician time.
51	Multiple Procedure	50%	Intraoperative portion.
52	Reduced Services	50%	50%.
53	Discontinued Procedure	50%	50%.
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims.	Preoperative + Intraoperative portion.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES—Continued

Modifier	Description	Volume adjustment	Time adjustment
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims.	Postoperative portion.
62	Co-surgeons	62.5%	50%.
66	Team Surgeons	33%	33%.

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPR). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since the average allowed charge is used when simulating RVUs, and therefore, includes all adjustments. A time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where time units are duplicative.

- *Work RVUs:* The setup file contains the work RVUs from this proposed rule with comment period.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

*(1/(minutes per year * usage)) * price * ((interest rate/(1-(1/((1 + interest rate)∧ life of equipment)))) + maintenance)*

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.

usage = variable, see discussion below.

price = price of the particular piece of equipment.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

interest rate = variable, see discussion below.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment. For expensive diagnostic imaging equipment, which is equipment priced at over $1 million (for example, computed tomography (CT) and magnetic resonance imaging (MRI) scanners), we use an equipment utilization rate assumption of 75 percent. Section 1848(b)(4)(C) of the Act, as modified by section 635 of the America Taxpayer Relief Act of 2012 (Pub. L. 112–240, enacted on January 2, 2013) (ATRA), requires that for fee schedules established for CY 2014 and subsequent years, in the methodology for determining PE RVUs for expensive diagnostic imaging equipment, the Secretary shall use a 90 percent assumption. The provision also requires that the reduced expenditures attributable to this change in the utilization rate for CY 2014 and subsequent years shall not be taken into account when applying the BN limitation on annual adjustments described in section 1848(c)(2)(B)(ii)(II) of the Act. We are applying the 90 percent utilization rate assumption in CY 2014 to all of the services to which the 75 percent equipment utilization rate assumption applied in CY 2013. These services are listed in a file called ''CY 2014 CPT Codes Subject to 90 Percent Usage Rate,'' available on the CMS Web site under downloads for the CY 2014 PFS proposed rule at *http://www.cms.gov/physicianfeesched/downloads/*. These codes are also displayed in Table 3.

TABLE 3—CPT CODES SUBJECT TO 90 PERCENT EQUIPMENT UTILIZATION RATE ASSUMPTION

CPT code	Short descriptor
70336 ..	Mri, temporomandibular joint(s).
70450 ..	Ct head/brain w/o dye.
70460 ..	Ct head/brain w/dye.

Interest Rate: In the CY 2013 final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation. The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The interest rates are listed in Table 4. See 77 FR 68902 for a thorough discussion of this issue.

TABLE 4—SBA MAXIMUM INTEREST RATES

Price	Useful life	Interest rate (percent)
<$25K	<7 Years	7.50

TABLE 4—SBA MAXIMUM INTEREST RATES—Continued

Price	Useful life	Interest rate (percent)
$25K to $50K	<7 Years	6.50
>$50K	<7 Years	5.50
<$25K	7+ Years	8.00
$25K to $50K	7+ Years	7.00
>$50K	7+ Years	6.00

See 77 FR 68902 for a thorough discussion of this issue.

TABLE 5—CALCULATION OF PE RVUS UNDER METHODOLOGY FOR SELECTED CODES

	Step	Source	Formula	99213 Office visit, est non-facility	33533 CABG, arterial, single facility	71020 Chest x-ray non-facility	71020–TC Chest x-ray non-facility	71020–26 Chest x-ray non-facility	93000 ECG, complete non-facility	93005 ECG, tracing non-facility	93010 ECG, report non-facility
(1) Labor cost (Lab)	Step 1	AMA		13.32	77.52	5.74	5.74	0.00	6.12	6.12	0.00

Note: PE RVUs in Table 5, row 28, may not match Addendum B due to rounding.

*The direct adj = [current PE RVUs * CF * avg dir pct]/[sum direct inputs] = [Step 2]/[Step 3]

**The indirect adj = [current PE RVUs * avg ind pct]/[sum of ind allocators] = [Step 9]/[Step 10]

***The other adjustment includes adjustments for the changes in the equipment utilization rate for certain services and the MEI revisions.

Note: The use of any particular conversion factor (CF) in Table 5 to illustrate the PE calculation has no effect on the resulting RVUs.

3. Changes to Direct PE Inputs for Specific Services

In this section, we discuss other CY 2014 proposals and revisions related to direct PE inputs for specific services. The proposed revisions are included in the proposed rule CY 2014 direct PE database, which is available on the CMS Web site under the supporting data files for the CY 2014 PFS proposed rule with comment period at *www.cms.gov/PhysicianFeeSched/.*

a. Anomalous Supply Inputs

In the CY 2013 PFS final rule with comment period, we established interim final direct PE inputs based on acceptance, with refinement, of recommendations submitted by the AMA RUC. Although we generally address public comments on the prior year's interim final direct PE inputs in the following year's final rule with comment period, several commenters raised an issue regarding anomalous supply items that we believe is best addressed through proposed revisions to the direct PE inputs.

For the CY 2013 interim final direct PE inputs for a series of codes that describe six levels of surgical pathology services (CPT codes 88300, 88302, 88304, 88305, 88307, 88309), we did not accept the AMA RUC recommendation to create two new direct PE supply inputs because we did not consider these items to be disposable supplies (77 FR 69074). The recommended new items were called ''specimen, solvent, and formalin disposal cost,'' and ''courier transportation costs.'' In the CY 2013 PFS final rule with comment period, we explained that neither the specimen and supply disposal nor courier costs for transporting specimens are appropriately considered disposable medical supplies. Instead, we stated these costs are incorporated into the PE RVUs for these services through the indirect PE allocation. We also noted that the current direct PE inputs for these and similar services across the PFS do not include these kinds of costs as disposable supplies.

Several commenters noted that, contrary to our assertion in the final rule with comment period, there are a few items incorporated in the direct PE input database as ''supplies'' that are no more disposable supplies than the new items recommended by the AMA RUC for the surgical pathology codes. These commenters identified seven supply inputs in particular that they believe are analogous to the items that we did not accept in establishing CY 2013 interim final direct PE inputs. These items and their associated HCPCS codes are listed in Table 6.

TABLE 6—ITEMS IDENTIFIED BY COMMENTERS

CMS supply code	Item description	Associated CPT codes
SK106	device shipping cost	93271, 93229, 93268.
SK112	Federal Express cost (average across all zones)	64650, 88363, 64653.
SK113	communication, wireless per service	93229.
SK107	fee, usage, cycletron/accelerator, gammaknife, Lincac SRS System.	77423, 77422.
SK110	fee, image analysis	96102, 96101, 99174.
SK111	fee, licensing, computer, psychology	96102, 96101, 96103, 96120.
SD140	bag system, 1000ml (for angiography waste fluids)	93451, 93452, 93453, 93454, 93455, 93456, 93457, 93458, 93459, 93460, 93461.

We reviewed each of these items for consistency with the general principles of the PE methodology regarding the consistent categorization of all costs. Within the PE methodology, all costs other than clinical labor, disposable supplies, and medical equipment are considered indirect costs. For six of the items contained in Table 6, we agree with the commenters that the items should not be considered disposable supplies. We believe that these items are more appropriately categorized as indirect PE costs, which are reflected in the allocation of indirect PE RVUs rather than direct PE. Therefore, we are proposing to remove the following six items from the direct PE input database for CY 2014: ''device shipping cost'' (SK106); ''Federal Express cost (average across all zones)'' (SK112); ''communication, wireless per service'' (SK113); ''fee, usage, cycletron/accelerator, gammaknife, Lincac SRS System'' (SK107); ''fee, image analysis'' (SK110); and ''fee, licensing, computer, psychology'' (SK111). The CY 2014 proposed direct PE input database and Addendum B of this proposed rule reflect these proposed revisions.

In the case of the supply item called ''bag system, 1000ml (for angiography waste fluids)'' (SD140), we do not agree with the commenters that this item is analogous to the specimen disposal costs recommended for the surgical pathology codes. This supply input represents only the costs of the disposable material items associated with the removal of waste fluids that typically result from a particular procedure. In contrast, the item recommended by the AMA RUC for surgical pathology consisted of an amortized portion of a specimen disposal contract that includes costs for resources such as labor and transportation. Furthermore, we do not believe that the specimen disposal contract is attributable to individual procedures within the established PE methodology. We believe that a disposable supply is one that is attributable, in its entirety, to an individual patient for a particular service. An amortized portion of a specimen disposal contract does not meet these criteria. Accordingly, as stated in the CY 2013 final rule with comment period, we did not accept the AMA RUC recommendation to create a new supply item related to specimen disposal costs. We believe that many physician offices and other nonfacility settings where Medicare beneficiaries receive services incur costs related to waste management or other service contracts, but none of these costs are currently incorporated into the PE methodology as disposable supplies. Instead, these costs are appropriately categorized as indirect costs and are reflected in the PE RVUs through the allocation of indirect PE. We are clarifying that we believe that supply costs related to specimen disposal attributable to individual services may be appropriately categorized as disposable supplies, but that specimen disposal costs related to an allocated portion of service contracts that cannot be attributed to individual services should not be incorporated into the direct PE input database as disposable supplies.

Moreover, because do not agree with commenters that the ''bag system, 1000ml (for angiography waste fluids)'' (SD140) is analogous to a specimen disposal contract for the reasons state above, we continue to believe that SD140 is a direct expense. Accordingly, we are not removing SD140 from the direct PE input database. Additionally, we anticipate responding to these and other aspects of the comments regarding the direct PE inputs for the surgical pathology services in the CY 2014 PFS final rule with comment period.

b. Direct PE Input Refinements based on Routine Data Review

In reviewing the direct PE input database, we have identified several discrepancies that we believe should be addressed for CY 2014. In the following paragraphs, we identify the nature of these discrepancies, the affected codes, and the refinements displayed in the CY 2014 proposed direct PE input database. As part of our internal review of information in the direct PE input database, we identified supply items that appeared without quantities for CPT code 51710 (Change of cystostomy tube; complicated). Upon reviewing these items we believe that the codes should include the items at the quantities listed in Table 7.

TABLE 7—SUPPLY ITEMS AND QUANTITIES FOR CPT CODE 51710

Supply code	Description of supply item	NF quantity
SA069	tray, suturing	1.0
SB007	drape, sterile barrier 16in x 29in.	1.0
SC029	needle, 18–27g	1.0
SC051	syringe 10–12ml	1.0
SD024	catheter, Foley	1.0
SD088	Guidewire	1.0
SF036	suture, nylon, 3–0 to 6–0, c.	1.0
SG055	gauze, sterile 4in x 4in	1.0
SG079	tape, surgical paper 1in (Micropore).	6.0
SH075	water, sterile inj	3.0
SJ032	lubricating jelly (K–Y) (5gm uou).	1.0

TABLE 7—SUPPLY ITEMS AND QUANTITIES FOR CPT CODE 51710—Continued

Supply code	Description of supply item	NF quantity
SJ041	povidone soln (Betadine)	20.0

Upon reviewing the direct PE inputs for CPT code 51710 and the related code 51705 (Change of cystostomy tube; simple), we also noted that the direct PE input database includes an anomalous 0.5 minutes of clinical labor time in the post-service period. We believe that this small portion of clinical labor time is the result of a rounding error in our data and should be removed from the direct PE input database.

During our review of the data, we noted an invalid supply code (SM037) that appears in the direct PE input database for CPT codes 88312 and 88313. Upon review of the code, we believe that the supply item called ''wipes, lens cleaning (per wipe) (Kimwipe)'' (SM027) should be included in the code instead of the invalid code. The CY 2014 proposed direct PE input database reflects these proposed revisions.

Additionally, we conducted a routine review of the codes valued in the nonfacility setting for which moderate sedation is inherent in the procedure. Consistent with the standard moderate sedation package finalized in the CY 2012 PFS final rule with comment period (76 FR 73043), we have made minor adjustments to the nurse time and equipment time of 18 of these codes. These codes appear in Table 8, and the CY 2014 proposed direct PE input database reflects the proposed refined inputs for moderation sedation.

TABLE 8—CODES WITH MINOR ADJUSTMENTS TO MODERATE SEDATION INPUTS

CPT code	Descriptor
31629	Bronchoscopy/needle bx each.
31645	Bronchoscopy clear airways.
31646	Bronchoscopy reclear airway.
32405	Percut bx lung/mediastinum.
32550	Insert pleural cath.
35471	Repair arterial blockage.
37183	Remove hepatic shunt (tips).
37210	Embolization uterine fibroid.
43453	Dilate esophagus.
43458	Dilate esophagus.
44394	Colonoscopy w/snare.
45340	Sig w/balloon dilation.
47000	Needle biopsy of liver.
47525	Change bile duct catheter.
49411	Ins mark abd/pel for rt perq.
50385	Change stent via transureth.
50386	Remove stent via transureth.
57155	Insert uteri tandem/ovoids.
93312	Echo transesophageal.
93314	Echo transesophageal.
G0341	Percutaneous islet celltrans.

c. Adjustments to Pre-Service Clinical Labor Minutes

We recently received a recommendation from the AMA RUC regarding appropriate pre-service clinical labor minutes in the facility setting for codes with 000 day global periods. In general, the AMA RUC has recommended that codes with 000 day global period include a maximum of 30 minutes of clinical labor time in the pre-service period in the facility setting. The AMA RUC identified 48 codes that currently include more clinical labor time than this recommended maximum and provided us with recommended pre-service clinical labor minutes in the facility setting of 30 minutes or fewer for these 48 codes. We reviewed the AMA RUC's recommendation and agree that the recommended reductions would be appropriate to maintain relativity with other 000 day global codes. Therefore, we propose to amend the pre-service clinical labor minutes for the codes listed in Table 9, consistent with the AMA RUC recommendation. The proposed CY 2014 direct PE input database reflects this proposal.

TABLE 9—000-DAY GLOBAL CODES WITH PROPOSED CHANGES TO PRE-SERVICE CL TIME

CPT code	Short descriptor	Existing CL pre-service facility minutes	Proposed CL pre-service facility minutes (AMA RUC recommendation)
20900	Removal of bone for graft	60	30
20902	Removal of bone for graft	60	30

d. Price Adjustment for Laser Diode

It has come to our attention that the price associated with the equipment item called ''laser, diode, for patient positioning (Probe)'' (ER040) in the direct PE input database is $7,678 instead of $18,160 as listed in the CY 2013 PFS final rule with comment period (77 FR 68922). The CY 2014 proposed direct PE input database reflects the updated price for the equipment item.

e. Direct PE Inputs for Stereotactic Radiosurgery (SRS) Services (CPT Codes 77372 and 77373)

Since 2001, Medicare has used HCPCS G-codes, in addition to the CPT codes, for stereotactic radiosurgery (SRS) to distinguish robotic and non-robotic methods of delivery. Based on our review of the current SRS technology, it is our understanding that most services currently furnished with linac-based SRS technology, including services currently billed using the non-robotic codes, incorporate some type of robotic feature. Therefore, we believe that it is no longer necessary to continue to distinguish robotic versus non-robotic linac-based SRS through the HCPCS G-codes. For purposes of the hospital outpatient prospective payment system (OPPS), CMS is proposing to replace the existing four SRS HCPCS G-codes G0173 (Linear accelerator based stereotactic radiosurgery, complete course of therapy in one session), G0251 (Linear accelerator based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, maximum five sessions per course of treatment), G0339 (Image-guided robotic linear accelerator-based stereotactic radiosurgery, complete course of therapy in one session or first session of fractionated treatment), and G0340 (Image-guided robotic linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, second through fifth sessions, maximum five sessions per course of treatment), with the SRS CPT codes 77372 (Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; linear accelerator based) and 77373 (Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions) that do not distinguish between robotic and non-robotic methods of delivery. We refer readers to section II.C.3 of the CY 2014 OPPS proposed rule for more discussion of that proposal. We also refer readers to the CY 2007 OPPS final rule (71 FR 68023 through 68026) for a

detailed discussion of the history of the SRS codes.

Two of the four current SRS G-codes are paid in the nonfacility setting through the PFS. These two codes, G0339 and G0340, describe robotic SRS treatment delivery and are contractor-priced. CPT codes 77372 and 77373, which describe SRS treatment delivery without regard to the method of delivery, are currently paid in the nonfacility setting based on resource-based RVUs developed through the standard PE methodology. If the CY 2014 OPPS proposal is implemented, it would appear that there would no longer be a need for G-codes to describe robotic SRS treatment and delivery. Prior to eliminating the contractor-priced G-codes and using the existing CPT code for PFS payment of services previously reported using G-codes, we believe that it would be appropriate to ensure that the direct PE inputs used to develop PE RVUs for CPT codes 77372 and 77373 accurately reflect the typical resources used in furnishing the services that would be reported in the non-facility setting in the absence of the robotic G-codes. Therefore, for CY 2014, we are not proposing to replace the contractor-priced G-codes for PFS payment. We are seeking comment from the public and stakeholders, including the AMA RUC, regarding whether or not the direct PE inputs for CPT codes 77372 and 77373 would continue to accurately estimate the resources used in furnishing typical SRS delivery were there no coding distinction between robotic and non-robotic methods of delivery.

3. Using OPPS and ASC Rates in Developing PE RVUs

As we explain in section II.A.2.d of this proposed rule, we typically establish two PE RVUs for procedures that can be furnished in either a nonfacility setting, like a physician's office, or facility setting, like a hospital. The nonfacility RVUs reflect all of the direct and indirect practice expenses of providing a particular service when the entire service is furnished in a nonfacility setting. The facility RVUs are designed to reflect the direct and indirect practice expenses typically associated with furnishing a particular service in a setting, such as a hospital or ASC where those facilities incur a portion or all of the costs. Thus, the difference between the facility and nonfacility RVUs is because Medicare makes a separate payment to the facility for its costs of furnishing a service when a service is furnished in a facility.

When services are furnished in the facility setting, such as a hospital outpatient department (OPD) or an ambulatory surgical center (ASC), the total Medicare payment (made to the facility and the professional combined) typically exceeds the Medicare payment made for the same service when furnished in the physician office or other nonfacility setting. We believe that this payment difference generally reflects the greater costs that facilities incur than those incurred by practitioners furnishing services in offices and other non-facility settings. For example, hospitals incur higher overhead costs because they maintain the capability to furnish services 24 hours a day and 7 days per week, furnish services to higher acuity patients than those who receive services in physician offices, and have additional legal obligations such as complying with the Emergency Medical Treatment and Active Labor Act (EMTALA). Additionally, hospitals and ASCs must meet Medicare conditions of participation and conditions for coverage, respectively.

However, we have found that for some services, the total Medicare payment when the service is furnished in the physician office setting exceeds the total Medicare payment when the service is furnished in an OPD or an ASC. When this occurs, we believe it is not the result of appropriate payment differentials between the services furnished in different settings. Rather, we believe it is due to anomalies in the data we use under the PFS and in the application of our resource-based PE methodology to the particular services.

The PFS PE RVUs rely heavily on the voluntary submission of information by individuals furnishing the service and who are paid at least in part based on the data provided. Currently, we have little means to validate whether the information is accurate or reflects typical resource costs. Furthermore, in the case of certain direct costs, like the price of high-cost disposable supplies and expensive capital equipment, even voluntary information has been very difficult to obtain. In some cases the PE RVUs are based upon single price quotes or one paid invoice. We have addressed these issues extensively in previous rulemaking (75 FR 73252) and again in section II.A.3.e of this proposed rule. Such incomplete, small sample, potentially biased or inaccurate resource input costs may distort the resources used to develop nonfacility PE RVUs used in calculating PFS payment rates for individual services.

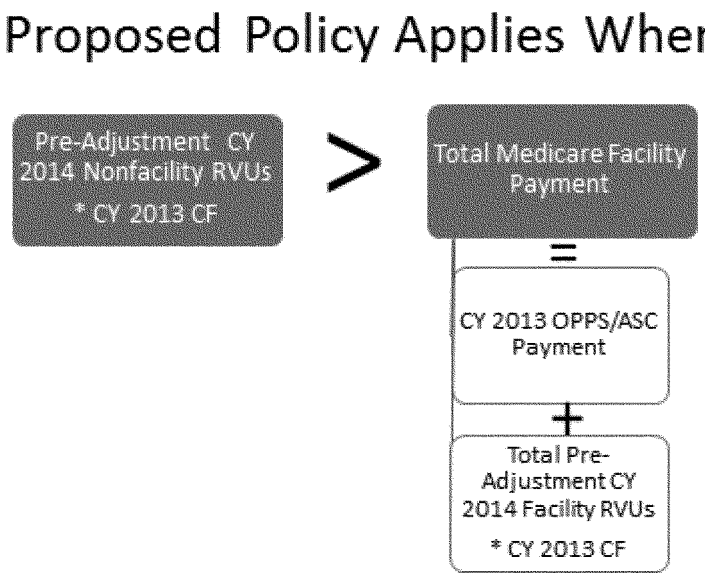
In addition to the accuracy issues with some of the physician PE resource inputs, the data used in the PFS PE methodology can often be outdated. As we have previously noted (77 FR 68921) there is no practical means for CMS or stakeholders to engage in a complete simultaneous review of the input resource costs for all HCPCS codes paid under the PFS on an annual or even regular basis. Thus, the information used to estimate PE resource costs for PFS services is not routinely updated. Instead, we strive to maintain relativity by reviewing the work RVUs, physician time, and direct PE inputs for a code at the same time and reviewing all codes within families where appropriate. Nonetheless, outdated resource input costs may distort RVUs used to develop nonfacility PFS payment rates for individual services. In the case of new medical devices for which high growth in volume of a service as it diffuses into clinical practice may lead to a decrease in the cost of expensive items, outdated price inputs can result in significant overestimation of resource costs.

Such inaccurate resource input costs may distort the nonfacility PE RVUs used to calculate PFS payment rates for individual services. As we have previously noted, OPPS payment rates are based on auditable hospital data and are updated annually. Given the differences in the validity of the data used to calculate payments under the PFS and OPPS, we believe that the nonfacility PFS payment rates for procedures that exceed those for the same procedure when in a facility result from inadequate or inaccurate direct PE inputs, especially in price or time assumptions, as compared to the more accurate OPPS data. On these bases, we are proposing a change in the PE methodology beginning in CY 2014 and subsequent years. To improve the accuracy of PFS nonfacility payment rates for each calendar year, we are proposing to use the current year OPPS or ASC rates as a point of comparison in establishing PE RVUs for services under the PFS. In setting PFS rates, we would compare the PFS payment rate for a service furnished in an office setting to the total Medicare payment to practitioners and facilities for the same service when furnished in a hospital outpatient setting. For services on the ASC list, we would make the same comparison except we would use the ASC rate as the point of comparison instead of the OPPS rate.

We are proposing to limit the nonfacility PE RVUs for individual codes so that the total nonfacility PFS payment amount would not exceed the total combined amount Medicare would pay for the same code in the facility setting. That is, if the nonfacility PE RVUs for a code would result in a higher payment than the corresponding

OPPS or ASC payment rate and PFS facility PE RVUs (when applicable) for the same code, we would reduce the nonfacility PE RVU rate so that the total nonfacility payment does not exceed the total Medicare payment made for the service in the facility setting. To maintain the greatest consistency and transparency possible, we are proposing to use the current year PFS conversion factor, as reflected in Figure B1. Similarly, we are proposing to use current year OPPS or ASC rates in the comparison.

Figure B1



For services with no work RVUs, we are proposing to compare the total nonfacility PFS payment to the OPPS payment rates directly since no PFS payment is made for these services when furnished in the facility setting.

We are proposing to exempt the following services from this policy:

Services Without Separate OPPS Payment rates: We are proposing to exclude services without separately payable OPPS rates from this methodical change since there would be no OPPS rate to which we could compare the PFS nonfacility PE RVUs. We note that there would also be no ASC rate for these services since ASCs are only approved to furnish a subset of OPPS services.

Codes Subject to the DRA Imaging Cap: We are proposing to exclude services capped at the OPPS payment rate by the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171) from this policy. The DRA provision limits PFS payment for most imaging procedures to the amount paid under the OPPS system. This policy applies to the technical component of imaging services, including X-ray, ultrasound, nuclear medicine, MRI, CT, and fluoroscopy services. Screening and diagnostic mammograms are exempt. Since payment for these procedures is capped by statute we are excluding them from this policy.

Codes with Low Volume in the OPPS or ASC: We are proposing to exclude any service for which 5% percent or less of the total number of services are furnished in the OPPS setting relative to the total number of PFS/OPPS allowed services.

Codes with ASC Rates Based on PFS Payment Rates: To avoid issues of circularity, we are proposing to exclude ASC services subject to the ''office-based'' procedure payment policies for which payment rates are based on the PFS nonfacility PE RVUs. We direct interested readers to the CY 2013 OPPS final rule (77 FR 68444) for additional information regarding this payment policy.

Codes Paid in the Facility at Nonfacility PFS Rates: To avoid issues of circularity, we are also proposing to exclude services that are paid in the facility setting at nonfacility payment rates. This would include certain professional-only services where the resource costs for practitioners are assumed to be similar in both settings.

Codes with PE RVUs Developed Outside the PE Methodology: We are also proposing to exclude services with PE RVUs established outside the PE Methodology through notice and comment rulemaking.

Addendum B of this proposed rule with comment period displays the PE RVUs that would result from implementation of this proposed change in the PE methodology.

In discussing resource input issues, some stakeholders have previously suggested that the direct costs (for example, clinical labor, disposable supplies and medical equipment) involved in furnishing a service are similar in both the nonfacility and facility settings. Others have suggested that facilities, like hospitals, have greater purchasing power for medical equipment and disposable supplies so that the direct costs for a facility to furnish a service can be lower than costs for a physician practice furnishing the same service. This proposed policy does not assume that the direct costs to furnish a service in the nonfacility setting are always lower than in the facility setting. Medicare payment methodologies, including both OPPS and the PFS PE methodology, incorporate both direct and indirect costs (administrative labor, office expenses, and all other expenses). This proposed policy is premised on the idea that there are significantly greater indirect resource costs that are carried by facilities even in the event that the direct costs involved in furnishing a service in the office and facility settings are comparable.

We believe this proposal provides a reliable means for Medicare to set upper payment limits for office-based procedures based on relatively more

reliable cost information available for the same procedures when furnished in a facility setting where the cost structure would be expected to be somewhat, if not significantly, higher than the office setting. We believe that the current basis for estimating the resource costs involved in furnishing a PFS service is significantly encumbered by our current inability to obtain accurate information regarding supply and equipment prices, as well as procedure time assumptions. We believe that this policy will mitigate the negative impact of these difficulties on both the appropriate relativity of PFS services and overall Medicare spending. A wide range of stakeholders and public commenters have pointed to the nonfacility setting as the most cost-effective location for services. Given the significantly higher cost structure of facilities (as discussed above) we believe that this presumption is accurate. In its March 2012 report to Congress, MedPAC recommended that Medicare should seek to pay similar amounts for similar services across payment settings, taking into account differences in the definitions of services and patient severity. (MedPAC March 2012 Report to Congress, page 46) We believe that the proposed change to our PFS PE methodology will more appropriately reflect resource costs in the nonfacility setting.

b. Ultrasound Equipment Recommendations

In the CY 2012 PFS proposed rule (76 FR 42796), we asked the AMA RUC to review the ultrasound equipment described in the direct PE input database. We specifically asked for review of the ultrasound equipment items described in the direct PE input database and whether the ultrasound equipment listed for specific procedure codes is clinically necessary.

In response, the AMA RUC recommended creating several new equipment inputs in addition to the revision of current equipment inputs for ultrasound services. The AMA RUC also forwarded pricing information for new and existing equipment items from certain medical specialty societies that represent the practitioners who furnish these services. In the following paragraphs, we summarize the AMA RUC recommendations, address our review of the provided information, and describe proposed changes to the direct PE inputs used in developing PE RVUs for these services.

(1) Equipment Rooms

The AMA RUC made a series of recommendations regarding the ultrasound equipment items included in direct PE input equipment packages called ''rooms.'' Specifically, the AMA RUC recommended adding several new equipment items to the equipment packages called ''room, ultrasound, general'' (EL015) and ''room, ultrasound, vascular'' (EL016). The AMA RUC also recommended creating a similar direct PE input equipment package called ''room, ultrasound, cardiovascular.'' In considering these recommendations, we identified a series of new concerns regarding the makeup of these equipment packages and because there are several different ways to handle these concerns, we are seeking public comment from additional stakeholders prior to proposing to implement any of these recommended changes through future rulemaking.

We note that the existing ''rooms'' for ultrasound technology include a greater number of individual items than the ''rooms'' for other kinds of procedures. For example, the equipment package for the ''room, basic radiology'' (EL012) contains only two items: An x-ray machine and a camera. Ordinarily under the PFS, direct PE input packages for ''rooms'' include only equipment items that are typically used in furnishing every service in that room. When equipment items beyond those included in a ''room'' are typically used in furnishing a particular procedure, the additional equipment items for that procedure are separately reflected in the direct PE input database in addition to the ''room'' rather than being included in the room. When handled in this way, the room includes only those inputs that are common to all services furnished in that room type, and thus the direct PE inputs are appropriate for the typical case of each particular service. When additional equipment items are involved in furnishing a particular service, they are included as an individual PE input only for that particular service.

In contrast, the equipment items currently included in the ''room, ultrasound, general'' are: the ultrasound system, five different transducers, two probe starter kits, two printers, a table, and various other items. We do not believe that it is likely that all of these items would be typically used in furnishing each service. For example, we do not believe that the typical ultrasound study would require the use of five different ultrasound transducers. However, the costs of all of these items are incorporated into the resource inputs for every service for which the ultrasound room is a direct PE input, regardless of whether each of those items is typically used in furnishing the particular service. This increases the resource cost for every service that uses the room regardless of whether or not each of the individual items is typically used in furnishing a particular procedure.

Instead of incorporating the AMA RUC's recommendation to add more equipment items to these ultrasound equipment ''room'' packages, we believe that we should continue to consider the appropriateness of the full number of items in the ultrasound ''rooms'' in the context of maintaining appropriate relativity with other services across the PFS. We seek comment from stakeholders, including the AMA RUC, on the items included in the ultrasound rooms, especially as compared to the items included in other equipment ''rooms.'' We believe that it would be appropriate to consider these comments in future rulemaking. Specifically we seek comment on whether equipment packages called ''rooms'' should include all of the items that might be included in an actual room, just the items typically used for every service in such a room, or all of the items typically used in typical services furnished in the room. We believe that it would be most appropriate to propose changes to the ''room, ultrasound, general'' (EL015) and ''room, ultrasound, vascular'' (EL016) in the context of considering comments on this broader issue. We also believe that consideration of the broader issue will help determine whether it would be appropriate to create a ''room, ultrasound, cardiovascular,'' and if so, what items would be included in this equipment package.

In addition to the concerns regarding the contents of the ultrasound ''room'' packages, we are also concerned about the pricing information submitted through the AMA RUC to support its recommendation to add equipment to the ultrasound room packages. The highest-price item used in pricing the existing equipment input called ''room, ultrasound, general'' (EL015), is a ''GE Logic 9 ultrasound system,'' currently priced at $220,000. As part of a current AMA RUC recommendation, a medical specialty society recommended increasing the price of that item to $314,500. However, that recommendation did not include documentation to support the pricing level, such as a copy of a paid invoice for the equipment. Furthermore, the recommended price conflicts with certain publicly available information. For example, the *Milwaukee Sentinel-Journal* reported in a February 9, 2013 article that the price for GE ultrasound equipment ranges from ''$7,900 for a hand-held ultrasound to $200,000 for its

most advanced model.'' The same article points to an item called the ''Logiq E9'' as the ultrasound machine most used by radiologists and priced from $150,000 to $200,000. *http://www.jsonline.com/business/ge-sees-strong-future-with-its-ultrasound-business-uj8mn79-190533061.html*

At this time, are unsure how to best reconcile the information disclosed by the manufacturer to the press and the prices submitted by the medical specialty society for use in updating the direct PE input prices. We believe discrepancies, such as these, exemplify the potential problem with updating prices for particular items based solely on price quotes or information other than copies of paid invoices. However, copies of paid invoices must also be evaluated carefully. The information presented in the article regarding the price for hand-held ultrasound devices raises questions about the adequacy of paid invoices, too, in determining appropriate input costs. The direct PE input described in the database as ''ultrasound unit, portable'' (EQ250) is currently priced at $29,999 based on a submitted invoice, while the article cites that GE sells a portable unit for as low as $7,900. We are seeking comment on the appropriate price to use as the typical cost for portable ultrasound units.

Additionally, we are not proposing to revise the equipment items, or to change the prices of items, included in these rooms. Instead, pending our receipt and consideration of additional information, the proposed direct PE input database continues to include the current prices for the ''room, ultrasound, general'' (EL015), ''room, ultrasound, vascular'' (EL016), and ''ultrasound unit, portable'' (EQ250).

(2) New Equipment Inputs and Price Updates

Ultrasound Unit, portable, breast procedures. The AMA RUC recommended that a new direct PE input, ''ultrasound unit, portable, breast procedures,'' be created for breast procedures that are performed in a surgeon's office and where ultrasound imaging is included in the code descriptor. These services are described by CPT codes 19105 (Ablation, cryosurgical, of fibroadenoma, including ultrasound guidance, each fibroadenoma), 19296 (Placement of radiotherapy afterloading expandable catheter (single or multichannel) into the breast for interstitial radioelement application following partial mastectomy, includes imaging guidance; on date separate from partial mastectomy), and 19298 (Placement of radiotherapy afterloading brachytherapy catheters (multiple tube and button type) into the breast for interstitial radioelement application following (at the time of or subsequent to) partial mastectomy, includes imaging guidance). We are creating this input. The pricing information submitted for this item is a paid invoice and two price quotes. As we have previously stated, we believe that copies of paid invoices are more likely to reflect actual resource costs associated with equipment and supply items than quotes or other information. Therefore, we are proposing a price of $33,930, which reflects the price displayed on the submitted copy of the paid invoice. We are not using the quotes as we do not believe that quotes provide reliable information about the prices that are actually paid for medical equipment.

Endoscopic Ultrasound Processor. The AMA RUC recommended creating a new direct PE input called ''endoscopic ultrasound processor,'' for use in furnishing the service described by CPT code 31620 (Endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) (List separately in addition to code for primary procedure[s])). We are creating this equipment item to use as an input in the proposed direct PE input database. The price associated with the ''endoscopic ultrasound processor'' will be $59,925, which reflects the price documented on the copy of the paid invoice submitted with the recommendation.

Bronchofibervideoscope. The AMA RUC recommended creating a new direct PE input called ''Bronchofibervideoscope,'' for use in furnishing the service described by CPT code 31620 (Endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) (List separately in addition to code for primary procedure[s])). We are creating this new equipment item to use as an input in the proposed direct PE input database. However, this item has no price associated with it in the proposed direct PE input database because we did not receive any information that would allow us to price the item accurately. Consequently, we seek copies of paid invoices for this equipment item so that we can price the item accurately in the future.

Endoscope, ultrasound probe, drive (ES015). The AMA RUC forwarded pricing information to us regarding the existing input called ''endoscope, ultrasound probe, drive'' (ES015). This information included a copy of a paid invoice. Based on this information, we are proposing to change the price associated with ES015 to $13,256.25, which reflects the price documented on the submitted copy of the paid invoice.

(3) Ultrasound Equipment Input Recommendations for Particular Services

The AMA RUC made recommendations regarding the typical ultrasound items used in furnishing particular services. In general, the AMA RUC recommended that the existing equipment items accurately described the typical equipment used in furnishing particular services. However, for some CPT codes the AMA RUC recommended changing the associated equipment inputs that appear in the direct PE input database. Based on our review of these recommendations, we have generally agreed with the AMA RUC regarding these recommended changes, and these changes are reflected in the proposed direct PE input database. Table 10 displays the codes with proposed changes to ultrasound equipment. However, for certain codes we do not agree with the recommendations of the AMA RUC. The following paragraphs address the changes we are proposing that differ from the recommendations of the AMA RUC.

For a series of cardiovascular services that include ultrasound technology, the AMA RUC recommended removing certain equipment items and replacing those items with a new item called ''room, ultrasound, cardiovascular.'' As we described in the preceding paragraphs, we are not proposing to create the ''room, ultrasound, cardiovascular'' and therefore will not propose to add this ''room'' an input for these services. However, we note that the newly recommended equipment package incorporates many of the same kinds of items as the currently existing ''room, ultrasound, vascular'' (EL016). We agree with the AMA RUC's suggestion that the existing equipment inputs for the relevant services listed in Table 10 do not reflect typical resource costs of furnishing the services. We believe that, pending our further consideration of the ultrasound ''room'' equipment packages, it would be appropriate to use the existing ''room, ultrasound, vascular'' (EL016) as a proxy for resource costs for these services. Therefore, the proposed direct PE input database reflects this proposed change.

In the case of CPT code 76942 (Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation), we agree with the AMA RUC's

recommendation to replace the current equipment input of the ''room, ultrasound, general'' (EL015) with ''ultrasound unit, portable'' (EQ250). We note that this service is typically reported with other codes that describe the needle placement procedures and that the recommended change in equipment from a room to a portable device reflects a change in the typical kinds of procedures reported with this image guidance service. Given this change, we believe that it is appropriate to reconsider the procedure time assumption currently used in establishing the direct PE inputs for this code is 45 minutes, which we believe is inaccurate. We reviewed the services reported with CPT code 76942 to identify the most common procedures furnished with this image guidance. The code most frequently reported with CPT code 76942 is CPT 20610 (Arthrocentesis, aspiration and/or injection; major joint or bursa (eg, shoulder, hip, knee joint, subacromial bursa). The assumed procedure time for this service is five minutes. The vast majority of other procedures frequently reported with CPT code 76942 range in procedure time assumptions from 5 to 20 minutes. Therefore, in addition to proposing the recommended change in equipment inputs associated with the code, we are also proposing to change the procedure time assumption used in establishing direct PE inputs for the service from 45 to 10 minutes, based on our analysis of thirty needle placement procedures most frequently reported with CPT code 76942. We note that this will reduce the clinical labor and equipment minutes associated with the code from 58 to 23 minutes. This change is reflected in the proposed direct PE input database. We also note that this code has been proposed as a potentially misvalued code in section II.B.3.b.1.

TABLE 10—CODES WITH PROPOSED CHANGES TO ULTRASOUND EQUIPMENT FOR CY 2014

CPT code	Descriptor	CY 2013 CMS Equipment code	CY 2013 Equipment description	Proposed CY 2014 Equipment CMS code	Proposed CY 2014 Equipment description

4. Collecting Data on Services Furnished in Off-Campus Hospital Provider-Based Departments

In recent years, the research literature and popular press have documented the increased trend toward hospital acquisition of physician practices, integration of those practices as a department of the hospital, and the resultant increase in the furnishing of physicians' services in a hospital outpatient setting (for example, see Ostrom, Carol M. ''Why you might pay twice for one visit to a doctor,'' *Seattle Times.* November 3, 2012, and O'Malley, Ann, Amelia M. Bond, and Robert Berenson. *Rising hospital employment of physicians: better quality, higher costs?* Issue Brief No. 136, Center for Studying Health System Change. August 2011). When a Medicare

beneficiary receives outpatient services in a hospital, Medicare generally pays more in total than when the beneficiary receives those same services in a freestanding clinic or physician office. As more physician practices become hospital-based, news articles have highlighted beneficiary liability for the additional coinsurance for the ''facility fee,'' which is the payment in addition to the physician payment when services are furnished in a hospital. MedPAC has questioned the appropriateness of increased Medicare payment and beneficiary cost-sharing when physician offices become hospital outpatient departments, and has recommended that Medicare pay selected hospital outpatient services at physician fee schedule rates (MedPAC March 2012 *Report to Congress*).

The total l payment (including both Medicare program payment and beneficiary cost-sharing) generally is higher when outpatient services are furnished in the hospital outpatient setting rather than a physician office. Both the PFS and the hospital outpatient prospective payment system (OPPS) establish payment based on the relative resources involved in furnishing a service. As described in section II.B.1.b. of this proposed rule, the relative values for services furnished in the physician office setting under the PFS reflect not only payment for the practitioner's work, but also the direct expenses (clinical labor, medical equipment, and medical supplies) and the indirect expenses (administrative labor, office expense, and all other expenses) typically involved in furnishing the service. Under section 1833(t) of the Act, Medicare provides separate payment through the OPPS to hospitals for certain items and services furnished to registered hospital outpatients that are based on the relativity of the resource costs (labor and capital) involved in furnishing those hospital services. In general, we expect hospitals to have higher overall resource requirements than physician offices because hospitals are required to meet conditions of participation, to maintain standby capacity for emergency situations, and to be available to address a wide variety of complex medical needs in a community. When services are furnished in the hospital setting, such as in off-campus provider based departments, Medicare pays the physician under the PFS at a typically lower facility payment rate but then also pays the hospital under the OPPS for the facility resources required to furnish the service. The beneficiary pays coinsurance for both the physician PFS payment and the hospital OPPS payment. The term ''facility fee'' refers to this additional hospital outpatient payment.

Upon acquisition of a physician practice, hospitals frequently treat the practice locations as off-campus provider-based departments of the hospital and bill Medicare for services furnished at those locations under the OPPS (for further information on the provider-based regulations at § 413.65, see *http://www.gpo.gov/fdsys/pkg/CFR-2010-title42-vol2/pdf/CFR-2010-title42-vol2-sec413-65.pdf*). Since October 1, 2002, we have not required hospitals to seek from CMS a determination of provider-based status for a facility that is located off campus. We also do not have a formal process for gathering information on the frequency, type, and payment for services furnished in off-campus provider-based departments of the hospital.

To better understand the growing trend toward hospital acquisition of physician offices and subsequent treatment of those locations as off-campus provider-based outpatient departments, we are considering collecting information that would allow us to analyze the frequency, type, and payment for services furnished in off-campus provider-based hospital departments. We have considered several potential methods. Claims-based approaches could include (1) creating a new place of service code for off-campus departments of a provider under 42 CFR 413.65(g)(2) as part of item 24B of the CMS–1500 claim form, comparable to current place of service codes such as ''22 Outpatient'' and ''23 Emergency Room-Hospital'' when physician services are furnished in an off-campus provider-based department, or (2) creating a HCPCS modifier that could be reported with every code for services furnished in an off-campus provider-based department of a hospital on the CMS–1500 claim form for physician services and the UB–04 (CMS form 1450) for hospital outpatient claims. In addition, we also have considered asking hospitals to break out the costs and charges for their provider-based departments as outpatient service cost centers on the Medicare hospital cost report, form 2552–10. We note that some hospitals already break out these costs voluntarily or because of cost reporting requirements for the 340B Drug Discount program but this practice is not consistent or standardized. We welcome public comment on the best means for collecting information on the frequency, type, and payment for services furnished in off-campus provider-based departments of hospitals.

B. Misvalued Codes

1. Valuing Services Under the PFS

Section 1848(c) of the Act requires the Secretary to determine relative values for physicians' services based on three components: work; PE; and malpractice. Section 1848(c)(1)(A) of the Act defines the work component to include ''the portion of the resources used in furnishing the service that reflects physician time and intensity in furnishing the service.'' In addition, section 1848(c)(2)(C)(i) of the Act specifies that ''the Secretary shall determine a number of work relative value units (RVUs) for the service based on the relative resources incorporating physician time and intensity required in furnishing the service.'' Section 1848(c)(1)(B) of the Act defines the PE component as ''the portion of the resources used in furnishing the service that reflects the general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising practice expenses.'' (See section I.A.2. for more detail on the PE component.) Section 1848(c)(1)(C) of the Act defines the malpractice component as ''the portion of the resources used in furnishing the service that reflects malpractice expenses in furnishing the service.'' Sections 1848 (c)(2)(C)(ii) and (iii) of the Act specify that PE and malpractice expense RVUs shall be determined based on the relative PE/malpractice expense resources involved in furnishing the service.

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 3134(a) of the Affordable Care Act added a new section 1848(c)(2)(K) to the Act, which requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 3134(a) of the Affordable Care Act also added a new section 1848(c)(2)(L) to the Act which, requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, identified using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.A.1. of this proposed rule, each year we develop and propose appropriate adjustments to the RVUs, taking into account the recommendations provided by the

American Medical Association/Specialty Society Relative Value Scale Update Committee (AMA RUC), the Medicare Payment Advisory Commission (MedPAC), and others. For many years, the AMA RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by the law. We may also consider analyses of physician time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS) National Database, and the Physician Quality Reporting Initiative (PQRI) databases. In addition to considering the most recently available data, we also assess the results of physician surveys and specialty recommendations submitted to us by the AMA RUC. We conduct a clinical review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available in addition to taking into account the results of consultations with organizations representing physicians. In accordance with section 1848(c) of the Act, we determine appropriate adjustments to the RVUs, explain the basis of these adjustments, and respond to public comments in the PFS proposed and final rules.

2. Identifying, Reviewing, and Validating the RVUs of Potentially Misvalued Services

a. Background

In its March 2006 Report to the Congress, MedPAC noted that ''misvalued services can distort the price signals for physicians' services as well as for other health care services that physicians order, such as hospital services.'' In that same report MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, ''when a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.'' We believe services can also become overvalued when PEs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PEs rise. In the ensuing years since MedPAC's 2006 report, additional groups of potentially misvalued services have been identified by the Congress, CMS, MedPAC, the AMA RUC, and other stakeholders.

In recent years, CMS and the AMA RUC have taken increasingly significant steps to identify and address potentially misvalued codes. As MedPAC noted in its March 2009 Report to Congress, in the intervening years since MedPAC made the initial recommendations, ''CMS and the AMA RUC have taken several steps to improve the review process.'' Most recently, section 1848(c)(2)(K)(ii) of the Act (as added by section 3134(a) of the Affordable Care Act) directed the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following seven categories:

- Codes and families of codes for which there has been the fastest growth;
- Codes and families of codes that have experienced substantial changes in PEs;
- Codes that are recently established for new technologies or services;
- Multiple codes that are frequently billed in conjunction with furnishing a single service;
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment;
- Codes which have not been subject to review since the implementation of the RBRVS (the so-called 'Harvard-valued codes'); and
- Other codes determined to be appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Finally, section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the physician fee schedule.

b. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes in all seven of the categories specified in section 1848(c)(2)(K)(ii) of the Act, and we plan to continue our work examining potentially misvalued codes in these areas over the upcoming years. In the current process, we identify potentially misvalued codes for review, and request recommendations from the AMA RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The AMA RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well.

Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed more than 1,000 potentially misvalued codes to refine work RVUs and direct PE inputs. We have adopted appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the CY 2012 PFS proposed rule, we proposed to identify and review potentially misvalued codes in the category of ''Other codes determined to be appropriate by the Secretary,'' referring to a list of the highest PFS expenditure services, by specialty, that had not been recently reviewed (76 FR 73059 through 73068).

In the CY 2012 final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time

(76 FR 73055 through 73958), and established a process for the annual public nomination of potentially misvalued services.

One of the priority categories for review of potentially misvalued codes is services that have not been subject to review since the implementation of the PFS (the so-called ''Harvard-valued codes''). In the CY 2009 PFS proposed rule, we requested that the AMA RUC engage in an ongoing effort to review the remaining Harvard-valued codes, focusing first on the high-volume, low intensity codes (73 FR 38589). For the Fourth Five-Year Review (76 FR 32410), we requested that the AMA RUC review services that have not been reviewed since the original implementation of the PFS with annual utilization greater than 30,000 (Harvard-valued—Utilization > 30,000). In the CY 2013 final rule with comment period, we identify for review the potentially misvalued codes for Harvard-valued services with annual allowed charges that total at least $10,000,000 (Harvard-valued—Allowed charges ≥$10,000,000).

In addition to the Harvard-valued codes, in the same rule we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed physician time and codes with no physician work and have listed physician time).

c. Validating RVUs of Potentially Misvalued Codes

In addition to identifying and reviewing potentially misvalued codes, section 3134(a) of the Affordable Care Act added section 1848(c)(2)(L) of the Act, which specifies that the Secretary shall establish a formal process to validate RVUs under the PFS. The validation process may include validation of work elements (such as time, mental effort and professional judgment, technical skill and physical effort, and stress due to risk) involved with furnishing a service and may include validation of the pre-, post-, and intra-service components of work. The Secretary is directed, as part of the validation, to validate a sampling of the work RVUs of codes identified through any of the seven categories of potentially misvalued codes specified by section 1848(c)(2)(K)(ii) of the Act. Furthermore, the Secretary may conduct the validation using methods similar to those used to review potentially misvalued codes, including conducting surveys, other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the validation of RVUs of services.

In the CY 2011 PFS proposed rule (75 FR 40068) and CY 2012 PFS proposed rule (76 FR 42790), we solicited public comments on possible approaches, methodologies, and data sources that we should consider for a validation process. A summary of the comments along with our responses are included in the CY 2011 PFS final rule with comment period (75 FR 73217) and the CY 2012 PFS final rule with comment period (73054 through 73055).

We have entered into two contracts with outside entities to develop validation models for RVUs. During a 2-year project, the RAND Corporation will use available data to build a validation model to predict work RVUs and the individual components of work RVUs, time and intensity. The model design will be informed by the statistical methodologies and approach used to develop the initial work RVUs and to identify potentially misvalued procedures under current CMS and AMA RUC processes. RAND will use a representative set of CMS-provided codes to test the model. RAND will consult with a technical expert panel on model design issues and the test results.

The second contract is with the Urban Institute. Given the central role of time in establishing work RVUs and the concerns that have been raised about the current time values, a key focus of the project is collecting data from several practices for services selected by the contractor. The data will be used to develop time estimates. Urban Institute will use a variety of approaches to develop objective time estimates, depending on the type of service, which will be a very resource-intensive part of the project. Objective time estimates will be compared to the current time values used in the fee schedule. The project team will then convene groups of physicians from a range of specialties to review the new time data and their potential implications for work and the ratio of work to time.

3. CY 2014 Identification and Review of Potentially Misvalued Services

a. Public Nomination of Potentially Misvalued Codes

In the CY 2012 PFS final rule with comment period, we finalized a process for the public to nominate potentially misvalued codes (76 FR 73058). The public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation during the 60-day public comment period following the release of the annual PFS final rule with comment period. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in the peer reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: technique; knowledge and technology; patient population; site-of-service; length of hospital stay; and physician time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work, that is, diffusion of technology.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of physician time, work RVU, or direct PE inputs using other data sources (for example, Department of Veteran Affairs (VA) National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS) National Database, and the Physician Quality Reporting System (PQRS) databases).
- National surveys of physician time and intensity from professional and management societies and organizations, such as hospital associations.

After we receive the nominated codes during the 60-day comment period following the release of the annual PFS final rule with comment period, we evaluate the supporting documentation and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate whether we are proposing each nominated code as a potentially misvalued code.

We did not receive publicly nominated potentially misvalued codes for inclusion in this proposed rule. We look forward to receiving new code nominations for inclusion in the CY 2015 proposed rule to continue with our efforts to identify potentially misvalued codes.

b. Potentially Misvalued Codes

(1) Contractor Medical Director Identified Potentially Misvalued Codes

After publishing the CY final rule with comment period, we began considering additional ways to broaden participation in the process of identifying potentially misvalued codes. We solicited the input of Medicare contractor medical directors (CMDs) in developing a list of potentially misvalued codes. CMDs offer a unique perspective on the Medicare program. Medicare Administrative Contractors administer the Medicare program in their assigned geographic area and each has at least one CMD that serves as its director. As a group, CMDs represent a variety of medical specialties, which makes them a diverse group of physicians capable of providing opinions across the vast scope of services covered under the PFS. In addition to being physicians, they are on the front line of administering the Medicare program; and their offices often serve as the first point of contact for any provider with questions regarding coverage, coding and claims processing. CMDs spend a significant amount of time communicating directly with providers and the health care industry discussing more than just the broad aspects of the Medicare program but also engaging in and facilitating specific discussions around individual services. Through their development of evidence-based local coverage determinations (LCDs), CMDs also have experience developing policy based on research. In consultation with our CMDs, we have identified the following list of codes that we are proposing as potentially misvalued. We include a brief discussion of the reasons for proposing these codes as potentially misvalued.

TABLE 11—CODES IDENTIFIED IN CONSULTATION WITH CMDS AS POTENTIALLY MISVALUED

CPT code	Short descriptor
17311	Mohs 1 stage h/n/hf/g.
17313	Mohs 1 stage t/a/l.
21800	Treatment of rib fracture.
22035	Closed tx spine process fx.
27193	Treat pelvic ring fracture.
33960	External circulation assist.
33961	External circulation assist, each subsequent day.
47560	Laparoscopy w/cholangio.
47562	Laparoscopic cholecystectomy.
47563	Laparo cholecystectomy/graph.
55845	Extensive prostate surgery.
55866	Laparo radical prostatectomy.
64566	Neuroeltrd stim post tibial.
76942	Echo guide for biopsy.

CPT codes 17311 (Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation, head, neck, hands, feet genitalia, or any location with surgery directly involving muscle, cartilage, bone, tendon, major nerves, or vessels; first stage, up to 5 tissue blocks) and 17313 (Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histpathologic preparation including routine stains(s) of the trunk, arms, or legs; first stage, up to 5 tissue blocks) are proposed as potentially misvalued codes because based on CMD comments, we believe that the code may be overvalued.

CPT codes 21800 (Closed treatment of rib fracture, uncomplicated, each), 22305 (Closed treatment of vertebral process fracture(s)) and 27193 (Closed treatment of pelvic ring fracture, dislocation, diastasis or subluxation, without manipulation) is proposed for review. We are considering the appropriateness of having a 90-day global surgical package for a procedure that is performed in settings other than the inpatient setting 33 percent of the time. We believe it is unlikely that it is appropriate for a procedure performed outside of the inpatient hospital setting at this frequency to have such a long global period. CPT codes 33960 (Prolonged extracorporeal circulation for cardiopulmonary insufficiency; initial day) and 33961 (Each subsequent day) are being proposed for review because CMDs were concerned about their current valuation of physician work. The CMD comment states that the service was originally valued when it was used primarily in premature neonates; but the service is now being furnished to adults with severe influenza, pneumonia and respiratory distress syndrome. We are concerned that, while the code currently includes 523 minutes of total physician time with 133 minutes of intraservice time, physicians are not typically furnishing the service over that entire time interval; rather, hospital-employed pump technicians are furnishing much of the work.

CPT codes 47560 (Laparoscopy, surgical; with guided transhepatic cholangiography, without biopsy), 47562 (Cholecystectomy) and 47563 (Cholecystectomy with cholangiography) we are proposing these codes as potentially misvalued because the more extensive code has lower work RVUs than the less extensive codes.

CPT codes 55845 (Prostatectomy, retropubic radical with or without nerve sparing with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes) and 55866 (Laparoscopy, surgical prostatectomy, retropubic radial, including nerve sparing, includes robotic assistance when performed) we are proposing as potentially misvalued because the RVUs for the laparoscopic procedure are higher than for the open procedure and, in general, a laparascopic procedure would not require greater resources than the open procedure.

We are proposing CPT 64566 (Posterior tibial neurostimulation, percutaneous needle electrode, single treatment, includes programming) as a potentially misvalued code because we think that the procedure typically is furnished by support staff with supervision as opposed to being furnished by the physician. We are concerned that the current valuation is based on the procedure being furnished by a physician.

We are proposing CPT code 76942 (Ultrasonic guidance for needle placement (for example, biopsy, aspiration, injection, localization device), imaging supervision and interpretation) as a potentially misvalued code because of the high frequency with which it is billed with CPT code 20610 (Arthrocentesis aspiration and/or injection; major joint or bursa (for example, shoulder, hip, knee joint, subacromial bursa) in the CMD's geographic region. The CMD noted that some providers within the contractor's geographic area bill CPT code 76942 with every injection or aspiration of the knee. One CMD suggests that the payment for CPT code 76942 and CPT code 20610 should be combined to reduce the incentive for providers to always provide and bill separately for ultrasound guidance. We note that we are making a proposal regarding the direct PE inputs for CPT code 76942. Our claims data show that the procedure time assumption for CPT code 76942 is longer than the typical procedure with which the code is billed (for example, CPT code 20610). The proposed changes relating to CPT code 76942 are addressed in detail in section II.A.4.b.3. of this proposed rule. We believe that the discrepancy in procedure times and the resulting potentially inaccurate payment raises a fundamental concern regarding the incentive to furnish ultrasound guidance. However, we believe this

concern spans more than just an individual code for ultrasound guidance. Accordingly, we have proposed additional ultrasound guidance codes as potentially misvalued in Table 12. We are seeking public comment on including these codes as potentially misvalued codes. We are also seeking public comment on any similar codes that should be included on this list.

TABLE 12—CPT CODES FOR ULTRASOUND GUIDANCE

CPT code	Short descriptor
76930	Echo guide cardiocentesis.
76932	Echo guide for heart biopsy.
76936	Echo guide for artery repair.
76940	US guide tissue ablation.
76948	Echo guide ova aspiration.
76950	Echo guidance radiotherapy.
76965	Echo guidance radiotherapy.

(2) Improving the Valuation of the Global Surgical Package, Measuring Post-Operative Work

In the CY 2013 proposed rule, we sought comments on methods of obtaining accurate and current data on E/M services furnished as part of a global surgical package. Commenters provided a variety of suggestions including setting the all surgical services to a 0-day global period, requiring all E/M services to be separately billed, validating the global surgical packages with the hospital Diagnosis-Related Group length of stay data, and setting documentation standards for post-operative E/M services that could be audited. In addition to receiving the broader comments on measuring post-operative work, we also received a comment from the AMA RUC noting that the hospital and discharge day management services included in the global period for many surgical procedures may have been inadvertently removed from the time file in 2007. With its comment letter, the AMA RUC sent us a time file with updated post-operative visits for the services that arguably we incorrectly displayed with zero visits in the CMS time file. We said in the CY 2013 final rule with comment period that we would review this file and, if appropriate, propose modifications to the physician time file in the CY 2014 PFS proposed rule. We noted in the CY 2013 final rule with comment period that if time had been removed from the physician time file inadvertently, it would not have affected the physician work RVUs or direct PE inputs for these services. It would have a small impact on the indirect allocation of PE at the specialty level, which we would review when we explore this potential time file change.

After extensive review, we believe that the data were deleted from the time file due to an inadvertent error as noted by the AMA RUC. Thus, we are proposing to replace the missing post-operative hospital E/M visit information and time for the 117 codes that were identified by the AMA–RUC and displayed in Table 13. We believe this proposal would populate the physician time file with data that, absent the inadvertent error, would have been present in the time file.

(3) Codes With Higher Total Medicare Payments in Office Than in Hospital or ASC

We are proposing to address nearly 200 codes that we believe have misvalued resource inputs. These are codes for which the total PFS payment when furnished in an office or other nonfacility setting would exceed the total Medicare payment (the combined payment to the facility and the professional) when the service is furnished in a facility, either a hospital outpatient department or an ASC.

For services furnished in a facility setting we would generally expect the combined payment to the facility and the practitioner to exceed the PFS payment made to the professional when the service is furnished in the nonfacility setting. This payment differential is expected because it reflects the greater costs we would expect to be incurred by facilities relative to physicians furnishing services in offices and other non-facility settings. These greater costs are due to higher overhead resulting from differences in regulatory requirements and for facilities, such as hospitals, maintaining the capacity to furnish services 24 hours per day and 7 days per week. However, when we analyzed such payments, we identified nearly 300 codes that would result in greater Medicare payment in the nonfacility setting than in the facility setting. We believe these anomalous site-of-service payment differentials are the result of inaccurate resource input data used to establish rates under the PFS.

In this proposed rule, we are proposing to address these misvalued codes. Specifically, we are proposing to refine the PE methodology to limit the nonfacility PE RVUs for individual codes so that the total nonfacility PFS payment amount would not exceed the total combined payment under the PFS and the OPPS (or the ASC payment system) when the service is furnished in the facility setting. We believe this is an efficient way to address these significant anomalies within the PE methodology and more appropriately value these services. We discuss this proposal in more detail in section II.A.4.b.3.

4. The Multiple Procedure Payment Reduction Policy

Medicare has long employed multiple procedure payment reduction (MPPR) policies to adjust payment to more appropriately reflect reduced resources involved with furnishing services that are frequently furnished together. Under these policies, we reduce payment for the second and subsequent services within the same MPPR category furnished in the same session or same day. These payment reductions reflect efficiencies that typically occur in either the PE or professional work or both when services are furnished together. With the exception of a few codes that are always reported with another code, the PFS values services independently to recognize relative resources involved when the service is the only one furnished in a session. Although some of our MPPR policies precede the Affordable Care Act, MPPRs can address the fourth category of potentially misvalued codes identified in section 1848(c)(2)(K) of the Act, as added by the Affordable Care Act, which is ''multiple codes that are frequently billed in conjunction with furnishing a single service'' (see 75 FR 73216). We are not proposing any new MPPRs in this proposed rule, but the following sections describe the history of MPPRs and the services currently covered by MPPRs.

a. Background

Medicare has a longstanding policy to reduce payment by 50 percent for the second and subsequent surgical procedures furnished to the same beneficiary by a single physician, or physicians in the same group practice, on the same day, largely based on the presence of efficiencies in the PE and pre- and post-surgical physician work. Effective January 1, 1995, the MPPR policy, with this same percentage reduction, was extended to nuclear medicine diagnostic procedures (CPT codes 78306, 78320, 78802, 78803, 78806, and 78807). In the CY 1995 PFS final rule with comment period (59 FR 63410), we indicated that we would consider applying the policy to other diagnostic tests in the future.

Consistent with recommendations of MedPAC in its March 2005 Report to the Congress on Medicare Payment Policy, for CY 2006 PFS, we extended the MPPR policy to the TC of certain diagnostic imaging procedures furnished on contiguous areas of the body in a single session (70 FR 70261). This MPPR policy recognizes that for the second and subsequent imaging procedures furnished in the same session, there are some efficiencies in clinical labor, supplies, and equipment time. In particular, certain clinical labor activities and supplies are not duplicated for subsequent imaging services in the same session and, because equipment time and indirect costs are allocated based on clinical labor time, we also reduced those accordingly.

The imaging MPPR policy originally applied to computed tomography (CT) and computed tomographic angiography (CTA), magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA), and ultrasound services within 11 families of codes based on imaging modality and body region, and only applied to procedures furnished in a single session involving contiguous body areas within a family of codes. Additionally, this MPPR policy originally applied to TC-only services and to the TC of global services, but not to professional component (PC) services.

There have been several revisions to this policy since it was originally adopted. Under the current imaging

MPPR policy, full payment is made for the TC of the highest paid procedure, and payment for the TC is reduced by 50 percent for each additional procedure subject to this MPPR policy. We originally planned to phase in the imaging MPPR policy over a 2-year period, with a 25 percent reduction in CY 2006 and a 50 percent reduction in CY 2007 (70 FR 70263). However, section 5102(b) of the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171, enacted on December 20, 2006) amended the statute to place a cap on the PFS payment amount for most imaging procedures at the amount paid under the hospital outpatient prospective payment system (OPPS). In view of this new OPPS payment cap, we decided in the CY 2006 PFS final rule with comment period that it would be prudent to retain the imaging MPPR at 25 percent while we continued to examine the appropriate payment levels (71 FR 69659). The DRA also exempted reduced expenditures attributable to the imaging MPPR policy from the PFS budget neutrality provision. Effective July 1, 2010, section 1848(b)(4)(C) of the Act increased the MPPR on the TC of imaging services under the policy established in the CY 2006 PFS final rule with comment period from 25 to 50 percent. Section 1848(c)(2)(B)(v)(IV) of the Act exempted the reduced expenditures attributable to this further change from the PFS budget neutrality provision.

In the July 2009 U.S. Government Accountability Office (GAO) report entitled, *Medicare Physician Payments: Fees Could Better Reflect Efficiencies Achieved when Services are Provided Together,* the GAO recommended that we take further steps to ensure that fees for services paid under the PFS reflect efficiencies that occur when services are furnished by the same physician to the same beneficiary on the same day. The GAO report recommended the following: (1) Expanding the existing imaging MPPR policy for certain services to the PC to reflect efficiencies in physician work for certain imaging services; and (2) expanding the MPPR to reflect PE efficiencies that occur when certain nonsurgical, nonimaging services are furnished together. The GAO report also encouraged us to focus on service pairs that have the most impact on Medicare spending.

In its March 2010 report, MedPAC noted its concerns about mispricing of services under the PFS. MedPAC indicated that it would explore whether expanding the unit of payment through packaging or bundling would improve payment accuracy and encourage more efficient use of services. In the CY 2009 and CY 2010 PFS proposed rules (73 FR 38586 and 74 FR 33554, respectively), we stated that we planned to analyze nonsurgical services commonly furnished together (for example, 60 to 75 percent of the time) to assess whether an expansion of the MPPR policy could be warranted. MedPAC encouraged us to consider duplicative physician work, as well as PE, in any expansion of the MPPR policy.

Section 1848(c)(2)(K) of the Act specifies that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service, and review and make appropriate adjustments to their relative values. As a first step in applying this provision, in the CY 2010 final rule with comment period, we implemented a limited expansion of the imaging MPPR policy to additional combinations of imaging services.

Effective January 1, 2011, the imaging MPPR applies regardless of code family; that is, the policy applies to multiple imaging services furnished within the same family of codes or across families. This policy is consistent with the standard PFS MPPR policy for surgical procedures that does not group procedures by body region. The current imaging MPPR policy applies to CT and CTA, MRI and MRA, and ultrasound procedures furnished to the same beneficiary in the same session, regardless of the imaging modality, and is not limited to contiguous body areas.

As we noted in the CY 2011 PFS final rule with comment period (75 FR 73228), although section 1848(c)(2)(B)(v)(VI) of the Act specifies that reduced expenditures attributable to the increase in the imaging MPPR from 25 to 50 percent (effective for fee schedules established beginning with 2010 and for services furnished on or after July 1, 2010) are excluded from the PFS budget neutrality adjustment, it does not apply to reduced expenditures attributable to our policy change regarding additional code combinations across code families (noncontiguous body areas) that are subject to budget neutrality under the PFS. The complete list of codes subject to the CY 2011 MPPR policy for diagnostic imaging services is included in Addendum F.

As a further step in applying the provisions of section 1848(c)(2)(K) of the Act, on January 1, 2011, we implemented an MPPR for therapy services. The MPPR applies to separately payable ''always therapy'' services, that is, services that are only paid by Medicare when furnished under a therapy plan of care. As we explained in the CY 2011 PFS final rule with comment period (75 FR 73232), the therapy MPPR does not apply to contractor-priced codes, bundled codes, or add-on codes.

This MPPR for therapy services was first proposed in the CY 2011 proposed rule (75 FR 44075) as a 50 percent payment reduction to the PE component of the second and subsequent therapy services for multiple ''always therapy'' services furnished to a single beneficiary in a single day. It applies to services furnished by an individual or group practice or ''incident to'' a physician's service. However, in response to public comments, in the CY 2011 PFS final rule with comment period (75 FR 73232), we adopted a 25 percent payment reduction to the PE component of the second and subsequent therapy services for multiple ''always therapy'' services furnished to a single beneficiary in a single day.

Subsequent to publication of the CY 2011 PFS final rule with comment period, section 3 of the Physician Payment and Therapy Relief Act of 2010 (PPTRA) (Pub. L. 111–286) revised the payment reduction percentage from 25 percent to 20 percent for therapy services for which payment is made under a fee schedule under section 1848 of the Act (which are services furnished in office settings, or non-institutional services). The payment reduction percentage remained at 25 percent for therapy services furnished in institutional settings. Section 4 of the PPTRA exempted the reduced expenditures attributable to the therapy MPPR policy from the PFS budget neutrality provision. Section 633 of the ATRA revised the reduction to 50 percent of the PE component for all settings, effective April 1, 2013. Therefore, full payment is made for the service or unit with the highest PE and payment for the PE component for the second and subsequent procedures or additional units of the same service is reduced by 50 percent for both institutional and non-institutional services.

This MPPR policy applies to multiple units of the same therapy service, as well as to multiple different ''always therapy'' services, when furnished to the same beneficiary on the same day. The MPPR applies when multiple therapy services are billed on the same date of service for one beneficiary by the same practitioner or facility under the same National Provider Identifier (NPI), regardless of whether the services are furnished in one therapy discipline or multiple disciplines, including physical therapy, occupational therapy, or speech-language pathology.

The MPPR policy applies in all settings where outpatient therapy services are paid under Part B. This includes both services that are furnished in the office setting and paid under the PFS, as well as institutional services that are furnished by outpatient hospitals, home health agencies, comprehensive outpatient rehabilitation facilities (CORFs), and other entities that are paid for outpatient therapy services at rates based on the PFS.

In its June 2011 Report to Congress, MedPAC highlighted continued growth in ancillary services subject to the in-office ancillary services exception. The in-office ancillary exception to the general prohibition under section 1877 of the Act as amended by the Ethics in Patient Referrals Act, also known as the Stark law, allows physicians to refer Medicare beneficiaries for designated health services, including imaging, radiation therapy, home health care, durable medical equipment, clinical laboratory tests, and physical therapy, to entities with which they have a financial relationship under specific conditions. MedPAC recommended that we apply a MPPR to the PC of diagnostic imaging services furnished by the same practitioner in the same session as one means to curb excess self-referral for these services. The GAO already had made a similar recommendation in its July 2009 report.

In continuing to apply the provisions of section 1848(c)(2)(K) of the Act regarding potentially misvalued codes that result from ''multiple codes that are frequently billed in conjunction with furnishing a single service,'' in the CY 2012 final rule (76 FR 73071), we expanded the MPPR to the PC of Advanced Imaging Services (CT, MRI, and Ultrasound), that is, the same list of codes to which the MPPR on the TC of advanced imaging already applied. Thus, this MPPR policy now applies to the PC and the TC of certain diagnostic imaging codes. Specifically, we expanded the payment reduction currently applied to the TC to apply also to the PC of the second and subsequent advanced imaging services furnished by the same physician (or by two or more physicians in the same group practice) to the same beneficiary in the same session on the same day. However, in response to public comments, in the CY 2012 PFS final rule with comment period, we adopted a 25 percent payment reduction to the PC component of the second and subsequent imaging services.

Under this policy, full payment is made for the PC of the highest paid advanced imaging service, and payment is reduced by 25 percent for the PC for each additional advanced imaging service furnished to the same beneficiary in the same session. This policy was based on the expected efficiencies in furnishing multiple services in the same session due to duplication of physician work, primarily in the pre- and post-service periods, but with some efficiencies in the intraservice period.

This policy is consistent with the statutory requirement for the Secretary to identify, review, and adjust the relative values of potentially misvalued services under the PFS as specified by section 1848(c)(2)(K) of the Act. This policy is also consistent with our longstanding policies on surgical and nuclear medicine diagnostic procedures, under which we apply a 50 percent payment reduction to second and subsequent procedures. Furthermore, it was responsive to continued concerns about significant growth in imaging spending, and to MedPAC (March 2010 and June 2011) and GAO (July 2009) recommendations regarding the expansion of MPPR policies under the PFS to account for additional efficiencies.

In the CY 2013 final rule (77 FR 68933), we expanded the MPPR to the TC of certain cardiovascular and ophthalmology diagnostic tests. Although we proposed a 25 percent reduction for both diagnostic cardiovascular and ophthalmology services, we adopted a 20 percent reduction for ophthalmology services in the final rule with comment period (77 FR 68941) in response to public comments. For diagnostic cardiovascular services, full payment is made for the procedure with the highest TC payment, and payment is reduced by 25 percent for the TC for each additional procedure furnished to the same patient on the same day. For diagnostic ophthalmology services, full payment is made for the procedure with the highest TC payment, and payment is reduced by 20 percent for the TC for each additional procedure furnished to the same patient on the same day.

Although we are not proposing any new MPPR policies for CY 2014, we continue to look at expanding the MPPR based on efficiencies when multiple procedures are furnished together. Any specific proposals would be presented in future rulemaking and subject to further public comment.''

The complete list of services subject to the MPPRs on diagnostic imaging services, therapy services, diagnostic cardiovascular services and diagnostic ophthalmology services is shown in Addenda F through J.

C. Malpractice RVUs

Section 1848(c) of the Act requires that each service paid under the PFS be composed of three components: Work, PE, and malpractice. From 1992 to 1999, malpractice RVUs were charge-based, using weighted specialty-specific malpractice expense percentages and 1991 average allowed charges. Malpractice RVUs for new codes after 1991 were extrapolated from similar existing codes or as a percentage of the corresponding work RVU. Section 4505(f) of the BBA, which amended section 1848(c) of the Act, required us to implement resource-based malpractice RVUs for services furnished beginning in 2000. Therefore, initial implementation of resource-based malpractice RVUs occurred in 2000.

The statute also requires that we review and, if necessary, adjust RVUs no less often than every 5 years. The first review and update of resource-based malpractice RVUs was addressed in the CY 2005 PFS final rule with comment period (69 FR 66263). Minor modifications to the methodology were addressed in the CY 2006 PFS final rule with comment period (70 FR 70153). In the CY 2010 PFS final rule with comment period, we implemented the second review and update of malpractice RVUs. For a discussion of the second review and update of malpractice RVUs, see the CY 2010 PFS proposed rule (74 FR 33537) and final rule with comment period (74 FR 61758).

As explained in the CY 2011 PFS final rule with comment period (75 FR 73208), malpractice RVUs for new and revised codes effective before the next five-year review of malpractice RVUs (for example, effective CY 2011 through CY 2014, assuming that the next review of malpractice RVUs occurs for CY 2015) are determined either by a direct crosswalk from a similar source code or by a modified crosswalk to account for differences in work RVUs between the new/revised code and the source code. For the modified crosswalk approach, we adjust (or ''scale'') the malpractice RVU for the new/revised code to reflect the difference in work RVU between the source code and the new/revised work value (or, if greater, the clinical labor portion of the fully implemented PE RVU) for the new code. For example, if the proposed work RVU for a revised code is 10 percent higher than the work RVU for its source code, the malpractice RVU for the revised code would be increased by 10 percent over the source code malpractice RVU. This approach presumes the same risk factor for the new/revised code and source code but

uses the work RVU for the new/revised code to adjust for the difference in risk attributable to the variation in work between the two services.

For CY 2014, we will continue our current approach for determining malpractice RVUs for new/revised codes. We will publish a list of new/revised codes and the malpractice crosswalks used for determining their malpractice RVUs in the final rule with comment period. The CY 2014 malpractice RVUs for new/revised codes will be implemented in the CY 2014 PFS final rule with comment period. These RVUs will be subject to public comment. They will then be finalized in the CY 2015 PFS final rule with comment period.

D. Medicare Economic Index (MEI)

1. Revising of the Medicare Economic Index (MEI)

a. Background

The Medicare Economic Index (MEI) is authorized under section 1842(b)(3) of the Act, which states that prevailing charge levels beginning after June 30, 1973 may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that such higher level is justified by year-to-year economic changes. Beginning July 1, 1975, and continuing through today, the MEI has met this requirement by reflecting the weighted-average annual price change for various inputs involved in furnishing physicians' services. The MEI is a fixed-weight input price index, with an adjustment for the change in economy-wide, private nonfarm business multifactor productivity. This index is comprised of two broad categories: (1) Physicians' own time; and (2) physicians' practice expense (PE).

The current form of the MEI was described in the November 25, 1992 **Federal Register** (57 FR 55896) and was based in part on the recommendations of a Congressionally-mandated meeting of experts held in March 1987. Since that time, the MEI has been updated or revised on four instances. First, the MEI was rebased in 1998 (63 FR 58845), which moved the cost structure of the index from 1992 data to 1996 data. Second, the methodology for the productivity adjustment was revised in the CY 2003 PFS final rule with comment period (67 FR 80019) to reflect the percentage change in the 10-year moving average of economy-wide private nonfarm business multifactor productivity. Third, the MEI was rebased in 2003 (68 FR 63239), which moved the cost structure of the index from 1996 data to 2000 data. Fourth, the MEI was rebased in 2011 (75 FR 73262), which moved the cost structure of the index from 2000 data to 2006 data.

The terms ''rebasing'' and ''revising'', while often used interchangeably, actually denote different activities. Rebasing refers to moving the base year for the structure of costs of an input price index, while revising relates to other types of changes such as changing data sources, cost categories, or price proxies used in the input price index. For CY 2014, we are proposing to revise the MEI based on the recommendations of the MEI Technical Advisory Panel (TAP). We are not rebasing the MEI and will continue to use the data from 2006 to estimate the cost weights, since these are the most recently available, relevant, and complete data we have available to develop these weights. In the following sections of this proposed rule, we detail our proposals regarding reorganization of cost categories, our rationale for selecting the price proxies in the MEI, and the results of the proposed revisions to the MEI based on the MEI TAP recommendations.

b. MEI Technical Advisory Panel (TAP) Recommendations

In the CY 2011 PFS final rule (77 FR 68892), we proposed to convene a MEI TAP that would review all aspects of the MEI, including the inputs, input weights, price-measurement proxies, and productivity adjustment. The MEI TAP was to assess the relevance and accuracy of these inputs to current physician practices. The MEI TAP's analysis and recommendations would be considered in future rulemaking to ensure that the MEI accurately and appropriately meets its intended statutory purpose.

The MEI TAP was established by the Secretary under 42 U.S.C. 217a and was governed by the provisions of the Federal Advisory Committee Act (FACA) (Pub. L. 92–463, enacted on October 6, 1972), as amended, 5 U.S.C. App. The Panel's deliberations were made in accordance with the FACA, which means that the meetings were conducted in public and stakeholders were given the opportunity to share their evidence and views with panel members.

The MEI TAP consisted of five members and held three meetings in 2012: May 21; June 25; and July 11. It produced 8 findings and 13 recommendations for consideration by CMS. Background on the MEI TAP members, meeting transcripts for all three meetings, and the MEI TAP's final report, including all findings and recommendations are available at *http://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/MEITAP.html.* It is possible to implement some of the recommendations immediately, while more in-depth research is required to implement several of the recommendations.

For CY 2014, we are proposing to implement 10 of the 13 recommendations made by the MEI TAP. These proposed changes only involve revising the MEI categories, cost shares, and price proxies. Again, we are not proposing to rebase the MEI at this time since the MEI TAP concluded that there is not a reliable, ongoing source of data to maintain the MEI. After acknowledging that there are no additional data to support further rebasing of the MEI at this time, the MEI TAP recommended that CMS' Office of the Actuary (OACT) identify and evaluate additional data sources that may allow for more frequent updates to the MEI's cost categories and their respective weights. Some of the possible data sources the MEI TAP suggested we consider are:

- The Medical Group Management Association's (MGMA) Cost Survey
- The Bureau of the Census Services Annual Survey (SAS)
- Pending feasibility, a CMS survey, possibly conducted jointly with the American Medical Association, that focuses exclusively on physician expenses as they relate to the MEI. The Panel notes that the lead time to conceive, develop, fund, and administer such a survey would likely be considerable.
- Alternatively, and again pending feasibility, CMS could obtain more robust data by means of detailed formal cost reports based on a methodologically sound sample of physician practices. Whether the degree of improvement in the MEI would warrant the cost associated with the process would be an important consideration.

As such, we will continue to investigate possible data sources, including an assessment of whether using self-employed physician data for the MEI cost weights, continues to be the most appropriate approach.

c. Overview of Proposed Revisions

The MEI was last rebased and revised in the CY 2011 PFS final rule with comment period (75 FR 73262–73275). The current base year for the MEI is 2006, which means that the cost weights in the index reflect physicians' expenses in 2006. The details of the methodology used to determine the 2006 cost shares were provided in the CY 2011 PFS

proposed rule and finalized in the CY 2011 PFS final rule with comment period (75 FR 40087 and 75 FR 73262, respectively). We are proposing to make the following revisions to the 2006-based MEI:

(1) Reclassify and Revise Certain Cost Categories

- Reclassify expenses for non-physician clinical personnel that can bill independently from non-physician compensation to physician compensation.
- Revise the physician wage and benefit split so that the cost weights are more in line with the definitions of the price proxies used for each category.
- Add an additional subcategory under non-physician compensation for health-related workers.
- Create a new cost category called ''All Other Professional Services'' that includes expenses covered in the current MEI categories: ''All Other Services'' and ''Other Professional Expenses.'' The proposed ''All Other Professional Services'' category would be further disaggregated into appropriate occupational subcategories.
- Create an aggregate cost category called ''Miscellaneous Office Expenses'' that would include the expenses for ''Rubber and Plastics,'' ''Chemicals,'' ''All Other Products,'' and ''Paper.''

(2) Revise Price Proxies

- Revise the price proxy for physician wages and salaries from the Average Hourly Earnings (AHE) for the Total Private Nonfarm Economy for Production and Nonsupervisory Workers to the ECI for Wages and Salaries, Professional and Related Occupations, Private Industry.
- Revise the price proxy for physician benefits from the ECI for Benefits for the Total Private Industry to the ECI for Benefits, Professional and Related Occupations, Private Industry.
- Use the ECI for Wages and Salaries and the ECI for Benefits of Hospital, Civilian workers (private industry) as the price proxies for the new category of non-physician health-related workers.
- Use ECIs to proxy the Professional Services occupational subcategories that reflect the type of professional services purchased by physicians' offices.
- Revise the price proxy for the fixed capital category from the CPI for Owners' Equivalent Rent of Residences to the PPI for Lessors of Nonresidential Buildings (NAICS 53112).

d. Revising Expense Categories in the MEI

The MEI is used as part of the Sustainable Growth Rate (SGR) methodology to update the PFS and represents the price component of that update. The proposed expense categories in the MEI, along with their respective weights, are primarily derived from data collected in the 2006 AMA Physician Practice Information Survey (PPIS) for self-employed physicians representing 42 medical specialties and selected self-employed non-Medical Doctor (non-MD) specialties. Data for non-MD specialties were collected in a supplemental survey of the PPIS survey questionnaire. We included the data from the following non-medical specialties in the MEI cost weight calculations (optometrists, oral surgeons, podiatrists, and chiropractors) specialties in the MEI cost weight calculations consistent with the definition of the term ''physician'' in section 1861(r) of the Act. In summary, the term ''physician'' when used in connection with the performance of functions or actions an individual is legally authorized to perform means the following: (1) A doctor of medicine or osteopathy; (2) a doctor of dental surgery or of dental medicine; (3) a doctor of podiatric medicine; (4) a doctor of optometry; or (5) a chiropractor. For a complete definition, please see section 1861(r) of the Act. We are not proposing to change the data source we used to establish the major MEI cost weights, and therefore, we propose to continue to use of the 2006 AMA PPIS physician expense data at this time. Data for the dental medicine specialty are not included in the weights since the PPIS supplemental collection effort did not survey this specialty.

We are not proposing any changes in the methodology for estimating the cost shares as finalized in the CY 2011 PFS final rule with comment period (75 FR 73263–73267). For CY 2014, we are proposing to revise the classification of certain expenses within the 2006-based MEI. The following sections describe the details of the proposed revisions for each of the categories and the rationale for the proposed changes. We also provide the Panel recommendation that is the impetus for each of the proposed revisions.

(1) Overall MEI Cost Weights

Table 14 lists the set of mutually exclusive and exhaustive cost categories and weights that make up the proposed revised MEI as compared to the current MEI cost categories.

The physician compensation cost weight under the proposed revised MEI is 2.600 percentage points higher than the physician compensation weight in the current MEI. This occurs because of the proposed reclassification of expenses for non-physician clinical staff that can bill independently from non-physician compensation to physician compensation. This change lowers the PE cost weight by 2.600 percent as well, all of which comes from a lower weight for non-physician compensation. The remaining MEI cost weights are unchanged.

The proposed revised MEI includes four new detailed cost categories and two new sub-aggregate cost categories. The proposed new detailed cost categories are:

- Health-related, non-physician wages and salaries.
- Professional, scientific, and technical services.
- Administrative support and waste management services.
- All other services.

The proposed new sub-aggregate categories are:

- Non-health, non-physician wages.
- Miscellaneous office expenses.

The proposed revised MEI excludes two sub-aggregate categories that were included in the current 2006-based MEI. The sub-aggregate categories we propose to remove are:

- Office expenses.
- Drugs & supplies.

TABLE 14—PROPOSED REVISED 2006 MEI COST CATEGORIES AND, WEIGHTS COMPARED TO THE CURRENT 2006 MEI COST CATEGORIES AND WEIGHTS

Current MEI (2006 = 100), finalized in the CY2011 PFS final rule		Proposed revised MEI (2006 = 100), CY2014 PFS proposed rule	
Cost category	Current weights (percent)	Revised weights (percent)	Revised cost category
Physician Compensation	48.266	50.866	Physician Compensation.
Wages and Salaries	43.881	43.641	Wages and Salaries.

TABLE 14—PROPOSED REVISED 2006 MEI COST CATEGORIES AND, WEIGHTS COMPARED TO THE CURRENT 2006 MEI COST CATEGORIES AND WEIGHTS—Continued

Current MEI (2006 = 100), finalized in the CY2011 PFS final rule		Proposed revised MEI (2006 = 100), CY2014 PFS proposed rule	
Cost category	Current weights (percent)	Revised weights (percent)	Revised cost category
Benefits	4.386	7.225	Benefits.
Practice Expense	51.734	49.134	Practice Expense.
Non-physician compensation	19.153	16.553	Non-physician compensation.
Non-physician wages	13.752	11.885	Non-physician wages.
		7.249	Non-health, non-physician wages.
P&T	6.006	0.800	Professional and Related.
Management	1.446	1.529	Management.
Clerical	4.466	4.720	Clerical.
Services	1.834	0.200	Services.
		4.636	Health related, non-physician wages.
Non-physician benefits	5.401	4.668	Non-physician benefits.
Other Practice Expense	26.308	32.581	Other Practice Expense.
Office expenses	20.035		
Utilities	1.266	1.266	Utilities.
		2.478	Miscellaneous Office Expenses.
Chemicals	0.723	0.723	Chemicals.
Paper	0.656	0.656	Paper.
Rubber & Plastics	0.598	0.598	Rubber & Plastics.
		0.500	All other products.
Telephone	1.501	1.501	Telephone.
Postage	0.898	0.898	Postage.
All other services	3.581	8.095	All Other professional services.
		2.592	Professional, scientific, & technical services.
		3.052	Administrative support & waste management.
		2.451	All other services.
All other products	0.500		
Capital	10.310	10.310	Capital.
Fixed Capital	8.957	8.957	Fixed Capital.
Moveable Capital	1.353	1.353	Moveable Capital.
Professional Liability Insurance	4.295	4.295	Professional Liability Insurance.
Medical Equipment	1.978	1.978	Medical Equipment.
Drugs and Supplies	1.760		
Prescription Drugs	0.000		
Medical supplies	1.760	1.760	Medical supplies.
Other Professional Expenses	4.513		
All other	4.513		
Total MEI	100.000	100.000	Total MEI.

* The term (2006 = 100) refers to the base year of the MEI

(2) Physician Compensation (Own time).

The component of the MEI that reflects the physician's own time is represented by the net income portion of business receipts. The 2006 cost weight associated with the physician's own time (otherwise referred to as the Physician's Compensation cost weight) is based on 2006 AMA PPIS data for mean physician net income (physician compensation) for self-employed physicians and for the selected self-employed specialties referenced previously in this rule. Expenses for employed physician compensation are combined with expenses for self-employed physician compensation to obtain an aggregate Physician Compensation cost weight. Based on this methodology, the Physician Compensation cost weight in the current MEI is 48.266 percent.

As discussed in the CY 2011 PFS final rule with comment period (75 FR 73265), when determining this weight, we classified the expenses for non-physician clinical staff that can bill Medicare independently under non-physician compensation, which is where these expenses have historically been apportioned in the MEI. The AMA PPIS survey question that collected the data for the clinical personnel who can independently bill, such as nurse practitioners, physician assistants, and other clinical personnel, captured these expenses under non-physician compensation. Additionally, prior AMA surveys captured these expenses as non-physician compensation costs.

The Panel reviewed this methodology and Recommendation 3.2 was that:

''OACT evaluate the appropriate classification of the expenses associated with non-physician clinical staff who can bill Medicare independently. Among the factors OACT should consider are:

- Any definition of 'physicians' that exists under current law in relation to the Medicare PFS and whether these definitions might limit OACT's ability to make changes;
- Whether time for non-physician staff who can bill independently is included among the inputs to the PE RVU methodology under the Medicare PFS (that is, is the treatment of this input under the PE RVU methodology consistent with that under the MEI);
- Whether there is any evidence these staff do not spend the majority of their time providing 'physicians' services' as defined by Medicare; and
- The extent to which those who can bill independently actually do so.''

We are proposing to reclassify these expenses to physician compensation for several reasons:

- These types of practitioners furnish services that are similar to those furnished by physicians.
- If billing independently, these practitioners would be paid at a percentage of the physicians' services or in certain cases at the same rate as physicians.
- The expenses related to the work components for the RVUs would include work from clinical staff that can bill independently. Therefore, it would improve consistency with the RVU payments to include these expenses as physician compensation in the MEI.

The effect of moving the expenses related to clinical staff that can bill independently is to increase the physician compensation cost share by 2.600 percentage points and reduces non-physician compensation costs by the same amount. The physician compensation cost share for the proposed revised MEI is 50.866 percent compared to the physician compensation cost share of 48.266 percent in the current MEI.

Within the physician compensation cost weight, the MEI includes a separate weight for wages and salaries and a separate weight for benefits. Under the current 2006-based MEI, the ratio for wages and salaries, and benefits was calculated using data from the PPIS. Self-employed physician wages and salaries accounted for 92.3 percent of physician earnings while physician benefits accounted for the remaining 7.8 percent. For employed physician payroll, the distributions for wages and salaries, and benefits for 2006 were 85.8 percent and 14.2 percent, respectively. This ratio was determined by calculating a weighted average of available IRS Statistics of Income (SOI) data for partnerships, corporations, and S-corporations specific to physicians and outpatient care centers. Combining the information on self-employed and employed physicians produced a physician wages & salaries cost weight of 43.880 percent and a physician benefits cost weight of 4.386 percent, in the current MEI.

Recommendation 3.1 stated:

> The Panel recommends that OACT revise the Physician Wages and Salaries and Physician Benefit cost weights in the 2006-based MEI. OACT should determine the cost weights for wages and benefits to ensure they are consistent with the definitions in the Employment Cost Index. Specifically, OACT should consider estimating the proportion of the Physician Wages and Salaries cost weight associated with physicians' retirement benefits, and reclassifying that percentage into the Physician Benefits cost weight to be consistent with the costs included in the ECI for Wages and Salaries and the ECI for Benefits price proxies. Evaluation of the PPIS data determined that retirement benefits were included in the Physician Wages and Salaries cost weight while the associated price change is currently reflected in the ECI for Benefits.

We are proposing to revise the wage and benefit split used for physician compensation. Specifically, we are proposing to apply the distribution from the SOI data to both self-employed and employed physician compensation. In reviewing the detailed AMA PPIS survey questions, it was clear that self-employed physician benefits were mainly comprised of insurance costs while other benefits such as physician retirement, paid leave, and payroll taxes were likely included in physician wages and salaries.

By definition, the price proxy used for physician benefits, which is an Employment Cost Index (ECI) concept, includes retirement savings. Thus, using the AMA PPIS data produces a definitional inconsistency between the cost weight and the price proxy. Therefore, we propose to use the data on wages and salaries, and employee benefits from the SOI for Offices of Physicians and Dentists for partnerships and corporations for both self-employed and employed physicians. From the SOI data, benefit expenses were estimated by summing the partnership data for retirement plans and employee benefit programs with corporation data for pension, profit-sharing plans and employee benefit programs. For 2006, the split between wages and salaries, and benefits was 85.8 percent and 14.2 percent, respectively. Retirement/pension plans account for about 60 percent of total benefits. The SOI data do not classify paid leave and supplemental pay as a benefit.

Combining the impact of classifying compensation for non-physicians that can bill independently as physician compensation with the use of the SOI data, the physician wages and salary cost share in the proposed revised MEI is lower than the current MEI by 0.240 percentage points. These two methodological changes result in an increase in the physician benefit cost share in the proposed revised MEI of 2.839 percentage points. As a result, the physician wages and salary cost share for the proposed revised MEI is 43.641 percent and the physician benefit cost share for the proposed revised MEI is 7.225 percent.

(3) Physician's Practice Expenses

To determine the PE cost weights, we use mean expense data from the 2006 PPIS survey. The derivation of the weights and categories for practice expenses is the same as finalized in the CY 2011 PFS final rule with comment period (75 FR 73264–73267), except where noted below.

(a) Non-physician Employee Compensation

The cost weight for Non-physician Employee Compensation was developed using the 2006 AMA PPIS mean expenses for these costs. As discussed previously, for CY 2014 we are proposing to exclude the expenses related to non-physician clinical staff that can bill independently from this cost category. Moving the expenses related to the clinical staff that can bill independently out of non-physician compensation costs decreases the share by 2.600 percentage points. The non-physician compensation cost share for the proposed revised MEI is 16.553 percent compared to the current physician compensation cost share of 19.153 percent.

We are proposing to use the same method as finalized in the CY 2011 PFS final rule to split the non-physician compensation between wages and benefits. For reference, we use 2006 BLS Employer Costs for Employee Compensation (ECEC) data for the Health Care and Social Assistance (private industry). Data for 2006 in the ECEC for Health Care and Social Assistance indicate that wages and benefits are 71.8 percent and 28.2 percent of compensation, respectively. The non-physician wage and benefit cost shares for the proposed revised MEI are 11.885 percent and 4.668 percent, respectively; for the current MEI, the non-physician wage and benefit cost shares are 13.752 percent and 5.401 percent, respectively.

The current 2006-based MEI further disaggregated the non-physician wages into four occupational subcategories, the details of this method can be found in 75 FR 73264–73265. The MEI TAP Recommendation 4.4 stated:

> ''The Panel recommends the disaggregation of the Non-Physician Compensation costs to include an additional category for health-related workers. This disaggregation would allow for health-related workers to be separated from non-health-related workers. CMS should rely directly on PPIS data to estimate the health-related non-physician compensation cost weights. The non-health, non-physician wages should be further disaggregated based on the Current Population Survey and Occupational Employment Statistics data.''

We propose to implement this recommendation using expenses reported on the AMA PPIS for non-

physician, non-health-related workers. The survey question asks for the expenses for: ''Non-clinical personnel involved primarily in administrative, secretarial or clerical activities (Including transcriptionists, medical records personnel, receptionists, schedulers and billing staff, coding staff, information technology staff, and custodial personnel).'' The non-physician, non-health-related wage cost share for the proposed revised MEI is 7.249 percent.

For wage costs of non-physician, health-related workers, the survey question asks for the expenses for: ''Other clinical staff, including RNs, LPNs, physicists, lab technicians, x-ray technicians, medical assistants, and other clinical personnel who cannot independently bill.'' The non-physician, health-related wage cost share for the proposed revised MEI is 4.636 percent. Together the non-health and health-related, non-physician wage costs sum to be equal to the total non-physician wage share in the proposed revised MEI of 11.885 percent.

We are proposing to disaggregate the non-physician, non-health-related wage cost weight of 7.249 percent into four occupational subcategories. The methodology is similar to that finalized in the CY 2011 PFS final rule with comment period (75 FR 73264), in that we are proposing to use 2006 Current Population Survey (CPS) data and 2006 BLS Occupational Employment Statistics (OES) data to develop cost weights for wages for non-physician, non-health-related occupational groups. We determined total annual earnings for offices of physicians using employment data from the CPS and mean annual earnings from the OES. To arrive at a distribution for these separate occupational categories (Professional & Related (P&R) workers, Managers, Clerical workers, and Service workers), we determined annual earnings for each using the Standard Occupational Classification (SOC) system. We then determined the overall share of the total for each. The occupational distribution in the proposed revised MEI as well as the distribution for the 2006-based MEI is presented in Table 15.

TABLE 15—PERCENT DISTRIBUTION OF NONPHYSICIAN PAYROLL EXPENSE BY OCCUPATIONAL GROUP: PROPOSED REVISED 2006-BASED MEI AND CURRENT 2006-BASED MEI

Current MEI (2006 = 100), finalized in the CY11 PFS final rule		Proposed MEI (2006 = 100), CY14 PFS proposed rule	
Cost Category	Current MEI06 (percent)	Revised MEI06 (percent)	Revised cost category
Non-physician compensation	19.153	16.553	Non-physician compensation.
Non-physician wages	13.752	11.885	Non-physician wages.
	.....	7.249	Non-health, non-phys. wages.
P&T	6.006	0.800	Professional and Related.
Management	1.446	1.529	Management.
Clerical	4.466	4.720	Clerical.
Services	1.834	0.200	Services.
	.....	4.636	Health related, non-phys. Wages.
Non-physician benefits	5.401	4.668	Non-physician benefits.

The health-related workers were previously included mainly in the Professional and Technical and Service Categories. These proposed changes allow for health-related workers to be proxied by a health-specific ECI rather than an ECI for more general occupations.

(b) Other Practice Expense

The remaining expenses in the MEI are categorized as Other Practice Expenses. In the current 2006-based MEI we had classified other PEs in one of the following subcategories: Office Expenses; Drugs and Supplies; and All Other Professional Expenses. For CY 2014, we are proposing to disaggregate these expenses in a way consistent with the MEI TAP's recommendations, as detailed below.

We rely on the 2006 AMA PPIS data to determine the cost share for Other Practice Expenses. These expenses are the total of office expenses, medical supplies, medical equipment, Professional Liability Insurance (PLI), and all other professional expenses.

For the proposed revised 2006-based MEI, we propose to disaggregate Other Practice Expenses into 15 detailed subcategories as shown in Table 16.

TABLE 16—REVISED COST CATEGORIES FOR OTHER PRACTICE EXPENSE

Revised cost category	Revised MEI06 (percent)
Other Practice Expense	32.581
Utilities	1.266
Miscellaneous Office Expenses	2.478
Chemicals	0.723
Paper	0.656
Rubber & Plastics	0.598
All other products	0.500
Telephone	1.501
Postage	0.898
All Other professional services	8.095
Professional, Scientific, and Tech. Svcs.	2.592
Administrative and support & waste	3.052
All Other Services	2.451
Capital	10.310
Fixed	8.957
Moveable	1.353
Professional Liability Insurance	4.295
Medical Equipment	1.978
Medical supplies	1.760

For most of these categories, we use the same method as finalized in the CY 2011 PFS final rule with comment period to estimate the cost shares. In particular, the cost shares for the following categories are derived directly from expense data reported on the 2006 AMA PPIS: PLI; Medical Equipment; and Medical Supplies. In each case, the cost shares remain the same as in the current MEI. Additionally, we continue to use the Bureau of Economic Analysis (BEA) 2002—Benchmark I/O data aged to 2006 to determine the cost weights for other expenses not collected directly from the AMA PPIS. The BEA 2002-Benchmark I/O data can be accessed at the following link: *http://www.bea.gov/industry/io_benchmark.htm#2002data.*

The derivation of the cost weight for each of the detailed categories under Other Practice Expenses is provided below.

- *Utilities:* The Utilities cost weight includes expenses classified in the fuel, oil and gas, water and sewage, and electricity industries. The proposed cost weight for utilities is 1.266 percent, the same cost share as in the current MEI.

• *Miscellaneous Office Expenses:* We are proposing to include an aggregate category of detailed office expenses that were stand-alone categories in the current 2006-based MEI. During the CY 2011 PFS proposed rule comment period, several commenters expressed confusion as to the relevance of these categories to their practice costs. The MEI TAP discussed the degree of granularity needed in both the calculation and reporting of the MEI. The MEI TAP concluded that it might be prudent to collapse some of the non-labor PE categories with other categories for presentation purposes. In particular, Recommendation 3.4 was that:

''OACT report more aggregated costs under the Office Expenses cost category. In particular, reported costs associated with Rubber and Plastics, Chemicals, All Other Products, and Paper should be combined. However, the Panel believes that OACT should maintain separately the underlying details and calculations associated with these aggregated costs when applying price proxies and calculating the overall MEI and its subcomponents.'' Based on this recommendation, we are proposing to add an aggregate category to the MEI that includes the expenses for paper, chemicals, rubber and plastics, and all other products. The cost shares for paper, chemicals, rubber and plastics, and all other products remain the same for the proposed revised MEI as in the current MEI.''

• *Telephone:* The telephone cost weight includes expenses classified in the telecommunications (accounting for the majority of the telephone expenses) and cable industries. The cost weight for Telephone services is 1.501 percent in the proposed revised MEI, the same cost share as in the current MEI.

• *Postage:* The Postage cost weight includes postal service expenses. The cost weight for Postage is 0.898 percent in the proposed revised MEI, the same cost share as in the current MEI.

• *All Other Services:* We propose to combine the All Other Services cost weight and All Other Professional Expenses into a single cost category. The proposed weight for the All Other Professional Services category is 8.095 percent, which is the sum of the current MEI weight for All Other Services (3.581 percent) and All Other Professional Expenses (4.513 percent), is more in line with the GPCI Purchased Services index as finalized in the CY2012 PFS final rule with comment period (76 FR 73085). The TAP Recommendation 3.3 was that

''OACT create a new cost category entitled Professional Services that should consist of the All Other Services cost category (and its respective weight) and the Other Professional Expenses cost category (and its respective weight). The Panel further recommends that this category be disaggregated into appropriate occupational categories consistent with the relevant price proxies.''

We propose to combine the ''Other Professional Expenses'' and ''All Other Services'' cost weights of the 2006-based MEI and further disaggregate the 8.095 percent of expenses into more detail based on the BEA I–O data, allowing for specific cost weights for services such as contract billing services, accounting, and legal services. We considered various levels of aggregation; however, in considering the level of aggregation, the available corresponding price proxies must be considered. Given the price proxies that are available from the ECI, we propose to disaggregate these expenses into three categories:

• *NAICS 54 (Professional, Scientific, and Technical Services):* The Professional, Scientific, and Technical Services sector comprises establishments that specialize in performing professional, scientific, and technical activities for others. These activities require a high degree of expertise and training. The establishments in this sector specialize according to expertise and provide these services to clients in a variety of industries, including but not limited to: legal advice and representation; accounting, and payroll services; computer services; management consulting services; and advertising services and have a 2.592 percent weight.

• *NAICS 56 (Administrative and Support and Waste Management and Remediation Services):* The Administrative and Support and Waste Management and Remediation Services sector comprises establishments performing routine support activities for the day-to-day operations of other organizations. The establishments in this sector specialize in one or more of these support activities and provide these services to clients in a variety of industries including but not limited to: office administration; temporary help services; security services; cleaning and janitorial services; and trash collection services. These services have a 3.052 percent weight.

• *All Other Services, a residual category of these expenses:* The residual All Other Services cost category is mostly comprised of expenses associated with service occupations, including but not limited to: Lab and blood specimen transport; catering and food services; collection company services; and dry cleaning services and have a 2.451 percent weight.

++ *Fixed Capital:* The Fixed Capital cost weight includes expenses for building leases and depreciation. The cost weight for Fixed Capital is 8.957 percent in the proposed revised MEI, the same cost share as in the current MEI.

++ *Moveable Capital:* The Moveable Capital cost weight includes expenses for non-medical equipment including but not limited to, computer equipment and software, as well as the rental and leasing of automotive and industrial machinery equipment. The cost weight for Moveable Capital is 1.353 percent in the proposed revised MEI, the same cost share as in the current MEI.

++ *Professional Liability Insurance (PLI):* The weight for PLI expense was derived from the 2006 AMA survey and was calculated as the mean PLI expense expressed as a percentage of total expenses. The cost weight for PLI is 4.295 percent in the proposed revised MEI, the same cost share as in the current MEI.

++ *Medical Equipment Expenses:* The proposed weight for Medical Equipment was calculated using the 2006 AMA PPIS mean expense data. The cost weight for Medical Equipment Expenses is 1.978 percent in the proposed revised MEI, the same cost share as in the current MEI.

++ *Medical Supplies Expenses:* The proposed weight for Medical Supplies was calculated using the 2006 AMA PPIS mean expense data. The cost weight for Medical Supplies Expenses is 1.760 percent in the proposed revised MEI, the same cost share as in the current MEI.

2. Selection of Price Proxies for Use in the MEI

After developing the cost category weights for the proposed revised 2006-based MEI, we reviewed all the price proxies based on the recommendations from the MEI TAP. As was the case in the development of the current 2006-based MEI, most of the proxy measures we considered are based on BLS data and are grouped into one of the following four categories:

• *Producer Price Indices (PPIs):* PPIs measure price changes for goods sold in markets other than retail markets. These fixed-weight indexes are measures of price change at the intermediate or final stage of production. They are the preferred proxies for physician purchases as these prices appropriately reflect the product's first commercial transaction.

• *Consumer Price Indices (CPIs):* CPIs measure change in the prices of final

goods and services bought by consumers. Like the PPIs, they are fixed weight indexes. Since they may not represent the price changes faced by producers, CPIs are used if there are no appropriate PPIs or if the particular expenditure category is likely to contain purchases made at the final point of sale.

• *Employment Cost Indices (ECIs) for Wages & Salaries:* These ECIs measure the rate of change in employee wage rates per hour worked. These fixed-weight indexes are not affected by employment shifts among industries or occupations and thus, measure only the pure rate of change in wages.

• *Employment Cost Indices (ECIs) for Employee Benefits:* These ECIs measure the rate of change in employer costs of employee benefits, such as the employer's share of Social Security taxes, pension and other retirement plans, insurance benefits (life, health, disability, and accident), and paid leave. Like ECIs for wages & salaries, the ECIs for employee benefits are not affected by employment shifts among industries or occupations.

When choosing wage and price proxies for each expense category, we evaluate the strengths and weaknesses of each proxy variable using the following four criteria.

• *Relevance:* The price proxy should appropriately represent price changes for specific goods or services within the expense category. Relevance may encompass judgments about relative efficiency of the market generating the price and wage increases.

• *Reliability:* If the potential proxy demonstrates a high sampling variability, or inexplicable erratic patterns over time, its viability as an appropriate price proxy is greatly diminished. Notably, low sampling variability can conflict with relevance—since the more specifically a price variable is defined (in terms of service, commodity, or geographic area), the higher the possibility of high sampling variability. A well-established time series is also preferred.

• *Timeliness of actual published data:* For greater granularity and the need to be as timely as possible, we prefer monthly and quarterly data to annual data.

• *Public availability:* For transparency, we prefer to use data sources that are publicly available.

Below we discuss the price and wage proxies for each cost category of the proposed revised 2006-based MEI (as shown in Table 17). We will continue to use the same price proxies as those used in the 2006-based MEI except as noted below.

a. Physician Compensation (Physician's Own Time)

(1) Physician Wages and Salaries

Based on recommendations from the MEI TAP, we are proposing to use the ECI for Wages and Salaries for Professional and Related Occupations (Private Industry) (BLS series code CIU2020000120000I) to measure price growth of this category in the proposed revised 2006-based MEI. The current 2006-based MEI used Average Hourly Earnings (AHE) for Production and Non-Supervisory Employees for the Private Nonfarm Economy.

The MEI TAP had two recommendations concerning the price proxy for physician Wages and Salaries. The first recommendation from the MEI TAP was Recommendation 4.1, which was that: ''. . . OACT revise the price proxy associated with Physician Wages and Salaries from an Average Hourly Earnings concept to an Employment Cost Index concept.'' AHEs are calculated by dividing gross payrolls for wages and salaries by total hours. The AHE proxy was representative of actual changes in hourly earnings for the nonfarm business economy, including shifts in employment mix. The recommended alternative, the ECI concept, measures the rate of change in employee wage rates per hour worked. ECIs measure the pure rate of change in wages by industry and/or occupation and are not affected by shifts in employment mix across industries and occupations. The MEI TAP thought that the ECI concept better reflected physician wage trends compared to the AHE concept.

The second recommendation related to the price proxy for physician wages and salaries was Recommendation 4.2, which was that:

> CMS revise the price proxy associated with changes in Physician Wages and Salaries to use the Employment Cost Index for Wages and Salaries, Professional and Related, Private Industry. The Panel believes this change would maintain consistency with the guidance provided in the 1972 Senate Finance Committee report titled 'Social Security Amendments of 1972,' which stated that the index should reflect changes in practice expenses and 'general earnings.' In the event this change would be determined not to meet the legal requirement that the index reflect ''general earnings,'' the Panel recommends replacing the current proxy with the Employment Cost Index for Wages and Salaries, All Workers, Private Industry. The Panel believed this change would maintain consistency with the guidance provided in the 1972 Senate Finance Committee report titled ''Social Security Amendments of 1972,'' which stated that the index should reflect changes in practice expenses and ''general earnings.'' [1]

We agree that switching the proxy to the ECI for Wages and Salaries for Professional and Related Occupations would be consistent with the authority provided in the statute and reflect a wage trend more consistent with other professionals that receive advanced training. Additionally, we believe the ECI is a more appropriate concept than the AHE because it can isolate wage trends without being impacted by the change in the mix of employment.

(2) Physician Benefits

The MEI TAP states in Recommendation 4.3 that, ''. . . any change in the price proxy for Physician Wages and Salaries be accompanied by the selection and incorporation of a Physician Benefits price proxy that is consistent with the Physician Wages and Salaries price proxy.'' We are proposing to use the ECI for Benefits for Professional and Related Occupations (Private Industry) to measure price growth of this category in the proposed revised 2006-based MEI. The ECI for Benefits for Professional and Related Occupations is derived using BLS's Total Compensation for Professional and Related Occupations (BLS series ID CIU2010000120000I) and the relative importance of wages and salaries within total compensation. We believe this series is technically appropriate because it better reflects the benefit trends for professionals requiring advanced training. The current 2006-based MEI market basket used the ECI for Total Benefits for the Total Private Industry.

b. Practice Expense

(1) Non-Physician Employee Compensation

(a) Non-Physician Wages and Salaries

(i) Non-Physician, Non-Health-Related Wages and Salaries

• *Professional and Related:* We will continue using the ECI for Wages and Salaries for Professional and Related Occupation (Private Industry) (BLS series code CIU2020000120000I) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Management:* We will continue using the ECI for Wages and Salaries for Management, Business, and Financial (Private Industry) (BLS series code CIU2020000110000I) to measure the price growth of this cost category. This

[1] U.S. Senate, Committee on Finance, *Social Security Amendments of 1972.* ''Report of the Committee on Finance United States Senate to Accompany H.R. 1,'' September 26, 1972, p. 191.

is the same proxy used in the current 2006-based MEI.

• *Clerical:* We will continue using the ECI for Wages and Salaries for Office and Administrative Support (Private Industry) (BLS series code CIU20200002200001) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Services:* We will continue using the ECI for Wages and Salaries for Service Occupations (Private Industry) (BLS series code CIU20200003000001) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

(ii) Non-Physician, Health-Related Wages and Salaries

In Recommendation 4.4, the MEI TAP ''. . . recommend[ed] the disaggregation of the Non-Physician Compensation costs to include an additional category for health-related workers. This disaggregation would allow for health-related workers to be separated from non-health-related workers. CMS should rely directly on PPIS data to estimate the health-related non-physician compensation cost weights. The non-health, non-physician wages should be further disaggregated based on the Current Population Survey and Occupational Employment Statistics data. The new health-related cost category should be proxied by the ECI, Wages and Salaries, Hospital (NAICS 622), which has an occupational mix that is reasonably close to that in physicians' offices. The Non-Physician Benefit category should be proxied by a composite benefit index reflecting the same relative occupation weights as the non-physician wages.'' We are proposing to use the ECI for Wages and Salaries for Hospital Workers (Private Industry) (BLS series code CIU20262200000001) to measure the price growth of this cost category in the proposed revised 2006-based MEI. The ECI for Hospital workers has an occupational mix that approximates that in physicians' offices. This cost category was not broken out separately in the current 2006-based MEI.

(b) Non-Physician Benefits

We will continue using a composite ECI for non-physician employee benefits in the proposed revised 2006-based MEI. However, we are proposing to expand the number of occupations from four to five by adding detail on Non-Physician Health-Related Benefits. The weights and price proxies for the composite benefits index will be revised to reflect the addition of the new category. Table 17 lists the five ECI series and corresponding weights used to construct the proposed revised composite benefit index for non-physician employees in the proposed revised 2006-based MEI.

TABLE 17—CMS COMPOSITE PRICE INDEX FOR NON-PHYSICIAN EMPLOYEE BENEFITS IN THE PROPOSED REVISED 2006-BASED MEI

ECI Series	2006 Weight (%)
Benefits for Professional and Related Occupation (Private Industry)	7
Benefits for Management, Business, and Financial (Private Industry)	12
Benefits for Office and Administrative Support (Private Industry)	40
Benefits for Service Occupations (Private Industry)	2
Benefits for Hospital Workers (Private Industry)	39

(3) Other Practice Expense

(a) All Other Professional Services

As discussed previously, MEI TAP Recommendation 3.3 was that:

''. . . OACT create a new cost category entitled Professional Services that should consist of the All Other Services cost category (and its respective weight) and the Other Professional Expenses cost category (and its respective weight). The Panel further recommends that this category be disaggregated into appropriate occupational categories consistent with the relevant price proxies.'' We are proposing to implement this recommendation in the proposed revised 2006-based MEI using a cost category titled ''All Other Professional Services.'' Likewise, the MEI TAP stated in Recommendation 4.7 that ''. . . price changes associated with the Professional Services category be proxied by an appropriate blend of Employment Cost Indexes that reflect the types of professional services purchased by physician offices.'' We agree with this recommendation and are proposing to the use the following price proxies for each of the new occupational categories:

• *Professional, Scientific, and Technical Services:* We are proposing to use the ECI for Total Compensation for Professional, Scientific, and Technical Services (Private Industry) (BLS series code CIU20154000000001) to measure the price growth of this cost category. This cost category was not broken out separately in the current 2006-based MEI.

• *Administrative and Support Services:* We are proposing to use the ECI for Total Compensation for Administrative, Support, Waste Management, and Remediation Services (Private Industry) (BLS series code CIU20156000000001) to measure the price growth of this cost category. This cost category was not broken out separately in the current 2006-based MEI.

• *All Other Services:* We are proposing to use the ECI for Compensation for Service Occupations (Private Industry) (BLS series code CIU20100003000001) to measure the price growth of this cost category.

(b) Miscellaneous Office Expenses

• *Chemicals:* We will continue using the PPI for Other Basic Organic Chemical Manufacturing (BLS series code #PCU32519–32519) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Paper:* We will continue using the PPI for Converted Paper and Paperboard (BLS series code #WPU0915) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Rubber & Plastics:* We will continue using the PPI for Rubber and Plastic Products (BLS series code #WPU07) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *All Other Products:* We will continue using the CPI–U for All Products less Food and Energy (BLS series code CUUR0000SA0L1E) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Utilities:* We will continue using the CPI for Fuel and Utilities (BLS series code CUUR0000SAH2) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Telephone:* We will continue using the CPI for Telephone Services (BLS series code CUUR0000SEED) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Postage:* We will continue using the CPI for Postage (BLS series code CUUR0000SEEC01) to measure the price growth of this cost category. This is the same proxy used in the current 2006-based MEI.

• *Fixed Capital:* In Recommendation 4.5, ''The Panel recommends using the Producer Price Index for Lessors of Nonresidential Buildings (NAICS 53112) for the MEI Fixed Capital cost category as it represents the types of

fixed capital expenses most likely faced by physicians. The Panel noted the volatility in the index, which is greater than the Consumer Price Index for Owners' Equivalent Rent of Residences. This relative volatility merits ongoing monitoring and evaluation of alternatives.'' We are proposing to use the PPI for Lessors of Nonresidential Buildings (BLS series code PCU531120531120) to measure the price growth of this cost category in the proposed revised 2006-based MEI. The current 2006-based MEI used the CPI for Owner's Equivalent Rent. We believe the PPI for Lessors of Nonresidential Buildings is more appropriate as fixed capital expenses in physician offices should be more congruent with trends in business office space costs than residential costs.

• *Moveable Capital:* In Recommendation 4.6, the MEI TAP states that ''. . . CMS conduct research into and identify a more appropriate price proxy for Moveable Capital expenses. In particular, the Panel believes it is important that a proxy reflect price changes in the types of non-medical equipment purchased in the production of physicians' services, as well as the price changes associated with Information and Communication Technology expenses (including both hardware and software).'' We intend to continue to investigate possible data sources that could be used to proxy the physician expenses related to moveable capital in more detail. However, we will continue to use the PPI for Machinery and Equipment (series code WPU11) to measure the price growth of this cost category in the proposed revised 2006-based MEI. This is the same proxy used in the current 2006-based MEI.

• *Professional Liability Insurance:* Unlike the other price proxies based on data from BLS and other public sources, the proxy for PLI is based on data collected directly by CMS from a sample of commercial insurance carriers. The MEI TAP discussed the methodology of the CMS PLI index, as well as considered alternative data sources for the PLI price proxy, including information available from BLS and through state insurance commissioners. MEI TAP Finding 4.3 states:

''The Panel finds the CMS-constructed professional liability insurance price index used to proxy changes in professional liability insurance premiums in the MEI represents the best currently available method for its intended purpose. The Panel also believes the pricing patterns of commercial carriers, as measured by the CMS PLI index, are influenced by the same driving forces as those observable in policies underwritten by physician-owned insurance entities; thus, the Panel believes the current index appropriately reflects the price changes in premiums throughout the industry.'' Given this finding, we will continue using the CMS Physician PLI index to measure the price growth of this cost category in the proposed revised 2006-based MEI. This is the same proxy used in the current 2006-based MEI.

• *Medical Equipment:* We will continue using the PPI for Medical Instruments and Equipment (BLS series code WPU1562) as the price proxy for this category. This is the same proxy used in the current 2006-based MEI.

• *Medical Materials and Supplies:* We will continue using a blended index comprised of 50/50 blend of the PPI for Surgical Appliances (BLS series code WPU156301) and the CPI–U for Medical Equipment and Supplies (BLS series code CUUR0000SEMG). This is the same proxy used in the current 2006-based MEI.

TABLE 18—PROPOSED REVISED 2006-BASED MEI COST CATEGORIES, WEIGHTS, AND PRICE PROXIES

Cost category	2006 Weight (percent)	Price proxy
Total MEI	100.000	
Physician Compensation	50.866	
Wages and Salaries	43.641	ECI—Wages and salaries—Professional and Related (Private).
Benefits	7.225	ECI—Benefits—Professional and Related (Private).

Medical Equipment	1.978	PPI—Medical Instruments and Equipment.
Medical Supplies	1.760	Composite—PPI Surgical Appliances & CPI–U Medical Supplies.

3. Productivity Adjustment to the MEI

The MEI has been adjusted for changes in productivity since its inception. In the CY 2003 PFS final rule with comment period (67 FR 80019), we implemented a change in the way the MEI was adjusted to account for changes in productivity. The MEI used for the 2003 physician payment update incorporated changes in the 10-year moving average of private nonfarm business (economy-wide) multifactor productivity that were applied to the entire index. Previously, the index incorporated changes in productivity by adjusting the labor portions of the index by the 10-year moving average of economy-wide private nonfarm business labor productivity.

The MEI TAP was asked to review this approach. In Finding 5.1, ''[t]he Panel reviewed the basis for the current economy-wide multifactor productivity adjustment (Private Nonfarm Business Multifactor Productivity) in the MEI and finds such an adjustment continues to be appropriate. This adjustment prevents 'double counting' of the effects of productivity improvements, which would otherwise be reflected in both (i) the increase in compensation and other input price proxies underlying the MEI, and (ii) the growth in the number of physician services performed per unit of input resources, which results from advances in productivity by individual physician practices.''

Based on the MEI TAP's finding, we will continue to use the current method for adjusting the full MEI for multifactor productivity in the proposed revised 2006-based MEI. As described in the CY 2003 PFS final rule with comment period, we believe this adjustment is appropriate because it explicitly reflects the productivity gains associated with all inputs (both labor and non-labor). We believe that using the 10-year moving average percent change in economy-wide multifactor productivity is appropriate for deriving a stable measure that helps alleviate the influence that the peak (or a trough) of a business cycle may have on the measure. The adjustment will be based on the latest available historical economy-wide nonfarm business multifactor productivity data as measured and published by BLS.

4. Results of Proposed Revisions on the MEI Update

Table 19 shows the average calendar year percent change from CY 2005 to CY 2014 for both the proposed revised 2006-based MEI and the current 2006-based MEI. The average annual percent change in the proposed revised 2006-based MEI is 0.1 percent lower than the current 2006-based MEI over the 2005–2013 period. On an annual basis over this period, the differences vary by up to plus or minus 0.7 percentage points. In the two most recent years (CY 2012 and CY 2013), the annual percent change in the proposed revised 2006-based MEI was within 0.1 percentage point of the percent change in the current 2006-based MEI. The majority of these differences over the historical period can be attributed to the revised price proxy for physician wages and salaries and benefits and the revised price proxy for fixed capital.

TABLE 19—ANNUAL PERCENT CHANGE IN THE PROPOSED REVISED 2006-BASED MEI, NOT INCLUDING PRODUCTIVITY ADJUSTMENT AND THE CURRENT 2006-BASED MEI, NOT INCLUDING PRODUCTIVITY ADJUSTMENT *

Update year	Proposed revised 2006-based MEI excl. MFP	Current 2006-based MEI, excl. MFP
CY 2005	3.8	3.1
CY 2006	4.0	3.3
CY 2007	3.2	3.2
CY 2008	3.2	3.4
CY 2009	2.9	3.1
CY 2010	2.4	2.8
CY 2011	0.9	1.6
CY 2012	1.7	1.8
CY 2013	1.7	1.8
Avg. Change for CYs 2005–2013	2.6	2.7

* Update year based on historical data through the second quarter of the prior calendar year. For example, the 2013 update is based on historical data through the second quarter 2012, prior to MFP adjustment.

As shown in Table 20, the projection of the proposed revised 2006-based MEI for the CY 2014 PFS proposed rule is an increase of 0.7 percent, 0.1 percentage point lower than the projected increase using the current 2006-based MEI. In the CY 2014 PFS final rule with comment period, we will incorporate historical data through the second quarter of 2013, and therefore, the current estimated increase of 0.7 percent for 2014 may differ in the final rule.

TABLE 20—PROJECTED ANNUAL PERCENT CHANGE IN THE CY 2014 PROPOSED REVISED 2006-BASED MEI AND THE CURRENT 2006-BASED MEI *

Update year	Proposed revised 2006-based MEI	Current 2006-based MEI
CY 2014	0.7	0.8

* Based on the 2nd quarter 2013 forecast from IHS Global Insight, with historical data through the 1st quarter 2013.

For the productivity adjustment, the 10-year moving average percent change adjustment for CY 2014 is 0.9 percent, which is based on the most historical data available from BLS at the time of the proposed rule. If more recent historical data of MFP is available at the time of the final rule, we will incorporate it into the final MEI update.

E. Geographic Practice Cost Indices (GPCIs)

1. Background

Section 1848(e)(1)(A) of the Act requires us to develop separate Geographic Practice Cost Indices (GPCIs) to measure resource cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, PE, and malpractice (MP)). The 89 total PFS localities are discussed in section II.E.3. of this proposed rule. While requiring that the PE and MP GPCIs reflect the full relative cost differences, section 1848(e)(1)(A)(iii) of the Act requires that the work GPCIs reflect only one-quarter of the relative cost differences compared to the national average. In addition, section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for services furnished in Alaska beginning January 1, 2009, and section 1848(e)(1)(I) of the Act sets a permanent 1.0 PE GPCI floor for services furnished in frontier states (as defined in section 1848(e)(1)(I) of the Act) beginning January 1, 2011. Additionally, section 1848(e)(1)(E) of the Act provided for a 1.0 floor for the work GPCIs, which was set to expire at the end of 2012. Section 602 of the ATRA amended the statute to extend the 1.0 floor for the work GPCIs through CY 2013 (that is, for services furnished no later than December 31, 2013).

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(C) of the Act requires that ''if more than 1 year has elapsed since the date of the last previous GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be ½ of the adjustment that otherwise would be made.'' Therefore, since the previous GPCI update was implemented in CY 2011 and CY 2012, we are proposing to phase in ½ of the latest GPCI adjustment in CY 2014.

We have completed a review of the GPCIs and are proposing new GPCIs, as well as a revision to the cost share weights that correspond to all three GPCIs in this proposed rule. We also calculate a geographic adjustment factor (GAF) for each PFS locality. The GAFs are a weighted composite of each area's work, PE and malpractice expense GPCIs using the national GPCI cost share weights. While we do not actually use GAFs in computing the fee schedule payment for a specific service, they are useful in comparing overall areas costs and payments. The actual effect on payment for any actual service will

deviate from the GAF to the extent that the proportions of work, PE and MP RVUs for the service differ from those of the GAF.

As noted above, section 602 of the ATRA extended the 1.0 work GPCI floor only through December 31, 2013. Therefore, the proposed CY 2014 work GPCIs and summarized GAFs do not reflect the 1.0 work floor. However, as required by sections 1848(e)(1)(G) and 1848(e)(1)(I) of the Act, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI floor for frontier states are permanent, and therefore, applicable in CY 2014. See Addenda D and E to this proposed rule for the proposed CY 2014 GPCIs and summarized GAFs available on the CMS Web site under the supporting documents section of the CY 2014 PFS proposed rule located at *http://www.cms.gov/PhysicianFeeSched/*.

2. GPCI Update

The proposed updated GPCI values were calculated by a contractor to CMS. There are three GPCIs (work, PE, and MP), and all GPCIs are calculated through comparison to a national average for each type. Additionally, each of the three GPCIs relies on its own data source(s) and methodology for calculating its value as described below. Additional information on the CY 2014 GPCI update may be found in our contractor's draft report, ''*Draft Report on the CY 2014 Update of the Geographic Practice Cost Index for the Medicare Physician Fee Schedule,*'' which is available on the CMS Web site. It is located under the supporting documents section of the CY 2014 PFS proposed rule located at *http://www.cms.gov/PhysicianFeeSched/*.

a. Work GPCIs

The physician work GPCIs are designed to reflect the relative costs of physician labor by Medicare PFS locality. As required by statute, the physician work GPCI reflects one quarter of the relative wage differences for each locality compared to the national average.

To calculate the physician work GPCIs, we use wage data for seven professional specialty occupation categories, adjusted to reflect one-quarter of the relative cost differences for each locality compared to the national average, as a proxy for physicians' wages. Physicians' wages are not included in the occupation categories used in calculating the work GPCI because Medicare payments are a key determinant of physicians' earnings. Including physician wage data in calculating the work GPCIs would potentially introduce some circularity to the adjustment since Medicare payments typically contribute to or influence physician wages. That is, including physicians' wages in the physician work GPCIs would, in effect, make the indices, to some extent, dependent upon Medicare payments.

The physician work GPCI updates in CYs 2001, 2003, 2005, and 2008 were based on professional earnings data from the 2000 Census. However, for the CY 2011 GPCI update (75 FR 73252), the 2000 data were outdated and wage and earnings data were not available from the more recent Census because the ''long form'' was discontinued. Therefore, we used the median hourly earnings from the 2006 through 2008 Bureau of Labor Statistics (BLS) Occupational Employment Statistics (OES) wage data as a replacement for the 2000 Census data. The BLS OES data meet several criteria that we consider to be important for selecting a data source for purposes of calculating the GPCIs. For example, the BLS OES wage and employment data are derived from a large sample size of approximately 200,000 establishments of varying sizes nationwide from every metropolitan area and can be easily accessible to the public at no cost. Additionally, the BLS OES is updated regularly, and includes a comprehensive set of occupations and industries (for example, 800 occupations in 450 industries).

Because of its reliability, public availability, level of detail, and national scope, we believe the BLS OES continues to be the most appropriate source of wage and employment data for use in calculating the work GPCIs (and as discussed in section II.E.2.b the employee wage component and purchased services component of the PE GPCI). Therefore, for the proposed CY 2014 GPCI update, we used updated BLS OES data (2009 through 2011) as a replacement for the 2006 through 2008 data to compute the work GPCIs.

We note that the Medicare Payment Advisory Commission (MedPAC) was required by section 3004 of the MCTRJCA to submit a report to the Congress by June 15, 2013 that assesses whether any adjustment under section 1848 of the Act to distinguish the difference in work effort by geographic area is appropriate and, if so, what that level should be and where it should be applied. In the report, MedPAC was required to also assess the impact of the work geographic adjustment under the Act, including the extent to which the floor on such adjustment impacts access to care. We did not have sufficient time to review this report, which was issued on June 14, 2013 for this proposed rule. We look forward to reviewing the MedPAC report and its recommendations with respect to the work GPCI.

b. Practice Expense GPCIs

The PE GPCIs are designed to measure the relative cost difference in the mix of goods and services comprising practice expenses (not including malpractice expenses) among the PFS localities as compared to the national average of these costs. Whereas the physician work GPCIs (and as discussed later in this section, the MP GPCIs) are comprised of a single index, the PE GPCIs are comprised of four component indices (employee wages; purchased services; office rent; and equipment, supplies and other miscellaneous expenses). The employee wage index component measures geographic variation in the cost of the kinds of skilled and unskilled labor that would be directly employed by a physician practice. Although the employee wage index adjusts for geographic variation in the cost of labor employed directly by physician practices, it does not account for geographic variation in the cost of services that typically would be purchased from other entities, such as law firms, accounting firms, information technology consultants, building service managers, or any other third-party vendor. The purchased services index component of the PE GPCI (which is a separate index from employee wages) measures geographic variation in the cost of contracted services that physician practices would typically buy. (For more information on the development of the purchased service index, we refer readers to the CY 2012 PFS final rule with comment period (76 FR 73084 through 73085).) The office rent index component of the PE GPCI measures relative geographic variation in the cost of typical physician office rents. For the medical equipment, supplies, and miscellaneous expenses component, we believe there is a national market for these items such that there is not significant geographic variation in costs. Therefore, the ''equipment, supplies and other miscellaneous expense'' cost index component of the PE GPCI is given a value of 1.000 for each PFS locality.

For the previous update to the GPCIs (implemented in CY 2011 and CY 2012) we used 2006 through 2008 BLS OES data to calculate the employee wage and purchased services indices for the PE GPCI. As discussed in section II.E.2.a., because of its reliability, public availability, level of detail, and national scope, we continue to believe the BLS

OES is the most appropriate data source for collecting wage and employment data. Therefore, in calculating the proposed CY 2014 GPCI update, we used updated BLS OES data (2009 through 2011) as a replacement for the 2006 through 2008 data for purposes of calculating the employee wage component and purchased service index of the PE GPCI.

Office Rent Index Discussion

Since the inception of the PFS, we have used residential rent data (primarily the two-bedroom residential apartment rent data produced by the Department of Housing and Urban Development (HUD) at the 50th percentile) as the proxy to measure the relative cost difference in physician office rents. As discussed in the CY 2012 PFS final rule with comment period (76 FR 73084), we had concerns with the continued use of the HUD rental data because the data were not updated frequently and the Census ''long form,'' which was used to collect the necessary base year rents for the HUD Fair Market Rent (FMR) data, was discontinued in CY 2010 and would no longer be available for future updates. Therefore, we examined the suitability of using 3-year (2006–2008) American Community Survey (ACS) rental data as a proxy for physician office rents to replace the HUD data. We determined that the ACS is one of the largest nationally representative surveys of household rents in the United States conducted annually by the U.S. Census Bureau, sampling approximately 3 million addresses with a recent response rate above 97 percent, and that it reports rental information for residences at the county level. Given that the ACS rental data provided a sufficient degree of reliability, is updated annually, and was expected to be available for future updates, we used the 2006 through 2008 ACS 3-year residential rent data as a replacement for the HUD data to create the office rent index for the CY 2012 PFS final rule with comment (76 FR 73084). For all the same reasons that we used the ACS data for the last GPCI update, we propose to use the most recent 3-year ACS residential rent data (2008 through 2010) to calculate the office rent component of the PE GPCI. We note that when responding to the ACS survey, individuals also report whether utilities are included in their rent. Thus, the cost of utilities cannot be separated from ''gross rents'' since some individuals monthly rent also covers the cost of utilities. As discussed in section II.E.2.d. we combined the cost weights for fixed capital and utilities when assigning a proposed weight to the office rent component of the PE GPCI.

For many years, we have received requests from physicians and their representatives to use commercial rent data instead of residential rent data as a proxy to measure the relative cost differences in physician office rent. Additionally, in a report entitled ''*Geographic Adjustment in Medicare Payment, Phase I: Improving Accuracy,*'' prepared for CMS under contract and released on September 28, 2011, the Institute of Medicine recommended that ''a new source of data should be developed to determine the variation in the price of commercial office rent per square foot.'' The Institute of Medicine report did not identify any new data source and did not suggest how a new source of data might be developed. Because we could not identify a reliable commercial rental data source that is available on a national basis and includes data for non-metropolitan areas, we continued to use residential rent data for the CY 2012 GPCI update.

For the CY 2014 GPCI update, we continued our efforts to identify a reliable source of commercial rent data that could be used in calculating the rent index. We could not identify a nationally representative commercial rent data source that is available in the public sector. However, we identified a proprietary commercial rent data source that has potential for use in calculating the office rent indices in future years. To that end, we are attempting to negotiate an agreement with the proprietor to use the data for purposes of calculating the office rent component of the PE GPCI.

One of the challenges of using a proprietary data source is our ability to make information available to the public. When using government data, we are able to release all data for public consideration. However, when using a proprietary data source, it is likely that restrictions will be imposed on its use and our ability to disclose data. In such a situation, those wishing to replicate our calculations based on detailed data would also need to purchase the underlying proprietary data. We also believe that, generally speaking, a proprietary ''for profit'' data source is more susceptible to periodic changes in the criteria used for data collection, including possible changes in the data collected, the frequency at which the data is updated, changes in ownership, and the potential for termination of the survey vehicle entirely as changes are made to address economic pressures or opportunities. As such, we cannot predict that a given proprietary data source will be available in the format needed to develop office rent indices in the future. Since we have not identified a nationally representative commercial rent data source that is available in the public sector, we believe it would be necessary to use a proprietary data source for commercial office rent data. That is, in the absence of using a proprietary data source, it is unlikely that we would be able to use commercial rent data to calculate the office rent index component of the PE GPCI. Therefore, we request comments on the potential future use of a proprietary commercial rent data source as well as whether there is a source for these data that is not proprietary.

c. Malpractice Expense (MP) GPCIs

The MP GPCIs measure the relative cost differences among PFS localities for the purchase of professional liability insurance (PLI). The MP GPCIs are calculated based on insurer rate filings of premium data for $1 million to $3 million mature claims-made policies (policies for claims made rather than services furnished during the policy term). For the CY 2011 GPCI update (sixth update) we used 2006 and 2007 malpractice premium data (75 FR 73256). The proposed CY 2014 MP GPCI update reflects 2011 and 2012 premium data.

Additionally, for the past several GPCI updates, we were not able to collect MP premium data from insurer rate filings for the Puerto Rico payment locality. For the CY 2014 (seventh) GPCI update, we worked directly with the Puerto Rico Insurance Commissioner and Institute of Statistics to obtain data on MP insurance premiums that were used to calculate an updated MP GPCI for Puerto Rico. Using updated MP premium data would result in a 17 percent increase in MP GPCI for the Puerto Rico payment locality under the proposed fully phased-in seventh GPCI update, which would be effective CY 2015.

d. GPCI Cost Share Weights

To determine the cost share weights for the proposed CY 2014 GPCIs, we used the weights we propose to use for the CY 2014 value for the revised 2006-based Medicare Economic Index (MEI) as discussed in section II.D. of this proposed rule. As discussed in detail in that section, the MEI was rebased and revised in the CY 2011 PFS final rule with comment period (75 FR 73262 through 73277) to reflect the weighted-average annual price change for various inputs needed to provide physicians' services. We have historically updated the GPCI cost share weights to make them consistent with the most recent

update to the MEI, and propose to do so again for CY 2014. We would note that consistent with this approach in the CY 2011 proposed rule, the last time the MEI was revised, we proposed to update the GPCI cost share weights to reflect these revisions to the MEI. However, in response to public comments we did not finalize the proposal in the CY 2011 PFS final rule with comment period (75 FR 73258 and 73260), so that we could explore public comments received suggesting the reallocation of labor related costs from the medical equipment, supplies and miscellaneous component to the employee compensation component and comments received on the cost share weight for the rent index of the PE GPCI as well as to continue our analysis of the cost share weights attributed to the PE GPCIs as required by section 1848(e)(1)(H)(iv) of the Act.

In the CY 2012 PFS final rule (76 FR 73085 through 73086) we addressed commenter concerns regarding the inclusion of the cost share weight assigned to utilities within the office rent component of the PE GPCI and to geographically adjust wage related industries contained within the medical equipment, supplies and miscellaneous component of the PE GPCI. As a result, to accurately capture the utility measurement present in the ACS two bedroom gross rent data, the cost share weight for utilities was combined with the fixed capital portion to form the office rent index. Additionally, we developed a purchased service index to geographically adjust the labor-related components of the ''All Other Services'' and ''Other Professional Expenses'' categories of the 2006-based MEI market basket. Upon completing our analysis of the GPCI cost share weights (as required by the Act) and addressing commenters' concerns regarding the office rent and labor related industries previously contained in the medical equipment, supplies and other miscellaneous components of the PE GCPI, we updated the GPCI cost share weights consistent with the weights established in the 2006-based MEI in the CY 2012 PFS final rule (76 FR 73086).

The proposed revised 2006-based MEI cost share weights reflect our actuaries' best estimate of the weights associated with each of the various inputs needed to provide physicians' services. Use of the current MEI cost share weights also provides consistency across the PFS in the use of this data. Given that we have addressed previous commenters concerns about the allocation of labor related costs (as discussed earlier in this section) and that we have completed our analysis of the GPCI cost share weights (as required by the Act) we believe it is appropriate to propose to adopt the weights we are proposing to use for the revised 2006-based MEI as the GPCI cost share weights for CY 2014.

As a result, the cost share weight for the work GPCI (as a percentage of the total) in this proposal is changed from 48.266 percent to 50.866 percent, and the cost share weight for the PE GPCI is revised from 47.439 percent to 44.839 percent with a change in the employee compensation component from 19.153 to 16.553 percentage points. The cost share weights for the office rent component (10.223 percent), purchased services component (8.095 percent), and the medical equipment, supplies, and other miscellaneous expenses component (9.968 percent) of the PE GPCI and the cost share weight for the MP GPCI (4.295 percent) remains unchanged. A discussion of the specific MEI cost centers and the respective weights used to calculate each GPCI component (and subcomponent) is provided below.

(1) Work GPCIs

We propose to adopt the proposed revised weight of 50.866 for the physician compensation cost category as the proposed work GPCI cost share weight.

(2) Practice Expense GPCIs

For the cost share weight for the PE GPCIs, we used the revised 2006-based MEI proposed weight for the PE category of 49.134 percent minus the PLI category weight of 4.295 percent (because the relative costs differences in malpractice expenses are measured by its own GPCI). Therefore, the proposed cost share weight for the PE GPCIs is 44.839 percent.

(a) Employee Compensation

For the employee compensation portion of the PE GPCIs, we used the proposed non-physician employee compensation category weight of 16.553 percent reflected in the revised 2006-based MEI.

(b) Office Rent

We set the PE GPCI office rent portion at 10.223 percent which includes the proposed revised 2006-based MEI cost weights for fixed capital (reflecting the expenses for rent, depreciation on medical buildings and mortgage interest) and utilities. As discussed previously in this section, we propose to use 2008–2010 ACS rental data as the proxy for physician office rent. As mentioned previously, these data represent a gross rent amount and include data on utility expenditures. Since it is not possible to separate the utilities component of rent for all ACS survey respondents, we combined these two components to calculate office rent values that were used to calculate the office rent index component of the proposed PE GPCI. For purposes of consistency, we combined those two cost categories when assigning a proposed weight to the office rent component.

(c) Purchased Services

As discussed in section II.D. of this proposed rule, to be consistent with the purchased services index, we are proposing to combine the current MEI cost share weights for ''All Other Services'' and ''Other Professional Expenses'' into a component called ''All Other Professional Services.'' The proposed weight for ''All Other Professional Services'' is 8.095. As noted in the CY 2012 PFS final rule with comment period (76 FR 73084), we only adjust for locality cost differences of the labor-related share of the purchased services index. We determined that only 5.011 percentage points of the total 8.095 proposed weight are labor-related and, thus, would be adjusted for locality cost differences (5.011 adjusted purchased service + 3.084 non-adjusted purchased services = 8.095 total cost share weight). Therefore, only 62 percent (5.011/8.095) of the purchased service index is adjusted for geographic cost differences while the remaining 38 percent (3.084/8.095) of the purchased service index is not adjusted for geographic variation.

(d) Equipment, Supplies, and Other Miscellaneous Expenses

To calculate the medical equipment, supplies, and other miscellaneous expenses component, we removed PLI (4.295 percentage points), non-physician employee compensation (16.553 percentage points), fixed capital/utilities (10.223 percentage points), and purchased services (8.095 percentage points) from the total proposed PE category weight (44.839 percent). Therefore, the proposed cost share weight for the medical equipment, supplies, and other miscellaneous expenses component is 9.968 percent (44.839 − (4.295 + 16.553 + 10.223 + 8.095) = 9.968). As explained above, because we believe there is a national market for these items, costs that fall within this component of the PE GPCI are not adjusted for geographic variation.

(3) Malpractice GPCIs

We propose to use the PLI weight of 4.295 percent for the MP GPCI cost

share weight. The proposed GPCI cost share weights for CY 2014 are displayed in Table 22.

TABLE 22—PROPOSED COST SHARE WEIGHTS FOR CY 2014 GPCI UPDATE

Expense category	Current cost share weight (percent)	Proposed CY 2014 cost share weight (percent)
Work	48.266	50.866
Practice Expense	47.439	44.839
—Employee Compensation	19.153	16.553
—Office Rent	10.223	10.223
—Purchased Services	8.095	8.095
—Equipment, Supplies, Other	9.968	9.968
Malpractice Insurance	4.295	4.295
Total	100.000	100.000

e. PE GPCI Floor for Frontier States

Section 10324(c) of the Affordable Care Act added a new subparagraph (I) under section 1848(e)(1) of the Act to establish a 1.0 PE GPCI floor for physicians' services furnished in frontier States effective January 1, 2011. In accordance with section 1848(e)(1)(I) of the Act, beginning in CY 2011, we applied a 1.0 PE GPCI floor for physicians' services furnished in States determined to be frontier States. In general, a frontier state is one in which at least 50 percent of the counties are ''frontier counties,'' which are those that have a population per square mile of less than 6. For more information on the criteria used to define a frontier state, we refer readers to the FY 2011 Inpatient Prospective Payment System final rule (75 FR 50160 through 50161). There are no changes in the States identified as ''Frontier States'' for the CY 2014 proposed rule. The qualifying States are reflected in Table 23. In accordance with statute, we will apply a 1.0 PE GPCI floor for these States in CY 2014.

TABLE 23—FRONTIER STATES UNDER SECTION 1848(E)(1)(I) OF THE ACT

[As added by section 10324(c) of the Affordable Care Act]

State	Total counties	Frontier counties	Percent frontier counties (relative to counties in the State) (percent)
Montana	56	45	80
Wyoming	23	17	74
North Dakota	53	36	68
Nevada	17	11	65
South Dakota	66	34	52

f. Proposed GPCI Update

As explained above in the background section, the periodic review and adjustment of GPCIs is mandated by section 1848(e)(1)(C) of the Act. At each update, the proposed GPCIs are published in the PFS proposed rule to provide an opportunity for public comment and further revisions in response to comments prior to implementation. The proposed CY 2014 updated GPCIs for the first and second year of the 2-year transition, along with the GAFs, are displayed in Addenda D and E to this proposed rule available on the CMS Web site under the supporting documents section of the CY 2014 PFS proposed rule Web page at *http://www.cms.gov/PhysicianFeeSched/*.

3. Payment Locality Discussion

a. Background

The current PFS locality structure was developed and implemented in 1997. There are currently 89 total PFS localities; 34 localities are statewide areas (that is, only one locality for the entire state). There are 52 localities in the other 16 states, with 10 states having 2 localities, 2 states having 3 localities, 1 state having 4 localities, and 3 states having 5 or more localities. The District of Columbia, Maryland, and Virginia suburbs, Puerto Rico, and the Virgin Islands are additional localities that make up the remainder of the total of 89 localities. The development of the current locality structure is described in detail in the CY 1997 PFS proposed rule (61 FR 34615) and the subsequent final rule with comment period (61 FR 59494).

Prior to 1992, Medicare payments for physicians' services were made under the reasonable charge system. Payments were based on the charging patterns of physicians. This resulted in large differences in payment for physicians' services among types of services, geographic payment areas, and physician specialties. Recognizing this, the Congress replaced the reasonable charge system with the Medicare PFS in the Omnibus Budget Reconciliation Act (OBRA) of 1989, and the PFS went into effect January 1, 1992. Payments under the PFS are based on the relative resources involved with furnishing services, and are adjusted to account for geographic variations in resource costs as measured by the GPCIs.

Payment localities originally were established under the reasonable charge system by local Medicare carriers based on their knowledge of local physician charging patterns and economic conditions. These localities changed little between the inception of Medicare in 1967 and the beginning of the PFS in 1992. Shortly after the PFS took effect, CMS undertook a study in 1994 that culminated in a comprehensive locality revision that was implemented in 1997 (61 FR 59494).

The revised locality structure reduced the number of localities from 210 to the current 89, and the number of statewide localities increased from 22 to 34. The revised localities were based on locality resource cost differences as reflected by the GPCIs. For a full discussion of the methodology, see the CY 1997 PFS final rule with comment period (61 FR 59494). The current 89 fee schedule areas are defined alternatively by state boundaries (for example, Wisconsin), metropolitan areas (for example, Metropolitan St. Louis, MO), portions of a metropolitan area (for example, Manhattan), or rest-of-state areas that exclude metropolitan areas (for example, Rest of Missouri). This locality

configuration is used to calculate the GPCIs that are in turn used to calculate payments for physicians' services under the PFS.

As stated in the CY 2011 PFS final rule with comment period (75 FR 73261), we require that changes to the PFS locality structure be done in a budget neutral manner within a state. For many years, before making any locality changes, we have sought consensus from among the professionals whose payments would be affected. In recent years, we have also considered more comprehensive changes to locality configuration. In 2008, we issued a draft comprehensive report detailing four different locality configuration options (*www.cms.gov/physicianfeesched/downloads/ReviewOfAltGPCIs.pdf*). The alternative locality configurations in the report are described below.

- *Option 1: CMS Core-Based Statistical Area (CBSA) Payment Locality Configuration:* CBSAs are a combination of Office of Management and Budget (OMB's) Metropolitan Statistical Areas (MSAs) and Micropolitan Statistical Areas. Under this option, MSAs would be considered as urban CBSAs. Micropolitan Statistical Areas (as defined by OMB) and rural areas would be considered as non-urban (rest of state) CBSAs. This approach would be consistent with the areas used in the Inpatient Prospective Payment System (IPPS) pre-reclassification wage index, which is the hospital wage index for a geographic area (CBSA or non-CBSA) calculated from submitted hospital cost report data before statutory adjustments reconfigure, or ''reclassify'' a hospital to an area other than its geographic location, to adjust payments for differences in local resource costs in other Medicare payment systems. Based on data used in the 2008 locality report, this option would increase the number of PFS localities from 89 to 439.
- *Option 2: Separate High-Cost Counties from Existing Localities (Separate Counties):* Under this approach, higher cost counties are removed from their existing locality structure, and they would each be placed into their own locality. This option would increase the number of PFS localities from 89 to 214, using a 5 percent GAF differential to separate high-cost counties.
- *Option 3: Separate MSAs from Statewide Localities (Separate MSAs):* This option begins with statewide localities and creates separate localities for higher cost MSAs (rather than removing higher cost counties from their existing locality as described in Option 2). This option would increase the number of PFS localities from 89 to 130, using a 5 percent GAF differential to separate high-cost MSAs.
- *Option 4: Group Counties Within a State Into Locality Tiers Based on Costs (Statewide Tiers):* This option creates tiers of counties (within each state) that may or may not be contiguous but share similar practice costs. This option would increase the number of PFS localities from 89 to 140, using a 5 percent GAF differential to group similar counties into statewide tiers.

For a detailed discussion of the public comments on the contractor's 2008 draft report detailing four different locality configurations, we refer readers to the CY 2010 PFS proposed rule (74 FR 33534) and subsequent final rule with comment period (74 FR 61757). There was no public consensus on the options, although a number of commenters expressed support for Option 3 (separate MSAs from statewide localities) because the commenters believed this alternative would improve payment accuracy and could mitigate potential reductions to rural areas compared to Option 1 (CMS CBSAs).

In response to some public comments regarding the third of the four locality options, we had our contractor conduct an analysis of the impacts that would result from the application of Option 3. Those results were displayed in the final locality report released in 2011. The final report, entitled ''*Review of Alternative GPCI Payment Locality Structures—Final Report,*'' may be accessed directly from the CMS Web site at *www.cms.gov/PhysicianFee Sched/downloads/Alt_GPCI_Payment_Locality_Structures_Review.pdf.*

Moreover, at our request, the Institute of Medicine conducted a comprehensive empirical study of the Medicare GAFs established under sections 1848(e) (PFS GPCI) and 1886(d)(3)(E) (IPPS hospital wage index) of the Act. These adjustments are designed to ensure Medicare payments reflect differences in input costs across geographic areas. The first of the Institute of Medicine's two reports entitled, ''*Geographic Adjustment in Medicare Payment, Phase I: Improving Accuracy*'' recommended that the same labor market definition should be used for both the hospital wage index and the physician geographic adjustment factor. Further, the Institute of Medicine recommended that MSAs and statewide non-metropolitan statistical areas should serve as the basis for defining these labor markets.

Under the Institute of Medicine's recommendations, MSAs would be considered as urban CBSAs. Micropolitan Areas (as defined by the OMB) and rural areas would be considered as non-urban (rest of State) CBSAs. This approach would be consistent with the areas used in the IPPS pre-reclassification wage index to make geographic payment adjustments in other Medicare payment systems. For more information on the Institute of Medicine's recommendations on the PFS locality structure, see the CY 2013 PFS final rule with comment period (77 FR 68949). We also provided our technical analyses of the Institute of Medicine Phase I recommendations in a report released on the PFS Web site at *www.cms.gov/PhysicianFeeSched.*

Additionally, the Phase I report can be accessed on the Institute of Medicine's Web site at *http://www.iom.edu/Reports/2011/Geographic-Adjustment-in-Medicare-Payment-Phase-I-Improving-Accuracy.aspx.*

b. Institute of Medicine Phase II Report Discussion

The Institute of Medicine's second report, entitled ''*Geographic Adjustment in Medicare Payment—Phase II: Implications for Access, Quality, and Efficiency*'' was released July 17, 2012 and can be accessed on the Institute of Medicine's Web site at *http://www.iom.edu/Reports/2011/Geographic-Adjustment-in-Medicare-Payment-Phase-I-Improving-Accuracy.aspx.*

The Phase II report evaluated the effects of geographic adjustment factors (hospital wage index and GPCIs) on the distribution of the health care workforce, quality of care, population health, and the ability to provide efficient, high value care. The Institute of Medicine's Phase II report also included an analysis of the impacts of implementing its recommendations for accuracy in geographic adjustments which include a CBSA-based locality structure under the PFS. The Institute of Medicine analysis found that adopting a CBSA-based locality structure under the PFS creates large changes in county GAF values; for example, approximately half of all US counties would experience a payment reduction. The Institute of Medicine also found that GPCIs calculated under a CBSA-based locality structure would result in lower GAFs in rural areas (relative to the national average) because the GPCI values for rural areas would no longer include metropolitan practice costs within the current ''rest-of-state'' or ''statewide'' localities.

(1) Institute of Medicine Phase II Report Recommendations

The Institute of Medicine developed recommendations for improving access to and quality of medical care. The

recommendations included in the Institute of Medicine's Phase II report are summarized as follows:

- *Recommendation 1:* The Medicare program should develop and apply policies that promote access to primary care services in geographic areas where Medicare beneficiaries experience persistent access problems.
- *Recommendation 2:* The Medicare program should pay for services that improve access to primary and specialty care for beneficiaries in medically underserved urban and rural areas, particularly telehealth technologies.
- *Recommendation 3:* To promote access to appropriate and efficient primary care services, the Medicare program should support policies that would allow all qualified practitioners to practice to the full extent of their educational preparation.
- *Recommendation 4:* The Medicare program should reexamine its policies that provide location-based adjustments for specific groups of hospitals, and modify or discontinue them based on their effectiveness in ensuring adequate access to appropriate care.
- *Recommendation 5:* Congress should fund an independent ongoing entity, such as the National Health Care Workforce Commission, to support data collection, research, evaluations, and strategy development, and make actionable recommendations about workforce distribution, supply, and scope of practice.
- *Recommendation 6:* Federal support should facilitate independent external evaluations of ongoing workforce programs intended to provide access to adequate health services for underserved populations and Medicare beneficiaries. These programs include the National Health Services Corps, Title VII and VIII programs under the Public Health Service Act, and related programs intended to achieve these goals.

(2) Institute of Medicine Phase II Report Conclusions

The Institute of Medicine committee concluded that geographic payment adjustments under the PFS are not a strong determinant of access problems and not an appropriate mechanism for improving the distribution of the healthcare workforce, quality of care, population health, and the ability to provide efficient, high value care. Specifically, the Institute of Medicine committee stated ''that there are wide discrepancies in access to and quality of care across geographic areas particularly for racial and ethnic minorities. However, the variations do not appear to be strongly related to differences in or potential changes to fee for service payment'' (Page. 6). The committee also concluded ''that Medicare beneficiaries in some geographic pockets face persistent access and quality problems, and many of these pockets are in medically underserved rural and inner-city areas. However, geographic adjustment of Medicare payment is not an appropriate approach for addressing problems in the supply and distribution of the health care workforce. The geographic variations in the distribution of physicians, nurses and physician assistants, and local shortages that create access problems for beneficiaries should be addressed through other means'' (Page. 7). Moreover, the committee concluded that ''geographic [payment] adjustment is not an appropriate tool for achieving policy goals such as improving quality of expanding the pool of providers available to see Medicare beneficiaries'' (Page. 9).

(3) CMS Summary Response to Institute of Medicine Phase II Report

The Institute of Medicine's Phase II report recommendations are broad in scope, do not propose specific recommendations for making changes to the GPCIs or PFS locality structure, or are beyond the statutory authority of CMS.

We agree with the Institute of Medicine's assessment that many counties would experience a payment reduction and that large payment shifts would occur as a result of implementing a CBSA-based locality configuration under the PFS. Based on our contractor's analysis, there would be significant redistributive impacts if we were to implement a policy that would reconfigure the PFS localities based on the Institute of Medicine's CBSA-based locality recommendation. Many rural areas would see substantial decreases in their corresponding GAF and GPCI values as higher cost counties are removed from current ''rest of state'' payment areas. Conversely, many urban areas, especially those areas that are currently designated as ''rest of state'' but are located within higher cost MSAs, would experience increases in their applicable GPCIs and GAFs. That is, given that urban and rural areas would no longer be grouped together (for example, as in the current 34 statewide localities), many rural areas would see a reduction in payment under a CBSA-based locality configuration.

As noted earlier in this section, we are assessing a variety of approaches to changing the locality structure under the PFS and will continue to study options for revising the locality structure. However, to fully assess the implications of proposing a nationwide locality reconfiguration under the PFS, we must also assess and analyze the operational changes necessary to implement a revised locality structure. Given that all options under consideration (including the Institute of Medicine's CBSA-based approach) would expand the number of current localities and result in payment reductions to primarily rural areas, presumably any nationwide locality reconfiguration could potentially be transitioned over a number of years (to phase-in the impact of payment reductions gradually, from year to year, instead of all at once). As such, transitioning from the current locality structure to a nationwide reconfigured locality structure would present operational and administrative challenges that need to be identified and addressed. Therefore, we have begun to assess the broad operational changes that would be involved in implementing a nationwide locality reconfiguration under the PFS. Accordingly, we believe that it would be premature to make any statements about potential changes we would consider making to the PFS localities at this time. Any changes to PFS fee schedule areas would be made through future notice and comment rulemaking.

In the event that we develop a specific proposal for changing the locality configuration during future rulemaking, we would provide detailed analysis on the impact of the changes for physicians in each county. We would also provide opportunities for public input.

F. Medicare Telehealth Services for the Physician Fee Schedule

1. Billing and Payment for Telehealth Services

a. History

Prior to January 1, 1999, Medicare coverage for services delivered via a telecommunications system was limited to services that did not require a face-to-face encounter under the traditional model of medical care. Examples of these services included interpretation of an x-ray, electroencephalogram tracing, and cardiac pacemaker analysis.

Section 4206 of the BBA provided for coverage of, and payment for, consultation services delivered via a telecommunications system to Medicare beneficiaries residing in rural health professional shortage areas (HPSAs) as defined by the Public Health Service Act. Additionally, the BBA required that a Medicare practitioner (telepresenter) be with the patient at the time of a teleconsultation. Further, the BBA

specified that payment for a teleconsultation had to be shared between the consulting practitioner and the referring practitioner and could not exceed the fee schedule payment that would have been made to the consultant for the service furnished. The BBA prohibited payment for any telephone line charges or facility fees associated with the teleconsultation. We implemented this provision in the CY 1999 PFS final rule with comment period (63 FR 58814).

Effective October 1, 2001, section 223 of the Medicare, Medicaid and SCHIP Benefits Improvement Protection Act of 2000 (BIPA) (Pub. L. 106–554) added section 1834(m) to the Act, which significantly expanded Medicare telehealth services. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when delivered via a telecommunications system. We first implemented this provision in the CY 2002 PFS final rule with comment period (66 FR 55246). Section 1834(m)(4)(F)(ii) of the Act required the Secretary to establish a process that provides for annual updates to the list of Medicare telehealth services. We established this process in the CY 2003 PFS final rule with comment period (67 FR 79988).

As specified in regulations at § 410.78(b), we generally require that a telehealth service be furnished via an interactive telecommunications system. Under § 410.78(a)(3), an interactive telecommunications system is defined as, ''multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Telephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system.'' An interactive telecommunications system is generally required as a condition of payment; however, section 1834(m)(1) of the Act allows the use of asynchronous ''store-and-forward'' technology when the originating site is a federal telemedicine demonstration program in Alaska or Hawaii. As specified in regulations at § 410.78(a)(1), store-and-forward means the asynchronous transmission of medical information from an originating site to be reviewed at a later time by the practitioner at the distant site.

Medicare telehealth services may be furnished to an eligible telehealth individual notwithstanding the fact that the practitioner furnishing the telehealth service is not at the same location as the beneficiary. An eligible telehealth individual means an individual enrolled under Part B who receives a telehealth service furnished at an originating site. Under the BIPA, originating sites were limited under section 1834(m)(3)(C) of the Act to specified medical facilities located in specific geographic areas. The initial list of telehealth originating sites included the office of a practitioner, a critical access hospital (CAH), a rural health clinic (RHC), a federally qualified health center (FQHC) and a hospital (as defined in section 1861(e) of the Act). More recently, section 149 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275) (MIPPA) expanded the list of telehealth originating sites to include a hospital-based renal dialysis center, a skilled nursing facility (SNF), and a community mental health center (CMHC). To serve as a telehealth originating site, a site must also be located in an area designated as a rural HPSA, in a county that is not in a metropolitan statistical area (MSA), or must be an entity that participates in a federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary as of December 31, 2000. Finally, section 1834(m) of the Act does not require the eligible telehealth individual to be with a telepresenter at the originating site.

b. Current Telehealth Billing and Payment Policies

As noted previously, Medicare telehealth services can only be furnished to an eligible telehealth beneficiary in a qualifying originating site. An originating site is defined as one of the specified sites where an eligible telehealth individual is located at the time the service is being furnished via a telecommunications system. The originating sites authorized by the statute are as follows:

- Offices of a physician or practitioner;
- Hospitals;
- CAHs;
- RHCs;
- FQHCs;
- Hospital-Based or Critical Access Hospital-Based Renal Dialysis Centers (including Satellites);
- SNFs;
- CMHCs.

Currently approved Medicare telehealth services include the following:

- Initial inpatient consultations;
- Follow-up inpatient consultations;
- Office or other outpatient visits;
- Individual psychotherapy;
- Pharmacologic management;
- Psychiatric diagnostic interview examination;
- End-stage renal disease (ESRD) related services;
- Individual and group medical nutrition therapy (MNT);
- Neurobehavioral status exam;
- Individual and group health and behavior assessment and intervention (HBAI);
- Subsequent hospital care;
- Subsequent nursing facility care;
- Individual and group kidney disease education (KDE);
- Individual and group diabetes self-management training (DSMT);
- Smoking cessation services;
- Alcohol and/or substance abuse and brief intervention services;
- Screening and behavioral counseling interventions in primary care to reduce alcohol misuse;
- Screening for depression in adults;
- Screening for sexually transmitted infections (STIs) and high intensity behavioral counseling (HIBC) to prevent STIs;
- Intensive behavioral therapy for cardiovascular disease; and
- Behavioral counseling for obesity.

In general, the practitioner at the distant site may be any of the following, provided that the practitioner is licensed under state law to furnish the service via a telecommunications system:

- Physician;
- Physician assistant (PA);
- Nurse practitioner (NP);
- Clinical nurse specialist (CNS);
- Nurse-midwife;
- Clinical psychologist;
- Clinical social worker;
- Registered dietitian or nutrition professional.

Practitioners furnishing Medicare telehealth services submit claims for telehealth services to the Medicare contractors that process claims for the service area where their distant site is located. Section 1834(m)(2)(A) of the Act requires that a practitioner who furnishes a telehealth service to an eligible telehealth individual be paid an amount equal to the amount that the practitioner would have been paid if the service had been furnished without the use of a telecommunications system. Distant site practitioners must submit the appropriate HCPCS procedure code for a covered professional telehealth service, appended with the –GT (via interactive audio and video telecommunications system) or –GQ (via asynchronous telecommunications system) modifier. By reporting the –GT or –GQ modifier with a covered

telehealth procedure code, the distant site practitioner certifies that the beneficiary was present at a telehealth originating site when the telehealth service was furnished. The usual Medicare deductible and coinsurance policies apply to the telehealth services reported by distant site practitioners.

Section 1834(m)(2)(B) of the Act provides for payment of a facility fee to the originating site. To be paid the originating site facility fee, the provider or supplier where the eligible telehealth individual is located must submit a claim with HCPCS code Q3014 (telehealth originating site facility fee), and the provider or supplier is paid according to the applicable payment methodology for that facility or location. The usual Medicare deductible and coinsurance policies apply to HCPCS code Q3014. By submitting HCPCS code Q3014, the originating site certifies that it is located in either a rural HPSA or non-MSA county or is an entity that participates in a federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary as of December 31, 2000 as specified in section 1834(m)(4)(C)(i)(III) of the Act.

As previously described, certain professional services that are commonly furnished remotely using telecommunications technology, but that do not require the patient to be present in-person with the practitioner when they are furnished, are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in-person at the medical facility furnishing care to the patient. Such services typically involve circumstances where a practitioner is able to visualize some aspect of the patient's condition without the patient being present and without the interposition of a third person's judgment. Visualization by the practitioner can be possible by means of x-rays, electrocardiogram or electroencephalogram tracings, tissue samples, etc. For example, the interpretation by a physician of an actual electrocardiogram or electroencephalogram tracing that has been transmitted via telephone (that is, electronically, rather than by means of a verbal description) is a covered physician's service. These remote services are not Medicare telehealth services as defined under section 1834(m) of the Act. Rather, these remote services that utilize telecommunications technology are considered physicians' services in the same way as services that are furnished in-person without the use of telecommunications technology; they are paid under the same conditions as in-person physicians' services (with no requirements regarding permissible originating sites), and should be reported in the same way (that is, without the –GT or –GQ modifier appended).

c. Geographic Criteria for Originating Site Eligibility

Section 1834(m)(4)(C)(i)(I)–(III) of the Act specifies three criteria for the location of eligible telehealth originating sites. One of these is for entities participating in federal telemedicine demonstration projects as of December 31, 2000, and the other two are geographic. One of the geographic criteria is that the site is located in a county that is not in an MSA and the other is that the site is located in an area that is designated as a rural HPSA under section 332(a)(1)(A) of the Public Health Service Act (PHSA) (42 U.S.C. 254e(a)(1)(A)). Section 332(a)(1)(A) of the PHSA provides for the designation of various types of HPSAs, but does not provide for ''rural'' HPSAs. In the absence of guidance in the PHSA, CMS has in the past interpreted the term ''rural'' under section 1834(m)(4)(C)(i)(I) to mean an area that is not located in an MSA. As such, the current geographic criteria for telehealth originating sites limits eligible sites to those that are not in an MSA.

To determine rural designations with more precision, HHS and CMS have sometimes used methods that do not rely solely on MSA designations. For example, the Office of Rural Health Policy (ORHP) uses the Rural Urban Commuting Areas (RUCAs) to determine rural areas within MSAs. RUCAs are a census tract-based classification scheme that utilizes the standard Bureau of Census Urbanized Area and Urban Cluster definitions in combination with work commuting information to characterize all of the nation's census tracts regarding their rural and urban status and relationships. They were developed under a collaborative project between ORHP, the U.S. Department of Agriculture's Economic Research Service (ERS), and the WWAMI Rural Health Research Center (RHRC). A more comprehensive description is available at the USDA ERS Web site at: *www.ers.usda.gov/data-products/rural-urban-commuting-area-codes/documentation.aspx#.UcsKfZwzZKE*. The RUCA classification scheme contains 10 primary and 30 secondary codes. The primary code numbers (1 through 10) refer to the primary, or single largest, commuting share. Census tracts with RUCA codes of 4 through 10 refer to areas with a primary commuting share outside of a metropolitan area. In addition to counties that are not in an MSA, ORHP considers some census tracts in MSA counties to be rural. Specifically, census tracts with RUCA codes 4 through 10 are considered to be rural, as well as census tracts with RUCA codes 2 and 3 that are also at least 400 square miles and have a population density of less than 35 people per square mile.

We are proposing to modify our regulations regarding originating sites to define rural HPSAs as those located in rural census tracts as determined by ORHP. We believe that defining ''rural'' to include geographic areas located in rural census tracts within MSAs would allow for the appropriate inclusion of additional HPSAs as areas for telehealth originating sites. We also believe that adopting the more precise definition of ''rural'' for this purpose would expand access to health care services for Medicare beneficiaries located in rural areas.

We are also proposing to change our policy so that geographic eligibility for an originating site would be established and maintained on an annual basis, consistent with other telehealth payment policies. Absent this proposed change, the status of a geographic area's eligibility for telehealth originating site payment is effective at the same time as the effective date for changes in designations that are made outside of CMS. This proposed change would reduce the likelihood that mid-year changes to geographic designations would result in sudden disruptions to beneficiaries' access to services, unexpected changes in eligibility for established telehealth originating sites and avoid the operational difficulties associated with administering with mid-year Medicare telehealth payment changes. We are proposing to establish geographic eligibility for Medicare telehealth originating sites for each calendar year based upon the status of the area as of December 31st of the prior calendar year. Accordingly, we are proposing to revise our regulations at § 410.78(b)(4) to conform with both of these proposed policies.

2. Adding Services to the List of Medicare Telehealth Services

As noted previously, in the December 31, 2002 **Federal Register** (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services. This process provides the public with an ongoing opportunity to submit requests for adding services. We assign any request to make additions to the list of telehealth services to one of

two categories. In the November 28, 2011 **Federal Register** (76 FR 73102), we finalized revisions to criteria that we use to review requests in the second category. The two categories are:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the list of telehealth services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter. We also look for similarities in the telecommunications system used to deliver the proposed service, for example, the use of interactive audio and video equipment.
- *Category 2:* Services that are not similar to the current list of telehealth services. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when delivered via telehealth and whether the use of a telecommunications system to deliver the service produces demonstrated clinical benefit to the patient. In reviewing these requests, we look for evidence indicating that the use of a telecommunications system in delivering the candidate telehealth service produces clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

Since establishing the process to add or remove services from the list of approved telehealth services, we have added the following to the list of Medicare telehealth services: Individual and group HBAI services; psychiatric diagnostic interview examination; ESRD services with 2 to 3 visits per month and 4 or more visits per month (although we require at least 1 visit a month to be furnished in-person by a physician, CNS, NP, or PA to examine the vascular access site); individual and group MNT; neurobehavioral status exam; initial and follow-up inpatient telehealth consultations for beneficiaries in hospitals and skilled nursing facilities (SNFs); subsequent hospital care (with the limitation of one telehealth visit every 3 days); subsequent nursing facility care (with the limitation of one telehealth visit every 30 days); individual and group KDE; and individual and group DSMT (with a minimum of 1 hour of in-person instruction to ensure effective injection training), smoking cessation services; alcohol and/or substance abuse and brief intervention services; screening and behavioral counseling interventions in primary care to reduce alcohol misuse; screening for depression in adults; screening for sexually transmitted infections (STIs) and high intensity behavioral counseling (HIBC) to prevent STIs; intensive behavioral therapy for cardiovascular disease; and behavioral counseling for obesity.

Requests to add services to the list of Medicare telehealth services must be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. For example, requests submitted before the end of CY 2013 will be considered for the CY 2015 proposed rule. Each request for adding a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as a vehicle for making changes to the list of Medicare telehealth services, requestors should be advised that any information submitted is subject to public disclosure for this purpose. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to mail these requests, we refer readers to the CMS Web site at *www.cms.gov/telehealth/*.

3. Submitted Requests and Other Additions to the List of Telehealth Services for CY 2014

We received a request in CY 2012 to add online assessment and E/M services as Medicare telehealth services effective for CY 2014. The following presents a discussion of this request, and our proposals for additions to the CY 2014 telehealth list.

a. Submitted Requests

The American Telemedicine Association (ATA) submitted a request to add CPT codes 98969 (Online assessment and management service provided by a qualified nonphysician health care professional to an established patient, guardian, or health care provider not originating from a related assessment and management service provided within the previous 7 days, using the Internet or similar electronic communications network) and 99444 (Online evaluation and management service provided by a physician to an established patient, guardian, or health care provider not originating from a related E/M service provided within the previous 7 days, using the Internet or similar electronic communications network) to the list of Medicare telehealth services.

As we explained in the CY 2008 PFS final rule with comment period (72 FR 66371), we assigned a status indicator of ''N'' (Non-covered service) to these services because: (1) These services are non-face-to-face; and (2) the code descriptor includes language that recognizes the provision of services to parties other than the beneficiary and for whom Medicare does not provide coverage (for example, a guardian). Under section 1834(m)(2)(A) of the Act, Medicare pays the physician or practitioner furnishing a telehealth service an amount equal to the amount that would have been paid if the service was furnished without the use of a telecommunications system. Because CPT codes 98969 and 99444 are currently noncovered, there would be no Medicare payment if these services were furnished without the use of a telecommunications system. Since these codes are noncovered services for which no payment may be made under Medicare, we are not proposing to add online evaluation and management services to the list of Medicare Telehealth Services for CY 2014.

b. Other Additions

Under our existing policy, we add services to the telehealth list on a category 1 basis when we determine that they are similar to services on the

existing telehealth list with respect to the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 proposed rule (76 FR 42826), we believe that the category 1 criteria not only streamline our review process for publically requested services that fall into this category, the criteria also expedite our ability to identify codes for the telehealth list that resemble those services already on this list.

For CY 2013, CMS finalized a payment policy for new CPT code 99495 (Transitional care management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge medical decision making of at least moderate complexity during the service period face-to-face visit, within 14 calendar days of discharge) and CPT code 99496 (Transitional care management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge medical decision making of high complexity during the service period face-to-face visit, within 7 calendar days of discharge). These services are for a patient whose medical and/or psychosocial problems require moderate or high complexity medical decision making during transitions in care from an inpatient hospital setting (including acute hospital, rehabilitation hospital, long-term acute care hospital), partial hospitalization, observation status in a hospital, or skilled nursing facility/nursing facility, to the patient's community setting (home, domiciliary, rest home, or assisted living). Transitional care management is comprised of one face-to-face visit within the specified time frames following a discharge, in combination with non-face-to-face services that may be performed by the physician or other qualified health care professional and/or licensed clinical staff under his or her direction.

We believe that that the interactions between the furnishing practitioner and the beneficiary described by the required face-to-face visit component of the TCM services are sufficiently similar to services currently on the list of Medicare telehealth services for these services to be added under category 1. Specifically, we believe that the required face-to-face visit component of TCM services is similar to the office/outpatient evaluation and management visits described by CPT codes 99201–99205 and 99211–99215. We note that like certain other non-face-to-face PFS services, the other components of the TCM service are commonly furnished remotely using telecommunications technology, and do not require the patient to be present in-person with the practitioner when they are furnished. As such, we do not need to consider whether the non-face-to-face aspects of the TCM service are similar to other telehealth services. Were these components of the TCM services separately billable, they would not need to be on the telehealth list to be covered and paid in the same way as services delivered without the use of telecommunications technology. Therefore, we are proposing to add CPT codes 99495 and 99496 to the list of telehealth services for CY 2014 on a category 1 basis. Consistent with this proposal, we are also proposing to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include TCM services as Medicare telehealth services.

4. Telehealth Frequency Limitations

The ATA asked that we remove the telehealth frequency limitation for subsequent nursing facility services reported by CPT codes 99307 through 99310. Subsequent nursing facility services were added to the list of Medicare telehealth services in the CY 2011 PFS final rule (75 FR 73317 through 73318), with a limitation of one telehealth subsequent nursing facility care service every 30 days. In the CY 2011 PFS final rule (75 FR 73615) we noted that, as specified in our regulation at § 410.78(e)(2), the federally mandated periodic SNF visits required under § 483.40(c) could not be furnished through telehealth.

The ATA requested that the frequency limitation be removed due to ''recent federal telecommunications policy changes'' and newly available information from recent studies. Specifically, the ATA pointed to the Federal Communications Commission (FCC) pilot funding of a program to facilitate the creation of a nationwide broadband network dedicated to health care, connecting public and private non-profit health care providers in rural and urban locations, and a series of studies that demonstrated the value to patients of telehealth technology.

In considering this request, we began with the analysis contained in the CY 2011 proposed rule (75 FR 73318), when we proposed to add SNF subsequent care, to the list of Medicare telehealth services. We discussed our complementary commitments to ensuring that SNF residents, given their potential clinical acuity, continue to receive in-person visits as appropriate to manage their complex care and to make sure that Medicare pays only for medically reasonable and necessary care. To meet these commitments, we believed it was appropriate to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days.

We then reviewed the publicly available information regarding both the FCC pilot program and the ATA-referenced studies in light of the previously stated commitments to assess whether these developments warrant a change in 30-day frequency limitation policy. Based on our review of the FCC demonstration project and the studies referenced in the request, we found no information regarding the relative clinical benefits of SNF subsequent care when furnished via telehealth more frequently than once every 30 days. We did note that the FCC information reflected an aim to improve access to medical specialists in urban areas for rural health care providers, and that medical specialists in urban areas can continue to use the inpatient telehealth consultation HCPCS G-codes (specifically G0406, G0407, G0408, G0425, G0426, or G0427) when reporting medically reasonable and necessary consultations furnished to SNF residents via telehealth without any frequency limitation.

We also reviewed the studies referenced by the ATA to assess whether they provided evidence that more frequent telehealth visits would appropriately serve this particular population given the potential medical acuity and complexity of patient needs. We did not find any such evidence in the studies. Three of the studies identified by the ATA were not directly relevant to SNF subsequent care services. One of these focused on using telehealth technology to treat patients with pressure ulcers after spinal cord injuries. The second focused on the usefulness of telehealth technology for patients receiving home health care services. A third study addressed the use of interactive communication technology to facilitate the coordination of care between hospital and SNF personnel on the day of hospital discharge. The ATA also mentioned a peer-reviewed presentation delivered at its annual meeting related to SNF patient care, suggesting that the presentation demonstrated that telehealth visits are better for SNF patients than in-person visits to emergency departments or, in some cases, visits to physician offices. Although we did not have access to the full presentation it does not appear to

address subsequent nursing facility services, so we do not believe this is directly relevant to the clinical benefit of SNF subsequent care furnished via telehealth. More importantly, none of these studies addresses the concerns we have expressed about the possibility that nursing facility subsequent care visits furnished too frequently through telehealth rather than in-person could compromise care for this potentially acute and complex patient population.

We remain committed to ensuring that SNF inpatients receive appropriate in-person visits and that Medicare pays only for medically reasonable and necessary care. We are not persuaded by the information submitted by the ATA that it would be beneficial or advisable to remove the frequency limitation we established for SNF subsequent care when furnished via telehealth. Because we want to ensure that nursing facility patients with complex medical conditions have appropriately frequent, medically reasonable and necessary encounters with their admitting practitioner, we continue to believe that it is appropriate for some subsequent nursing facility care services to be furnished through telehealth. At the same time, because of the potential acuity and complexity of SNF inpatients, we remain committed to ensuring that these patients continue to receive in-person, hands-on visits as appropriate to manage their care. Therefore, we are not proposing any changes to the limitations regarding SNF subsequent care services furnished via telehealth for CY 2014.

G. Therapy Caps

1. Outpatient Therapy Caps for CY 2014

Section 1833(g) of the Act applies annual, per beneficiary, limitations on expenses considered incurred for outpatient therapy services under Medicare Part B, commonly referred to as ''therapy caps.'' There is one therapy cap for outpatient occupational therapy (OT) services and another separate therapy cap for physical therapy (PT) and speech-language pathology (SLP) services combined.

Until October 1, 2012, the therapy caps applied to all outpatient therapy services except those furnished by a hospital or another entity under an arrangement with a hospital described under section 1833(a)(8)(B) of the Act. For convenience, we will refer to the exemption from the caps for services described under section 1833(a)(8)(B) of the Act as the ''outpatient hospital services exemption.'' Section 3005(b) of the MCTRJCA added section 1833(g)(6) of the Act to temporarily suspend the outpatient hospital services exemption, thereby requiring that the therapy caps apply to services described under section 1833(a)(8)(B) of the Act from October 1, 2012 to December 31, 2012 for services furnished during 2012. This broadened application of the therapy caps was extended through December 31, 2013, by section 603(a) of the ATRA. In addition, section 603(b) of the ATRA amended section 1833(g)(6) of the Act to specify that during CY 2013, for outpatient therapy services paid under section 1834(g) of the Act (those furnished by a critical access hospital (CAH)), we must count towards the therapy caps the amount that would be payable for the services under Medicare Part B if the services were paid as outpatient therapy services under section 1834(k)(1)(B) of the Act, which describes payment for outpatient therapy services furnished by hospitals and certain other entities, instead of as CAH outpatient therapy services under section 1834(g) of the Act. Payment for outpatient therapy services under section 1834(k)(1)(B) of the Act is made at 80 percent of the lesser of the actual charge for the services or the applicable fee schedule amount as defined in section 1834(k)(3) of the Act. Section 1834(k)(3) of the Act defines applicable fee schedule to mean the payment amount determined under a fee schedule established under section 1848 of the Act, which refers to the PFS, or an amount under a fee schedule for comparable services as the Secretary specifies. The PFS is required as the applicable fee schedule to be used as the payment basis under section 1834(k)(3) of the Act. Section 603(b) of the ATRA also specified that nothing in the amendments to section 1833(g)(6) of the Act ''shall be construed as changing the method of payment for outpatient therapy services under 1834(g) of the Act.''

Since CY 2011, a therapy multiple procedure payment reduction (MPPR) policy has applied to the second and subsequent ''always therapy'' services billed on the same date of service for one patient by the same practitioner or facility under the same NPI. Prior to April 1, 2013, the therapy MPPR reduced the practice expense portion of office-based services by 20 percent and reduced the practice expense portion of institutional-based services by 25 percent. As of April 1, 2013, section 633(a) of the ATRA amended sections 1848(b)(7) and 1834(k) of the Act to increase the therapy MPPR to 50 percent for all outpatient therapy services furnished in office-based and institutional settings. (For more information on the MPPR and its history, see section II.B.4 of this proposed rule.)

Sections 1833(g)(1) and (3) of the Act specify that in counting services towards the cap, ''no more than the amount specified in paragraph (2) for the year shall be considered incurred expenses.'' As noted above, section 603(b) of the ATRA amended section 1833(g)(6) of the Act to require that outpatient therapy services furnished by CAHs during CY 2013 are counted towards the therapy caps using the amount that would be paid for those services under section 1834(k)(1)(B) of the Act, which is how outpatient therapy services furnished by hospitals and certain other entities are paid. Since payment for outpatient therapy services under section 1834(k)(1)(B) of the Act is made at the PFS rate and includes any applicable therapy MPPR, the amounts for incurred expenses counted toward the caps for therapy services furnished by a CAH also reflect any applicable therapy MPPR.

We believe that this is consistent with the statutory amendments made by the ATRA. Including the therapy MPPR in calculating incurred expenses for therapy services furnished by CAHs treats CAH services consistently with services furnished in other applicable settings. Therefore, therapy services furnished by CAHs during CY 2013 count towards the therapy caps using the amount that would be payable under section 1834(k)(1)(B) of the Act, which includes an applicable MPPR. For a list of the ''always therapy'' codes subject to the therapy MPPR policy, see Addendum H of this proposed rule.

The therapy cap amounts under section 1833(g) of the Act are updated each year based on the Medicare Economic Index (MEI). Specifically, the annual caps are calculated by updating the previous year's cap by the MEI for the upcoming calendar year and rounding to the nearest $10 as specified in section 1833(g)(2)(B) of the Act. The therapy cap amounts for CY 2014 will be announced in the CY 2014 PFS final rule with comment period.

An exceptions process for the therapy caps has been in effect since January 1, 2006. Originally required by section 5107 of the Deficit Reduction Act of 2005 (DRA), which amended section 1833(g)(5) of the Act, the exceptions process for the therapy caps has been continuously extended several times through subsequent legislation (MIEA–TRHCA, MMSEA, MIPPA, the Affordable Care Act, MMEA, TPTCCA, and MCTRJCA). Last amended by section 603(a) of the ATRA, the Agency's current authority to provide an

exceptions process for therapy caps expires on December 31, 2013. After expenses incurred for the beneficiary's services for the year have exceeded the therapy cap, therapy suppliers and providers use the KX modifier on claims for services to request an exception to the therapy caps. By use of the KX modifier, the therapist is attesting that the services above the therapy cap are reasonable and necessary and that there is documentation of medical necessity for the services in the beneficiary's medical record.

Under section 1833(g)(5)(C) of the Act, added by the MCTRJCA and extended through 2013 by the ATRA, we are required to apply a manual medical review process to therapy claims when a beneficiary's incurred expenses exceed a threshold amount of $3,700. There are two separate thresholds of $3,700, just as there are two therapy caps, and incurred expenses are counted toward the thresholds in the same manner as the caps. Under the statute, the required application of the manual medical review process expires December 31, 2013. For information on the manual medical review process, go to *www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medical-Review/TherapyCap.html*.

2. Proposed Application of Therapy Caps to Services Furnished by CAHs

Section 4541 of the BBA amended section 1833(g) of the Act to create the therapy caps discussed above. This BBA provision applied the therapy caps to outpatient therapy services described at section 1861(p) of the Act except for the outpatient therapy services described in section 1833(a)(8)(B) of the Act. Section 1833(a)(8)(B) of the Act refers to therapy services furnished by a hospital to an outpatient, to services furnished to a hospital inpatient who has exhausted, or is not entitled to, benefits under Part A; and to these same services when furnished by an entity under arrangements with a hospital. Payment for the services described under section 1833(a)(8)(B) of the Act is made under section 1834(k)(1)(B) of the Act.

Section 4201 of the BBA amended section 1820 of the Act to require a process for establishment of CAHs. Payment for CAH outpatient services is described under section 1834(g) of the Act.

When we proposed language to implement the BBA provision establishing therapy caps in the CY 1999 PFS proposed rule, we indicated in the preamble that the therapy caps do not apply to therapy services furnished directly or under arrangements by a hospital or CAH to an outpatient or to an inpatient who is not in a covered Part A stay (63 FR 30818, 30858). We included a similar statement in the preamble to the final rule; however, we did not include the same reference to CAHs in that sentence in the CY 1999 PFS final rule with comment period (63 FR 58814, 58865). In the CY 1999 PFS final rule with comment period, we also stated generally that the therapy caps apply only to items and services furnished by nonhospital providers and therapists (63 FR 58865). In the CY 1999 proposed rule, we proposed to include provisions at § 410.59(e)(3) and § 410.60(e)(3) to describe, respectively, the outpatient therapy services that are exempt from the statutory therapy caps for outpatient OT services, and for outpatient PT and SLP services combined. Specifically, in the CY 1999 PFS proposed rule, we proposed to add the following regulatory language for OT and for PT at §§ 410.59(e)(3) and 410.60(e)(3): ''For purposes of applying the limitation, outpatient [occupational therapy/physical therapy] excludes services furnished by a hospital or CAH directly or under arrangements'' (63 FR 30880). However, in the CY 1999 PFS final rule with comment period, the phrase ''or CAH'' was omitted from the final regulation text for OT in § 410.59(e)(3), but was included in the final regulation text for PT in § 410.60(e)(3). We note that for purposes of the therapy cap, outpatient PT services under our regulation at § 410.60 include outpatient SLP services described under § 410.62. As such, SLP services are included in the references to PT under § 410.60. Although the rulemaking history and regulations appear inconclusive as to whether outpatient therapy services furnished by CAHs were intended to be subject to the therapy caps between January 1, 1999 and October 1, 2012, we believe that we inadvertently omitted the phrase ''or CAH'' in the CY 1999 final regulation for the occupational therapy cap. Moreover, we have consistently excluded all outpatient therapy services furnished by CAHs from the therapy caps over this time frame, whether the services were PT, SLP, or OT.

Accordingly, from the outset of the therapy caps under section 1833(g) of the Act, therapy services furnished by CAHs have not been subject to the therapy caps. Thus, CAHs have not been required to use the exceptions process (including the KX modifier and other requirements) when furnishing medically necessary therapy services above the therapy caps; and therapy services furnished by CAHs above the threshold amounts have not been subject to the manual medical review process. Similarly, until section 603(b) of the ATRA amended the statute to specify the amount that must be counted towards the therapy caps and thresholds for outpatient therapy services furnished by CAHs, we did not apply towards the therapy caps or thresholds any amounts for therapy services furnished by CAHs. Therefore, we have interpreted the statutory exclusion for outpatient therapy services furnished by hospital outpatient departments also to apply to CAHs and implemented the therapy caps accordingly.

As noted above, section 3005(b) of the MCTRJCA temporarily suspended the outpatient hospital services exemption from October 1, 2012 through December 31, 2012 (which has subsequently been extended by the ATRA through December 31, 2013). As a result, from October 1, 2012 to the present, CAH services have been treated differently than services furnished in other outpatient hospital settings. In implementing this change required by the MCTRJCA, we had reason to assess whether, as a result of the amendment, the therapy caps should be applied to outpatient therapy services furnished by CAHs. We concluded that the MCTRJCA amendment did not make the therapy caps applicable to services furnished by CAHs for which payment is made under section 1834(g) of the Act because it affected only the outpatient hospital services described under section 1833(a)(8)(B) of the Act for which payment is made under section 1834(k)(1)(B) of the Act. With the enactment in section 603(b) of the ATRA of specific language requiring us to count amounts toward the therapy caps and thresholds for services furnished by CAHs, we again had reason to assess whether the therapy caps apply to services furnished by CAHs. We concluded that the ATRA amendment did not explicitly make the therapy caps applicable to services furnished by CAHs, but directed us to count CAH services towards the caps. However, after reflecting on the language of section 1833(g) of the Act, we have concluded that the therapy caps should be applied to outpatient therapy services furnished by CAHs.

To explain further, under sections 1833(g)(1) and (3) of the Act, the therapy caps are made applicable to all services described under section 1861(p) of the Act except those described under the outpatient hospital services exemption. Section 1861(p) of the Act establishes the benefit category for outpatient PT, SLP and OT services, (expressly for PT

services and, through section 1861(ll)(2) of the Act, for outpatient SLP services and, through section 1861(g) of the Act, for outpatient OT services). Section 1861(p) of the Act defines outpatient therapy services in the three disciplines as those furnished by a provider of services, a clinic, rehabilitation agency, or a public health agency, or by others under an arrangement with, and under the supervision of, such provider, clinic, rehabilitation agency, or public health agency to an individual as an outpatient; and those furnished by a therapist not under arrangements with a provider of services, clinic, rehabilitation agency, or a public health agency. As such, section 1861(p) of the Act defines outpatient therapy services very broadly to include those furnished by providers and other institutional settings, as well as those furnished in office settings. Under section 1861(u) of the Act, a CAH is a ''provider of services.'' As such, unless the outpatient therapy services furnished by a CAH fit within the outpatient hospital services exemption under section 1833(a)(8)(B) of the Act, the therapy caps would be applicable to PT, SLP, OT services furnished by a CAH. As noted above, section 1833(a)(8)(B) of the Act describes only outpatient therapy services for which payment is made under section 1834(k) of the Act. Payment for CAH services is made under section 1834(g) of the Act. Thus, the outpatient hospital services exemption to the therapy caps under section 1833(a)(8)(B) of the Act does not apply, and the therapy caps are applicable, to outpatient therapy services furnished by a CAH.

However, we recognize that our current regulation specifically excludes PT and SLP services furnished by CAHs from the therapy caps, and our consistent practice since 1999 has been to exclude PT, SLP and OT services furnished by CAHs from the therapy caps. As such, in order to apply the therapy caps and related policies to services furnished by CAHs for CY 2014 and subsequent years, we believe we would need to revise our regulations.

We propose to apply the therapy cap limitations and related policies to outpatient therapy services furnished by a CAH beginning on January 1, 2014. Not only do we believe this is the proper statutory interpretation, but we also believe it is the appropriate policy. Under the existing regulations, with the suspension of the outpatient hospital services exemption through 2013, the therapy caps apply to outpatient therapy services paid under Medicare Part B and furnished in all applicable settings except CAHs. We believe that outpatient therapy services furnished by a CAH should be treated consistently with outpatient therapy services furnished in all other settings. Therefore, we propose to revise the therapy cap regulation at § 410.60(e)(3) to remove the exemption for services furnished by a CAH.

CAH outpatient therapy services are distinct from other outpatient therapy services in that outpatient therapy services furnished in office-based or other institutional settings are paid at the rates contained in the PFS, whereas CAHs are paid for outpatient therapy services under the methodology described under section 1834(g) of the Act. Because the CAH reasonable cost-based payment amounts are reconciled at cost reporting year-end, and are different from the fee schedule-based payments for other outpatient therapy services, it might have been difficult to identify the amounts that we should have accrued towards the therapy caps for services furnished by CAHs. Therefore, prior to 2013, not only did CMS not apply any caps to services provided by a CAH, but also did not count CAH services towards the caps. However, the ATRA amended the statute to require for outpatient therapy services furnished by CAHs during 2013 that we count towards the caps and the manual medical review thresholds the amount that would be payable for the services under Medicare Part B as if the services were paid as outpatient therapy services under section 1834(k)(1)(B) of the Act instead of as CAH services under section 1834(g) of the Act. Thus, the distinction in payment methodology no longer provides a technical barrier to including an amount for therapy services furnished by CAHs in the caps. We propose to continue this methodology of counting the amount payable under section 1834(k)(1)(B) of the Act towards the therapy cap and threshold for services furnished by CAHs in CY 2014 and subsequent years.

We recognize that the outpatient hospital services exemption is suspended under current law only through December 31, 2013. If this provision is not extended, with our proposal to apply the therapy caps to services furnished by CAHs, effective January 1, 2014, therapy services furnished by CAHs would be treated differently than services furnished in other outpatient hospital settings. We note that the exceptions process described above, including use of the KX modifier to attest to the medical necessity of therapy services above the caps and other requirements, would apply for services furnished by a CAH in the same way that it applies to outpatient therapy services furnished by certain other facilities. Similarly, the manual medical review process for claims that exceed the $3,700 thresholds would apply to therapy services furnished by a CAH in the same way that they apply for outpatient therapy services furnished by certain other facilities. We recognize that the manual medical review process expires on December 31, 2013 and we would apply the manual medical review process to CAH services only as required by statute. We are proposing to amend the regulations establishing the conditions for PT, OT, and SLP services by removing the exemption of CAH services from the therapy caps and specifying that the therapy caps apply to such services.

Specifically, we propose to amend the regulations, which pertain to the OT therapy cap and the combined PT and SLP therapy cap, respectively, by including paragraph (e)(1)(iv) under § 410.59 and (e)(1)(iv) under § 410.60 to specify that (occupational/physical) therapy services furnished by a CAH directly or under arrangements shall be counted towards the annual limitation on incurred expenses as if such services were paid under section 1834(k)(1)(B) of the Act. We also propose to add new paragraph (e)(2)(v) to § 410.59 and (e)(2)(vi) to § 410.60. These new paragraphs would expressly include outpatient (occupational/physical) therapy services furnished by a CAH directly or under arrangements under the description of services to which the annual limitation applies. Further, we propose to amend the regulation at § 410.60(e)(3), which currently excludes services furnished by a CAH from the therapy cap for PT and SLP services, to remove the phrase ''or CAH.''

H. Requirements for Billing ''Incident To'' Services

Section 1861(s)(2)(A) of the Act establishes the benefit category for services and supplies furnished as ''incident to'' the professional services of a physician. The statute specifies that ''incident to'' services and supplies are ''of kinds which are commonly furnished in physicians' offices and are commonly either rendered without charge or included in physicians' bills.''

In addition to the requirements of the statute, our regulation at § 410.26 sets forth specific requirements that must be met in order for physicians and other practitioners to bill Medicare for incident to physicians' services. Section 410.26(a)(7) limits ''incident to'' services to those included under section 1861(s)(2)(A) of the Act and that are not covered under another benefit category. Section 410.26(b) specifies (in part) that

in order for services and supplies to be paid as ''incident to'' services under Medicare Part B, the services or supplies must be:

- Furnished in a noninstitutional setting to noninstitutional patients.
- An integral, though incidental, part of the service of a physician (or other practitioner) in the course of diagnosis or treatment of an injury or illness.
- Furnished under direct supervision (as specified under § 410.26(a)(2) and defined in § 410.32(b)(3)(ii)) of a physician or other practitioner eligible to bill and directly receive Medicare payment.
- Furnished by the physician, practitioner with an ''incident to'' benefit, or auxiliary personnel.

In addition to § 410.26, there are regulations specific to each type of practitioner who is allowed to bill for ''incident to'' services. These are found at § 410.71(a)(2) (clinical psychologist services), § 410.74(b) (physician assistants' services), § 410.75(d) (nurse practitioners' services), § 410.76(d) (clinical nurse specialists' services), and § 410.77(c) (certified nurse-midwives' services). When referring to practitioners who can bill for services furnished ''incident to'' their professional services, we are referring to physicians and these practitioners.

''Incident to'' services are treated as if they were furnished by the billing practitioner for purposes of Medicare billing and payment. Consistent with this terminology, in this discussion when referring to the practitioner furnishing the service, we mean the practitioner who is billing for the service. When we refer to the ''auxiliary personnel'' or the person who ''provides'' the service we are referring to an individual who is personally performing the service or some aspect of it. Since we treat ''incident to'' services as services furnished by the billing practitioner for purposes of Medicare billing and payment, payment is made to the billing practitioner under the PFS, and all relevant Medicare rules apply including, but not limited to, requirements regarding medical necessity, documentation, and billing. Those practitioners who can bill Medicare for ''incident to'' services are paid at their applicable Medicare payment rate as if they furnished the service. For example, when ''incident to'' services are billed by a physician, they are paid at 100 percent of the fee schedule amount, and when the services are billed by a nurse practitioner or clinical nurse specialist, they are paid at 85 percent of the fee schedule amount. Payments are subject to the usual deductible and coinsurance.

As the services commonly furnished in physicians' offices and other nonfacility settings have expanded to include more complicated services, the types of services that can be furnished ''incident to'' physicians' services have also expanded. States have increasingly adopted standards regarding the delivery of health care services in all settings, including physicians' offices, in order to protect the health and safety of their citizens. These state standards often include qualifications for the individuals who are permitted to furnish specific services or requirements about the circumstances under which services may be actually furnished. For example, since 2009, New York has required that offices in which surgery is furnished must be accredited by a state-approved accredited agency or organization. Similarly, Florida requires certain standards be met when surgery is furnished in offices, including that the surgeon must ''examine the patient immediately before the surgery to evaluate the risk of anesthesia and of the surgical procedure to be performed'' and ''qualified anesthesia personnel shall be present in the room throughout the conduct of all general anesthetics, regional anesthetics and monitored anesthesia care.''

Over the past years, several situations have come to our attention where Medicare was billed for ''incident to'' services that were provided by auxiliary personnel who did not meet the state standards for those services in the state in which the services were furnished. The physician or practitioner billing for the services would have been permitted under state law to personally furnish the services, but the services were actually provided by auxiliary personnel who were not in compliance with state law in providing the particular service (or aspect of the service).

Practitioners authorized to bill Medicare for services that they furnish to Medicare beneficiaries are required under Medicare to comply with state law. For example, section 1861(r) of the Act specifies that an individual can be considered a physician in the performance of any function or action only when legally authorized to practice in the particular field by the State in which he performs such function or action. Section 410.20(b) of our regulations provides that payment is made for services only if furnished by a doctor who is ''. . . legally authorized to practice by the state in which he or she performs the functions or actions, and who is acting within the scope of his or her license.'' Similarly, section 1861(s)(2)(K)(ii) of the Act provides a benefit category for services of a nurse practitioner (NP) or clinical nurse specialist (CNS) that the NP or CNS is ''legally authorized to perform by the State in which the services are performed, and § 410.75(b) of our regulations provides that nurse practitioners' services are covered only if the NP is ''authorized by the State in which the services are furnished to practice as a nurse practitioner in accordance with State law.'' There are similar provisions for clinical psychologist services (§ 410.71(a)(2)), clinical social worker services (§ 410.73(b)(1)), physician assistants' services (§ 410.74(a)(2)(ii)), clinical nurse specialists' services (§ 410.76(b)(1)), and certified nurse-midwives' services (§ 410.77(b)(1)).

However, the Medicare requirements for services and supplies incident to a physician's professional services (§ 410.26 discussed above), do not specifically make compliance with state law a condition of payment for services (or aspects of services) and supplies furnished and billed as ''incident to'' services. Nor do any of the regulations regarding services furnished ''incident to'' the services of other practitioners contain this requirement. Thus, Medicare has had limited recourse when services furnished incident to a physician's or practitioner's services are not furnished in compliance with state law.

In 2009, the Office of Inspector General issued a report entitled ''Prevalence and Qualifications of Nonphysicians Who Performed Medicare Physician Services'' (OEI–09–06–00430) that considered in part the qualifications of auxiliary personnel providing incident to physician services. This report found that services were being billed to Medicare that were provided by auxiliary personnel. After finding that services were being provided and billed to Medicare by auxiliary personnel ''. . . who did not possess the required licenses or certifications according to State laws, regulations, and/or Medicare rules,'' the OIG recommended that we revise the ''incident to'' rules to, among other things, ''require that physicians who do not personally perform the services they bill to Medicare ensure that no persons except . . . nonphysicians who have the necessary training, certification, and/or licensure, pursuant to State laws, State regulations, and Medicare regulations personally perform the services under the direct supervision of a licensed physician.'' We are also proposing amendments to our regulations to address this recommendation.

To ensure that auxiliary personnel providing services to Medicare

beneficiaries incident to the services of other practitioners do so in accordance with the requirements of the state in which the services are furnished and to ensure that Medicare dollars can be recovered when such services are not furnished in compliance with the state law, we are proposing to add a requirement to the ''incident to'' regulations at § 410.26, Services and supplies incident to a physician's professional services: Conditions. Specifically, we are proposing to amend § 410.26(b) by redesignating paragraphs (b)(7) and (b)(8) as paragraphs (b)(8) and (b)(9), respectively, and by adding a new paragraph (b)(7) to state that ''Services and supplies must be furnished in accordance with applicable State law.'' We are also proposing to amend the definition of auxiliary personnel at § 410.26(a)(1) to require that the individual performing ''incident to'' services ''meets any applicable requirements to provide the services, including licensure, imposed by the State in which the services are being furnished.''

In addition, we are proposing to eliminate redundant and potentially incongruent regulatory language by replacing the specific ''incident to'' requirements currently contained in the regulations relating to each of the various types of practitioners with a reference to the requirements of § 410.26. Specifically, we are proposing to:

- Revise § 410.71(a)(2) regarding clinical psychologist services to read ''Medicare Part B covers services and supplies incident to the services of a clinical psychologist if the requirements of § 410.26 are met.''
- Revise § 410.74(b) regarding physician assistants' services to read ''Medicare Part B covers services and supplies incident to the services of a physician assistant if the requirements of § 410.26 are met.''
- Revise § 410.75(d) regarding nurse practitioners to read ''Medicare Part B covers services and supplies incident to the services of a nurse practitioner if the requirements of § 410.26 are met.''
- Revise § 410.76(d) regarding clinical nurse specialists' services to read with ''Medicare Part B covers services and supplies incident to the services of a clinical nurse specialist if the requirements of § 410.26 are met.''
- Revise the language in § 410.77(c) regarding certified nurse-midwives' services to read ''Medicare Part B covers services and supplies incident to the services of a certified nurse-midwife if the requirements of § 410.26 are met.''

As discussed above, these practitioners are, and would continue to be under this proposal, required to comply with § 410.26 for services furnished incident to their professional services. We believe it is redundant and potentially confusing to have separate regulations that generally restate the requirements for ''incident to'' services of § 410.26 using slightly different terminology. Our goal in proposing the revisions to refer to § 410.26 in the regulation for each practitioner's ''incident to'' services is to reduce the regulatory burden and make it less difficult for practitioners to determine what is required. Reconciling these regulatory requirements for physicians and all other practitioners who have the authority to bill Medicare for ''incident to'' services is also consistent with our general policy to treat nonphysician practitioners similarly to physicians unless there is a compelling reason for disparate treatment. We believe that this proposal would make the requirements clearer for practitioners furnishing ''incident to'' services without eliminating existing regulatory requirements or imposing new ones. We welcome comments on any requirements that we may have inadvertently overlooked in our proposed revisions, or any benefit that accrues from continuing to carry these separate regulatory requirements.

The regulations applicable to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) have similar ''incident to'' rules, and we are proposing to make conforming changes to these regulations. Specifically, we are also proposing to revise § 405.2413(a), which addresses services and supplies incident to physicians' services for RHCs and FQHCs, by redesignating paragraphs (a)(4) and (a)(5) as paragraphs (a)(5) and (a)(6), respectively and by adding a new paragraph (a)(4) that states services and supplies must be furnished in accordance with applicable state law. Additionally, we are proposing to amend § 405.2415(a), which addresses services incident to nurse practitioner and physician assistant services by redesignating paragraphs (a)(4) and (a)(5) as paragraphs (a)(5) and (a)(6), respectively and by adding a new paragraph (a)(4) that specifies services and supplies must be furnished in accordance with applicable state law. We are proposing to amend § 405.2452(a), which addresses services and supplies incident to clinical psychologist and clinical social worker services by redesignating paragraphs (a)(4) and (a)(5) as paragraphs (a)(5) and (a)(6), respectively and by adding a new paragraph (a)(4) that states services and supplies must be furnished in accordance with applicable state law. Finally, we are also proposing the removal of the word ''personal'' in §§ 405.2413, 405.2415, and 405.2452 to be consistent with the ''incident to'' provisions in § 410.26 Services and supplies incident to a physician's professional services: Conditions.

The proposed amendments to our regulations are consistent with the traditional approach of relying primarily on the states to regulate the health and safety of their residents in the delivery of health care services. Throughout the Medicare program, as evidenced by several examples above, the qualifications required for the delivery of health care services are generally determined with reference to state law. As discussed above, our current regulations governing practitioners who can bill Medicare directly include a basic requirement to comply with state law when furnishing Medicare covered services. However, the Medicare regulations for ''incident to'' services and supplies do not specifically make compliance with state law a condition of payment for services and supplies furnished and billed as an incident to a practitioner's services. The proposed amendments to our regulations would rectify this situation and make compliance with state law a requirement for all ''incident to'' services. In addition to health and safety benefits we believe would accrue to the Medicare patient population, this approach would assure that federal dollars are not expended for services that do not meet the standards of the states in which they are being furnished, and provides the ability for the federal government to recover funds paid where services and supplies are not furnished in accordance with state law.

We note that this proposal would not impose any new requirements on those practitioners billing the Medicare program since auxiliary personnel furnishing services in a state would already be required to comply with the laws of that state. This regulatory change would simply adopt the existing requirements as a condition of payment under Medicare. Codifying this requirement would provide the federal government a clear basis to deny a claim for Medicare payment when services are not furnished in accordance with applicable state law and the ability to recover funds, as well as assure that Medicare makes payment for services furnished to beneficiaries only when the services meet the requirements imposed by the states to regulate health care delivery in order to ensure the health and safety of their citizens.

I. Complex Chronic Care Management Services

As we discussed in the CY 2013 PFS final rule with comment period, we are committed to primary care and we have increasingly recognized care management as one of the critical components of primary care that contributes to better health for individuals and reduced expenditure growth (77 FR 68978). Accordingly, we have prioritized the development and implementation of a series of initiatives designed to improve payment for, and encourage long-term investment in, care management services. These initiatives include the following programs and demonstrations:

- The Medicare Shared Savings Program (described in ''Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; Final Rule'' which appeared in the November 2, 2011 **Federal Register** (76 FR 67802)).
- The testing of the Pioneer ACO model, designed for experienced health care organizations (described on the Center for Medicare and Medicaid Innovation's (Innovation Center's) Web site at *innovations.cms.gov/initiatives/ACO/Pioneer/index.html*).
- The testing of the Advance Payment ACO model, designed to support organizations participating in the Medicare Shared Savings Program (described on the Innovation Center's Web site at *innovations.cms.gov/initiatives/ACO/Advance-Payment/index.html*).
- The Primary Care Incentive Payment (PCIP) Program (described on the CMS Web site at *www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/PCIP-2011-Payments.pdf*).
- The patient-centered medical home model in the Multi-payer Advanced Primary Care Practice (MAPCP) Demonstration designed to test whether the quality and coordination of health care services are improved by making advanced primary care practices more broadly available (described on the CMS Web site at *www.cms.gov/Medicare/Demonstration-Projects/DemoProjectsEvalRpts/downloads/mapcpdemo_Factsheet.pdf*).
- The Federally Qualified Health Center (FQHC) Advanced Primary Care Practice demonstration (described on the CMS Web site at *www.cms.gov/Medicare/Demonstration-Projects/DemoProjectsEvalRpts/downloads/mapcpdemo_Factsheet.pdf* and the Innovation Center's Web site at *innovations.cms.gov/initiatives/FQHCs/index.html*).
- The Comprehensive Primary Care (CPC) initiative (described on the Innovation Center's Web site at *innovations.cms.gov/initiatives/Comprehensive-Primary-Care-Initiative/index.html*). The CPC initiative is a multi-payer initiative fostering collaboration between public and private health care payers to strengthen primary care in certain markets across the country.

In coordination with these initiatives, we also continue to explore potential refinements to the PFS that would appropriately value care management within Medicare's statutory structure for fee-for-service physician payment and quality reporting. For example, in the CY 2013 PFS final rule with comment period, we adopted a policy to pay separately for care management involving the transition of a beneficiary from care furnished by a treating physician during a hospital stay to care furnished by the beneficiary's primary physician in the community (77 FR 68978 through 68993). We view potential refinements to the PFS such as these as part of a broader strategy that relies on input and information gathered from the initiatives described above, research and demonstrations from other public and private stakeholders, the work of all parties involved in the potentially misvalued code initiative, and from the public at large.

1. Patient Eligibility for Separately Payable Non-Face-to-Face Complex Chronic Care Management Services

Under current PFS policy, the payment for non-face-to-face care management services is bundled into the payment for face-to-face E/M visits because care management is a component of those E/M services. The pre- and post-encounter non-face-to-face care management work is included in calculating the total work for the typical E/M services, and the total work for the typical service is used to develop RVUs for the E/M services. In the CY 2012 PFS proposed rule, we highlighted some of the E/M services that include substantial care management work. Specifically, we noted that the vignettes that describe a typical service for mid-level office/outpatient services (CPT codes 99203 and 99213) include furnishing care management, communication, and other necessary care management related to the office visit in the post-service work (76 FR 42917).

However, the physician community continues to tell us that the care management included in many of the E/M services, such as office visits, does not adequately describe the typical non-face-to-face care management work involved for certain categories of beneficiaries. Because the current E/M office/outpatient visit CPT codes were designed to support all office visits and reflect an overall orientation toward episodic treatment, we agree that these E/M codes may not reflect all the services and resources required to furnish comprehensive, coordinated care management for certain categories of beneficiaries. For example, we currently pay physicians separately for the non face-to-face care plan oversight services furnished to beneficiaries under the care of home health agencies or hospices and we currently pay separately for care management services furnished to beneficiaries transitioning from care furnished by a treating physician during a hospital stay to care furnished by the beneficiary's primary physician in the community.

Similar to these situations, we believe that the resources required to furnish complex chronic care management services to beneficiaries with multiple (that is, two or more) chronic conditions are not adequately reflected in the existing E/M codes. Furnishing care management to beneficiaries with multiple chronic conditions requires complex and multidisciplinary care modalities that involve: Regular physician development and/or revision of care plans; subsequent reports of patient status; review of laboratory and other studies; communication with other health professionals not employed in the same practice who are involved in the patient's care; integration of new information into the care plan; and/or adjustment of medical therapy. Therefore, for CY 2015, we are proposing to establish a separate payment under the PFS for complex chronic care management services furnished to patients with multiple complex chronic conditions that are expected to last at least 12 months or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline.

We have performed an analysis of Medicare claims for patients with selected multiple chronic conditions (see *http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Chronic-Conditions/Downloads/2012Chartbook.pdf*). This analysis indicated that patients with these selected multiple chronic conditions are at increased risk for hospitalizations, use of post-acute care services, and emergency department visits. We believe these findings would hold in general for patients with multiple

complex chronic conditions that are expected to last at least 12 months or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. We believe that successful efforts to improve chronic care management for these patients could improve the quality of care while simultaneously decreasing costs (for example, through reductions in hospitalizations, use of post-acute care services, and emergency department visits.)

As described below in more detail in section II.I.3, we intend to develop standards for furnishing complex chronic care management services to ensure that the physicians who bill for these services have the capability to provide them. One of the primary reasons for our proposed 2015 implementation date is to provide sufficient time to develop and obtain public input on the standards necessary to demonstrate the capability to provide these services.

2. Scope of Complex Chronic Care Management Services

We consider the scope of complex chronic care management services to include:

- The provision of 24-hour-a-day, 7-day-a-week access to address a patient's acute complex chronic care needs. To accomplish these tasks, we would expect that the patient would be provided with a means to make timely contact with health care providers in the practice to address urgent complex chronic care needs regardless of the time of day or day of the week. Members of the complex chronic care team who are involved in the after-hours care of a patient must have access to the patient's full electronic medical record even when the office is closed so they can continue to participate in care decisions with the patient.
- Continuity of care with a designated practitioner or member of the care team with whom the patient is able to get successive routine appointments.
- Care management for chronic conditions including systematic assessment of patient's medical, functional, and psychosocial needs; system-based approaches to ensure timely receipt of all recommended preventive care services; medication reconciliation with review of adherence and potential interactions; and oversight of patient self-management of medications. In consultation with the patient and other key practitioners treating the patient, the practitioner furnishing complex chronic care management services should create a patient-centered plan of care document to assure that care is provided in a way that is congruent with patient choices and values. A plan of care is based on a physical, mental, cognitive, psychosocial, functional and environmental (re)assessment and an inventory of resources and supports. It is a comprehensive plan of care for all health issues. It typically includes, but is not limited to, the following elements: Problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identify the individuals responsible for each intervention, requirements for periodic review and, when applicable, revision, of the care plan. The provider should seek to reflect a full list of problems, medications and medication allergies in the electronic health record to inform the care plan, care coordination and ongoing clinical care.
- Management of care transitions within health care including referrals to other clinicians, visits following a patient visit to an emergency department, and visits following discharges from hospitals and skilled nursing facilities. The practice must be able to facilitate communication of relevant patient information through electronic exchange of a summary care record with other health care providers regarding these transitions. The practice must also have qualified personnel who are available to deliver transitional care services to a patient in a timely way so as to reduce the need for repeat visits to emergency departments and re-admissions to hospitals and skilled nursing facilities.
- Coordination with home and community based clinical service providers required to support a patient's psychosocial needs and functional deficits. Communication to and from home and community based providers regarding these clinical patient needs must be documented in practice's medical record system.
- Enhanced opportunities for a patient to communicate with the provider regarding their care through not only the telephone but also through the use of secure messaging, internet or other asynchronous non face-to-face consultation methods.

3. Standards for Furnishing Complex Chronic Care Coordination Services

Not all physicians and qualified nonphysician practitioners who wish to furnish complex chronic care management services currently have the capability to fully provide the scope of services described in section II.I.2. without making additional investments in technology, staff training, and the development and maintenance of systems and processes to furnish the services. We intend to establish standards that would be necessary to provide high quality, safe complex chronic care management services. For example, potential standards could include the following:

- The practice must be using a certified Electronic Health Record (EHR) for beneficiary care that meets the most recent HHS regulatory standard for meaningful use. The EHR must be integrated into the practice to support access to care, care coordination, care management and communication.
- The practice must employ one or more advanced practice registered nurses or physicians assistants whose written job descriptions indicate that their job roles include and are appropriately scaled to meet the needs for beneficiaries receiving services in the practice who require complex chronic care management services provided by the practice.
- The practice must be able to demonstrate the use of written protocols by staff participating in the furnishing of services that describe: (1) The methods and expected ''norms'' for furnishing each component of complex chronic care management services provided by the practice; (2) the strategies for systematically furnishing health risk assessments to identify all beneficiaries eligible and who may be willing to participate in the complex chronic care management services; (3) the procedures for informing eligible beneficiaries about complex chronic care management services and obtaining their consent; (4) the steps for monitoring the medical, functional and social needs of all beneficiaries receiving complex chronic care management services; (5) system based approaches to ensure timely delivery of all recommended preventive care services to beneficiaries; (6) guidelines for communicating common and anticipated clinical and non-clinical issues to beneficiaries; (7) care plans for beneficiaries post-discharge from an emergency department or other institutional health care setting, to assist beneficiaries with follow up visits with clinical and other suppliers or providers, and in managing any changes in their medications; (8) a systematic approach to communicate and electronically exchange clinical information with and coordinate care among all service providers involved in

the ongoing care of a beneficiary receiving complex chronic care management services; (9) a systematic approach for linking the practice and a beneficiary receiving complex chronic care management services with long-term services and supports including home and community-based services; (10) a systematic approach to the care management of vulnerable beneficiary populations such as racial and ethnic minorities and people with disabilities; and (11) patient education to assist the beneficiary to self-manage a chronic condition that is considered at least one of his/her complex chronic conditions. These protocols must be reviewed and updated as is appropriate based on the best available clinical information at least annually.

• All practitioners including advanced practice registered nurses or physicians assistants, involved in the delivery of complex chronic care management services must have access at the time of service to the beneficiary's EHR that includes all of the elements necessary to meet the most recent HHS regulatory standard for meaningful use. This includes any and all clinical staff providing after hours care to ensure that the complex chronic care management services are available with this level of EHR support in the practice or remotely through a Virtual Private Network (VPN), a secure Web site, or a health information exchange (HIE) 24 hours per day and 7 days a week.

Some have suggested that, to furnish these services, practices could be recognized as a medical home by one of the national organizations including: the National Committee for Quality Assurance (NCQA), the Accreditation Association for Ambulatory Health Care, The Joint Commission, URAC, etc.; which are formally recognizing primary care practices as a patient-centered medical home. We understand there are differences among the approaches taken by national organizations that formally recognize medical homes and therefore, we seek comment on these and other potential care coordination standards, and the potential for CMS recognizing a formal patient-centered medical home designation as one means for a practice to demonstrate it has met any final care coordination standards for furnishing complex chronic care management services. Any regulatory changes would be addressed through separate notice-and-comment rulemaking.

4. Billing for Separately Payable Complex Chronic Care Management Services and Obtaining Informed Consent From the Beneficiary

To recognize the additional resources required to provide complex chronic care management services to patients with multiple chronic conditions, we are proposing to create two new separately payable alphanumeric G-codes.

Complex chronic care management services furnished to patients with multiple (two or more) complex chronic conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline;

GXXX1, initial services; one or more hours; initial 90 days

GXXX2, subsequent services; one or more hours; subsequent 90 days

Typically, we would expect the one or more hours of services to be provided by clinical staff directed by a physician or other qualified health care professional. Initial services include obtaining the initial informed consent from the beneficiary as described below and the initial implementation of the complex chronic care management services described in section II.I.2. of this proposed rule.

Not all patients who are eligible for separately payable complex chronic care management services may necessarily want these services to be provided. Therefore, before the practitioner can furnish or bill for these services, the eligible beneficiary must be informed about the availability of the services from the practitioner and provide his or her consent to have the services provided, including the electronic communication of the patient's information with other treating providers as part of care coordination. This would include a discussion with the patient about what complex chronic care management services are, how these services are accessed, how their information will be shared among other providers in the care team, and that cost-sharing applies to these services even when they are not delivered face-to-face in the practice. To bill for the initial services (GXXX1), the practitioner would be required to document in the patient's medical record that all of the complex chronic care management services were explained and offered to the patient, noting the patient's decision to accept these services. Also, a written or electronic copy of the care plan would be provided to the beneficiary and this would also be recorded in the beneficiary's electronic medical record.

A practitioner would need to reaffirm with the beneficiary at least every 12 months whether he or she wishes to continue to receive complex chronic care management services during the following 12-month period.

The informed consent for complex chronic care management services could be revoked by the beneficiary at any time. However, if the revocation occurs during a current 90-day complex chronic care management period, the revocation would not be effective until the end of that period. The beneficiary could notify the practitioner either verbally or in writing. At the time the informed consent is obtained, the practitioner would be required to inform the beneficiary of the right to stop the complex chronic care management services at any time and the effect of a revocation of consent on complex chronic care management services. Revocation by the beneficiary of the informed consent must also be noted by recording the date of the revocation in the beneficiary's medical record and by providing the beneficiary with written confirmation that the practitioner would not be providing complex chronic care management services beyond the current 90 day period.

A beneficiary who has revoked informed consent for complex chronic care management services from one practitioner may choose instead to receive these services from a different practitioner, which can begin at the conclusion of the current 90-day period. The new practitioner would need to fulfill all the requirements for billing GXXX1 and then GXXX2.

Prior to submitting a claim for complex chronic care management services, the practitioner must notify the beneficiary that a claim for these services will be submitted to Medicare. The notification must indicate: that the beneficiary has been receiving these services over the previous 90-day period (noting the beginning and end dates for the 90-day period), the reason(s) why the services were provided and a description of the services provided. The notice may be delivered by a means of communication mutually agreed to by the practitioner and beneficiary such as mail, email, or facsimile, or in person (for example, at the time of an office visit.) The notice must be received by the beneficiary before the practitioner submits the claim for the services. A separate notice must be received by the beneficiary for each 90-day period for which the services will be billed. A copy of the notice should be included in the medical record.

In addition to the requirement that at least an hour of complex chronic care

management services be furnished to the patient, we propose that billing for subsequent complex chronic care management services (GXXX2) would be limited to those 90-day periods in which the medical needs of the patient require substantial revision of the care plan discussed in section II.I.2. Substantial revision to a care plan typically is required when the patient's clinical condition changes sufficiently to require: Significantly more intensive monitoring by clinical staff, significant changes in the treatment regimen, and significant time to educate the patient/caregiver about the patient's condition/change in treatment plan and prognosis.

Because the payment for non-face-to-face care management services is generally bundled into the payment for face-to-face E/M visits, the resources required to provide care management services for patients without multiple chronic conditions or for less than the one or more hours of clinical staff time continues to be reflected in the payment for face-to-face E/M visits. For similar reasons, the resources required to provide care management services to patients residing in facility settings where care management activity by facility staff would be included in the associated facility payment also continues to be reflected in the payment for face-to-face E/M visits.

We propose that complex chronic care management services include transitional care management services (CPT 99495, 99496), home health care supervision (HCPCS G0181), and hospice care supervision (HCPCS G0182). If furnished, in order to avoid duplicate payment, we propose that these services may not be billed separately during the 90 days for which either GXXX1 or GXXX2 are billed. For similar reasons, we propose that GXXX1 or GXXX2 cannot be billed separately if ESRD services (CPT 90951–90970) are billed during the same 90 days.

Practitioners billing a complex chronic care management code accept responsibility for managing and coordinating the beneficiary's care over this period. Therefore, we propose to pay only one claim for the complex chronic care management services (either GXXX1 or GXXX2) billed per beneficiary at the conclusion of each 90-day period. All of the complex chronic care management services delineated in section II.H.2 above that are relevant to the patient must be furnished in order to bill GXXX1 or GXXX2 for a 90-day period.

If a face-to-face visit is provided during the 90-day period by the practitioner who is furnishing complex chronic care management services, the practitioner should report the appropriate evaluation and management code in addition to GXXX1 or GXXX2.

We note that to bill for these services, we propose that at least 60 minutes of complex chronic care management services must be provided. Time of less than 60 minutes over the 90 day period could not be rounded up to 60 minutes in order to bill for these services. We also propose that for purposes of meeting the 60-minute requirement, the practitioner could count the time of only one clinical staff member for a particular segment of time, and could not count overlapping intervals such as when two or more clinical staff members are meeting about the patient.

In future rulemaking, we intend to propose RVUs for complex chronic care management services. To inform our proposal, we seek input on the physician work and practice expenses associated with these services.

5. Complex Chronic Care Management Services and the Annual Wellness Visit (AWV) (HCPCS codes G0438, G0439)

We are proposing that a beneficiary must have received an AWV in the past twelve months in order for a practitioner to be able to bill separately for complex chronic care management services. We believe that the linking of these services to the AWV makes sense for several reasons. First, the AWV is designed to enable a practitioner to systematically capture information that is essential for the development of a care plan. This includes the establishment of a list of current practitioners and suppliers that are regularly involved in providing medical care to the beneficiary, the assessment of the beneficiary's functional status related to chronic health conditions, the assessment of whether the beneficiary suffers from any cognitive limitations or mental health conditions that could impair self-management of chronic health conditions, and an assessment of the beneficiary's preventive health care needs including those that contribute to or result from a beneficiary's chronic conditions. Second, the beneficiary's selection of a practitioner to furnish the AWV is a useful additional indicator to assist us in knowing which single practitioner a beneficiary has chosen to furnish complex chronic care management services. While a beneficiary would retain the right to choose and change the practitioner to furnish complex chronic care management services, we do not believe that it is in the interest of a beneficiary to have more than one practitioner at a time coordinating the beneficiary's care and we do not intend to pay multiple practitioners for furnishing these services over the same time period. Third, the AWV is updated annually which is consistent with the minimal interval for reviewing and modifying the care plan required for the complex chronic care management services.

We would expect that the practitioner the beneficiary chooses for the AWV would be the practitioner furnishing the complex chronic care management services. For the less frequent situations when a beneficiary chooses a different practitioner to furnish the complex chronic care management services from the practitioner who in the previous year furnished the AWV, the practitioner furnishing the complex chronic are management services would need to obtain a copy of the assessment and care plan developed between the beneficiary and the practitioner who furnished the AWV prior to billing for complex chronic care management services.

Because a beneficiary is precluded from receiving an AWV within 12 months after the effective date of his or her first Medicare Part B coverage period, for that time period we propose the Initial Preventive Physical Examination (G0402) can substitute for the AWV to allow a beneficiary to receive complex chronic care management services.

6. Complex Chronic Care Management Services Furnished Incident to a Physician's Service Under General Physician Supervision

We outline the requirements for billing for services furnished in the office, but not personally and directly performed by the physician or qualified nonphysician practitioner (referred to as a ''practitioner'' in the following discussion), under our ''incident to'' requirements in regulations and in section 60, Chapter 12, of Medicare Benefit Policy Manual (100–02). One key requirement of ''incident to'' services is that a practitioner (as the term is used in section II.H of this proposed rule directly supervise the provision of services by auxiliary personnel by being in the office suite and able to furnish assistance and direction throughout the provision of the service. Section 60.4 of the Manual specifically discusses the one exception that allows for general supervision of ''incident to'' services furnished to homebound patients in medically underserved areas. Under that provision, we identify more specific requirements for the personnel that can furnish ''incident to'' services under general supervision. For example, we require that the personnel must be

employed by, employed by the same entity, or an independent contractor of, the practitioner billing the ''incident to'' services.

One of the required capabilities for a physician to furnish complex chronic care management services is 24-hour-a-day, 7-day-a-week beneficiary access to the practice to address the patient's complex chronic care needs. We would expect that the patient would be provided with a means to make timely contact with health care providers in the practice to address those needs regardless of the time of day or day of the week. If the patient has a complex chronic care need outside of the practice's normal business hours, the patient's initial contact with the practice for that need could be with clinical staff employed by the practice, (for example, a nurse or other appropriate auxiliary personnel) and not necessarily with a physician or practitioner. Those services would be furnished incident to the services of the billing practitioner.

We have also proposed to require that at least one hour of complex chronic care services be furnished to a patient during the 90-day period in order for the practitioner to be able to bill separately for the chronic care services. The time, if not personally performed by the physician, must be directed by the physician. We are proposing that the time spent by a clinical staff person furnishing aspects of complex chronic care services outside of the practice's normal business hours during which there is no direct physician supervision would count towards the one hour requirement even though the services do not meet the direct supervision requirement for ''incident to'' services.

We believe that the additional requirements we impose for personnel under the exception for general supervision for homebound patients in medically underserved areas should apply in these circumstances where we are allowing a practitioner to bill Medicare for complex chronic care management services furnished under their general supervision and incident to their professional services. In both of these unusual cases, these requirements help to ensure that appropriate services are being furnished by appropriate personnel in the absence of the direct supervision. Specifically, we propose that if a practice meets all the conditions required to bill separately for complex chronic care management services, the time spent by a clinical staff employee furnishing aspects of these services to address a patient's complex chronic care need outside of the practice's normal business hours is counted towards the one hour requirement when at a minimum the following conditions are met:

- The clinical staff person is directly employed by the physician and the employed clinical staff person meets any relevant state requirements.
- The services of the clinical staff person are an integral part of the physician's complex chronic care management services to the patient (the patient must be one the physician is treating and for which informed consent is in effect), and are performed under the general supervision of the physician. General supervision means that the physician need not be physically present when the services are performed; however, the services must be performed under the physician's overall supervision and control. Contact is maintained between the clinical staff person and the physician (for example, the employed clinical staff person contacts the physician directly if warranted and the physician retains professional responsibility for the service.)
- The services of the employed clinical staff person meet all other ''incident to'' requirements with the exception of direct supervision.

7. Complex Chronic Care Management Services and the Primary Care Incentive Payment Program (PCIP)

Under section 1833(x) of the Act, the PCIP provides a 10 percent incentive payment for primary care services within a specific range of E/M services when furnished by a primary care practitioner. Specific physician specialties and qualified nonphysician practitioners can qualify as primary care practitioners if 60 percent of their PFS allowed charges are primary care services. As we explained in the CY 2011 PFS final rule (75 FR 73435 through 73436), we do not believe the statute authorizes us to add codes (additional services) to the definition of primary care services. However, to avoid inadvertently disqualifying community primary care physicians who follow their patients into the hospital setting, we finalized a policy to remove allowed charges for certain E/M services furnished to hospital inpatients and outpatients from the total allowed charges in the PCIP primary care percentage calculation. In the CY 2013 final rule (77 FR 68993), we adopted a policy that the TCM code should be treated in the same manner as those services for the purposes of PCIP because post-discharge TCM services are a complement in the community setting to the hospital-based discharge day management services already excluded from the PCIP denominator. Similar to the codes already excluded from the PCIP denominator, we expressed concern that inclusion of the TCM code in the denominator of the primary care percentage calculation could produce unwarranted bias against ''true primary care practitioners'' who are involved in furnishing post-discharge care to their patients.

Complex chronic care management services are also similar to the services that we have already excluded from the from the PCIP denominator. For example, complex chronic care management includes management of care transitions within health care settings including referrals to other clinicians, visits following a patient visit to an emergency department, and visits following discharges from hospitals and skilled nursing facilities. Therefore, while physicians and qualified nonphysician practitioners who furnish complex chronic care management services would not receive an additional incentive payment under the PCIP for the service itself (because it is not considered a ''primary care service'' for purposes of the PCIP), we propose that the allowed charges for complex chronic care management services would not be included in the denominator when calculating a physician's or practitioner's percent of allowed charges that were primary care services for purposes of the PCIP.

8. Summary

In summary, we are proposing for CY 2015 to establish a separate payment under the PFS for complex chronic care management services furnished to patients with multiple complex chronic conditions that are expected to last at least 12 months or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, as discussed in section II.I.1. We are proposing the scope of these complex chronic care management services discussed in section II.I.2; the billing requirements for these services as discussed in section II.I.4; the AWV requirement as discussed in section II.I.5; the general supervision requirements as discussed in section II.I.6, and the PCIP denominator exclusion as discussed in section II.I.7.

We are seeking input from the public on, the standards required to provide these services as discussed in section II.I.3, and the work and PE that would be associated with these services.

We are making this proposal to establish codes and separate payment for complex chronic care management services in the context of the broader

multi-year strategy to appropriately recognize and value primary care and care management services. Should this proposal become final policy, it may be a short-term payment strategy that would be modified and/or revised to be consistent with broader primary care, and care management and coordination services if the agency decides to pursue payment for a broader set of management and coordination services in future rulemaking. We also note that as we consider a final policy, we would assess the potential impact of the policy on our current programs and demonstrations designed to improve payment for, and encourage long-term investment in, care management services. Likewise, to assure that there are not duplicate payments for delivery of care management services, we would consider whether such payments are appropriate for providers participating in other programs and demonstrations.

J. Chiropractors Billing for Evaluation and Management Services

Section 1861(r)(5) of the Act includes chiropractors in its definition of ''physician'' with language limiting chiropractors to ''treatment by means of manual manipulation of the spine (to correct a subluxation).'' Specifically, the Act says:

> The term ''physician,'' when used in connection with the performance of any function or actions means . . . a chiropractor who is licensed as such by the State (or in a State which does not license chiropractors as such, is legally authorized to perform the services of a chiropractor in the jurisdiction in which he performs such services) and who meets uniform minimum standards promulgated by the Secretary, but only for the purpose of sections 1861(s)(1) and 1861(s)(2)(A) and only with respect to treatment by means of manual manipulation of the spine (to correct a subluxation) which he is legally authorized to perform the State or jurisdiction in which such treatment is provided.

The statute, thus, limits chiropractic coverage to treatment of subluxation of the spine. Our interpretation of this language allows payment to chiropractors for chiropractic manual manipulation to correct a subluxation of the spine. Specifically, we provide for payment of the following codes listed in the chiropractic section of the CPT Manual.

98940—Chiropractic manipulation treatment (CMT), spinal, 1–2 regions
98941—CMT spinal, 3–4 regions
98942—CMT spinal, 5 regions

(CPT includes an additional CPT code 98943—CMT extraspinal 1 or more regions for which Medicare does not cover as it is not a spinal manipulation.)

Section 240.1.2 of the IOM 100–02 includes requirements that must be met to demonstrate that these services are necessary, using either x-ray or physical examination. In addition, it includes documentation requirements for initial and subsequent visits. These include a history and physical exam.

According to the CPT manual, the codes for CMT describe services including a ''pre-manipulative patient assessment,'' which is consistent with the history and physical exam requirement discussed above. In determining the relative value assigned to the CMT services we include this pre-manipulative patient assessment.

These chiropractic codes have a global surgery indicator of 0, meaning that we do not pay separately for services provided on the same day and related to the same service. The CPT manual notes that separate E/M services can be reported with a -25 modifier ''if the patient's condition requires a significant, separately identified E/M service above and beyond the usual preservice and postservice work associated with the procedures.'' It goes on to note that a separate diagnosis is not required.

We currently do not allow payment for E/M services to chiropractors as we have not identified an E/M service that would be related to treatment of subluxation of the spine, which is the statutory requirement, beyond the preservice and postservice work associated with the CMT. We have believed that the assessments included in the CMT codes accurately capture the E/M that would typically be furnished by chiropractors in furnishing CMT services.

Questions have arisen as to whether it would be appropriate to allow chiropractors to furnish and bill Medicare for E/M services, especially in light of the CPT language regarding the reporting of a separate E/M service on the same day using a -25 modifier. We would note that CPT codes are the HIPPA compliant code set. Their use is not limited to Medicare, and other insurers may not limit chiropractic coverage to manual manipulation to correct subluxation of the spine. We are seeking comment to assess whether there are situations in which E/M services that are not included in the CMT codes, but would meet the statutory requirements for chiropractor services, would be appropriate. We are not proposing to pay chiropractors for E/M services in CY 2014. If after receiving and analyzing public comment we determine that it would be appropriate to modify our policy with respect to chiropractors and E/M services, we would do so in future rulemaking.

Specifically, we are seeking comments on the following questions:

- Are there situations where a chiropractor would furnish E/M services that are with respect to treatment by means of manual manipulation of the spine (to correct a subluxation) that are not included within the definition of the CMT codes? Specifically, we are seeking information on the situations, the services that would be provided, and the E/M codes that would be billed.
- Would such a policy expand access to chiropractic services for Medicare beneficiaries? Are there other benefits that would accrue?
- If payment were to be allowed for E/M services, which codes would be appropriate to report chiropractic E/M services? For services provided in an office, would it be appropriate to allow billing of all five office E/M codes for new or existing patient as appropriate? Should one or a set of codes be created specifically for chiropractic E/M services similar to those for therapy evaluations or ophthalmic evaluations? With what frequency should chiropractors be allowed to bill E/M services?
- What would justify E/M services beyond those included in CMT codes? Should they be allowed on every treatment day or only at the onset of treatment?
- Are these E/M services ones that are already being furnished by another physician or other practitioner? If these are not services currently covered by Medicare, what volume could be expected?

III. Other Provisions of the Proposed Regulations

A. Medicare Coverage of Items and Services in FDA Investigational Device Exemption Clinical Studies—Revision of Medicare Coverage

1. Statutory Authority and Background

This proposed rule would revise certain Medicare regulations currently codified in § 405.201 through 405.214, and § 411.15(o) relating to coverage of the costs of routine items and services in Category A Investigational device exemption (IDE) studies and trials, and coverage of the costs of Category B, investigational devices and the costs of routine items and services in Category B investigational device exemption (IDE) studies and trials. It is based on section 1862(m) of the Act, which, among other things, authorizes the Secretary to establish criteria to ensure that studies and trials of Category A devices conform to appropriate scientific and ethical

standards. We are proposing to establish those criteria that ensure that studies and trials of Category A devices conform to appropriate scientific and ethical standards. We are also proposing, based on our rulemaking authority in section 1871 of the Act, to extend the same criteria proposed for Category A IDE studies and trials to Category B IDE studies and trials. Our proposed rules are necessary to carry out the administration of the insurance program under Title XVIII of the Act). Finally, to ensure that coverage of items and services in IDE studies and trials is uniform across Medicare administrative regions, we are proposing that IDE coverage decisions will be made by CMS centrally.

On September 8, 1995, the FDA and CMS (then known as HCFA) entered into an interagency agreement in which the FDA agreed to categorize investigational device exemptions (IDEs) for purposes of Medicare coverage. The process identified in this interagency agreement is reflected in a September 19, 1995 final rule (60 FR 48417). The September 19, 1995 rule described two FDA device categories: (1) Category A devices were described as experimental/investigational devices; and (2) Category B devices were described as nonexperimental/investigational devices.

a. Coverage of IDE—Costs of Routine Items, Services, and Devices

The September 19, 1995 rule created a path to Medicare coverage under certain circumstances for Category B investigational devices and the costs of routine items and services in IDE studies and trials. The IDE coverage policy gave Medicare beneficiaries the opportunity to have earlier access to new medical devices, but these determinations were made by local Medicare contractors sometimes on a claim-by-claim basis. Although the current IDE policy was a path to earlier access to certain devices and the costs of routine items and services, we were also hearing that the IDE coverage approval process was burdensome and created national variability that made it difficult for study sponsors to conduct national IDE studies.

As we evaluated the IDE review and approval process we heard and sought out feedback from stakeholders (for example, manufacturers, study sponsors, and hospitals). Most of the stakeholders told us that obtaining coverage of the device and the costs of routine items and services was inefficient; that each Medicare contractor has different processes to review IDE devices and studies. It also became apparent that the lack of centralization led to inconsistent IDE coverage across the Medicare contractors. These factors contributed to some reluctance to enroll Medicare beneficiaries in IDE studies.

We also requested feedback from the Medicare local contractors. We found that the Medicare contractors reviewed pertinent available evidence and the FDA-approved IDE study protocol as factors in their decision-making process. Reviewing all of the information related to the IDE device and the FDA-approved study was a way to ensure that the device, as used, is reasonable and necessary for the Medicare beneficiary and furnished in a setting appropriate to the patient's medical needs. While each contractor's process was appropriate, they were in practice slightly different from contractor to contractor; and in most cases duplicative. Furthermore, we found that local Medicare contractors were applying varying levels of scrutiny in reviewing IDE devices and the costs of routine items and services within IDE studies. Most contractors reviewed IDE study protocols extensively, while other contractors may have reviewed them less extensively.

2. Proposals

We are proposing a transparent, centralized review process that would be more efficient by reducing the burden for stakeholders interested in conducting nationwide trials. Once the IDE coverage process is centralized, there would be a single entity making the IDE coverage decision. This enhances administrative efficiency by eliminating the need for duplicative reviews by Medicare local contractors and the submission of duplicated coverage requests to different contractors by stakeholders. We believe that a centralized review process would not significantly reduce the number of IDE devices currently covered; but we are specifically requesting public to comment on this issue. Changing the review and decision of IDE coverage to a centralized review process in no way changes any beneficiary appeal rights.

a. Category A IDE Devices

In 2003, section 731(b) of the Prescription Drug, Improvement, and Modernization Act (MMA) provided that the Secretary could not exclude coverage for certain routine care costs in IDE studies and trials of Category A devices, provided to beneficiaries under section 1862(a)(1)(A) of the Act. A Category A IDE device is a device for which the initial questions of safety and effectiveness have not been resolved and the FDA is unsure whether the device type can be safe and effective. In addition, the Secretary was given the authority to ensure that any Category A IDE device study conform to appropriate scientific and ethical standards (section 1862(m)(1) of the Act). While the Congress gave the Secretary the authority to determine the scope of routine care costs, the Congress did not authorize or establish coverage for the Category A device itself. Therefore, we are not proposing any changes to coverage of the Category A IDE device. Category A devices would continue to be noncovered under section 1862(a)(1)(A) of the Act.

The Congress has expressly authorized the Secretary to establish criteria to ensure that any Category A IDE device study conform to appropriate scientific and ethical standards. (For more information, see section 1862(m)(2)(B) of the Act.) In the November 15, 2004 conforming final rule (69 FR 66420), we finalized a regulatory provision at § 405.207(b)(2) requiring Category A IDE devices be furnished in conjunction with an FDA-approved clinical study and that the study standards would be defined through the national coverage determination (NCD) process. Rather than establish standards through the NCD process, we would specify the study standards in this proposed rule. We believe the Congress gave the Secretary the authority to create appropriate scientific and ethical standards because of their importance in protecting for Medicare beneficiaries.

The use of standards is essential to protecting Medicare study participants in category A trials. Studies that have high scientific and ethical standards lead to generalizable and reliable knowledge for Medicare providers, practitioners and beneficiaries.

We believe that minimum standards are needed for IDE studies and trials for which Medicare coverage of devices or routine items and services is provided to ensure that Medicare beneficiaries who volunteer to participate in studies are protected and that the study design is appropriate to answer questions of importance to Medicare and its beneficiaries. Although an item or service may be considered ''reasonable and necessary'' when used by a clinician for the benefit of an individual patient, it may not necessarily be reasonable and necessary when used in the context of an IDE study or trial. The use of such an item or service in an IDE study or trial may expose the study participants to increased risks that must be balanced by other factors, including the likelihood that the study would add important information to the body of

medical knowledge. There are numerous studies that may be considered ''scientifically valid,'' but are of little benefit to patients or to the Medicare program.

It is essential that CMS-approved IDE studies or trials serve the best interests of Medicare beneficiaries. We believe, in concert with other federal agencies, that appropriate study design is critical to ensure that not only are participants in research studies exposed to the least risk possible, but also to ensure that the results from the study would be useful in improving healthcare delivery. Scientifically and ethically flawed studies will not produce valid results, exposing Medicare beneficiaries to unnecessary risk; and wasting time and resources for all involved.

We are proposing 13 standards that Category A IDE studies must meet in order for the costs of routine care items and services to be coverable. The first four and the seventh proposed standards embody ethical values. The fifth and sixth proposed standards were developed in response to reports of egregious misconduct in the past in endeavors to conduct clinical research by placing individuals at the risk of harm for the good of others. Both the independent review of protocols and informed consent by study participants are warranted to provide accountability to the public that the conduct of the study is not compromised by potential conflicts of interest on the part of investigators, and the study subject's autonomy is respected.

The IDE study and trial standards that we are proposing are as follows:

- The principal purpose of the study is to test whether the item or service meaningfully improves health outcomes of patients who are represented by the Medicare-enrolled subjects.
- The rationale for the study is well supported by available scientific and medical information, or it is intended to clarify or establish the health outcomes of interventions already in common clinical use.
- The study results are not anticipated to unjustifiably duplicate existing knowledge.
- The study design is methodologically appropriate and the anticipated number of enrolled subjects is appropriate to answer the research question(s) being asked in the study.
- The study is sponsored by an organization or individual capable of completing it successfully.
- The study is in compliance with all applicable federal regulations concerning the protection of human subjects found at 45 CFR part 46.
- All aspects of the study are conducted according to appropriate standards of scientific integrity set by the International Committee of Medical Journal Editors.
- The study has a written protocol that clearly demonstrates adherence to the standards listed here as Medicare requirements.
- Where appropriate, the clinical research study is not designed to exclusively test toxicity or disease pathophysiology in healthy individuals. Trials of all medical technologies measuring therapeutic outcomes as one of the objectives may be exempt from this standard only if the disease or condition being studied is life threatening as defined in 21 CFR 312.81(a) and the patient has no other viable treatment options.
- The study is registered on the *ClinicalTrials.gov* Web site and/or the Registry of Patient Registries (RoPR) by the principal sponsor/investigator prior to the enrollment of the first study subject.
- The study protocol specifies the method and timing of public release of results on all pre-specified outcomes, including release of negative outcomes. The release should be hastened if the study is terminated early. The results must be made public within 24 months of the end of data collection. If a report is planned to be published in a peer reviewed journal, then that initial release may be an abstract that meets the requirements of the International Committee of Medical Journal Editors (*http://www.icmje.org*). However, a full report of the outcomes must be made public no later than 3 years after the end of data collection.
- The study protocol explicitly discusses subpopulations affected by the item or service under investigation, particularly traditionally underrepresented groups in clinical studies, how the inclusion and exclusion criteria effect enrollment of these populations, and a plan for the retention and reporting of said populations in the study. If the inclusion and exclusion criteria are expected to have a negative effect on the recruitment or retention of underrepresented populations, the protocol must discuss why these criteria are necessary.
- The study protocol explicitly discusses how the results are or are not expected to be generalizable to subsections of the Medicare population to infer whether Medicare patients may benefit from the intervention. Separate discussions in the protocol may be necessary for populations eligible for Medicare due to age, disability or Medicaid eligibility.

In proposed § 405.212(a)(1) through (7), we would set forth scientific standards for IDE studies or trials in which providers, practitioners, suppliers or beneficiaries are requesting payment for items or services provided to Medicare beneficiaries participating in the IDE study or trial.

While most studies are undertaken only after a detailed protocol has been developed, some are not. The protocol is the primary source of knowledge on the proposed design and management of the study. Without this document, reviewers and funding entities are unable to ascertain the quality and validity of the study. The exercise of committing to paper all the aspects of the study is crucial to ensuring that all potential concerns have been addressed. It is impossible to evaluate the adequacy of trial design without a written protocol. We do not propose to define the content of that protocol. Numerous federal agencies and other scientific entities have done that. However, in proposed § 405.212(a)(8) we would specify that all IDE studies or trials must have a written protocol addressing the Medicare standards.

In proposed § 405.212(a)(9), we would specify the ''therapeutic intent'' requirement. We are proposing a standard that limits IDE studies to those that do not exclusively test toxicity or disease pathophysiology in healthy individuals but also have a therapeutic outcome. However, the study may exclusively test toxicity or disease pathophysiology, if the disease or condition being studied must be life-threatening as defined in 21 CFR 312.81(a) and the patient has no other viable treatment options or is severely debilitating as defined in 21 CFR 312.81(b). In proposed § 405.212(a)(10), we would specify the standard that requires that IDE studies and trials that Medicare supports be registered on *ClinicalTrials.gov site*. The National Institutes of Health/National Library of Medicine (NIH/NLM) established a clinical trials registry (*ClinicalTrials.gov*) to meet the requirement of the 1997 Food and Drug Administration Modernization Act. After a thorough review of the NIH/NLM *ClinicalTrials.gov* Web site, we believe that all studies covered under this policy should be registered in this registry prior to enrollment of the first subject.

Registration into *ClinicalTrials.gov* assures that beneficiaries would have pertinent information about and IDE study or trial Medicare supports—an essential component of transparency to

facilitate patient-provider informed decision-making. The World Health Organization and International Committee of Medical Journal Editors (WHO/ICMJE) data elements are the required data elements in this registry. Information about this registry may be obtained at *http://www.clinicaltrials.gov/*. We believe that registration serves the public's desire to obtain information about the studies that their Medicare premiums and tax dollars support.

In proposed § 405.212(a)(11), we would address the issue of dissemination of the IDE study or trial findings. We believe that it is imperative that the results of IDE studies and trials for which Medicare has made payment of any clinical costs be made available to the public regardless of the outcomes. If trial results are not published, they do not add to the clinical evidence base and cannot be used for medical decision-making. For this standard, we are suggesting that the study protocol provides a discussion of the publication/dissemination plan of the study findings.

In proposed § 405.212(a)(12), we would focus on the issue of under-representation of specific demographic groups in U.S. clinical research studies. We want to support studies that allow Medicare beneficiaries to voluntarily participate in; and that add to the knowledge base about the use of the IDE device in the Medicare population, to ultimately improve the quality of care that Medicare beneficiaries receive. Well-designed studies have protocols that define the populations with the highest risk of having the disease or condition being studied. If data are not available that clearly demonstrate differences of clinical importance in subgroups defined by gender, race/ethnicity, age, or other relevant subpopulations, then the protocol must discuss the necessary steps to enroll appropriate numbers of these populations to ensure a valid analysis of the intervention effects. It is not our intention to require a specific enrollment of all subpopulations. However, it is, our intention that all covered study protocols address populations affected by the technology under investigation with special emphasis on minority and other groups that have experienced disparities in health care due to a lack of quality research data. If convincing evidence indicates that no differences exist between identified subgroups, that information should be noted in the protocol.

In proposed § 405.212(a)(13), we would specify the standard that requires that an IDE study or trial protocol explicitly discuss how the results are or are not expected to be generalizable to subsections of the Medicare population and to infer whether Medicare patients may benefit from the intervention. More often than not the published evidence does not include the Medicare population. We believe that unless there are clear data documenting that no important differences exist between the Medicare beneficiaries and the population studied, the study must discuss the enrollment of appropriate numbers representative of the Medicare population to ensure that the analysis of the results of the intervention may be applicable to Medicare beneficiaries.

In § 405.211, we are proposing that if the following two characteristics are also included met in addition to the criteria listed in § 405.212(a)(1) through (a)(13), we would automatically cover the costs of routine items and services in the Category A study or trial, and the costs of the investigation device and the routine items and services in a Category B study or trial as follows:

- The study is a pivotal study.
- The study has is a superiority study design.

In § 405.212, we propose a process by which Category A IDE studies will qualify for Medicare coverage of routine items and services provided in the studies. We propose that any interested party who seeks coverage in an IDE study may send us a request letter that describes the scope and nature of the IDE study, discussing each of the 15 standards in this policy.

b. Category B IDE Devices

Under our regulations, a nonexperimental/investigational (Category B) device was described as a device for which the underlying questions of safety and effectiveness has been resolved. In the absence of a NCD, Medicare coverage for Category B devices has been decided by Medicare contractors, subject to review under the claims review process at § 405.211(b). If the Category B device was covered, Medicare also covered the costs of items and services specific to the use of the device and furnished in conjunction with an FDA-approved clinical study.

Beyond Category A IDE studies, we believe that all investigational device studies wherein Medicare coverage is sought should conform to rigorous scientific and ethical standards. We believe that regardless of whether the device is categorized as an A or B the IDE study should meet the same scientific and ethical standards. Thus, we are proposing to require that Category B IDE trials must meet the same scientific and ethical standards.

c. Review and Approval (§ 405.212)

We are proposing a centralized IDE coverage review process for Category A and Category B IDEs. We believe the criteria § 405.212(a)(1) through (a)(13) are integral to coverage in any study that is Medicare-approved because it ensures that the IDE device is being furnished in a study with high levels of scientific and ethical integrity.

In addition, we propose to cover Category B IDE devices and the costs of routine care items and services furnished in an IDE study that meets the criteria proposed § 405.212(a) and the following additional criteria:

- The study is a pivotal study.
- The study has is a superiority study design.

As we review the IDE studies, we would look for reasonable assurance that enrolled Medicare beneficiary subjects will receive the best possible care and are protected when they are subjects in these IDE studies. The pivotal study and superiority study design criteria furnish assurances that the study results will be informative for beneficiary choices and medical decision-making in the non-trial settings where most care is actually furnished. We believe that their decisions are facilitated by trial designs that allow them to compare their options and determine which one is superior for the beneficiary. Non-inferiority trial designs (in contrast to superiority designs) only support more limited and thus less useful conclusions, that is, that the investigated device is no worse than the comparator treatment by some pre-specified margin.

Supporting materials may be submitted. The request would include the following information:

- The FDA approval letter.
- IDE study protocol.
- IRB approval letter(s).
- The *ClinicalTrials.gov* identifier

We propose that requests should be submitted via email to *clinicalstudynotification@cms.hhs.gov* or via hard copy to the following address:

Centers for Medicare & Medicaid Services, Center for Clinical Standards & Quality, Director, Coverage and Analysis Group, ATTN: Clinical Study Certification, Mailstop: S1–02–01, 7500 Security Blvd., Baltimore, MD 21244.

d. Notification

We propose that we would notify beneficiaries, providers, and practitioners of the IDE studies of all IDE devices eligible for coverage by

posting the IDE study title and *ClinicalTrials.gov* registry number on our Web site and publishing a list in the **Federal Register**.

e. Additional/Conforming Changes

In addition to the proposed changes in § 405.211 and § 405.212, we note the following changes:

• In § 405.201(b), Definitions, we would be revised the section by removing, revising and adding definitions. Some of the definitions that we are proposing to remove comprise factors that will allow stakeholders to understand the clinical study criteria for items and services furnished in an IDE study including the Category A and B device itself. Therefore, we proposing the following changes

++ Removal of the following definitions:

++ Class I, II, and III devices which refers to the different designations of FDA devices. These designations are not relevant to CMS coverage of an IDE device and routine items and services in an IDE study.

++ Post-market approval refers to a marketing application for a Class III device. Like class this is not relevant to whether CMS may cover an IDE device or routine items or services in an IDE study.

++ Adding the following definitions:

—*Clinicaltrials.gov* which refers to the National Institutes of Health's National Library of Medicine's online registry and results database of publicly and privately supported clinical studies of human participants conducted around the world. After a thorough review of the NIH/NLM *ClinicalTrials.gov* Web site, we believe that all studies covered under this policy should be registered in this registry. This is common practice in the research community. Studies and trials are now transparent—the study sites, investigator names, source of support, description of the study methods, and study results are open to the public, including Medicare beneficiaries. We believe that registration serves the public's desire to obtain information about the studies they may want to participate. This is a benefit to beneficiaries and their providers participating in IDE studies.

—Pivotal studies or trials, which refer to clinical investigations designed to collect definitive evidence of the safety and effectiveness of a device for a specified intended use, typically in a statistically justified number of subjects. It may or may not be preceded by an early and/or a traditional feasibility study or trial.

—Routine care items and services, which refer to items and services that are otherwise generally available to Medicare beneficiaries (that is, there exists a benefit category, it is not statutorily excluded, and there is not a national noncoverage decision) that are furnished in either the experimental or the control arms of a clinical trial and that would be otherwise furnished even if the beneficiary were not enrolled in a clinical trial. We note that noncoverage of a routine care item or services under an IDE trial in no way restricts a beneficiary's access to guaranteed Medicare benefits outside of an IDE trial.

—Superiority studies refer to studies or trials that are intended to demonstrate at some pre-specified level of confidence that the effect of an investigational treatment is superior to that of an active control by more than a pre-specified margin.

We are proposing the additions of the previously discussed definitions because we would use these factors in our decision to cover an investigational device and the costs of routine items and services in an IDE study.

• We are proposing to modify the following definitions:

++ The term Category A which was developed in cooperation with the FDA for the purposes of distinguishing those FDA classes under which investigational and non-investigational devices fall. A Category A IDE device is considered an experimental device; and therefore, deemed noncovered by Medicare standards.

++ Category A device would be defined as a device for which ''absolute risk'' of the device type has not been established (that is, the question of safety and effectiveness have not been resolved) and the FDA is unsure whether the device type can be safe and effective.

++ The term Category B which was developed in cooperation with the FDA for the purposes of distinguishing those FDA classes under which investigational and non-investigational devices fall. FDA assigns each device with an FDA-approved IDE to one of two categories. We propose to revise the definition of Category B (Nonexperimental/investigational) device to mean a device for which the incremental risk is the primary risk in question (that is, initial questions of safety and effectiveness of that device type have been resolved), or it is known that the device type can be safe and effective because, for example, other manufacturers have obtained FDA approval for that device type.

++ Contractors mean Medicare Administrative Contractors and other entities that contract with CMS to review and adjudicate claims for Medicare items and services. Currently, this is the definition refers to CMS's local Medicare Contractors. We propose to update the current definition in order for the definition to be accurate and consistent Agency-wide.

++ *IDE stands for investigational device exemption.* An FDA-approved IDE application permits a device, which would otherwise be subject to marketing approval or clearance, to be shipped lawfully for the purpose of conducting a clinical study in accordance with 21 U.S.C. 360j(g) and 21 CFR parts 812 and 813.

In § 405.203, FDA categorization of investigational devices, we are not proposing any changes. We have found that the interagency agreement between the FDA and CMS that supports the FDA categorization of devices to one of two categories for investigational purpose is widely accepted among device manufacturers. Therefore, to avoid future confusion by changing the categorization, we believe that maintaining this process continues to support the development of new health technologies and tools that practitioners and beneficiaries have access. It should be noted that neither the determination nor any re-evaluation made by FDA, nor the review determination made by CMS under § 405.211, would be considered coverage determinations that implicate the Part 426 NCD/LCD appeals process.

In § 405.207—

• In paragraph (a), we are not proposing any changes to our current noncoverage of Category A IDE devices. As stated previously, we continue to find that because initial questions of safety and effectiveness have not been resolved and the FDA is unsure of whether the device type can be safe and effective, experimental/investigational (Category A) devices are not reasonable and necessary under section 1862(a)(1)(A) of the Act; and

• Paragraph (b) currently states that all Category A IDE studies and trials must meet the criteria established through the NCD process. Because we are proposing scientific and ethical standards, we no longer need to establish the IDE study criteria through the NCD process; and therefore, we are proposing to delete the NCD process requirement. We are also proposing to remove the following statement from § 405.207(b)(2) that states ''If the trial is initiated before January 1, 2010, the device must be determined as intended for use in the diagnosis, monitoring or treatment of an immediately life-

threatening disease or condition'' because it is no longer applicable. We are not proposing changes to § 405.207(b)(1) or (b)(3).

In §§ 405.205, 405.207, 405.209, and 405.211, we propose to retain the current explanation of coverage and payment for non-experimental/investigational devices.

For § 405.213, Re-evaluation of a device categorization, we are not proposing any changes to this section because we believe that maintaining this process continues to support the development of new health technologies and tools that practitioners and beneficiaries have access.

We are proposing to retain the protections in § 405.215, Confidential Commercial and Trade Secret Information, without modification. We note that section 502(c) of the Act broadly prohibits the disclosure of trade secret and confidential commercial or financial information—information exempt from public disclosure by the Freedom of Information Act (FOIA) 5 U.S.C. 552(b)(4) outside the Department. This prohibition is found in the devices and regulatory inspections provisions of the Act, and is not limited to device-related information. This disclosure prohibition also applies to information reported or otherwise obtained by the Department during inspection activities and other activities. This prohibition is interpreted to allow information sharing within the U.S. Department of Health and Human Services only.

In § 411.15(o)(2), Experimental or investigational device exclusions, we propose to revise the requirement to specify that the exclusions under this section include experimental or investigational devices, except for certain devices furnished in accordance with the CMS IDE study and trial standards established in § 405.21l. We are proposing this change to be consistent with the IDE study characteristics.

B. Ultrasound Screening for Abdominal Aortic Aneurysms

1. Background and Statutory Authority

Section 1861(s)(2)(AA) of the Act authorizes Medicare coverage under Part B of ultrasound screening for abdominal aortic aneurysms (''AAA screening''), as defined in section 1861(bbb) of the Act. Our implementing regulations for AAA screening are at § 410.19. AAA screening is covered for a beneficiary that meets certain criteria including that he or she must receive a referral during the initial preventive physical examination (IPPE) and has not previously had an AAA screening covered under the Medicare program. The IPPE, as described in section 1861(ww) of the Act (and regulations at § 410.16), includes a time restriction and must be furnished not more than one year after the effective date of the beneficiary's first Part B coverage period (see section 1862(a)(1)(K) of the Act). This time limitation for the IPPE effectively reduces a Medicare beneficiary's ability to obtain a referral for AAA screening.

Section 1834(n) of the Act, added by section 4105 of the Affordable Care Act, grants the Secretary the discretion and authority to modify coverage of certain preventive services identified in section 1861(ddd)(3) of the Act, which in turn cross-references section 1861(ww)(2) of the Act (including AAA screening at section 1861(ww)(2)(L). The Secretary may modify coverage to the extent that such modification is consistent with the recommendations of the United States Preventive Services Task Force (USPSTF) per section 1834(n)(1)(A) of the Act. In 2005, the USPSTF recommended ''one-time screening for [AAA] by ultrasonography in men ages 65 through 75 who have ever smoked. (Grade: B Recommendation)'' (Screening for Abdominal Aortic Aneurysm: Recommendation Statement. *http://www.uspreventiveservicestaskforce.org/uspstf05/aaascr/aaars.htm*). The USPSTF recommendation does not include a time limit with respect to the referral for this test.

2. Provisions of the Proposed Regulations

We are proposing to exercise our discretion and authority under section 1834(n) of the Act to modify coverage of AAA screening consistent with the recommendations of the USPSTF to eliminate the one-year time limit with respect to the referral for this service. This proposed modification would allow coverage of AAA screening for eligible beneficiaries without requiring them to receive a referral as part of the IPPE. Specifically for purposes of coverage of AAA screening, we propose to modify the definition of ''eligible beneficiary'' in § 410.19(a) by removing paragraph (a)(1), of this definition, and redesignating paragraphs (a)(2) and (a)(3) of this definition as paragraphs (a)(1) and (a)(2), respectively.

The IPPE is a one-time benefit available to beneficiaries under Part B that receive the IPPE not more than one year after the effective date of the beneficiary's first Medicare Part B coverage period. Many beneficiaries were either not eligible to receive an IPPE (which did not become effective until January 1, 2005) or may not have taken advantage of the IPPE when they were eligible, limiting access to AAA screening. We believe that our proposed modification is consistent with current USPSTF recommendations for one-time screening and allows for expanded access to this important preventive service. We invite public comment on this proposal.

C. Colorectal Cancer Screening: Modification to Coverage of Screening Fecal Occult Blood Tests

1. Background and Statutory Authority

Sections 1861(s)(2)(R) and 1861(pp)(1) of the Act authorize Medicare coverage of colorectal cancer screening. The statute authorizes coverage of screening fecal occult blood tests (FOBT), screening flexible sigmoidoscopies, screening colonoscopies, and other tests determined to be appropriate, subject to certain frequency and payment limits. Section 410.37(b) (condition for coverage of screening FOBT) specifies that Medicare Part B pays for screening FOBT if ordered in writing by the beneficiary's attending physician. For purposes of § 410.37, ''attending physician'' is defined as ''a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act) who is fully knowledgeable about the beneficiary's medical condition, and who would be responsible using the results of any examination performed in the overall management of the beneficiary's specific medical problem.''

The coverage provisions for FOBT screening were established in 1997 and effective on January 1, 1998 (62 FR 59048, October 31, 1997). In the preamble to that final rule, we stated that the requirement for a written order from the attending physician was intended to make certain that beneficiaries receive appropriate preventive counseling about the implications and possible results of having these examinations performed (62 FR 59081).

Since then, Medicare coverage of preventive services has expanded to include, among other things, coverage of an annual wellness visit (as defined in § 410.15). The annual wellness visit includes provisions for furnishing personalized health advice and appropriate referrals. In addition to physicians, the annual wellness visit can be furnished by certain nonphysician practitioners, including physician assistants, nurse practitioners, and clinical nurse specialists.

Additionally, § 410.32 provides coverage and payment rules for diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic

tests. Section 410.32(a)(2) states: ''Nonphysician practitioners (that is, clinical nurse specialists, clinical psychologists, clinical social workers, nurse-midwives, nurse practitioners, and physician assistants) who furnish services that would be physician services if furnished by a physician, and who are operating within the scope of their authority under State law and within the scope of their Medicare statutory benefit, may be treated the same as physicians treating beneficiaries for the purpose of this paragraph.''

2. Proposed Revisions

We are proposing to revise § 410.37(b), ''Condition for coverage of screening fecal-occult blood tests,'' to allow an attending physician, physician assistant, nurse practitioner, or clinical nurse specialist to furnish written orders for screening FOBT. These proposed modifications would allow for expanded coverage and access to screening FOBT, particularly in rural areas. We invite public comment on this proposal. In addition, we are seeking public comment regarding whether a practitioner permitted to order a screening FOBT must be the beneficiary's attending practitioner as described earlier.

D. Ambulance Fee Schedule

1. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275, enacted on July 15, 2008) (MIPPA) amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008 and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

Sections 3105(a) and 10311(a) of the Affordable Care Act further amended section 1834(l)(13)(A) of the Act to extend the payment add-ons described above for an additional year, such that these add-ons also applied to covered ground ambulance transports furnished on or after January 1, 2010, and before January 1, 2011. In the CY 2011 PFS final rule with comment period (75 FR 73385, 73386, 73625), we revised § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

Section 106(a) of the Medicare and Medicaid Extenders Act of 2010 (Pub. L.111–309, enacted December 15, 2010) (MMEA) again amended section 1834(l)(13)(A) of the Act to extend the payment add-ons described above for an additional year, such that these add-ons also applied to covered ground ambulance transports furnished on or after January 1, 2011, and before January 1, 2012. In the CY 2012 End-Stage Renal Disease Prospective Payment System (ESRD PPS) final rule (76 FR 70228, 70284 through 70285, and 70315), we revised § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

Section 306(a) of the Temporary Payroll Tax Cut Continuation Act of 2011 (TPTCA) (Pub. L. 112–78, enacted on December 23, 2011) amended section 1834(l)(13)(A) of the Act to extend the payment add-ons described above through February 29, 2012; and section 3007(a) of the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96, enacted on February 22, 2012) (MCTRJCA) further amended section 1834(l)(13)(A) of the Act to extend these payment add-ons through December 31, 2012. Thus, these payment add-ons also applied to covered ground ambulance transports furnished on or after January 1, 2012 and before January 1, 2013. In the CY 2013 PFS final rule (77 FR 69139, 69368), we revised § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

Subsequently, section 604(a) of the ATRA amended section 1834(l)(13)(A) of the Act to extend the payment add-ons described above through December 31, 2013. Thus, these payment add-ons also apply to covered ground ambulance transports furnished on or after January 1, 2013 and before January 1, 2014. Thus, we propose to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary.

2. Amendment to Section 146(b)(1) of MIPPA

Section 146(b)(1) of the MIPPA amended the designation of certain rural areas for payment of air ambulance services. This section originally specified that any area that was designated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished on December 31, 2006, must continue to be treated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished during the period July 1, 2008 through December 31, 2009.

Sections 3105(b) and 10311(b) of the Affordable Care Act amended section 146(b)(1) of MIPPA to extend this provision for an additional year, through December 31, 2010. In the CY 2011 PFS final rule (75 FR 73385, 73386, and 73625 through 73626), we revised § 414.610(h) to conform the regulations to this statutory requirement.

Section 106(b) of the MMEA amended section 146(b)(1) of MIPPA to extend this provision again through December 31, 2011. In the CY 2012 ESRD PPS final rule (76 FR 70284, 70285, and 70315), we revised § 414.610(h) to conform the regulations to this statutory requirement.

Subsequently, section 306(b) of the TPTCCA amended section 146(b)(1) of MIPPA to extend this provision through February 29, 2012; and section 3007(b) of the MCTRJCA further amended section 146(b)(1) of MIPPA to extend this provision through December 31, 2012. In the CY 2013 PFS final rule (77 FR 69139, 69140, and 69368), we revised § 414.610(h) to conform the regulations to this statutory requirement.

Subsequently, section 604(b) of the ATRA amended section 146(b)(1) of MIPPA to extend this provision through June 30, 2013. Thus, we propose to revise § 414.610(h) to conform the regulations to this statutory requirement.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of a rural indicator, and does not require any substantive exercise of discretion on the part of the Secretary. Accordingly, for areas that were designated as rural on December 31, 2006, and were subsequently re-designated as urban, we have re-established the ''rural'' indicator on the ZIP Code file for air ambulance services through June 30, 2013.

3. Amendment to Section 1834(l)(12) of the Act

Section 414 of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (Pub. L. 108–

173, enacted on December 8, 2003) (MMA) added section 1834(l)(12) to the Act, which specified that in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a ''qualified rural area''; that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract).

Sections 3105(c) and 10311(c) of the Affordable Care Act amended section 1834(l)(12)(A) of the Act to extend this rural bonus for an additional year through December 31, 2010. In the CY 2011 PFS final rule with comment period (75 FR 73385, 73386 and 73625), we revised § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement.

Section 106(c) of the MMEA amended section 1834(l)(12)(A) of the Act to extend the rural bonus described above for an additional year, through December 31, 2011. Therefore, in the CY 2012 ESRD PPS final rule (76 FR 70284, 70285 and 70315), we revised § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement.

Section 306(c) of the TPTCCA amended section 1834(l)(12)(A) of the Act to extend this rural bonus through February 29, 2012; and section 3007(c) of the MCTRJCA further amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2012. In the CY 2013 PFS final rule with comment period (77 FR 69140, 69368), we revised § 414.610(c)(5)(ii) to conform the regulations to these statutory requirements.

Subsequently, section 604(c) of the ATRA amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2013. Therefore, we are continuing to apply the 22.6 percent rural bonus described above (in the same manner as in previous years), to ground ambulance services with dates of service on or after January 1, 2013 and before January 1, 2014 where transportation originates in a qualified rural area. Accordingly, we propose to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement.

This rural bonus is sometimes referred to as the ''Super Rural Bonus'' and the qualified rural areas (also known as ''super rural'' areas) are identified during the claims adjudicative process via the use of a data field included on the CMS-supplied ZIP Code File.

This statutory requirement is self-implementing. This provision requires a one-year extension of the rural bonus (which was previously established by the Secretary) through December 31, 2013, and does not require any substantive exercise of discretion on the part of the Secretary.

4. Addition of Section 1834(l)(15) of the Act

Section 637 of the ATRA, which added section 1834(l)(15) of the Act, specifies that the fee schedule amount otherwise applicable under the preceding provisions of section 1834(l) of the Act shall be reduced by 10 percent for ambulance services furnished on or after October 1, 2013, consisting of non-emergency basic life support (BLS) services involving transport of an individual with end-stage renal disease for renal dialysis services (as described in section 1881(b)(14)(B) of the Act) furnished other than on an emergency basis by a provider of services or a renal dialysis facility. We are proposing to revise § 414.610 by adding paragraph (c)(8) to conform the regulations to this statutory requirement.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate decrease, and does not require any substantive exercise of discretion on the part of the Secretary. Accordingly, for the ambulance services described in section 637 of the ATRA furnished on or after October 1, 2013, the fee schedule amount otherwise applicable (both base rate and mileage) will be reduced by 10 percent. For further information regarding application of this mandated rate decrease, please see CR 8269.

5. Studies of Ambulance Costs

Section 604(d)(1) of the ATRA provides that the Secretary shall conduct the following studies:

(A) A study that analyzes data on existing cost reports for ambulance services furnished by hospitals and critical access hospitals, including variation by characteristics of such providers of services, with a Report to Congress on such study due no later than October 1, 2013; and

(B) A study of the feasibility of obtaining cost data on a periodic basis from all ambulance providers of services and suppliers for potential use in examining the appropriateness of the Medicare add-on payments for ground ambulance services furnished under the fee schedule under section 1834(l) of the Act and in preparing for future reform of such payment system, with a Report to Congress due on such study no later than July 1, 2014.

Further, in conducting the study under paragraph (B) above, section 604(d)(2) of the ATRA directs the Secretary to:

- Consult with industry on the design of such cost collection efforts;
- Explore the use of cost surveys and cost reports to collect appropriate cost data and the periodicity of such cost data collection;
- Examine the feasibility of developing a standard cost reporting tool for providers of services and suppliers of ground ambulance services; and
- Examine the ability to furnish such cost data by various types of ambulance providers of services and suppliers, especially by rural and super-rural providers of services and suppliers.

As noted above, in conducting the study under section 604(d)(1) of the ATRA described in paragraph (B) above, the Secretary is required to consult with industry on the design of such cost collection efforts (see section 604(d)(2)(A) of the ATRA). We are using this proposed rule as the instrument to collect information, comments, and ideas from the industry on the design of such cost collection efforts as described above, and on the feasibility of obtaining cost data on a periodic basis from all ambulance providers of services and suppliers for potential use in examining the appropriateness of the Medicare add-on payments for ground ambulance services furnished under the fee schedule under section 1834(l) of the Act and in preparing for future reform of such payment system. We therefore invite public comment on these issues

as part of the study we are conducting under section 604(d)(1)(B) of the ATRA.

E. Proposals Regarding the Clinical Laboratory Fee Schedule

1. Background on the Clinical Laboratory Fee Schedule

Under Medicare Part B, clinical diagnostic laboratory tests furnished on or after July 1, 1984, in a physician's office, by an independent laboratory, or by a hospital laboratory for its outpatients and nonpatients currently are paid on the basis of the Clinical Laboratory Fee Schedule (CLFS), with limited exceptions. For each Healthcare Common Procedure Coding System (HCPCS) code, payment is the lesser of:

- The amount of charges billed for the test;
- The fee schedule amount for the State or a local geographic area; or
- A national limitation amount (NLA) (section 1833(a)(1)(D)(i), (a)(2)(D)(i), (h)(1), and (h)(4)(B) of the Act). The NLA for a clinical diagnostic laboratory test performed after December 31, 1997 is equal to 74 percent of the median of all fee schedules established for that test for that laboratory setting or 100 percent of such median in the case of a clinical diagnostic laboratory test performed on or after January 1, 2001, that the Secretary determines is a new test for which no limitation amount has previously been established (section 1833(h)(4)(B)(viii) of the Act).

Currently, we update the CLFS amounts annually to reflect changes in the Consumer Price Index for all Urban Consumers (U.S. city average) (CPI–U) and apply a multi-factor productivity adjustment (see section 1833(h)(2)(A) of the Act). In the past, we also implemented other adjustments or did not apply the change in the CPI–U to the CLFS in accordance with statutory mandates. For example, under section 1833(h)(2)(A)(i) of the Act, we were required to subtract 0.5 percentage points from the CPI–U adjustment for 2009 and 2010. We do not otherwise update or change the CLFS.

For any clinical diagnostic laboratory tests where a new or substantially revised HCPCS code is assigned on or after January 1, 2005, we determine the basis for, and amount of, payment for these clinical diagnostic laboratory tests (see section 1833(h)(8) of the Act and 42 CFR 414.500 through 414.509). Once established, however, in most cases, we only have the opportunity to reconsider the basis and/or amount of payment for new tests for one additional year after the basis or payment is initially set. Once the reconsideration process is complete, payment is not further adjusted (except by a change in the CPI–U, the productivity adjustment, and any other adjustments required by statute), regardless of any shift in the actual costs incurred to perform the test.

This lack of an established mechanism to adjust payment amounts is unique among the Medicare payment schedules and systems. Generally, fee schedules and prospective payment systems are evaluated each year to reflect the changing mix of services provided under that system or schedule and then the system or schedule is adjusted to maintain budget neutrality. Since there is currently no process to make such adjustments for the CLFS, payment amounts are essentially locked in place and do not change when the cost of the test changes. As discussed below, in this proposed rule, we are proposing to implement a process to adjust payment amounts based on changes in technology.

2. Proposals Regarding Technological Changes Under Section 1833(h)(2)(A)(i) of the Act

a. Background on Technological Changes

There has been a significant amount of technological change in the clinical laboratory area since the implementation of the CLFS, which has resulted in the increased use of point-of-care testing, brand new tests being developed, and the proliferation of laboratory-developed tests. The Institute of Medicine (IOM) dedicated a chapter of its 2000 report ''Medicare Laboratory Payment Policy: Now and in the Future'' to discussing trends in laboratory technology. The report noted rapid and dramatic innovation in the laboratory sector since the 1980s and remarkable growth in the range and complexity of available tests. The IOM concluded that the introduction of new tests, advances in equipment and testing techniques, and the proliferation of advanced information technology have all made testing more efficient and automated.

Technology has enabled a significant site-of-service shift for many laboratory tests from the laboratory environment to the point of health care delivery. This point-of-care testing has increased since the 1980s, when this type of testing first became available, mainly due to changes in technology which resulted in smaller, cheaper, and more portable test kits that are simple to use. For example, drug abuse testing has become readily available at the point of care. Point-of-care testing can be performed in various institutional and community settings but the main objective of such testing is to produce a result quickly, at the place where the patient is receiving care, such as at a physician's office or at a hospital bedside, to facilitate decisions about appropriate treatment.

There are also brand new technologies that did not exist when the CLFS was established, most notably genetic and genomic tests. This area of medicine evolved from the work of the Human Genome Project and subsequent research and development by both the federal government and private firms. The cost of sequencing a genome has dropped dramatically since the early inception of this technology in 2001 from more than $95 million per genome to approximately $5,700 in early 2013 (*http://www.genome.gov/pages/der/sequencing_cost.xlsx*). Early tests in this area were less likely to be covered by Medicare because they were either screening tests or tests for conditions found in the pediatric population. As this area has expanded over the past several decades, Medicare has taken on a more prominent role in payment for these services (see 77 FR 68994 through 69002 for a thorough discussion of how Medicare pays for these tests). We expect the number of codes and tests in this area to continue to grow as the technology evolves and more tests become available in the areas of pharmacogenomics, personalized and predictive medicine, and companion diagnostics.

We also note the growth in laboratory-developed tests (LDTs) over the years. These proprietary tests are developed by laboratories, which then offer the service of providing the test. Some of the most advanced laboratory tests currently being performed are LDTs which use sophisticated proprietary technology. Many LDTs do not have their own codes; instead, they are billed using unlisted codes for which contractors establish a payment amount. Other LDTs were billed to Medicare using ''stacking codes,'' where a laboratory submits a code for each step of the testing process; however, these ''stacking codes'' were eliminated at the end of 2012 for molecular pathology tests and replaced with 114 new test-specific codes. These payment processes provide us with limited information about the technology used to perform these tests. However, we know that the number of LDTs has been growing over the years and multiple laboratories have developed ways to perform the same test. Further, our recent experience with using a gap filling methodology to price molecular pathology tests, which are often LDTs, has shown that the costs of performing these tests have decreased since contractors initially established

payment amounts for the tests, or compared to the code stack previously billed. Our experience with gap filling molecular pathology tests has also shown that there is wide variation in the cost of performing the same test by different laboratories.

We believe that, given the technological changes that have occurred in the laboratory industry over the past several decades and the growth in the number of clinical laboratory tests (CMS has added approximately 800 new test codes to the CLFS since its inception), it would be appropriate to establish a process to reconsider payment amounts on the CLFS to take into account increased efficiency, changes in laboratory personnel and supplies necessary to conduct a test, changes in sites of service, and other changes driven by technological advances.

Section 1833(h)(2)(A)(i) of the Act requires the Secretary to set the fee schedules for clinical laboratory tests ''for the 12-month period beginning July 1, 1984, adjusted annually (to become effective on January 1 of each year) by, subject to [the multi-factor productivity adjustment], [the change in the CPI–U] and *subject to such other adjustments as the Secretary determines are justified by technological changes''* (emphasis added). Under this authority, we are proposing a process under which we will systematically reexamine the payment amounts established under the CLFS to determine if changes in technology for the delivery of that service warrant an adjustment to the payment amount.

b. Proposed Definition of Technological Changes

We are proposing to define technological changes as changes to the tools, machines, supplies, labor, instruments, skills, techniques, and devices by which laboratory tests are produced and used. Changes in technology could result in changes to, among other things, the resources required to perform the test (such as the type, volume, or number of supplies or reagents required), the laboratory personnel required to perform the test, and/or the frequency of testing, volume of testing, or site of service (for example, a shift in service site from a specialty laboratory to a physician's office). We believe this broad definition would capture all of the technological changes that could impact the resource inputs for various tests on the CLFS. As discussed below, the technological changes for a specific test would be discussed in the proposed rule in which we are proposing to adjust the payment amount for that test, and we would seek public comment on our determination of the technological changes and the payment adjustment.

c. Proposed Process

We are proposing that, each year, we would review certain codes on the CLFS, as described in the next section, to determine whether we believe that payment for these codes should be adjusted due to technological changes. For those codes where we determine that payment adjustments should be made, beginning with the CY 2015 PFS proposed rule, we would identify the test code, discuss how it has been impacted by technological changes, and propose an associated adjustment to the payment amount for the test code as appropriate to reflect the impact of such technological changes.

We believe such adjustments could be made both to increase fee schedule amounts (for example, in situations where new high cost technologies are employed), and to provide for reductions in existing amounts (for example in situations where technology reduces costs through increased efficiencies). We expect that most payment amounts will decrease due to the changes in technology that have occurred over the years since the payment amounts were established and the general downward trend of costs once technology has had an opportunity to diffuse. A key goal in establishing this review process is to ensure payment accuracy after technological changes; thus payment rates could increase or decrease as a result of these reviews.

Under our proposed process, we would also list codes that we reviewed but for which there was insufficient information to support or establish an adjustment to the payment amount due to technological changes. We would solicit comment on the technology used to perform any tests we reviewed for possible payment changes, and any relevant cost information. We expect that we would finalize any payment adjustments in the PFS final rule, beginning with the CY 2015 PFS final rule. We are proposing that the CPI–U and multi-factor productivity adjustments would be applied after we establish the new payment amount through our usual instruction process.

We believe that this proposed process would best allow for the greatest amount of transparency in review and the most structured and consistent opportunity for the public to provide input into the process. We are soliciting comment on these proposals.

d. Proposed Identification and Prioritization of Codes to be Reviewed

We are proposing to review all codes currently on the CLFS. We are proposing to start our review by examining the codes that have been on the CLFS the longest and then work our way forward, over multiple years, until we have reviewed all of the codes on the CLFS. We believe that the payment amounts for codes that have been on the CLFS the longest amount of time would be most affected by changes in technology because, in general, technology is most expensive earliest in its life cycle but decreases in cost as the technology matures and diffuses. If during the course of reviewing these individual codes we find that there are additional, newer codes that are clinically and/or technologically similar, we are proposing to consider them for review at the same time as we review the older codes because we expect we would have the same or similar justifications for making payment adjustments to those codes. We intend to review these codes as quickly as possible but we believe there would be a significant administrative burden associated with such a comprehensive review of the 1,250 codes on the CLFS. We are estimating that it would take at least 5 years to review all of the existing codes on the CLFS.

Once we have completed our review of the codes currently on the CLFS and made any adjustments necessary due to technological changes, we are proposing to review codes added to the CLFS after 2015 that have been on the CLFS for at least 5 years. We would also review codes again that have not been reviewed in the previous 5 years, as time and resources allow. We believe that tests that are less than 5 years old are likely still in their technological infancy and enough time would not have passed to adequately assess any change in technology for those services. Similarly, for previously reviewed codes, we believe that technology likely would not have changed dramatically in less than 5 years. We are soliciting public comment on how to prioritize these codes, which we expect to address in future rulemaking on this issue.

After the initial review of the codes currently on the CLFS, we are also proposing to allow the public to nominate additional codes for review, including those that had been previously reviewed for technological change. We are proposing that the public may nominate only codes that have been on the CLFS for at least 5 years and that have not been reviewed in the previous 5 years. Further, we are

proposing that the nomination must include an explanation from the nominator of the technological change in the service and the way that change affects its delivery. We would then consider these nominations and, in the **Federal Register** the following year, either propose a payment change based on technological changes or explain why we think such a change is not warranted at that time.

We are proposing to codify the proposed process at 42 CFR 414.511.

We are seeking public comment on these proposals. We also are seeking comment on alternative approaches to achieving our goal of paying appropriately for laboratory tests by accounting for changes in technology. Finally, we are soliciting comment on general trends in technology change in the laboratory industry and the health care sector in general.

3. Proposed Changes in the CY 2014 OPPS/ASC Proposed Rule

In the CY 2014 OPPS/ASC proposed rule, CMS is proposing to package payment for certain clinical diagnostic laboratory tests into the base payment for the Ambulatory Payment Classification (APC). For details on this proposal, please see the ''Proposed Changes to Packaged Items and Services'' section of the CY 2014 OPPS/ASC proposed rule. Comments on the OPPS proposal should be made to the CY 2014 OPPS/ASC proposed rule. Comments on the proposals in this rule should be made to the CY 2014 PFS proposed rule.

F. Liability for Overpayments to or on Behalf of Individuals Including Payments to Providers or Other Persons

1. Background and Statutory Authority

CMS waives recovery of overpayments in certain situations for claims based fee-for-service provider, supplier or beneficiary overpayments in accordance with section 1870 of the Act. Section 1870(b) and (c) of the Act provide a waiver of recovery of provider, supplier or beneficiary overpayments under certain presumptions within a specified timeframe. Section 1870(b) and (c) of the Act allow the Secretary to reduce the specified time period to not less than one year if the Secretary finds that such a reduction is consistent with the objectives of the Medicare program. Section 638 of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, enacted January 2, 2013) changed the timeframes associated with section 1870(b) and (c) of the Act.

Section 1870(b) of the Act provides for the waiver of recovery of an overpayment to a provider of services (hereinafter, ''provider'') or other person whenever that provider or other person is ''without fault'' in incurring the overpayment. For purposes of section 1870 of the Act and this proposed rule, the term ''other person'' includes practitioners, physicians, and other suppliers.

Section 1870(b) of the Act also establishes circumstances under which a provider or other person is presumed for administrative purposes to be ''without fault'' for an overpayment. If an overpayment is determined after a specified period of time, a provider or other person is presumed to be ''without fault.'' This presumption is negated, however, if there is evidence to show that the provider or other person was responsible for causing the overpayment.

Section 1870(c) of the Act provides for the waiver of recovery of an overpayment to an individual whenever the individual is ''without fault'' in incurring the overpayment, and recovery would either defeat the purpose of the Social Security or Medicare programs or would be ''against equity and good conscience.''

Section 1870(c) of the Act also establishes circumstances under which recovery of an overpayment for an individual is presumed to be ''against equity and good conscience.'' After a specified period of time, recovery of certain overpayments from individuals who are ''without fault'' is presumed ''against equity and good conscience.'' The overpayments addressed by this provision are payments for items or services for which payment may not be made because of the prohibitions found in section 1862(a)(1) or (a)(9) of the Act. Sections 1862(a)(1) and (a)(9) prohibit payment for, among other things, items and services that are not reasonable and necessary or that are for custodial care.

Section 638 of the ATRA amended the timeframe specified in section 1870(b) of the Act ''without fault'' presumption from 3 to 5 years so that the presumption of ''without fault'' only applies if the Medicare claims based fee-for-service overpayment determination for a provider or other person is made subsequent to the fifth year (instead of the third year) following the year in which the notice was sent to such individual that such amount had been paid. Likewise, section 638 of the ATRA amended the timeframe in section 1870(c) of the Act so that the presumption for ''against equity and good conscience'' for certain types of denials for an individual who is ''without fault'' only applies if the overpayment determination is made subsequent to the fifth year (instead of the third year) following the year in which notice of such payment was sent to such individual.

These ATRA changes do not affect or change CMS' claims reopening regulation at § 405.980. Specifically, we retain our authority to reopen claims for any reason within one year, for good cause within 4 years, and at any time for fraud or similar fault.

2. Provisions of the Proposed Regulations

We propose to revise § 405.350(c) and § 405.355(b). These proposed revisions would change the timing of the triggering event for the ''without fault'' and ''against equity and good conscience'' presumptions. These revisions are being proposed to reflect the revisions to section 1870 of the Act as specified in by section 638 of ATRA.

Specifically, we propose to change the timeframe at § 405.350(c) so that the rebuttable ''without fault'' presumption for the provider or other person would apply if the Medicare claims based fee-for-service overpayment determination is made subsequent to the fifth year (instead of the third year) following the year in which the notice was sent to such individual that such amount had been paid.

Likewise, we propose to amend the timeframe at § 405.355(b) for the presumption ''against equity and good conscience'' for certain types of denials for an individual who is ''without fault'' so that the presumption would apply if the overpayment determination is made subsequent to the fifth year (instead of the third year) following the year in which the notice of payment was sent to the individual.

Additionally, in our review of the current regulation implementing section 1870(c) of the Act, we noted that § 405.355(b) does not clearly reflect the statutory language, which limits the ''against equity and good conscience'' presumption to overpayments associated with denials under section 1862(a)(1) or (a)(9) of the Act. Accordingly, we propose to update and clarify § 405.355(b) so that it clearly reflects the statutory language by adding that the ''against equity and good conscience'' presumption would be applicable for an individual who is ''without fault'' only if the overpayment is related to items and services that are not payable under section 1862(a)(1) or (a)(9) of the Act. In addition, we propose to delete the parenthetical at the end of § 405.355(b) because the regulations referenced no longer exists; those

sections of the regulations were reassigned. (See the October 11, 1989 **FEDERAL REGISTER** (54 FR 41733).) The modifications we propose to § 405.355(b) makes the references in the parenthetical no longer necessary.

G. Physician Compare Web site

1. Background and Statutory Authority

Section 10331 (a)(1) of the Affordable Care Act, requires that, by no later than January 1, 2011, we develop a Physician Compare Internet Web site with information on physicians enrolled in the Medicare program under section 1866(j) of the Act, as well as information on other eligible professionals who participate in the Physician Quality Reporting System (PQRS) under section 1848 of the Act.

CMS launched the first phase of Physician Compare on December 30, 2010 (*www.medicare.gov/physiciancompare*). In the initial phase, we posted the names of eligible professionals that satisfactorily submitted quality data for the 2009 PQRS, as required by section 1848(m)(5)(G) of the Act.

Section 10331(a)(2) of the Affordable Care Act also requires that, no later than January 1, 2013, and for reporting periods that begin no earlier than January 1, 2012, we implement a plan for making publicly available through Physician Compare information on physician performance that provides comparable information on quality and patient experience measures. We met this requirement in advance of January 1, 2013, as outlined below, and intend to continue to address elements of the plan through rulemaking.

To the extent that scientifically sound measures are developed and are available, we are required to include, to the extent practicable, the following types of measures for public reporting:

- Measures collected under the PQRS.
- An assessment of patient health outcomes and functional status of patients.
- An assessment of the continuity and coordination of care and care transitions, including episodes of care and risk-adjusted resource use.
- An assessment of efficiency.
- An assessment of patient experience and patient, caregiver, and family engagement.
- An assessment of the safety, effectiveness, and timeliness of care.
- Other information as determined appropriate by the Secretary.

As required under section 10331(b) of the Affordable Care Act, in developing and implementing the plan, we must include, to the extent practicable, the following:

- Processes to ensure that data made public are statistically valid, reliable, and accurate, including risk adjustment mechanisms used by the Secretary.
- Processes for physicians and eligible professionals whose information is being publicly reported to have a reasonable opportunity, as determined by the Secretary, to review their results before posting to Physician Compare. This would consist of a 30-day preview period for all measurement performance data that will allow physicians and other eligible professionals to view their data as it will appear on the Web site in advance of publication. Details of the preview process will be communicated on the Physician Compare Initiative page on CMS.gov in advance of the preview period.
- Processes to ensure the data published on Physician Compare provides a robust and accurate portrayal of a physician's performance.
- Data that reflects the care provided to all patients seen by physicians, under both the Medicare program and, to the extent applicable, other payers, to the extent such information would provide a more accurate portrayal of physician performance.
- Processes to ensure appropriate attribution of care when multiple physicians and other providers are involved in the care of the patient.
- Processes to ensure timely statistical performance feedback is provided to physicians concerning the data published on Physician Compare.
- Implementation of computer and data infrastructure and systems used to support valid, reliable and accurate reporting activities.

Section 10331(d) of the Affordable Care Act requires us to consider input from multi-stakeholder groups in selecting quality measures for Physician Compare, which we note we are working to accomplish through a variety of means including rulemaking and various forms of stakeholder outreach. In developing the plan for making information on physician performance publicly available through Physician Compare, section 10331(e) of the Affordable Care Act requires the Secretary, as the Secretary deems appropriate, to consider the plan to transition to value-based purchasing for physicians and other practitioners that was developed under section 131(d) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275, enacted on July 15, 2008).

Under section 10331(f) of the Affordable Care Act, we are required to submit a report to the Congress, by January 1, 2015, on Physician Compare development, and include information on the efforts and plans to collect and publish data on physician quality and efficiency and on patient experience of care in support of value-based purchasing and consumer choice. Initial work on this report is currently underway. Section 10331(g) of the Affordable Care Act provides that any time before that date, we may continue to expand the information made available on Physician Compare.

We believe section 10331 of the Affordable Care Act supports our overarching goals of providing consumers with quality of care information to make informed decisions about their healthcare, while encouraging clinicians to improve on the quality of care they provide to their patients. In accordance with section 10331 of the Affordable Care Act, we intend to utilize Physician Compare to publicly report physician performance results.

2. Public Reporting of Physician Performance Data

Since the initial launch of the Web site, we have continued to build on and improve Physician Compare. In 2013, we launched a full redesign of Physician Compare offering significant improvements including a complete overhaul of the underlying database and a new Intelligent Search feature, addressing two of our stakeholders' primary critiques of the site and considerably improving functionality and usability. The primary source of administrative information on Physician Compare is the Provider Enrollment, Chain, and Ownership System (PECOS); as the sole source of verified Medicare professional information, PECOS remains the primary information source. However, with the redesign, we incorporated Medicare claims information to verify the information in PECOS to ensure only the most current and accurate information is included on the site.

With the redesign, users can now search for Medicare physicians and other healthcare professionals by defining a location—a ZIP code, a city/State combination, an exact address, or landmark—and by entering a medical specialty, health care professional or group practice name, a medical condition, body part, or organ system. The site produces a list of suggested specialties, as defined by the 855i Medicare Enrollment Form, users can choose related to their search term or a list of names, as appropriate.

Currently, users can view information about approved Medicare professionals such as name, primary and secondary specialties, practice locations, group affiliations, hospital affiliations that link to the hospital's profile on Hospital Compare as available, Medicare Assignment status, education, languages spoken, and American Board of Medical Specialties (ABMS) board certification information. In addition, for group practices, users can also view group practice names, specialties, practice locations, Medicare Assignment status, and affiliated professionals.

As required by 1848(m)(5)(G) of the Act, we are required to post on a CMS Web site the names of eligible professionals who satisfactorily report under the PQRS, as well as those eligible professionals who are successful electronic prescribers under the Medicare Electronic Prescribing (eRx) Incentive Program, and Physician Compare contains a link to the list of names. In addition to the list of names, there is a section on each individual's profile page listing the quality programs under which the specific individual satisfactorily reported or was a successful electronic prescriber. The program name is listed and a green check mark clearly indicates participation. These data will be updated annually with the most recent data available.

With the Physician Compare redesign, we have also added a quality programs section to each group practice profile page in order to indicate which group practices are satisfactorily reporting in Group Practice Reporting Option (GPRO) under the PQRS or the eRx Incentive program. We have also included a notation and check mark for individuals that participate in the Medicare EHR Incentive Program, as authorized by section 1848(o)(3)(D) of the Act. These data will be updated with the most recent data available.

As we indicated in the 2013 PFS final rule with comment period (77 FR 69166), we will include a check mark in the quality programs section of the profile page to note those individuals who report the PQRS Cardiovascular Prevention measures group in support of the Million Hearts Initiative. Finally, a check mark will be added to indicate those individuals who have earned a Maintenance of Certification Additional Incentive starting with data reported for CY 2013. We will update this information annually moving forward.

We are now instituting our plan for a phased approach to public reporting of performance information on Physician Compare. The first phase of our plan was finalized with the 2012 PFS final rule with comment period (77 FR 69166), where we established that PQRS GPRO measures collected through the GPRO Web interface during 2012 would be publicly reported on Physician Compare. These measures will be publicly reported on Physician Compare in CY 2014. We expanded our plan with the 2013 PFS final rule with comment period (77 FR 69166) where we established that the specific GPRO web interface measures that would be posted on Physician Compare include the Diabetes Mellitus (DM) and Coronary Artery Disease (CAD) PQRS GPRO measures, and that we would develop and report composite measures for these measure groups in future years, if technically feasible. For data reported in 2013 under the GPRO, DM and CAD PQRS GPRO measures and composites collected via the GPRO web interface that meet the minimum sample size of 20 patients, and that prove to be statistically valid and reliable, will be publicly reported on Physician Compare in late CY 2014, if technically feasible. As we previously established, if the minimum threshold is not met for a particular measure, or the measure is otherwise deemed not to be suitable for public reporting, the group's performance rate on that measure will not be publicly reported.

In the Shared Savings Program final rule (76 FR 67948), we noted that because Accountable Care Organization (ACO) providers/suppliers that are eligible professionals are considered to be group practices for purposes of qualifying for a PQRS incentive under the Shared Savings Program, we would publicly report performance on quality measures as we report performance on quality measures for PQRS GPRO group practices. Public reporting of performance on these measures will be presented at the ACO level only.

In the CY 2013 PFS final rule with comment period (77 FR 69167), we also finalized our decision to publicly report Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG-CAHPS) data for group practices of 100 or more eligible professionals reporting data in 2013 under the GPRO, and for ACOs participating in the Shared Savings Program. We anticipate posting these data on Physician Compare as early as 2014.

3. Future Development of Physician Compare

We will continue to phase in an expansion of Physician Compare over the next several years by incorporating quality measures from a variety of sources, as technically feasible. We previously finalized a decision to publicly report on Physician Compare the performance rates on a limited set of Web interface quality measures that group practices submit under the 2012 and 2013 PQRS GPRO Web interface (76 FR 73417 and 77 FR 69166).

For 2014, we propose to expand the quality measures posted on Physician Compare by publicly reporting performance on all measures collected through the GPRO Web interface for groups of all sizes participating in 2014 under the PQRS GPRO and for ACOs participating in the Medicare Shared Savings Program. These data would include measure performance rates for measures reported that met the minimum sample size of 20 patients, and that prove to be statistically valid and reliable. We will provide a 30-day preview period prior to publication of quality data on Physician Compare so that group practices and ACOs can view their data as it will appear on Physician Compare before it is publicly reported. CMS will detail the process for the 30-day preview and provide a detailed timeline and instructions for preview in advance of the start of the preview period.

For 2013 and 2014, we expanded the group reporting option for PQRS GPRO to include a registry reporting option, which we propose to further modify for data reported in 2014 under the PQRS GPRO registry option. Consistent with the requirement under section 10331(a)(2)(A) of the Affordable Care Act to make publicly available information on quality measures submitted by physicians and other eligible professionals under PQRS, we propose to publicly report on Physician Compare performance on certain measures that groups report via registries and EHRs in 2014 for the PQRS GPRO. Specifically, we propose to report, no earlier than 2015, performance on the GPRO registry and EHR measures identified below that can also be reported via the GPRO Web interface in 2014. By proposing to include on Physician Compare performance on these measures reported by participants under the GPRO through registries and EHRs, as well as the GPRO Web interface, we continue to provide beneficiaries with a consistent set of measures over time. For registry reporting, publicly reported measures would include:

- Diabetes: Hemoglobin A1c Poor Control.
- Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).
- Medication Reconciliation.

• Preventive Care and Screening: Influenza Immunization.
• Pneumococcal Vaccination Status for Older Adults.
• Preventive Care and Screening: Breast Cancer Screening.
• Colorectal Cancer Screening.
• Coronary Artery Disease (CAD): Angiotensin-converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy—Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%).
• Adult Weight Screening and Follow-Up.
• Preventive Care and Screening: Screening for Clinical Depression.
• Coronary Artery Disease (CAD): Lipid Control.
• Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic.
• Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.
• Hypertension (HTN): Controlling High Blood Pressure.
• Ischemic Vascular Disease (IVD): Complete Lipid Panel and LDL Control.
• Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.

For EHR reporting, publicly reported measures would include:
• Diabetes: Hemoglobin A1c Poor Control.
• Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).
• Preventive Care and Screening: Influenza Immunization.
• Pneumococcal Vaccination Status for Older Adults.
• Preventive Care and Screening: Breast Cancer Screening.
• Colorectal Cancer Screening.
• Adult Weight Screening and Follow-Up.
• Coronary Artery Disease (CAD): Lipid Control.
• Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic.
• Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.
• Hypertension (HTN): Controlling High Blood Pressure.
• Ischemic Vascular Disease (IVD): Complete Lipid Panel and LDL Control.
• Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.

Consistent with the requirement under section 10331(a)(2) of the Affordable Care Act to make comparable information on patient experience of care measures publicly available, we previously finalized a plan to post performance on patient experience survey-based measures from the Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG–CAHPS) (77 FR 44804) including the following patient experience of care measures for group practices participating in the PQRS GPRO (77 FR 44964):
• CAHPS: Getting Timely Care, Appointments, and Information.
• CAHPS: How Well Your Doctors Communicate.
• CAHPS: Patients' Rating of Doctor.
• CAHPS: Access to Specialists.
• CAHPS: Health Promotion and Education

These measures capture patients' experiences with clinicians and their staff, and patients' perception of care. We finalized a decision to publicly report performance on these measures on Physician Compare in 2014 for data collected for PY 2013 for group practices with 100 or more eligible professionals participating in the PQRS GPRO in 2013 and reporting data through the GPRO Web interface. At least for data reported for 2013, we noted that we would administer and collect patient experience survey data on a sample of the group practices' beneficiaries.

For ACOs participating in the Shared Savings Program, consistent with the PQRS policy of publicly reporting patient experience measures on Physician Compare starting with data collected for CY 2013, we will publicly report patient experience data in addition to the measure data reported through the GPRO Web interface (76 FR 67948). Specifically, the patient experience measures that would be reported for ACOs include the CG-CAHPS measures in the Patient/Caregiver Experience domain finalized in the Shared Savings Program final rule (76 FR 67889):
• CAHPS: Getting Timely Care, Appointments, and Information.
• CAHPS: How Well Your Doctors Communicate.
• CAHPS: Patients' Rating of Doctor.
• CAHPS: Access to Specialists.
• CAHPS: Health Promotion and Education.
• CAHPS: Shared Decision Making
• CAHPS: Health Status/Functional Status

For data reported for 2014, we propose to continue public reporting of these CG-CAHPS data for PQRS GPRO group practices of 100 or more eligible professionals participating in the GPRO via the Web interface and for Shared Savings Program ACOs reporting through the GPRO Web interface or other CMS-approved tool or interface. Consistent with what we finalized for CY 2013 under the PQRS GPRO, we will administer and fund the collection of data for these groups. As we will administer and collect the data for these surveys, we do not anticipate public reporting to impose any notable burden on these groups.

We believe these patient surveys are important tools for assessing beneficiary experience of care and outcomes, and under our authority under section 1848(m)(3)(C) of the Act to select the measures for which a group practice must report under the PQRS, we seek to encourage groups of 25 or more eligible professionals to report CG-CAHPS by proposing to make these measures available for reporting the PQRS and for the Value Based Payment Modifier. We propose to publicly report CY 2014 CG-CAHPS data for any group practice (regardless of size) that voluntarily chooses to report CG-CAHPS; however, CMS will not fund the surveys for these groups. CMS proposes to publically report comparable CG-CAHPS data collected by groups of any size collected via a certified CAHPS vendor.

We are dedicated to publicly reporting accurate, valid, and reliable data on Physician Compare and are aware that each group practice is unique in size and scope. We have closely evaluated the available data collection mechanisms, and are confident that CG-CAHPS is a well-tested collection mechanism with strong support from the healthcare community, and that it provides the best opportunity to collect useful and accurate data for the largest number of group practices. We propose to use only those survey domains that are applicable to group practices or ACOs respectively, and believe that these domains have been well tested, and will therefore provide the best data for the largest number of groups.

In the CY 2013 PFS final rule with comment period (77 FR 44804), we indicated our intention to publicly report performance rates on quality measures included in the 2014 PQRS and for individual eligible professionals consistent with the requirements under section 10331 of the Affordable Care Act to provide information about physicians and other eligible professionals who participate in PQRS. We believe that individual-level measure data is important in helping consumers make informed healthcare decisions and that this information should be posted on the site as soon as technically feasible. Therefore, we propose to publicly report comparable data, as noted below, collected for the CY 2014 PQRS via claims, EHR or registry from individual eligible professionals as early as CY

2015. Specifically, we propose to post individual measures reported by individual eligible professionals in line with those measures reported by groups through the GPRO Web interface. These measures include:

- Diabetes: Hemoglobin A1c Poor Control.
- Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).
- Medication Reconciliation.
- Preventive Care and Screening: Influenza Immunization.
- Pneumococcal Vaccination Status for Older Adults.
- Preventive Care and Screening: Breast Cancer Screening.
- Colorectal Cancer Screening.
- Coronary Artery Disease (CAD): Angiotensin-converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy—Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%).
- Adult Weight Screening and Follow-Up.
- Preventive Care and Screening: Screening for Clinical Depression.
- Coronary Artery Disease (CAD): Lipid Control.
- Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic.
- Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.
- Hypertension (HTN): Controlling High Blood Pressure.
- Ischemic Vascular Disease (IVD): Complete Lipid Panel and LDL Control.
- Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.
- Falls: Screening for Fall Risk.
- Diabetes Mellitus: Low Density Lipoprotein (LDL–C) Control.
- Diabetes Mellitus: High Blood Pressure Control.
- Diabetes Mellitus: Hemoglobin A1c Control (<8%).

Additionally, and in support of the HHS-wide Million Hearts Initiative, we propose to publicly report, no earlier than 2015, performance rates on measures in the PQRS Cardiovascular Prevention measures group (77 FR 44803) at the individual eligible professional level for data collected in 2014 for the PQRS (Table 50).

We seek comment on posting performance on patient experience survey-based measures for individual eligible professionals starting with data collected for CY 2015.

In future years, we will consider expanding public reporting of, and seek comment on, measures that have been developed and collected by approved and vetted specialty societies for individual eligible professionals as well as data collected via the new qualified clinical data registry option being proposed under the PQRS. Additionally, we seek comment on publicly reporting participation by individual eligible healthcare professionals on initiatives such as Choosing Wisely, an initiative of the American Board of Internal Medicine Foundation.

We are committed to making Physician Compare a constructive tool for Medicare beneficiaries, successfully meeting the Affordable Care Act mandate, and providing consumers with information needed to make informed healthcare decisions. We have developed a plan, and begun implementing that plan with a phased approach of adding physician quality data to Physician Compare. We believe this staged approach to public reporting of physician quality information allows consumers access to information that is currently available while we continue to develop the infrastructure necessary to support additional types of data and information on physicians' quality measure performance. We intend to implement subsequent phases of the plan in future rulemaking, as needed.

We invite comments regarding our proposals to: (1) Publicly report performance rates on all quality measures that group practices submit through the GPRO web interface in 2014 under the PQRS GPRO and that ACOs participating in the Medicare Shared Savings Program submit using the GPRO web interface or another CMS-approved tool or interface; (2) publicly report performance on certain quality measures collected under the 2014 PQRS GPRO via registry and EHR reporting mechanisms; (3) publicly report performance on patient experience measures for 2014 both for group practices and ACOs and for group practices of 25 or more professionals who choose to voluntarily report CG-CAHPS data as part of their participation in the PQRS GPRO; (4) publicly report performance on certain measures that are reported by individual eligible professionals reporting through an EHR, registry, or claims during 2014 under the PQRS; and (5) in support of the HHS-wide Million Hearts Initiative, publicly report performance rates for measures included in the Cardiovascular Prevention measures group reported by individual eligible professionals participating in the 2014 PQRS.

We seek comment regarding: (1) Publicly report patient experience survey data under the PQRS for individual eligible professionals, starting with data reported in 2015; and (2) to publicly report participation by individual eligible healthcare professionals on initiatives such as Choosing Wisely, an initiative of the American Board of Internal Medicine Foundation.

For the above proposals, we note that we would only post data on Physician Compare as it is technically feasible and as the data are available.

H. Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting System

There are several healthcare quality improvement programs that affect physician payments under the Medicare PFS. As we stated previously, we believe that alignment of these quality improvement programs—such as the EHR Incentive Program, Value-based Payment Modifier, and Medicare Shared Savings Program—is critical for programs involving physicians and other healthcare eligible professionals. The proposals that follow facilitate the alignment of programs, reporting systems, and quality measures. We believe that alignment of CMS quality improvement programs will decrease the burden of participation on physicians and allow them to spend more time and resources caring for beneficiaries. Furthermore, as the leaders of care teams and the healthcare systems, physicians and other clinicians serve beneficiaries both as frontline and system-wide change agents to improve quality. We believe that to improve quality, quality measurement and reporting is an important component. It is our intent that the following requirements will further improve alignment of physician-focused quality improvement programs, decrease burden and duplicative reporting for eligible professionals, increase engagement of physicians and other eligible professionals in quality improvement, and ultimately, lead to higher quality care for beneficiaries.

This section contains the requirements for the Physician Quality Reporting System (PQRS). The PQRS, as set forth in sections 1848(a), (k), and (m) of the Act, is a quality reporting program that provides incentive payments and payment adjustments to eligible professionals based on whether or not they satisfactorily report data on quality measures for covered professional services furnished during a specified reporting period. The regulation governing the PQRS is located at § 414.90. The program requirements for the 2007 through 2014 PQRS incentives and the 2015 PQRS payment adjustment that were

previously established, as well as information on the PQRS, including related laws and established requirements, are available at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html*. In addition, the 2011 PQRS and eRx Experience Report, which provides information about eligible professional participation in PQRS, is available for download at *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html*.

In the CY 2013 PFS final rule with comment period (77 FR 69170), we finalized certain requirements for the 2013 and 2014 PQRS incentives, as well as 2015 and 2016 PQRS payment adjustments. We also finalized certain requirements for future years, such as the reporting periods for the PQRS payment adjustment, as well as requirements for the various PQRS reporting mechanisms. Below, we propose to change some requirements for the 2014 PQRS incentive and 2016 PQRS payment adjustment, as well as to make changes to the PQRS measure set. Furthermore, we introduce our proposals for a new PQRS reporting option—satisfactory participation in a qualified clinical data registry. We then seek comment on a general plan for future years for PQRS, so that we may continue to consider stakeholder feedback as we develop policies and proposals for the future.

1. Proposed Changes to § 414.90

As noted previously, the regulation governing the PQRS is located at § 414.90. We are proposing the following changes and technical corrections to § 414.90:

- Under § 414.90(b), we are proposing to modify the definition of administrative claims to eliminate the words ''the proposed'' in the phrase ''on the proposed PQRS quality measures.'' We are proposing to make this technical change because this language was inadvertently included in the final regulation despite the fact that the quality measures that eligible professionals report under the PQRS were finalized in the CY 2013 PFS final rule with comment period (77 FR 69364).
- We propose to modify § 414.90(f) to include the term ''for satisfactory reporting'' after the title ''Use of consensus-based quality measures for satisfactory reporting.'' We are adding the term ''for satisfactory reporting'' so that it is clear that the paragraph refers to satisfactory reporting, not the new standard of satisfactorily participating in a qualified clinical data registry.
- We propose to modify the paragraph heading of § 414.90(g) to add the term ''satisfactory reporting'', so that the title of the paragraph reads ''Satisfactory reporting requirements for the incentive payments.'' We are proposing to make this change so that it is clear that the paragraph refers to satisfactory reporting, not the new standard of satisfactorily participating in a qualified clinical data registry.
- We propose to modify the paragraph heading of § 414.90(h) to add the term ''satisfactory reporting'', so that the title of the paragraph reads ''Satisfactory reporting requirements for the incentive payments.'' We are proposing to make this change so that it is clear that the paragraph refers to satisfactory reporting, not the new standard of satisfactorily participating in a qualified clinical data registry.
- We propose to delete paragraph § 414.90(i)(4), because § 414.90(i)(4) list requirements that are identical to § 414.90(i)(3). Therefore, § 414.90(i)(4) is redundant.

In addition, we are considering further revising the regulation at § 414.90 to list all the specific satisfactory reporting requirements for the 2014 PQRS incentive and 2016 PQRS payment adjustment, so that the different reporting requirements are specified in the regulation. We seek public comment on these proposals.

2. Participation as a Group Practice in the Group Practice Reporting Option (GPRO)

a. Proposed Changes to the Self-nomination, or Registration, Requirement for Group Practices To Be Selected to Participate in the GPRO

In the CY 2013 PFS final rule with comment period (77 FR 69172), we finalized requirements for the self-nomination process group practices must follow to participate in the PQRS GPRO. We propose to make two changes to the previously established self-nomination process for group practices. First, we propose to change the deadline for group practices to submit a self-nomination statement, or register, to participate in the PQRS GPRO. We previously established, that in order for a group practice to participate in PQRS under the GPRO, the group practice must submit a self-nomination statement, or register, via the web by October 15 of the year in which the reporting period occurs. Starting with reporting periods occurring in 2014, we propose to change this deadline to September 30 of the year in which the reporting period occurs (that is September 30, 2014 for reporting periods occurring in 2014). We believe that the proposed deadline still gives group practices a reasonable amount of time to make a decision on whether to participate in the PQRS GPRO while allowing CMS more time to pull samples to populate the GPRO web-interface for those group practices that select that particular reporting mechanism. Second, we propose that group practices comprised of 25 or more individual eligible professionals that wish to report the CG CAHPS survey measures (which are discussed later in this section) would be required to elect to report the CG CAHPS survey measures via the web as well. The Web site that a group practice would use to elect to report the CG CAHPS survey measures would be the same Web site used by group practices to register to participate in the PQRS GPRO and used by group practices comprised of 10–99 eligible professionals to elect quality tiering for the Value-based Payment Modifier set forth in section III.M of this proposed rule. We believe that providing a single Web site whereby group practices may make multiple elections (such as submitting the self-nomination statement to register to participate in the PQRS GPRO, be evaluated for the PQRS GPRO using CG CAHPS measures, and also elect quality tiering for the Value-based Payment Modifier) would be desirable for group practices. We seek public comment on the proposed changes to the PQRS GPRO self-nomination process.

3. Proposed Requirements for the PQRS Reporting Mechanisms

The PQRS includes the following reporting mechanisms: Claims, registry, EHR (including direct EHR products and EHR data submission vendor products), administrative claims, and the GPRO web-interface. Section 414.90(g) and (h) govern which reporting mechanisms are available for use by individuals and group practices for the PQRS incentive and payment adjustment. This section contains our proposed changes to these PQRS reporting mechanisms. In addition, this section contains our proposals for two new PQRS reporting mechanisms. We propose a new certified survey vendor reporting mechanism for purposes of reporting CG CAHPS measures described below and a qualified clinical data registry reporting mechanism under the new PQRS ''satisfactory participation'' option.

a. Registry-Based Reporting Mechanism

In the CY 2013 PFS final rule with comment period, we finalized the following requirement for registries to become qualified to participate in PQRS for 2013 and beyond: Be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 3 measures (77 FR 69180). Since, as we describe in more detail below, we are proposing to increase the number of measures eligible professionals would be required to report for the 2014 PQRS incentive from 3 to 9 measures covering at least 3 of the National Quality Strategy domains, we are proposing to change this registry requirement as follows: A qualified registry must be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 9 measures covering at least 3 of the National Quality Strategy domains. We seek public comment on this proposal.

b. Certified Survey Vendors

As discussed later in this section, we are proposing to allow group practices comprised of 25 or more eligible professionals to report CG CAHPS survey measures. The data collected on these CAHPS survey measures would not be transmitted to CMS via the previously established PQRS group practice reporting mechanisms (registry, EHR, or GPRO web interface). Rather, the data must be transmitted through a survey vendor. Therefore, to allow for the survey vendor to transmit survey measures data to CMS, we are proposing to modify § 414.90(b), § 414.90(g)(3), and § 414.90(h)(3) to propose a new reporting mechanism—the certified survey vendor.

In addition, § 414.90(g)(3), and § 414.90(h)(3) currently requires group practices to use only one mechanism to meet the requirements for satisfactory reporting (that is, CMS will not combine data submitted under multiple reporting mechanism to determine if the requirements for satisfactory reporting are met). As discussed further below, we propose that a group practice choosing to report CG CAHPS survey measures would be required to select an additional reporting mechanism to meet the requirements for satisfactory reporting for both the 2014 PQRS incentive and the 2016 PQRS payment adjustment. Therefore, we propose to modify § 414.90(g)(3), and § 414.90(h)(3) to indicate that groups selecting to use the certified survey vendor would be the exception to this requirement.

Specifically, for purposes of PQRS, we are proposing to modify § 414.90(b) to define a certified survey vendor as a vendor that is certified by CMS for a particular program year to transmit survey measures data to CMS.

To obtain CMS certification, we propose that vendors would be required to undergo training, meet CMS standards on how to administer the survey, and submit a quality assurance plan. CMS would provide the identified vendor with an appropriate sample frame of beneficiaries from the group. The vendor would also be required to administer the survey according to established protocols to ensure valid and reliable results. Survey vendors would be supplied with mail and telephone versions of the survey in electronic form, and text for beneficiary pre-notification and cover letters. Surveys can be administered in English, Spanish, Cantonese, Mandarin, Korean, Russian and/or Vietnamese. Vendors would be required to use appropriate quality control, encryption, security and backup procedures to maintain survey response data. The data would then be securely sent back to CMS for scoring and/or validation. To ensure that a vendor possesses the ability to transmit survey measures data for a particular program year, we propose to require survey vendors to undergo this certification process for each year in which the vendor seeks to transmit survey measures data to CMS. We seek public comment on these proposals.

4. Proposed Changes to the Criteria for the Satisfactory Reporting for Individual Eligible Professionals for the 2014 PQRS Incentive—Individual Quality Measures Submitted via Claims and Registries and Measures Groups Submitted via Claims

Individual eligible professionals may currently report PQRS quality measures data to meet the criteria for satisfactory reporting for the 2014 PQRS incentive via the claims, registry, and EHR-based reporting mechanisms. This section contains our proposed changes to the criteria for satisfactory reporting of individual quality measures via claims and registries by individual eligible professionals for the 2014 PQRS incentive. Please note that we are not proposing to modify the criteria for satisfactory reporting of individual quality measures via EHR that were established in the CY 2013 PFS final rule with comment period (see Table 91, 77 FR 69194).

a. Proposed Changes to the Criterion for Satisfactory Reporting of Individual Quality Measures via Claims for Individual Eligible Professionals for the 2014 PQRS Incentive

For 2014, in accordance with § 414.90(c)(3), eligible professionals that satisfactorily report data on PQRS quality measures are eligible to receive an incentive equal to 0.5 percent of the total estimated Medicare Part B allowed charges for all covered professional services furnished by the eligible professional or group practice during the applicable reporting period. In the CY 2013 PFS final rule with comment period (*see* Table 91, 77 FR 69194), to maintain the reporting criterion with which individual eligible professionals are familiar, we finalized the same satisfactory reporting criterion for the submission of individual quality measures via claims that we finalized in previous years: For the 12-month reporting period for the 2014 PQRS incentive, report at least 3 measures, OR, if less than 3 measures apply to the eligible professional, report 1–2 measures, and report each measure for at least 50 percent of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted. For an eligible professional who reports fewer than 3 measures via the claims-based reporting mechanism, the eligible professional would be subject to the Measures Applicability Validation (MAV) process, which would allow us to determine whether an eligible professional should have reported quality data codes for additional measures (77 FR 69188).

For the reasons described below and based on our authority to revise the criteria for satisfactory reporting for the 2014 PQRS incentive under section 1848(m)(3)(d) of the Act, we propose to change the criterion for the satisfactory reporting of individual, claims-based measures by individual eligible professionals for the 2014 PQRS incentive as follows: For the 12-month reporting period for the 2014 PQRS incentive, report at least 9 measures, covering at least 3 of the National Quality Strategy domains, OR, if less than 9 measures apply to the eligible professional, report 1–8 measures, and report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted. For an eligible professional who reports fewer than 9 measures via the claims-based reporting mechanism, the eligible professional would be subject to the MAV process, which would allow us to determine whether an eligible professional should have reported

quality data codes for additional measures.

We note that this proposal would increase the number of measures an eligible professional is required to report via the claims-based reporting mechanism from 3 measures to 9. We understand that this is a significant increase in the number of measures an eligible professionals is required to report. However, we believe that the need to collect enough quality measures data to better capture the picture of the care being furnished to a beneficiary, especially when this data may be used to evaluate an eligible professional's quality performance under the Value-based Payment Modifier, justifies the increase in measures.

We seek public comment on the proposed change to the criterion for the satisfactory reporting of individual quality measures via claims for individual eligible professionals for the 2014 PQRS incentive.

b. Proposed Changes to the Criterion for Satisfactory Reporting of Individual Quality Measures via Registry for Individual Eligible Professionals for the 2014 PQRS Incentive

In the CY 2013 PFS final rule with comment period, to maintain reporting criterion with which individual eligible professionals are familiar, we finalized the same satisfactory reporting criterion for individual eligible professionals to report individual quality measures via registry that we finalized in previous years: For the 12-month reporting period for the 2014 PQRS incentive, report at least 3 measures and report each measure for at least 80 percent of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted (77 FR 69189). We propose to change this reporting criterion for individual eligible professionals reporting via registry for the 2014 PQRS incentive to the following: For the 12-month reporting period for the 2014 PQRS incentive, report at least 9 measures, covering at least 3 of the National Quality Strategy domains and report each measure for at least 50 percent of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted.

We note that this proposal would increase the number of measures an eligible professional is required to report via the registry-based reporting mechanism from 3 measures to 9 covering at least 3 of the National Quality Strategy domains. We understand that this is a significant increase in the number of measures an eligible professional is required to report. However, similar to the reasons we provided for proposing to increase the measure threshold from 3 measures to 9 for the claims-based reporting mechanism, we believe that the need to collect enough quality measures data to better capture the picture of the care being furnished to a beneficiary, especially when this data may be used to evaluate an eligible professional's quality performance under the Value-based Payment Modifier, justifies the change. We believe that collecting data on 9 measures applicable to an eligible professional's practice as opposed to 3 measures would provide us with a better picture of the overall quality of care furnished by that eligible professional for purposes of having PQRS reporting being used to assess quality performance under the Value-based Payment Modifier. We also note that, as PQRS has used this same 3-measure criterion since the registry-based reporting mechanism was introduced in 2010, it would be conceivable that we would eventually propose to increase the number of measures an eligible professional is required to report. Our proposal to increase the number of measures reported via claims and registry would align with our established reporting option for the EHR-based reporting mechanism or the 2014 PQRS incentive, which requires the reporting of 9 measures covering 3 of the National Quality Strategy domains (77 FR 69189).

In addition, we note that this proposal would also decrease the number of patients for which an eligible professional must report for each measure from 80 percent to 50 percent of an eligible professional's applicable patients. We are proposing to drop the percentage threshold from 80 to 50 percent primarily to align our percentage thresholds for registry reporting with the percentage threshold established for reporting via the claims-based reporting mechanism. We believe it is appropriate to drop the percentage threshold to 50, particularly since we are proposing to also increase the number of measures an eligible professional is required to report via the registry-based reporting mechanism from 3 to 9 measures covering at least 3 of the National Quality Strategy domains. The criteria for satisfactory reporting that we are proposing for the 2014 PQRS incentive payment are described in Table 24.

We seek public comment on the proposed changes to the criterion for the satisfactory reporting of individual quality measures via registry for individual eligible professionals for the 2014 PQRS incentive.

c. Proposed Changes to the Criterion for Satisfactory Reporting of Measures Groups via Claims for Individual Eligible Professionals for the 2014 PQRS Incentive

In the CY 2013 PFS final rule with comment period, we finalized the following criteria for satisfactory reporting for individual eligible professionals to report measures groups via claims: Report at least 1 measures group and report each measures group for at least 20 Medicare Part B FFS patients. Measures groups containing a measure with a zero percent performance rate will not be counted (77 FR 69192). Since finalizing this criterion, we have recently published and analyzed the 2011 PQRS and eRx Experience Report, which provides a summary of PQRS reporting trends from 2007 through 2011, to determine where we may work to further streamline the reporting options available under the PQRS. The PQRS and eRx Experience Report stated that the number of eligible professionals who participated via claims-based measures groups reporting mechanism grew more than three-fold between 2008 and 2011. However, according to Appendix 8 of the PQRS and eRx Experience Report titled ''Eligible Professionals who Participated by Reporting Measures Groups through the Claims Reporting Mechanism for the Physician Quality Reporting System, by Specialty (2008 to 2011),'' only 4,472 eligible professionals used this reporting option. Meanwhile, the Experience Report further shows that the option to report measures groups via registry has grown at an even faster rate with 12,894 participants in 2011. Therefore, in an effort to streamline the reporting options available under the PQRS and to eliminate reporting options that are not widely used, we are proposing to remove this satisfactory reporting criterion for the 2014 PQRS incentive. Please note that, since we are proposing to remove this reporting criterion, the only manner in which an eligible professional would be able to report a PQRS measures group would be via registry. We seek public comment on this proposal.

5. Proposed Criteria for Satisfactory Reporting for the 2016 PQRS Payment Adjustment for Individual Eligible Professionals Using the Claims and Registry Reporting Mechanisms

Section 1848(a)(8) of the Act, as added by section 3002(b) of the

Affordable Care Act, provides that for covered professional services furnished by an eligible professional during 2015 or any subsequent year, if the eligible professional does not satisfactorily report data on quality measures for covered professional services for the quality reporting period for the year, the fee schedule amount for services furnished by such professional during the year shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services. For 2016 and subsequent years, the applicable percent is 98.0 percent.

In the CY 2013 PFS final rule, we finalized seven different criteria for the satisfactory reporting by individual eligible professionals of data in PQRS quality measures for the 2016 PQRS payment adjustment (*see* 77 FR 69200–69204 and Table 91 at 77 FR 69194). Although we are retaining five of the final criteria for satisfactory reporting by individual eligible professionals of data on PQRS quality measures for the 2016 PQRS payment adjustment, we propose to eliminate two criteria, revise another, and include two additional criteria (based on two of the existing criteria). Specifically, we propose to remove the following criterion we previously finalized for the CY 2016 payment adjustment for individual eligible professionals reporting measures groups through claims (77 FR 69200 and Table 91, 77 FR 69164): Report at least 1 measures group and report each measures group for at least 20 Medicare Part B FFS patients (Measures groups containing a measure with a zero percent performance rate will not be counted). Our proposal to remove this criterion would correspond to the same proposal we are making, as discussed above, for the 2014 PQRS incentive for individual eligible professionals. As we indicated, we believe it is important to streamline the program and eliminate criteria for reporting options that are not widely used.

We also propose to remove the following criterion we previously finalized for the 2016 payment adjustment for individual eligible professionals reporting individual measures through a qualified registry (77 FR 69200 and Table 91, 77 FR 69164): Report at least 3 measures, and report each measure for at least 80 percent of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measures applies (Measures with a zero percent performance rate will not be counted). Finally, to maintain some consistency and to otherwise align with the criteria we are proposing for the 2014 PQRS incentive for individual eligible professionals, we are proposing two other criteria for satisfactory reporting by individual eligible professionals for the 2016 PQRS payment adjustment using the claims and registry reporting mechanisms. Specifically, we propose the following criterion for reporting individual measures via claims by individual eligible professionals for the 2016 PQRS payment adjustment: For the 12-month reporting period for the 2014 PQRS incentive, report at least 9 measures, covering at least 3 of the National Quality Strategy domains, OR, if less than 9 measures apply to the eligible professional, report 1–8 measures, and report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted. Similarly, for the same reasons we discussed previously, we propose the following criterion for reporting individual measures via qualified registry by individual eligible professionals for the 2016 PQRS payment adjustment: For the 12-month reporting period for the 2014 PQRS incentive, report at least 9 measures, covering at least 3 of the National Quality Strategy domains and report each measure for at least 50% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted.

Please note that in the CY 2013 PFS final rule, we finalized the same criteria for satisfactorily reporting data on quality measures for covered professional services for the 2016 PQRS payment adjustment as those for the 2014 PQRS incentive for individual eligible professionals (77 FR 69200). However, if the proposals we are making in this proposed rule were finalized, there would be some differences between the criteria for satisfactory reporting for the 2016 PQRS payment adjustment and the 2014 PQRS incentive. In particular, there would be one more criterion for satisfactory reporting for the 2016 payment adjustment than for the 2014 PQRS incentive with respect to claims-based reporting, but the other criteria would otherwise align. Although we considered, as an alternative, to propose to remove the criterion we previously finalized for the 2016 payment adjustment for individual eligible professionals reporting individual measures through claims, we believe it is still important to offer as many options as possible for the 2016 PQRS payment adjustment, particularly since the penalty phase is relatively new under the PQRS. We also note that it would remain true that if an individual eligible professional were to meet any of the criteria for satisfactory reporting for the 2014 PQRS incentive, the individual eligible professional would meet the requirements for satisfactory reporting for the 2016 PQRS payment adjustment (note, however, that the reverse would not necessarily be true since there would be one additional criterion for satisfactory reporting for the 2016 PQRS payment adjustment that would not apply to the 2014 PQRS incentive).

The criteria for satisfactory reporting that we are proposing for the 2016 PQRS payment adjustment are described in Table 25. We believe such alignment still serves to reduce reporting burden, and as we have noted previously, we believe that proposing similar criteria for satisfactory reporting by individual eligible professionals for the 2014 PQRS incentive and 2016 PQRS payment adjustment is appropriate because the reporting period for the 2014 PQRS incentive and 2016 PQRS payment adjustment coincide. As we continue to implement the PQRS payment adjustment and fully implement the value-based payment modifier in 2017, it is our intent to ramp up the criteria for satisfactory reporting for the 2017 PQRS payment adjustment to be on par or more stringent than the criteria for satisfactory reporting for the 2014 PQRS incentive.

We seek public comment on our proposed satisfactory reporting criteria for individual eligible professionals for the 2016 PQRS payment adjustment, including the alternative proposal considered for individual eligible professionals reporting individual measures through the claims-based reporting mechanism.

6. Proposals Related to Satisfactory Participation in a Qualified Clinical Data Registry by Individual Eligible Professionals

Section 601(b) of the American Taxpayer Relief Act of 2012 amends section 1848(m)(3) of the Act, by redesignating subparagraph (D) as subparagraph (F) and adding new subparagraph (D), to provide for a new standard for individual eligible professionals to satisfy the PQRS beginning in 2014, based on satisfactory participation in a qualified clinical data registry. Below, we set forth our proposals for implementing this provision, including the proposed requirements for qualified clinical data registries and our proposals for individual eligible professionals to

satisfactorily participate in a qualified clinical data registry with respect to the 2014 PQRS incentive and 2016 PQRS payment adjustment.

On February 7, 2013, CMS published a Request for Information titled ''Medicare Program; Request for Information on the Use of Clinical Quality Measures (CQMs) Reported Under the Physician Quality Reporting System (PQRS), the Electronic Health Record (EHR) Incentive Program, and Other Reporting Programs'' (78 FR 9057). The Request for Information included a solicitation for comments about section 601(b) of the American Taxpayer Relief Act of 2012. CMS received over 100 comments on this Request for Information, and much of the information provided in these comments were used to shape the proposals set forth in this section.

a. Proposed Definition of a Qualified Clinical Data Registry
